Preface

It has been six and a half years now since the first volume of the *Encyclopaedia Aethiopica* saw light, and we have arrived to an important landmark: with the exception of approximately 350 remaining articles – most of those beginning with letters Y and Z – the main part of the entire work has been completed. The last outstanding volume, the fifth one, will, along with the aforementioned entries include addenda et corrigenda, overviews, a set of maps and a general index. Thus, the very final stage in the creation of the first ever academic lexicon for a large African cultural region is approaching. The lexicon will create a reliable basis for further research; the index in particular will provide targeted access to its over 4,300 articles.

The humanities – with topics from history and biography, ethnology and linguistics, literature and art history, historical geography and religion – remain at the centre of the *Encyclopaedia*'s thematic scope. At the same time, abundant basic data on land and people, the region's resources, its flora and fauna as well as on the social, economic and political developments from the pre-Aksumite times well into the second half of the 20th century is provided. Some of the subjects have been so far little known even to experienced scholars of Ethiopian studies; in many cases extensive primary research had to be conducted for the articles to take their present shape. These new research results inevitably lead to the necessity to be confirmed and developed in the course of further study. The need of a lengthier profound research has in some cases forced us to postpone certain entries until the next volume. These entry titles appear in the volume in alphabetical order with the endorsement "s. EAE vol. 5".

I am particularly pleased to acknowledge the active participation of many young scholars in the authorship of the *Encyclopaedia Aethiopica*. For some of them, this was an important step in their personal academic development. Supported by the Hamburg editorial team, they could thus acquire the important skills that will, among other things, enable them to advance Ethiopian studies. The fact that a considerable share of authors (ca. 20 % in this volume) come from Ethiopia and Eritrea confirms the interest of scholars from the region in this international enterprise which has so far involved over 560 authors from 30 countries.

The *Encyclopaedia Aethiopica* provides a basic research tool for the students and scholars of Ethiopian Studies, more general African Studies or Oriental Studies. Its articles as well as bibliographies for further study make many research areas more easily accessible. Moreover, it has in the meanwhile advanced to become a reference work for those involved in economics, politics, diplomacy and development work. It is among the most consulted publications in many University libraries, including Ethiopian ones, as can be easily seen from the obvious signs of wear and tear.

Such positive feedback from colleagues and users motivates the editorial team, co-editors, advisors, field specialists and authors to bring the joint enterprise to a successful and speedy completion.

Acknowledgements

An international venture such as the *Encyclopaedia Aethiopica* can only succeed thanks to the generous cooperation and support of a large number of persons. In the first place, each and every of the authors should be thanked personally for their dedication. Notwithstanding numerous other commitments, they took the effort to deliver their contributions – and in most cases timely enough for the Hamburg team to have the space for providing the necessary editorial corrections, collecting feedback from reviewers and supplying the articles with maps and illustrations wherever needed. Many had to work under a particular pressure – whether for personal or health reasons, or because they were asked to replace another author – in order to ensure that Volume Four, with its 970 articles, can be completed. To all of them I would like to express my most heartfelt gratitude.

Since the appearance of Volume Three little over two years ago, several former contributors of the *Encyclopaedia Aethiopica* have been snatched by death. They were M. Lionel Bender, Stanisław Chojnacki, Abraham Johannes Drewes, Hussein Ahmed, Joanna Mantel-Niećko, Merid Wolde Aregay and Zewde GebreSellassie. We miss them as friends and colleagues, and we acutely feel the lack of their competence in the project. In one particular case, a text of a longer deceased colleague, Ernst Hammerschmidt (d. 1993), originally published in German, was translated and reused in the current volume (s. the entry Rüppel, Eduard).

The *Encyclopaedia Aethiopica* is a living body, and therefore from volume to volume and from year to year the responsibilities of persons may change. Thus, more often than not, older colleagues withdraw and younger scholars take their place. This development is true for the authorship but also for the peer reviewers, both Field Specialists and the Advisory Board members (s. lists p. x). The Field Specialists, who share the responsibility for the academic quality of the lexicon by assuring that no important scholarly aspect has been omitted, deserve my special thanks. Some colleagues were ready to offer more than advice by correspondence and agreed to actively help the editorial team in its daily work by spending lengthy periods of time in Hamburg. They have therefore formed the Advisory Board for the current volume. Abbebe Kifleyesus, Jon Abbink, Ewa Balicka-Witakowska, Gianfranco Fiaccadori, Alessandro Gori, Jonathan Miran, Didier Morin and Witold Witakowski all found time and energy for this task.

Several scholars have been advising us on several occasions without being an official member of either of the aforementioned groups. Their help was of great value for the scholarly quality of the volume, and I would like to thank all those who have been responding to our queries. In particular, on this occasion I would like to express my gratitude to Gian Paolo Calchi Novati, Matthew Curtis, Eloi Ficquet, Fentahun Tiruneh, Ib Friis, Federica Guazzini, Jan Hultin, Wendy James, Mersha Alehegne and Walter Müller.

I would like to repeat my thanks to all those institutions, archives and private persons who have found it possible to place illustrative materials at the disposal of the *Encyclopaedia*.

As before, David Appleyard bore the main responsibility for the quality of the English used throughout the volume. He was strongly supported in this task by Joe McIntyre. To both colleagues I owe my most deepfelt gratitude. The standard in transliteration of Ethiopic terms was additionally controlled by Mersha Alehegne and Maija Priess.

Matthias Schulz was in charge of preparing the maps appearing in this volume, and his skillful work deserves much appreciation.

The main work load remained, however, on the shoulders of the members of the Hamburg editorial team at Hiob Ludolf Centre for Ethiopian Studies, as the former Research Unit Ethiopian Studies have been now renamed. Without their selfless commitment the appearance of this volume would have been impossible. Their efforts went far beyond formal corrections; they took active part in all important decision-making processes and ensured that the high scientific level of the work could be maintained. In addition to the members of the editorial team listed on p. x, I would like to express my gratitude to the student research assistants who were responsible for the many little things in the background one can so easily forget but that are necessary for the overall success – Isabel Hofmann, Angela Müller and Helen Schmidt.

In autumn 2009 Alessandro Bausi accepted the call as my successor on the Chair of Ethiopian Studies at Hamburg University. From the very start he has invested much of his time and skills in editing the current volume. For this, I am deeply grateful.

A project of such size and scope as the *Encyclopaedia* could never succeed without general financial support. In the first place I would like to thank the Deutsche Forschungsgemeinschaft, which has now been sponsoring the project for over ten years with a considerable amount. It is with great appreciation that I must also highlight the generous support of the ZEIT-Stiftung Ebelin und Gerd Bucerius. The Fritz Thyssen Stiftung sponsored twice special tasks within the project. The German Israeli Foundation has also invested considerable material and personnel costs in particular aspects of the *Encyclopaedia*. Since its very early stages, the Johanna und Fritz Buch Gedächtnis-Stiftung has been providing a yearly subsidy for various research aspects; this help came most handy in several emergency situations. The Sigrid Rausing Trust has enabled some of the authors to spend considerable amount of time on the research for the *Encyclopaedia.* Within a special European cooperation framework, the German Academic Exchange Service has repeatedly supported project members and contributors with generous travel grants. The DeutschÄthiopischeStiftung has been able to help out of a few bottlenecks. Finally, the University of Hamburg deserves a special place on this list, as its constant availability and readiness to help has made the life of the editorial team much easier in many senses.

As with all the previous volumes, the Harrassowitz Verlag and the Memminger printing press have ensured that a due solution was found for all the technical issues and that the *Encyclopaedia Aethiopica* could maintain its high-quality appearance. The subsidy of the Deutsche Forschungsgemeinschaft has once again made it possible that the volume can be sold at its relatively modest constant price.

Notes for the User

The *Encyclopaedia Aethiopica* uses several conventions that on the one hand standardize the appearance of the articles, and on the other hand facilitate their understanding by the readers. For the transcription and transliteration rules followed in the *Encyclopaedia* s. the corresponding tables in the *Notes for the User* section in Volumes One and Two. A key to the standard Encyclopaedia detail map can also be found in either of the previous two volumes. The section devoted to *Abbreviation Rules* is reproduced in the current volume due to the fact that more bibliographic titles and general abbreviations have been incorporated.

Abbreviation Rules

The *Encyclopaedia Aethiopica* works with different types of abbreviations. First and foremost, the main heading is always abbreviated throughout the entry, to one letter if it consists of one or more than two words, and to two letters, if of two words (e.g., "Ometo" - "O.", "Oliqa Dəngəl" - "O.D.", "Täkkälä Wäldä Ḥawaryat" - "T."). The subheadings and titles of subarticles are not abbreviated. If the entry title can have both singular and plural forms, both are abbreviated by the same syglum, the grammatical meaning being elicitable from the context (e.g., "S." in the article "Spirits" stands for both "spirit" and "spirits").

In order to keep the texts compact, a limited set of general abbreviations is used. The frequently used bibliographic references are also abbreviated. The clues are provided in tables on the following pages.

O

O rəḫrəḫtä ḫəllina

O.r. (**ኦርኀርኀተ፡ ኀሊና**, lit. ‘Oh merciful of mind …’) is the incipit of the Gəᶜəz Marian ↗hymn describing in detail the magnanimity of St. ↗Mary and her icon.

Describing ms. BN d’Abbadie 102, Carlo ↗Conti Rossini erroneously referred to the hymn (fols. 53r–59r) as the ↗*Ḥaṣurä mäsqäl*, for the second verse of the first strophe ends with these words (CRAbb 75, no. 51). Being not a ↗*mälkəʾ*, the O.r. appears in the ↗*Mälkəʾa gubaʾe* under the title **መልክአ፡ ሥዕል** (*Mälkəʾa śəᶜəl*, ‘Image of the Icon’). It also features in liturgical compositions: in the ↗*Säᶜatat* (Mogäs ᶜƎqʷəbä Giyorgis 1964: 182), it is recited before the Eucharistic liturgy. It is regularly performed during the feasts of St. Mary, usually with a large chorus, accompanied with ↗*käbäro* and ↗*ṣänaṣəl*. In some monasteries, it is sung daily.

The O.r. contains 17 strophes, the first with six verses and the others with five rhymed verses each, following the scheme of the ↗*mälkəʾat*. Each of the five verses within one strophe ends with the same consonant. The first four strophes start with “O.r.”, most of the others have the incipit *sälam lä śəᶜələki* (‘Salutation for your icon …’). The 13th strophe starts with *sägid* (or *sälam*) *wäʾamməḫa yədällu läśəᶜələki;* and the 16th with *bäʾityopəya wägəbṣ*, with *sälam lä śəᶜələki* at the end of the verse.

The O.r. opens with a description of the character of Mary, followed by a list of her miraculous deeds. Unlike most *mälkəʾat*, the O.r. does not follow the systematic worship of the different parts of Mary’s body. It extensively praises the depiction of Mary and connects the Apostles and other contemporaries to the Virgin (e.g., it is due to her that Matthew became an Evangelist). The O.r. is often included with the manuscripts of the ↗*Täʾammərä Maryam* (e.g., ms. Orient. 641, WrBriMus 48) and contains numerous allusions to and quotations from the latter text. In the last strophe, the author of the *Täʾammərä Maryam* St. Ildephonse (here Däqsəyos) threatens all those who reject her miracles with excommunication.

The list of authors of different *mälkəʾat* found in ms. EMML 1706, fols. 50r–51r, names *aṣe* ↗Gälawdewos as the author of the O.r. (Getatchew Haile in PICES 10, 373f.).

Obbia ↗Hobyo

Obboo

O. in modern ↗Oromo language is a form of address or reference equivalent to “mister” in modern English and ↗*ato* in Amharic. Earlier, however, O. was mainly used as a term of endearment mostly to refer to or address the eldest or sometimes an elder brother by the younger. It has also been used as a term of address to a senior relative in general. O. seems to be related to the Oromo word *obbooleessa*, ‘brother’ and is linked with the ↗*obboo* and *č̣ora* system of alternating generation-sets. The female pendant is *adde* (but not *obbooleeti*, ‘sister’)

O. as a form of address or reference to nonrelatives seems to have come into use only in modern times. At present, the term O. is used for both purposes, to address the eldest/elder brother and as a polite or respectful form of address to a male person who does not possess a military, professional or other title.

Obboo and Č̣oora

O. (cp. also ↗Obboo) and Č̣. (Oromo sp.: Oboo, Coora) were terms used for distinguishing two adjacent (subsequent) generations in ↗Oromo society. Oromo have conventions and customary rules which regulate behaviour between members of different generations, particularly those between parents and children and grandparents and grandchildren: members of alternate generations should be relaxed with each other, whereas members of adjacent generations should show each other "respect" and, especially, avoid any behaviour and speech containing sexual components. The names O. and Č̣. are used by many Oromo groups to designate members of two adjacent or proximate generations: every child of a man who was born O. must be a Č̣. and, in turn, every child born to a Č̣. must be an O. (TilDic). Similar rules of behaviour feature in many kinship systems and accord well with those which are imposed on adjacent and alternate generations in African cyclical age-and generation-set systems (Radcliffe-Brown 1950: 27–31).

The only detailed account we have of how the restraints of O. and Č̣. operate in daily life is that of ↗Bartels (1983, ch. 25) for the ↗Mäč̣č̣a, amongst whom the restraints may be especially extensive and strict. The Mäč̣č̣a extend the rules which constrain the behaviour between kinsfolk of proximate or adjacent generations to include all members of those generations, whether or not kinship can be traced directly. For most purposes women only enter the dual O. and Č̣. system at marriage. Every married person and youth should know whether they are an O. or a Č̣. and behave accordingly. The senior generation should demonstrate its authority and protective care for the junior which, in turn, should show dependence and respect. Married persons and youths should not engage in any talk across the generations which contains sexual references. An O. and a Č̣. who have sexual intercourse are considered to have committed incest and may be punished or ostracised. It is particularly reprehensible for a father and a son ever to have intercourse with the same woman. Social and verbal relations between members of alternate generations, in contrast, can be relaxed and include discussions of sexual matters and even banter.

The rules are similar to those between adjacent generations-sets in the ↗*gadaa* system. Bartels' informants were unanimous that a set which had completed its period in office never gave advice to the set which succeeded it and only did so to the set after that. Some of the young schooled men interviewed by Bartels, though they still knew the appropriate rules of behaviour, were ignorant about their own generational affiliation, i.e. if they were O. or Č̣.

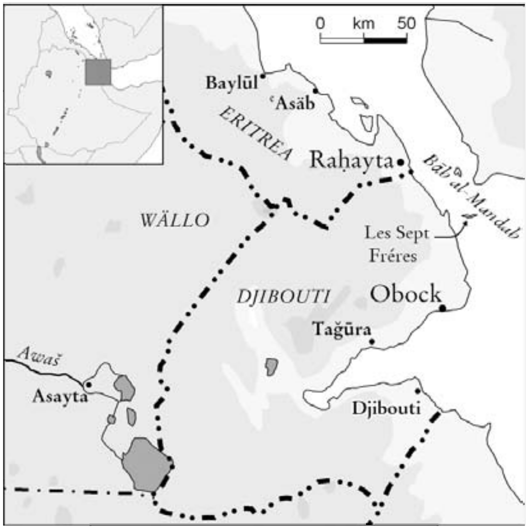
Paul T.W. Baxter

Obock

O. is a small city and port in the Republic of ↗Djibouti. It owes its existence to French colonialism. In the 1860s ↗France developed a vivid interest in the western shores of the ↗Bāb al-Mandab, which controls the passage from the Red Sea to the Indian Ocean and is therefore of primary strategic importance. This was especially the case after the opening of the Suez canal in 1869. In fact, the government of Napoléon III decided to counterbalance the influence of the British in the region, who had been present in Aden since 1839. On 11 May 1862, France concluded a treaty of friendship with the ↗^{c}Afar delegate Dīnī Aḥmad Abūbakr, in the name of the ^{c}Afar sultans of ↗Raḥayta, ↗Tağūra and ↗Goba^{c}ad. This text stipulated that the shores of O., together with the desert lowlands from Ras ^{c}Ali to ↗Ras Dumērá, would be ceded to France, against the payment of 10,000 thalers. From 1862 to 1881 French presence consisted



only of the irregular appearance of French navy ships based in the Indian Ocean; and the only French flag flew on a building guarded by an ᶜAfar.

O. was a seasonal camp of ᶜAfar nomads moving between the Mabla mountains and the coast, and served as a small port for ships coming from the Indian Ocean to the Red Sea and vice versa. In contrast to the neighbouring ᶜAfar settlement of Tağūra, the seat of the sultan of Tağūra, and ancient centre of Islamization and an active commercial port (grain, coffee, leather, ivory, slaves from the Ethiopian hinterland), O. was not a caravan centre and had no role to play in the commerce with the Ethiopian south.

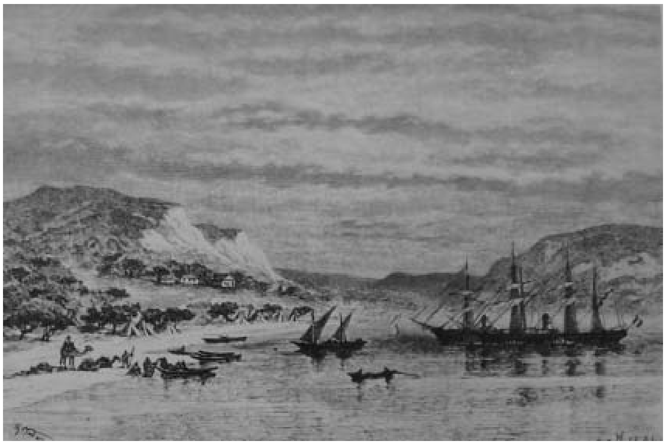
Aerial view on Obock, photo courtesy of the author

Just before the French–Chinese war of 1883–85 and the conquest of Tonkin, France changed its policy radically. The "établissement français d'O." was to become the strategic port of call for the French fleet, important for the ships involved in colonial operations; it also became the port for the economically important Ethiopian kingdom of ↗Šäwa. Starting from 1884, Governor Léonce ↗Lagarde succeeded in making the ᶜAfar sultans of the north and the centre accept French sovereignty, and established diplomatic relations with the south of the Gulf of Tağūra. O. became an administrative centre and a commercial port, with a coal depot. The first urban nucleus, consisting of stone houses on the "plateau des Gazelles", in 1886 consisted of about 2,000 inhabitants (Europeans, ᶜAfar and Yemenites, who built the first mosques).

From 1884 to 1896, O. was the short-lived capital of the new French colony, before being replaced by Djibouti, capital of the Côte française des Somalis, which became the new centre of commerce and established itself as the new main port, with the new ↗railway.

In 1896, within a few months, O. lost its administrative functions (even the prison, opened in 1888, was closed, and also the Catholic mission) and a great part of its population: from 9,000 inhabitants in 1894, it was reduced to 800 in 1902. O. then lost its vitality, but later became, from 1930, a modest administrative centre of the "subdivision d'Obock", belonging to the "cercle de Tadjourah" (Tağūra). The establishment of a garrison, charged with surveying the borders of the French territory, somehow re-stimulated O.'s development: in 1946 there were 4,106 inhabitants (4,042 ᶜAfar, 58 Arabs, 6 Somalis). After the independance of the state of Djibouti in 1977, O. became the capital of a district, with the residence of a commissaire de la République.

With little infrastructure linking it with the semi-desert hinterland, this port is characterized by its heat. There are no agricultural resources or minerals and, seen from the capital, it is too remote. It is more easily accessible by sea than by land and lives only from its military and administrative functions. In addition, there are school and sanitary services used by ᶜAfar nomads. There are few initiatives to modernize O. and the surrounding district or improve its industry – virtually inexistant – or infrastructure, although the former Premier ministre, Aḥmad Dīnī Aḥmad, an ᶜAfar, established a stone quarry there. Their politically marginalized posi-



The French coaling station of Obock in a 19th-cent. depiction; from Reclus 1885: 325

tion within the country under President Hassan Gouled Aptidon encouraged many ʿAfar of the district of O., to participate in the armed rebellion which started in November 1991.

O. was then attacked by the Front pour la restauration de l'Unité et de la Démocratie (FRUD), an action followed by the bombardment of O. by the national army. During the civil war, which ended in 1994, O. was virtually emptied. The civilian refugees from O. established themselves at Balbala, a suburb of Djibouti. After the 1994-peace treaty between the FRUD and the government and following a new policy of decentralization, the government invested in O., the "martyr city", which had suffered greatly from the destruction of its buildings, infrastructure, depopulation and land mines. There are also new activities such as fishing, alongside traditional ones such as animal husbandry. An alphabetization campaign has started, and in 2001 the sisters of the congregation "Filles de la Présentation de Marie au temple" reopened the social centre (from 1971 to 1991 looked after by the Franciscans) and work as nurses at the state-run clinic.

At present, O. has 6,000–8,000 inhabitants and is starting to attract investors, especially due to its touristic potential, e.g. the hot springs, several historical sites (such as Lagarde's house) and the proximity to the Sept Frères Islands, one of the most attractive submarine sites of the world. The establishment of an American base in 2002 re-stimulated the old role of O. as a strategic location near the Bāb al-Mandab and Yemen.

Oborra ↗Qottu

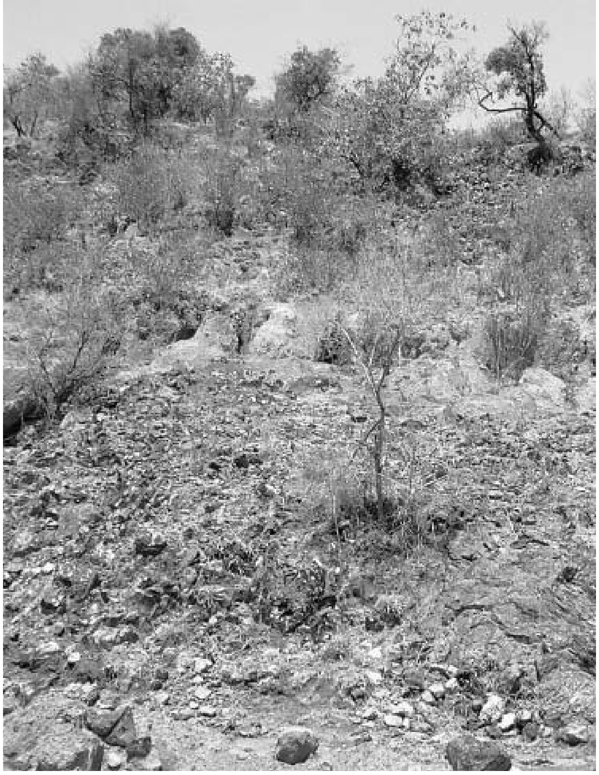
Obsidian

O. is an extrusive volcanic rock that cools down immediately after its eruption so that there is little time for crystallization to take place; although it is not unusual to find porphyritic O. containing feldspar and/or quartz phenocrysts. It has a high silica content (generally higher than 65 wt %). It is glassy and lustrous in texture (hence the term "volcanic glass"), and has typical conchoidal fracture characteristics. Its color is generally black and/or dark green/gray although depending on impurities a number of different shades are possible. Ethiopia provides a unique opportunity for O. investigations because of its ample geological and archaeological O., the latter spanning from the Early Stone Age (ESA) to very recent times.

O. is found along the many silicic volcanic centres in the Ethiopian Rift System in the form of massive felsic lava flows, domes, lapilli, boulders and gravels, some containing vesicles (often filled with secondary materials) or showing lamination of lava flow. O. sources currently known in Ethiopia generally range in age from the Miocene to the Holocene, and hence indicating their availability for utilization by successive prehistoric populations.

Because of its conchoidal properties that allow the production of predictable and sharp-edged flakes O. is an excellent raw material for stone tool production. The earliest evidence for the use of O. in Ethiopian prehistory is from the ESA site of ↗Mälka Qunṭure, some 50 km south-west of Addis Abäba, where O. artifacts are found in abundance. Acheulian tools are also found at the site of Gadäb in south-eastern Ethiopia but its use elsewhere in Ethiopia seems to have been widespread during the Middle Stone Age (MSA). The MSA localities of Mälka Qunṭure, the sites of Gademota and Qulquleti near Lake ↗Zʷay, and the site of Kone in central Ethiopia all contain MSA artifacts made almost entirely of O. It also continued to be used through Late Stone Age (LSA) and into the Neolithic. It is still used as a hide scraping implement in the ethnographic present in some parts of Ethiopia, although this is fast diminishing as a result of competition from manufactured implements.

O. is also an ideal raw material for tracing its movement an archaeological site back to its source due to, with few exceptions, its specific chemical composition with every eruption. O. geochemical studies have been used to address a number of archaeological issues in many parts of the world providing evidence, among others, for long distance ↗trade, contacts, and resource utilization. Long distance transport of raw material is considered by many prehistorians as one criterion for determining the emergence and development of modern behaviour. The importance of O. trade was already mentioned in ancient literary sources. For example, it is well known in the ↗Periplus of the Erythraean Sea (cp., Casson 1989, § 5, 109). O. use in the Pre-Aksumite and Aksumite cultures is attested as well (Michels 2005).



Obsidian flow in Alutocentral Ethiopia, between Lake Zʷay and Lake Langano; photo 2005, courtesy of the author

A number of O. sourcing methods exist. “Colour/visual provenancing”, refractive index, magnetism, etc., have occasionally been used for tracing the origins of archaeological O. but these have drawbacks particularly in Ethiopia where there are abundant geological and archaeological O. A better and more effective means of provenancing archaeological artifacts is using chemical or compositional analytical methods. Choice of instruments for compositional analysis depends on the questions asked as well as the availability, accuracy, rapid evaluation of data, and cost effectiveness of the instruments.

O. can be and has been dated with Fission Track, K/Ar and Ar/Ar in a number of places in Ethiopia and these dating methods are useful for determining the time of eruption, i.e., the age of the volcanic rock. Some investigators have also directly dated O. artifacts to determine the time of tool manufacture. This method, called O. hydration dating, is dependent on the total absorbed water content of a freshly exposed edge (hydration rind) of the artifact, although many factors (e.g., differences in relative humidity, temperature, the chemical composition) affect the usefulness of this technique.

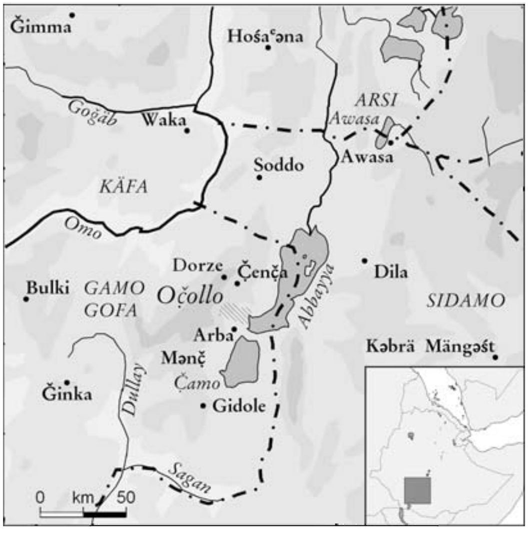
Oč̣ollo

O. is one of 55 ↗Gamo *dere* or local societies located north of the town of ↗Arba Mənč̣ on the western side of Lake ↗Abbayya. They border the ↗Dorze in the north and the ↗Č̣enč̣a *dere* (Ummo and Šaye) in the north-east.

The primary of the O. home is the mountain settlement where their *so* (main houses) with their centre-posts and the hearths of each lineage are located. The O. also own rich lowland fields stretching down to the rivers Baso (Šay) and Harre and to Lake Abbayya, where they have their *moṣa* (secondary homes). The lowland areas provide agricultural products for the highland centre. The main O. sub-sections are Zuza, Qeha, Guč̣a and Doma in the highlands, Lante, Čalba, Dorga and Čano in the lowlands. Other Gamo respect O. for their ability to cope with the conditions of the lowland areas.

Major social events and rituals take place in the main settlement where the *so*-houses are. Seniors of every lineage (*kao*) conduct rituals from their highland homes or sacred places that also serve as assembly venues for meetings, ↗feasts or ↗funeral dances. The most important of the 22 O. sacred places is Muta. O. are the only Eastern Gamo to dwell in and around sacred places (similarly to the ↗Konso and ↗Guǧǧi).

In the late 1890s the O. fiercely resisted the conquering army of *aṣe* ↗Mənilək II, even after the other Gamo had surrendered. The messengers sent to mediate compared the Gamo with a clay cooking pot, with O. forming the pot's bottom: a crack on the bottom will not hold water but will extinguish the fire. O. agreed to reunite with the other Gamo.



After ↗World War II, much of the O. lowland was appropriated by the government. The O. protested in a big demonstration in Addis Abäba in the late 1960s. *Aṣe* ↗Ḫaylä Śəllase I was deposed before the land issue could be resolved. When the O. later refused to join agricultural co-operatives they were persecuted by the *Därg* (↗Provisional Military Administrative Council), and more land was expropriated.

Recently, state and religious structures have made their way into O. life, interpreting the land problem as a consequence of allegiance to tradition rather than as a result of deliberate human appropriation. Various religious denominations are seeking influence in the region while state development models are trying to eliminate tradition. Many O. have been converted to ↗Protestantism by the ↗Sudan Interior Mission.

O. people continue to play a leading role in local trade, agriculture, cotton-weaving, and nowadays also fruit cultivation (bananas, mangoes, avocados).

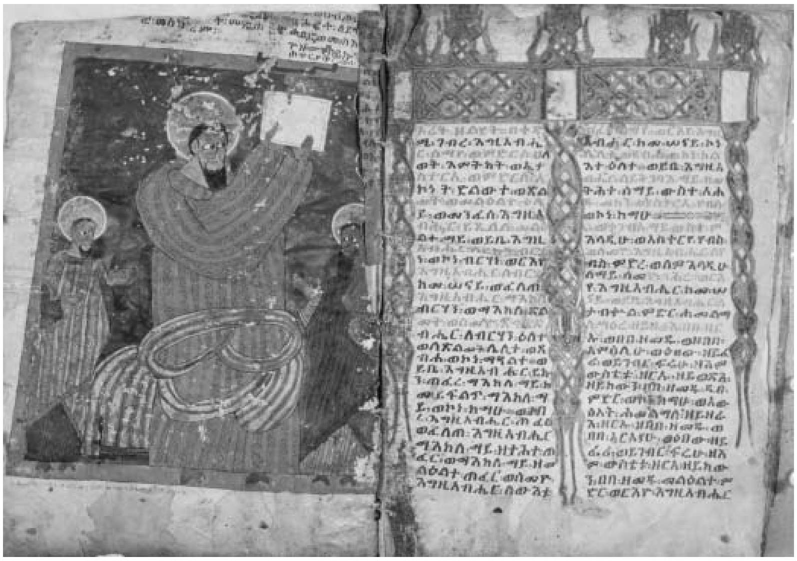
Octateuch

The Ethiopian O. (ኦሪት, *Orit*, 'Law', originally a loanword from Jewish Aram. *ʾôraytā*, 'Law [of Moses], Pentateuch'; s. Polotsky in PICES 2, 5 = 1971: 12) comprises the first five books of the ↗Old Testament as well as the subsequent books of Joshua, Judges, and Ruth. Authoritative Church law texts – such as the ↗*Senodos*, in which the Ethiopian Biblical canon is stated – have these



Moses, with Joshua and Aaron, receiving the Tablets of the Law, and the beginning of Genesis; front page of an Octateuch manuscript, Pistoia, Biblioteca Forteguerriana, ms. Martini etiop. 5 (1437/38), fols. 5v–6r (before restoration); photo by G. Marcone; courtesy of Gianfranco Fiaccadori

“three books” forming a fixed combination with the Pentateuch. This combination is known as the “Book of Law” (s., e.g., the 2nd recension of the ↗*Abṭəlis* and the *Mäṣḥafä* ↗*Bərhan*). Accordingly, each book is named “Orit (of) Genesis”, “Orit (of) Exodus”, etc.

The O. arrangement seems to be quite old, as Greek and Latin sources from the 4th/5th cent. onward refer to the first eight books of the Bible as “(Book of) Law” (Fiaccadori 1994: 84–87, 100ff.); in Ethiopia, it is likely that it dates back to Aksumite times and, thereby, to Greek prototypes of the early Byzantine period (ibid.).

The eight-book arrangement is also mentioned as being traditional in the ↗*Andəmta* commentaries, where it is explained in symbolic terms (Cowley 1974: 136f.). Nor did Ethiopic ↗Bible manuscripts ever include only parts of the O., but always the whole of it, even though sometimes they are copied in two volumes (5 + 3 books).

The earliest known O. testimony dates to the 14th–15th cent.: Paris BN, Aeth. 3, *olim* éth. 102; Abbadie 22; Oxford, Bodleian Library, BFBS 169 = Eth. 1; *Mäṣḥafä* ↗*ṭefut* of ↗Amba Gəšän Maryam; a ms. from the church of Krəstos Sämra, near Efrata, on the western shore of Lake Ṭana; ms. from ↗Däbrä Maryam Qʷäḥayn; Pistoia, Biblioteca Forteguerriana, Martini etiop. 5, *olim* 2. Other important mss. are BritLib Orient 481, copied from the *Mäṣḥafä ṭefut* (16th–17th cent.); EMML no. 510; Berlin Ms. or. 152.

O. volumes often show one or more illuminations: Moses (with Aaron and Joshua or the archangel Mikaʾel) and, respectively, a cycle of O.T. figures, both ultimately deriving from lost Aksumite exemplars depending in turn, like the text, upon early Byzantine models – here, probably, of Palestinian origin (e.g., mss. Martini etiop. 5; Amba Gəšän Maryam *Mäṣḥafä ṭefut* with its copy, BritLib Orient. 481).

Odaa ↗Sycamore

Odorizzi, Dante

O. (b. 14 November 1867, Mantua, d. 7 November 1917, Mersa Fatma Heri) was an Italian colonial officer. In February 1892, he joined the Army administration with the rank of an accountant Second Lieutenant in Colonia ↗Eritrea. With the end of the military administration, he took over civilian duties in the colony. Considered by governor Ferdinando ↗Martini as one of his most able aides, O. carried out important duties. He undertook field research on the geography, traditions and languages of the peoples of the colony. In 1899, he was sent to ↗Asaorta to study land-related issues and later was despatched on a mission to the ↗Ḥabab.

After a short stay in Italy, O. returned to Eritrea as a Lieutenant. In 1901, he was colonial deputy (*residente*) in ↗Naq̱fa. From March 1903 to January 1904, he was the Italian consul in Mocha and, in 1906, participated in the Italian delegation to *aṣe* ↗Mənilək II headed by Martini. From 1907 to 1908, he was vice-deputy and regional deputy (*commissario regionale*) at ↗Massawa and then deputy in southern Dankalia (↗Dänkäl; ↗ᶜAfar). In 1916, he left the colonial administration but stayed in Eritrea working for the private firms Gandolfi and Compagnia per lo sfruttamento dei sali potassici in Dallol (*Piano del Sale*, ↗Salt). During this last period he committed suicide. He was among the founding members of the ↗Istituto Coloniale Italiano.

Giancarlo Stella

Ogaden

The term O. (Somali sp.: Ogaadeen) denotes two distinct concepts: (1) territorial O., which is part of Ethiopia's Somali-speaking eastern region, and (2) the O. clan, a major Somali clan in the area that belongs to the ↗Daarood confederacy.

Territorial O., covering ca. 240,000 km^2, consists of the vast arid flat bush lands sloping down from the Ethiopian plateau of ↗Harärge province and extending to colonial ↗Italian Somaliland (today's southern Somalia) and to former ↗British Somaliland (today's Somaliland Republic). The territory is inhabited by an assortment of Somali pastoralists who eke out a precarious living, herding camels, cattle and flocks of sheep and goats. This is a harsh land without sufficient water or rainfall, though it does have pockets of well-watered places such as the Maraar plains near ↗Ǧiǧiga, and the lower ↗Wabi Šäbälle valley. The only significant settlements in the area are those of the towns of Ǧiǧiga and Ḍagaḥbuur (↗Dägah Bur) east of the city of ↗Harär, and Goday and Qällafo on the lower reaches of the Šäbälle. The Šäbälle stream traverses the O. while the Juba (↗Ganaalee), a much bigger river system, circles around its south western rim.

O. as a clan name is something of a misnomer because dozens of non-O. clans also inhabit the region. Nevertheless, the O. constitute the single largest clan in the area, their members occupying areas to the west as far as the Northern Province of Kenya, to the south as far as Somalia, and into parts of the Somaliland Republic. Their place in the Daarood clan confederacy is defined through traditional genealogical accounts, according to which O. was (together with the brothers Wayteen, Baalᵓad and Gidwaaq) the son of Absame, son of Kablalah of the Daarood.

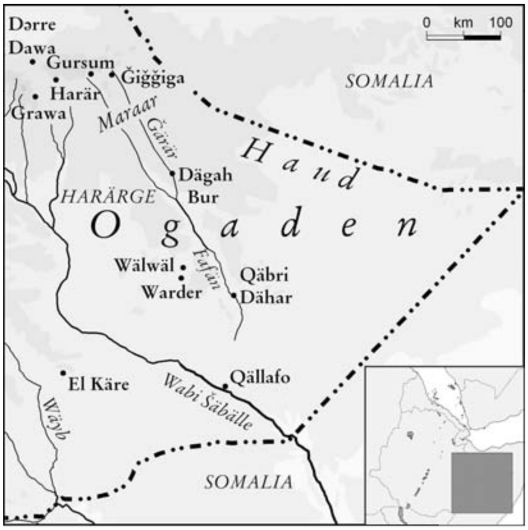
The O. region, and particularly the part known as the Haud, has played a prominent role in

Ethiopian history. In the 13th and early 14th cent., O. belonged to the Islamic ↗Ifat sultanate, and from the late 14th cent. to ↗^{c}Adal. The latter was largely independent from the central Christian Ethiopian power until, in the late 19th cent., *aṣe* ↗Mənilək II conquered Harär and solidified his occupation of O. by the treaties of 1897 and border agreements (↗Boundaries) with the ↗United Kingdom (British Somaliland) and ↗Italy (Italian Somaliland).

Ləǧ ↗Iyasu sought the support of the O. population, and appointed a local Somali, ^{c}Abdallāh Ṣādiq, as regional governor (BZHist 125). This, as well as Iyasu's alliance with the ↗Ottoman Empire and his support of Somali anti-colonial resistance by trading arms with *sayyid* ↗Muḥammad ^{c}Abdallāh Ḥasan through the O. to British Somaliland during ↗World War I, were certainly among the factors that accelerated his deposition.

In the following years, the O. was contended between Ethiopia on the one side and the colonial powers on the other. The struggle culminated in the incident of ↗Wälwäl of 5 December 1934, which led to the ↗Italian war of 1935–36 and the establishment of ↗Africa Orientale Italiana, bringing O. under Italian control. Several important battles of the war were fought in O. E.g., on 6–23 January 1936, Rodolfo ↗Graziani, the Commander of the Southern Front (Somalia), defeated the army of *ras* ↗Dästa Damṭäw in O.; and on 14–30 April 1936, he deployed forces into the O. and occupied Ḍagaḥbuur. After the Liberation of 1941, the British regained control of the O., which was duly returned to Ethiopia in 1948–49 (s. the sub-article on the Haud and Reserved Area for more details on the events between 1887 and 1948 below).

When British and Italian Somaliland merged into the unitary independent state of the Somali Republic in 1960, the dispute over the O. boiled over again. Shortly thereafter the Western Somali Liberation Front (WSLF) was formed which, with Somali military and logistical support, began to harass Ethiopian garrisons in the O. A brief but savage war broke out between Somalia and Ethiopia in 1964. Then in 1977 WSLF forces backed by Somali regular troops took over the entire O. region, but in early 1978 Ethiopia, reinforced by a Cuban expeditionary force and strengthened by a massive infusion of Soviet arms, counterattacked and ejected the Somali army along with the WSLF guerrillas, precipitating a mass flight of refugees estimated at 900,000 inhabitants of O. into Somalia. This massive human displacement overburdened the meagre resources of the Somali Republic to breaking point. It is partly this refugee crisis that directly led to the collapse of the state itself in 1991.



At present, with Ethiopian troops occupying southern Somalia, in response to the express appeal of the Transitional Federal Government (TFG) of Somalia in order to put down the Islamic Courts Union, a new anti-Ethiopian resistance movement has sprung up in the O. The Ogaden National Liberation Front is now engaged in persistent operations against Ethiopian security forces.

With oil and natural gas rumoured to be present in the O. in commercial quantities, the region's troubles are far from over.

Haud and Reserved Area

The Haud (also: Hawd, Som. ‘bush’) is a strip of land of approximately 65,000 km² which stretches from north-eastern Somalia to Ethiopia’s ↗Harär province. It is one of the main grazing areas used by Somali herders. This, and its geographical position, made the Haud a highly disputed area.

The part of the region belonging to the O. area was first brought under Ethiopian control by *aṣe* ↗Mənilək II in the course of his conquest of Harärge in the late 19th cent. After the Emperor’s victory over the Italians at ↗ᶜAdwa in 1896, the ↗United Kingdom, which depended on Ethiopia’s goodwill concerning the ↗Mahdi threat from the Sudan, offered large parts of Somaliland’s main grazing area to Ethiopia. The Anglo-Ethiopian border agreement of 1897 (↗Boundaries) placed large parts of the Haud under Ethiopian administration.

The border was ill-defined, and in 1934 a new Anglo-Ethiopian commission came together in an attempt to demarcate the boundary. However, subsequent events failed to resolve the dispute. In October 1934, Colonel Clifford, head of the British section of the boundary commission, failed to honour an Italian demand that he could not draw water at ↗Wälwäl. On 23 November 1934, Clifford also objected to Italian restrictions on his movement in the Wälwäl region which contained more than 1,000 water wells.

Two days later, Clifford and his party withdrew to Ado, 29 km away, to avoid a confrontation with the Italians. On 5 December 1934, a shooting incident at a watering hole at Wälwäl resulted in a short but fierce battle between Italian and Ethiopian forces. The incident gave Italy a pretext to invade Ethiopia, leading to the creation of ↗Africa Orientale Italiana, which from then on included the Haud region, and the entire O.

Following Britain’s conquest of Africa Orientale Italiana, London sought to unify the O. with ↗British Somaliland and the former ↗Italian Somaliland in the hope of establishing a Greater Somalia, which many local inhabitants supported. In 1945, Britain, Ethiopia, and the ↗United States attended the ↗London Conference of Allied Powers, in which Britain sought to gain possession of the O. and Eritrea. The Conference produced no result. ↗Ḫaylä Śəllase’s adroit diplomatic lobbying of the United States (to which he had just awarded a military base in newly federated Eritrea, ↗Qäññäw), coupled with Soviet Russia’s suspicion of British designs in the area, forced Britain to abandon its policy of seeking to establish control of these regions, and return the O. to Ethiopia in 1948-49.

The Haud and a corridor called the Reserved Area stretching from the Haud to French Somaliland (now ↗Djibouti) remained under British control until 1954. That year, a new Anglo-Ethiopian agreement reaffirmed the one of 1897 and confirmed British removal from the Haud and the Reserved Area. Provision was made for Somali herders to cross the border to use the grazing grounds. However, implementation of this has been frequently hindered by the ongoing Ethio-Somali disputes.

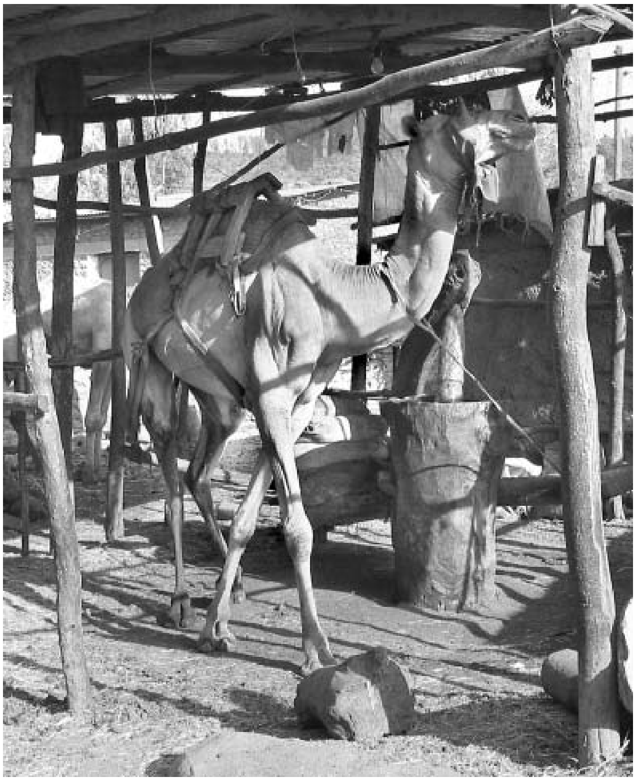
Thomas P. Ofcansky

Oil

O. (Gəᶜəz, Amh.: ዘይት, *zäyt*; Tgn. ዘይቲ, *zäyti*, etc.) of one kind or another seems to have been used in Ethiopia, for either consumption or ritual purposes, since early times. Thus, according to the *Periplus of the Erythraean Sea* articles imported through the Red Sea and the Gulf of Aden around the 1st cent. A.D., included sesame O. as well as “unripe olives”. Alvares in the 16th cent., and Almeida in the 17th cent., both told of the cultivation in the Ethiopian highlands of the oilseed ↗nug (*Guizotia olifera* or *abyssinica*).

According to Almeida, although primarily used in cooking, O. such as linseed O., was also used in ↗painting (BeckHuntAlm 46), and on one recorded occasion, was utilized by the 18th-cent. *aṣe* ↗Bäkaffa for the caulking of an experimental boat on Lake Ṭana (GuiIohan 338 [tr.]). The prevalence of sesame oilseeds was reported by the early 16th-cent. Ludovico di Varthema, who saw a “great quantity” of them at Zaylaᶜ (tr. Badger 1863:86), while the 19th-cent. traveller von Heuglin (1874:58) mentioned the import at Massawa of O. of cloves. The advent of the Italians in Eritrea subsequently led to sizable imports of olive-O. from Italy, largely through the ports of Massawa and ᶜAsäb, as well as other O. from India (PankEcon 379, 381, 387f.).

Oilseeds were particularly important during ↗Lent and other periods of ↗fasting when Christians abstained from meat products, including ↗milk products which were substituted by O. (ChTana 206). During the fasting period most Ethiopian stews contained edible O. Besides **ኑግ** (*nug*) the principal oilseeds consumed in Ethiopia comprised **ሱፍ** (*suf*, 'safflower' or *Carthamus tinctorus*); **ሰሊጥ** (*säliṭ*, 'sesame' or *Sesamum indicum*), also used in preparing the pan for the making of *ənğära*; **ተልባ** (*tälba*, 'linseed, flax' or *Linum usitatissimum*); **ጎመን፡ ዘር** (*gommän zär*, 'long-stalked cabbage' or *Brassica integrifolia*); and, a more recent innovation, **የፈረንጅ፡ ሱፍ** (*yäfäränğ suf* or *suf*, 'sunflower' or *Helianthus annuus*). Two of the above, *säliṭ* and *tälba*, were both widely used in traditional medicine. The oilseed **ጉሎ** (*gulo*, 'castor', *Ricinus communis*), served primarily for softening hides. O. was also used in oil-lamps.



Camel-drawn oil mill in Aksum, Təgray; photo 2005, courtesy of Jan Tromp

O. likewise had considerable ritual importance. The ↗Coronation ceremony, that of the ↗Matrymony and the ↗Unction of the Sick included anointing; and holy O. was also used in exorcising ↗spirit possession and in the First Catechesis of Christian initiation or ↗Baptism (s. EAE 1, 469b), as well as in a variety of consecrations and blessings of persons and things. The ointment should have been **ቅብዐ፡ ሜሮን** (*qəb^{c}a* ↗*meron* [s. EAE vol. 5]), or chrism, brought, like the metropolitan (cp. ↗*P̣ap̣p̣as*), from Coptic Egypt. This import, described in the *Mäṣḥafä meron*, was subsequently so difficult to procure that it fell into disuse (cp. BudHist vol. 1, 157). Import of O. from Egypt was, however, later resumed.

Old Testament

The clear separation of the Ethiopic ↗Bible into the O.T. (Gə^{c}əz **ብሉይ፡ ኪዳን**, *Bəluy kidan*) and the ↗New Testament is among the few unchanging features in all known Bible manuscripts and editions of the ↗Ethiopian Orthodox (Täwaḥədo) Church. The O.T. is the same for Christians and the ↗Betä Ǝsraʾel, and plays a central role in Ethiopian traditional culture.

The canon of the Ethiopic O.T. developed throughout the centuries (↗Bible canon, but cp. Bausi 1990: 46–51 and 72f.). The O.T. canon as it is known today is listed in the ↗*Fətḥa nägäśt* that is regarded as basic for issues concerned with canon ↗law; it is also found in the 17th-cent. *Gädlä Märqorewos* (cp. also the canons of the ↗*Senodos*). Apart from the books of the Septuagint [hereafter: LXX] it contains a number of texts considered apocryphal or pseudepigraphic by other churches. The number of books in the Ethiopian O.T. is usually 46 [47], though it can be reached in different ways (s. Brandt 2000: 89ff.).

The O.T. includes the eight Books of the ↗Octateuch; the ↗Historical books that, apart from the books present in the LXX usually include the Ethiopic Book of the ↗Maccabees and omit 1–2 Mac of the LXX; the ↗Wisdom Books of Solomon; the ↗Psalter; the Books of the ↗Prophets; the Book of Sirach and, with varying frequency, a number of apocalypses and ↗pseudoepigrapha absent in the LXX, such as the Apocryphal Book of Ezra, Apocalypse of ↗Ezra, the Book of ↗Baruch, the Book of ↗Jubilees, the Book of ↗Enoch, and the Ascension of ↗Isaiah. The Yosippon (↗*Zena Ayhud*), sometimes replacing the Book of Maccabees (as 5 Mac) in the canon of Oriental churches, is seldom part of the Gəᶜəz Bible tradition.

The O.T. books were translated into Gəᶜəz from the Greek LXX during the 4th–6th cent. A.D. Some ↗inscriptions contain quotations from Ps as well as other O.T. (and N.T.) books. The broad range of quoted texts suggests that the entire Bible had been translated into Gəᶜəz before RIÉ nos. 191, 192 and 195 were composed (Schneider in RIÉ, s. Beaucamp et al. 1999–2000: 39 n. 98).

From the 12th cent. on, Arabic (within the Copto-Arabic tradition, but also Syro-Arabic texts) Bible versions have influenced the Ethiopic text (↗Bible *Vorlage*). The oldest known manuscripts go back to the 13th–14th cent. (s., e.g., ms. VatLib Borg. aeth. 3, BN Paris Éth. 7, cp. UhPal 105ff., 139f.).

The development of the Gəᶜəz O.T. (parallel to that of the N.T.) can be summarized as follows: (1) translation of the texts from Greek during the 4th–6th cent.; (2) crystallization of the ancient Ethiopic version (= Versio Antiqua, or *Altäthiope*, which has the 12th cent. as its *terminus ante quem* and early 14th cent. as the *terminus post quem*); (3) further revision of the O.T. after the Arabic text, possibly upon the installation of the ↗Solomonic dynasty (= "Vulgar" recension); (4) revision according to the Hebrew text, as shown by Hebrew quotations transcribed with Ethiopic characters, e.g., in Neh 3:7 (= "Academic", or "Hebrew" recension), which took place possibly parallelly with (5) another revision during the literary heyday of the 16th–17th cent. resulting in the emergence of the standard text that has remained largely unchanged since the 18th cent. (↗Bible: biblical text criticism).

Whereas the pre-critical O.T. editions started with ↗Potken in the 16th cent., it was not until ↗Dillmann in the mid-19th cent. that the scholars turned their attention to critical editions of the O.T. texts (↗Bible: Gəᶜəz Bible editions). So far the Pentateuch, Josh, Judg, Ruth, 1–2 Kings, 1–2 Chr, Neh, Ezra, Esth, Song, Is, Jer and Lam have been edited, with a varying degree of critical approach, as well as all the deuterocanonical texts. Most editions were made on the basis of very few manuscripts. A new critical edition of O.T. texts appears desirable.

The O.T. plays an outstanding role in Ethiopian society, as is already shown by the quotations in the Aksumite inscriptions. The national epic novel ↗*Kəbrä nägäśt* draws a lot (maybe via intermediate sources) from 1 Kings 10:1–13. Besides, other elements constitutive of Ethiopian culture can be found in the O.T., such as the ↗Ark of the Covenant (Ex 25:10–22, 37:1–9, Deut 10:8; cp. also ↗*tabot*); the three-part structure of ↗church buildings resembling the tabernacle (Ex 25–27) and the Temple of ↗Jerusalem (1 Kings 6–8, 2 Chron 2–6); male ↗circumcision on the 8th day (in accordance with Gen 17:10–13, 21:4; Lev 12:3); ↗baptism on the 40th day for boys, 80th day for girls (in accordance with the defined period of impurity of the woman in childbed, 7 + 33 days – 4 + 76 days, as in Lev 12:2–6); the observance of the Saturday-↗Sabbath (which goes back to the N.T. in its practical shaping but is O.T. in spirit, cp. Hammerschmidt 1963: 25ff.); the observance of dietary rules (s. Lev 11; though also known in pre-Christian society, differentiating between pure and impure animals, slaughter rules and the ↗taboo on drinking ↗blood have, in practice, their roots in O.T. regulations); ritual ↗purity rules governing everyday life (defined in Lev 15:19–31 etc.; similar rules exist in other cultures but the close relationship to the Mosaic law cannot be denied); the church dime ↗*ᶜaśrat* is explicitly said to correspond to the O.T. practice of giving one tenth of one's income to God (e.g. Lev 27:30–33); hymnody (↗Hymns) and church ↗music have since earliest times (↗Yared) depended for their structure, form and instrumentalization upon O.T. examples. Besides, Ethiopians see the O.T. as the source of other traditions such as the Council of Elders and the Practice of the Vow.

The Ethiopian historiographers saw the history of the Solomonic dynasty as a sort of continuation of that of the Israelite kings, and the chronicles (the term itself borrowed from the Historical books of the O.T.) abound in biblical allusions (e.g., Barzillai from 2 Sam 17:27–29 in CRHist 33; Nabal from 1 Sam 25 in CRHist 132f., PerChron ch. 25, GuiIohan 298; reference to 1 Kings 4:24–25 in GuiIohan 185, etc.).

Ethiopian traditional theology has produced an ample commentary on the O.T. (↗*Andəmta*; ↗*Tərgʷame*; cp. ↗Bible: Bible commentary traditions) with written testimonies reaching back to the 16th cent. and sources in patristic literature, theological and hagiographic texts adapted by the Ethiopians as well as in genuinely local literary tradition. Some of the commentaries have become literary texts in their own right (such as, e.g., the *Mäṣḥafä ṣ́äḥay*, s. Marrassini 1987:76). The commentaries contributed greatly to grounding the O.T. in culture and society.

Siegbert Uhlig

ᶜOliqa Dəngəl

ᶜO.D. (ዖሊቃ፡ ድንግል, Oromo sp.: Oliiqaa Dingiluu; b. ca. 1900, Lalo Gare Denta, Qälləm *awrağğa*, d. 1941, Addi Butta Aläku) was one of the most famous ↗Oromo patriots to fight against the Italian colonial occupation forces in Ethiopia from 1936 to 1941 (↗Resistance). He was the son of a peasant, *ato* Hirpa Heffo Dagago of Wälläga.

At the height of his guerrilla activities, ᶜO.D. commanded a significant and well-armed insurgent force. His main arms suppliers were Dännäqä Täklä Wäld, Fäyissa Ararso and the brothers Elyas and Milkəyas Amäya. They commuted through ↗Kurmuk and Hursa to Khartoum to bring firearms from Major Corfield, former British District Commissioner of Southern Sudan and later Governor of Kharthoum. Even after the capture and death of the suppliers (Fäyissa Ararso was doused with gasoline and torched alive while the others were poisoned and killed), ᶜO.D. continued his struggle.

ᶜO.D.’s activities concentrated on the Sayyoo district (next to the road to ↗Dambi Dolloo), strategically important for its proximity to the Anglo-Egyptian Sudan. The Italian garrison in the area was guarding such key locations as the entrance to the British-controlled river port of ↗Gambella; the town of ↗Gidaamii, a gateway to Ǧootee Wärq and the gold mines of Beni Šangul and the rich coffee-producing district of ↗Anfillo. ᶜO.D. collected information, sometimes entering the enemy territories disguised as an Orthodox priest or a Muslim *šayḫ*, and then ambushed the Italian military units.

Afraid of ᶜO.D.’s strength, the Italians tried to win him over and offered him the governorship of Western Wälläga. When he declined, they promised 100,000 lira to anybody who would bring them ᶜO.D. dead or alive. ᶜO.D. was subsequently poisoned by one of his close aides, a certain Wädağo, only three months before the ↗Liberation. A photograph of the dead body was then sent to ↗Mussolini, with a letter informing the *Duce* that they had ultimately succeeded in crushing one of his fiercest foes in southern Ethiopia. Wädağo was later assassinated by Oromo resistance fighters.

A school in Dambi Dolloo has been recently renamed to bear ᶜO.D.’s name.

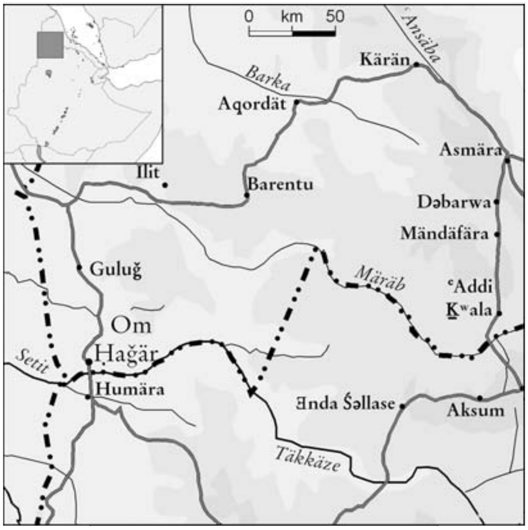
Paulos Milkias

Om Ḥağär

O.Ḥ. (ኦም፡ ሓጀር, also Umm Ḥağar, Om Ḥağer, 599 m A.S.L., 14° 20' N, 36° 39' E) is an Eritrean town close to the border with Ethiopia and near the border with the Sudan, adjacent to the Ethiopian town of ↗Ḥumära. It lies on the Ḵor Om Ḥağär (Ḫūawr Umm Ḥağar), a dry river bed belonging to the ↗Setit river system. A road connects O.Ḥ. with Ḥumära and Eritrean Guluğ. In the period of colonization O.Ḥ. became a small administrative centre and developed into a major border town and trading centre, with a few agricultural projects in the surrounding area. Before the independence of Eritrea, it was the centre of the *wäräda* O.Ḥ. and is now a sub-capital in the *zoba* Gaš-Barka.

The market of O.Ḥ. dates from the period when O.Ḥ. was only a caravan post linking the Ethio–Sudanese border regions with the northern Sudanese and Eritrean ports of ↗Sawākin and ↗Massawa. Because of this position, O.Ḥ. attracted settlers from very diverse origins, among them Təgrəñña speakers from both the Eritrean highlands and Təgray, ↗Hausa and other West Africans (called ↗Tukrir), Təgre, Kunama and others. The majority of the population is Muslim. Many local people are merchants, but also craftsmen and peasants, specialized in ↗oil milling. Before colonization most peasants only came to O.Ḥ. seasonally. Still in the 1970s the population of O.Ḥ. increased seasonally due to migrant workers.

The first time O.Ḥ. acquired political importance was when it served as a point of reference for the Addis Abäba border treaty of 15 May 1902 between Italy, Great Britain and Ethiopia (Hertslett 1967; ↗Treaties). The Ethio–Eritrean border was then established starting from the confluence between the Ḵor Om Ḥağär and the Setit (14° 18' N, 36° 38' E); this new border assured that the ↗Kunama came under ↗Eritrea. During the ↗Italian war 1935–36 there was an Ethiopian army unit called after O.Ḥ., from where many combattants originated, in the *mahəl säfäri* (the Army of the Centre), under the command of *ras* ↗Mulugeta Buli.



In the 1960s the *wäräda* of O.Ḥ. was included in the great “Humera Agricultural Development Project”, set up in a vast region stretching from the River Gärgäf near Guluğ to the south of today’s Western Təgray, the whole area being very fertile and irrigated by various rivers coming from the highlands (cp. Ministry of Agriculture 1973). Modern plantations (sesame, nug, cotton) were then set up around O.Ḥ. They are still important for the economy of Eritrea today.

During the period from 1961 to 1991, O.Ḥ. was repeatedly the scene of measures of repression by the Ethiopian central government, the first one being a massacre in July 1974 (again in 1975). Several thousand fighters of the ↗Eritrean Liberation Front (in the 1980s replaced by the ↗Eritrean People’s Liberation Front) were operating in the hinterland of O.Ḥ. and ↗Täsänäy, as far as ↗Kärän.

O.Ḥ.’s population numbered about 10,000 in the 1990s, but was reduced to ca. 2,000 after the Ethio–Eritrean border war of 1998–2000; many refugees went to the Sudan, but also to Təgray. O.Ḥ. lies within the Temporary Security Zone, which had been overseen by United Nations’ troops until 2008.

Oman

The Sultanate of O. (Ar.: ʿUmān) extends across the entire south-eastern corner of the Arabian Peninsula along the shores of the Indian Ocean and the Gulf of O. (Bosworth – Smith – Holes in EI²). The country is geographically and culturally divided into two distinct areas: the north (the area around the capital Masqaṭ, the Bāṭina coast and the Ḥağar region) inhabited by followers of the Ibāḍī current of ↗Islam (a branch of the early Islamic opposition movement of the Kharijites) and the Šāfiᶜī south (the region of Dhofar, Ar. Ẓafār) covering the Oriental part of the Mahra region, which forms a cultural continuum with the neighbouring Yemen. Known as *Magan* in Sumerian sources, the O. region traded abundant supplies of timber, copper and diorite to Mesopotamia and Elam from the 3rd millennium B.C. onward (Albright 1921, 1922; Hansman 1973; Michailowski 1988).

Since ancient times, O. enjoyed the strategic position of an important crossroads on the long-distance ↗trade routes linking the Mediterranean, via the Strait of Hormuz and the ↗Red Sea, to Indian Ocean areas such as East Africa, India and China. Northern O. coastal towns Ṣuḥār (Sohar, frequently but not unanimously identified with "Omana" mentioned by ↗Pliny the Elder and the ↗*Periplus of the Erythraean Sea* [Casson 1989, index esp. 180ff.; Fiaccadori 1992, xxvii n. 43, 33 and n. 109] and with the *Persikon Emporion* of Theophilus the Indian's mission [Kevran EI^2 but s. Fiaccadori 1992 xxvi–i and n. 43, 6f. and n. 8], subsequently Sasanian province of Māzūn), Masqaṭ (Wilkinson in EI^2) and Qalḥāt (ibid.) were important stations in the Oceanic trade which developed in accordance with the seasonal rhythm of the monsoons. The southern O. region was one of the main areas producing frankincense (↗Incense), with such ports as Ḫawr Rawrī (mentioned in the *Periplus* as "Móscha Limēn", Casson 1989: 170ff. and *passim*, and Avanzini 2008), Ḥāsik ("Asikhôn" in the *Periplus*, Casson 1989: 173, Schleifer in EI^2), Mirbāṭ (Bosworth in EI^2) and Raysūt (the port of ancient Ẓafār, modern Balīd and Ṣalāla: Costa 1979, Smith in EI^2).

Under the direct rule or the indirect control of different Persian dynasties, O. became the target of a large-scale migration of Azd Arabs from the Tihāma and Sarāt through Ǧaᶜlān and Qalḥāt. This migration led to the flight of the Persian component of the local population and the subsequent Arabization of O. which was completed before or immediately after Islam began to spread in the country.

Islamic O. was closely connected to the Horn of Africa (esp. Somalia) and East Africa from the very beginning of its history, when Sulaymān and Saᶜīd b. Abbād al-Ǧulanda fled to the land of the Zanǧ from the army of the notorious al-Ḥaǧǧāǧ b. Yūsuf, who had probably been sent in 705 by *ḫalīfa* ᶜAbdalmalik to invade O. (Kirkman 1983: 41). The presence of immigrants from the O. region and from the area of the Persian Gulf is recorded all along the African coasts of the Indian Ocean. The *Furs* (↗Iran) mentioned in relation to the ↗Dahlak islands may be typical of these waves of immigration (Puglisi 1966; Tedeschi 1966: 51f.). Over time, these ties consolidated even further (Kirkman 1983). According to Benaadiri traditions, many cities of the southern Somali coast (e.g., Warshaykh) were regularly visited by O. merchants (Cerulli 1923). Slaves were part of the goods traded: they were taken from the Swahili coast and sold in O. but also in Somalia (CerSom II, 20 and n. 1). Conversely, groups of Mahrī origin came to settle in the Horn where they intermixed with the local people (Martin 1964). Descendants of immigrants who had arrived in the 18th cent. were still easily recognizable among the ↗Mageerteen in the early 20th cent. (Cerulli 1926). Mahrī fighters were present in the army of *imām* ↗Aḥmad b. Ibrāhīm al-Ġāzī (BassHist I, 97, II, 170f. and n. 2). Noble *ašrāf* families descending from the famous saint Muḥammad Ṣāḥib Mirbāṭ in southern O. are still much revered in Mogadishu (s. EAE vol. 5; Gori 2006: 210f.).

Relations between O. and East Africa were strengthened with Portuguese expansion in the Indian Ocean and the Red Sea (Serjeant 1963), Afonso de ↗Albuquerque seizing Ṣuḥār Qalḥāt and Masqaṭ in 1507. Portuguese rule in O. lasted till the mid-17th cent., when *imām* Sulṭān b. Sayf liberated it, becoming the first of the Yaᶜrubī dynasty. His son *imām* Sayf b. Sulṭān al-Yaᶜrubī (d. 1711) defeated the Portuguese in East Africa, seizing Zanzibar in 1698, Mombasa, Pate, ↗Merka, ↗Brava and Mogadishu (Cerulli 1943: 24). The troops soon had to withdraw back to O., but from then on the *sulṭāns* of Masqaṭ claimed control over the region. The first *sulṭān* of the Būsaᶜīdī dynasty, Aḥmad b. Saᶜīd (d. 1793), placed the main commercial towns of the East African coast (Mombasa, Kilwa, Pemba, Lamu and Zanzibar) under O. government. Saᶜīd b. Sulṭān (d. 1856) put Zanzibar under his direct control and named a governor for Mogadishu. Upon his death, the dynasty split into two: Ṯuwaynī b. Saᶜīd continued to rule in O. while Māǧid b. Saᶜīd settled in Zanzibar and governed the island and other African possessions. Challenged by German and British colonial ambitions in East Africa, the dynasty was forced to make some concessions in Kenya and Tanzania (Declich 2004: 19ff.). ↗Italy also started extending its influence on the Indian Ocean coasts, eventually (1906) buying the Somali ports of Brava, Merka and Mogadishu from the Būsaᶜīdī rulers.

The interest of the O. rulers of Zanzibar in the Horn diminished when their power was drastically limited by the British protectorate (1890–1963). The continuing relationship, however, can be illustrated by the letter of *sayyid* Ḫalīfa b. Ḥārib b. Ṯuwaynī (r. 1911–60) to the Ethiopian emperor (possibly *ləǧ* ↗Iyasu), in which he asked for 20 horses to play polo (al-Muġayyirī 2001: 431).

O. cultural presence is evident in the architecture of Somali coastal towns, e.g., the Garesa of Mogadishu (Catalogo 1934; Monneret de Villard 1934, passim). The presence of Ibāḍīṣ among "Somali immigrants in Eritrea and among Ḥaḍramawtīs" has been mentioned (TrIslam 232, probably after Odorizzi 1911: 123) but seems unlikely unless we surmise that they could be Omanis from the ports of the Somali coast under the rule of the Būsaʿīdī dynasty and from the Arabian Peninsula. ↗Islamic brotherhoods from Somalia spread to Kenya, Tanzania and Zanzibar thanks to the common political and commercial space established and fostered by O. rule in the area (Martin 1969; Samatar 1992). In the late 19th cent. individual O. entrepreneurs settled in Eritrea where they engaged in trade (s. Miran 2009).

The ↗*zar* cult is known in O. where it was probably imported by Ethiopian slaves. A peculiar pl. *zīrān* from sg. *zār* is used in the local O. Arabic dialect (Cerulli in EI^1). Some current research has focused on the forced movement of East Africans to the O. region, where they worked on date plantations, in the pearl industry, or as domestic slaves.

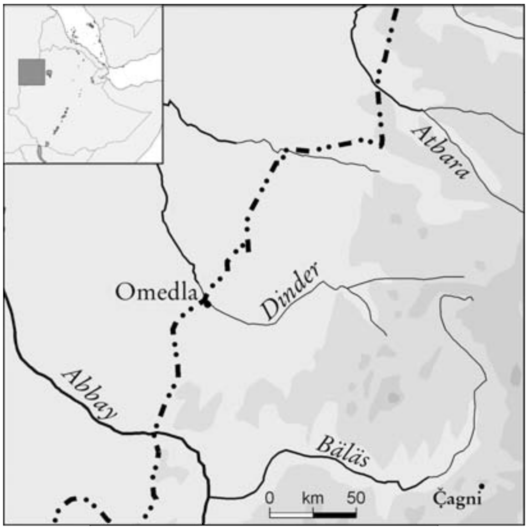
Omedla

O. (**ኦሜድላ**, also Umidla), a small settlement on the Dinder River along the Ethiopian–Sudanese bor-



Ḫaylä Śəllase I raising the Ethiopian flag after his arrival at Omedla; from Seltene Seyoum 1999: 347

der, played a significant role in freeing Ethiopia from Italian aggression and colonial rule. On 20 January 1941, *aṣe* ↗Ḫaylä Śəllase I – accompanied by his sons Crown Prince *märʿəd azmač* ↗Asfa Wäsän Ḫaylä Śəllase and the governor of Harär *ras* ↗Mäkʷännən Ḫaylä Śəllase, several other senior Ethiopian government officials and a bevy of international war correspondents – arrived in O. from Khartoum via Rosaires. He hoisted the Ethiopian flag before a guard of honour and remarked that "death is better than captivity". The following day, the Princes returned to Khartoum, while Ḫaylä Śəllase – supported by two battalions, Mission 101, a mortar platoon, an eight truck convoy, a staff car, and camel transport – departed O. to establish a forward headquarter ca. 240 km east of O. at Mount Bəlaya. On 6 February 1941, after an excruciating march, the beleaguered column finally reached its destination. From Mount Bəlaya, the Emperor directed operations that initially involved dropping leaflets from the air throughout Goǧǧam and Təgray that encouraged all Ethiopians to close ranks against the Italians. Ḫaylä Śəllase also approved a British strategy that involved opening a northern front under Lieutenant-General Will Platt's command and a southern front led by General Alan Cunningham from Kenya. Meanwhile, Ḫaylä Śəllase moved through the Goǧǧam front to Addis Abäba, where he arrived on 5 May 1941 to reclaim his Empire.

In the post-1941 administrative division O. was included in the Qʷara-Omedla *wäräda* of the Č̣əlga *awraǧǧa*.

Thomas P. Ofcansky

Ometo

O. is the collective name of about twelve languages and their dialects which constitute one of the major branches of the ↗Omotic language family (In the following alphabetic list variants reported as dialects are counted once and are separated by a hyphen): ↗Basketo–Dokko–Dolo, ↗Č̣ara, ↗Gamo–↗Dorze–Očollo, ↗Gofa, Harro–Gaṣame–Ganǧule (↗Harro cluster), ↗Koorete, ↗Kullo–Konta (Dawro), ↗Maale, ↗Malo, ↗Oyda, ↗Wälaytta, ↗Zayse–Zargulla–Mäle–Ganta.

The language vs. dialect status of many varieties is controversial and the nomenclature is not always consistent in the literature. Thus, the status of Dokko-Dolo is not clear: Bender (2000: 7) treats it as a dialect of Basketo, while Fleming (in BendNonSLang 300) lists these as distinct languages. Contrary to Lamberti (in EAE vol. 2, 55f., 676ff.), Dač̣e and Gamo are not names of different languages but are alternative names (along with Zeege) for one and the same language, i.e. the North-O. Gamo (not to be confused with Zargulla, whose speakers also call their language Gamo; cf. Freeman in PICES 15). Similarly, Balta, ↗Gäräse, Zala and Gidiččo (sometimes mentioned as language names) are respectively names of places where local varieties of Basketo, Gamo, Wälaytta and Harro are spoken. On the other hand, the varieties Mäle and Ganta (close to Zayse and Zargulla) are hardly mentioned in works on O. due to the fact that they are found in areas widely known as "Gamo-speaking".

The number of speakers and official status of each language vary considerably within the O. group. Wälaytta and Gamo, reported to have the largest number of speakers (ca. 1.7 million and 1.1 million, respectively; CSA 2008: 65, 67), are used in education and administration. O. varieties with the least number of speakers are Č̣ara (ca. 13,000 speakers, ibid. 65), Kačama (i.e., Gaṣame; 2,682) and Ganğule (1,390; the two latter groups are not listed in CSA 2008, the figures are provided after CSA 1996; Hudson 1999: 91).

The most important features that unite O. are a relatively high percentage of cognate grammatical morphemes, shared independent pronouns, numerals and other items of basic lexicon. According to Bender (1988: 133), the average lexical correspondence among O. languages is 58 % whereas that between O. and its next closest kin, ↗Benç̌, is 43 %; shared correspondences are as low as 14 % between O. and the distantly related Eastern Omotic (Aroid) languages (↗Aari, ↗Dime and ↗Hamär).

Most of the numerals correspond within O. and originate from a (now obsolete) quinary system (Zaborski in SegBodLes; Hirut Woldemariam 2008). Thus, Wälaytta *ˀusúppuna*, 'six', derives from *ˀissó*, 'one', and *-ppuna; laáppuna*, 'seven', from *naaˀˀá*, 'two', and *-ppuna*, etc. (for various etymologies proposed for -(*p*)*puna* s. CerStud III, 58; Fleming in BendLang 50; Dolgopolsky 1966: 62 [by Zaborski in SegBodLes 378]; and recently comparison to common O. *ˀappun-*, 'how much?' by Hirut Woldemariam 2008).

Verbal affixes wide-spread among O. languages include: affirmative and imperative negative marked by -*k*(*ay*) and -*Vpp*(*V*) for the affirmative and negative imperative, resp., -*ana* for the future tense. Grammaticalization of the auxiliary verb **d-* 'to be' as a past tense/perfective aspect marker is one of the characteristics of O. (cf. Hayward 1984; Zaborski in PICES 7).

In the nominal category, we find case-marking morphemes, including dative -*s* (absent in Č̣ara) and locative/instrumental -*n*. O. languages (plus Benç̌) have the "Marked Nominative" case system both in nouns and pronouns; all languages use the cognate morpheme -*i* for marking the nominative/subject case but in the North O. languages nominative -*i* is restricted to masc. sg. and pl. whereas fem. nominative is marked by -*a* (Zaborski 1990; Hayward – Tsuge 1998).

Within Omotic, O. belongs to the *Ta/Ne* branch (which includes also Benç̌, ↗Yäm and ↗Gonga/Käfoid languages), so labelled after the form of the 1st and 2nd pers. sg. pronouns (*ta.ani* and *ne.eni*, uniform across O.).

Two major internal classifications of O. have been proposed:

I) On the basis of lexical and grammatical comparison Fleming (in BendLang 47) divides O. into four groups (the language names are quoted here as in the original publication; for their evaluation s. discussion above):

1) North O. or central O.: Welamo [i.e., Wälaytta] (together with Gemu [Gamo], Gofa, Malo, Zala); Kullo-Konta; Dache [Dač̣e], Dorze and Oyda;
2) East O.: Zayse-Zargulla, Koyra [Koorete], Gidicho [Gidiččo] and Kachama [Kačama, i.e. Gaṣame];
3) West O.: Dok(k)o-Dollo, Basketo and tentatively Chara [Č̣ara];
4) South O.: Male.

II) The three-way division of O., first proposed in Cerulli (CerStud III), adopted by Moreno (1940), and supported by Bender (1988, 2000, 2003):

1) North-west O. (NWO), comprising all languages in Fleming's North, West and South O. groups, with the exception of Č̣ara;
2) South-east O. (SEO), same as Fleming's East O.;
3) Č̣ara.

Bender's (1988: 122) classification was "based on mainly lexicon (but including some pronouns and demonstratives)", but reaffirmed in his (2000) morphological comparison of Omotic languages. As a rationale for the sub-division, Bender (2000: 92ff.) mentions seven possible shared innovations, the first three of which are: 1) 3rd pers. pl. pronoun *usu* in SEO and *its+endi* in Č̣ara; 2) the interrogative form *ayna* 'where?' in SEO; 3) lack of -*k* in one of the distal demonstratives in SEO and presence of +*r* in several demonstratives in Č̣ara.

Further remarks on O. classification (Zaborski in PICES 7, 29) are similar to that by Fleming. The position of Č̣ara remains unclear: certain isoglosses relate it to North O., some others to West O. and still others to East O.

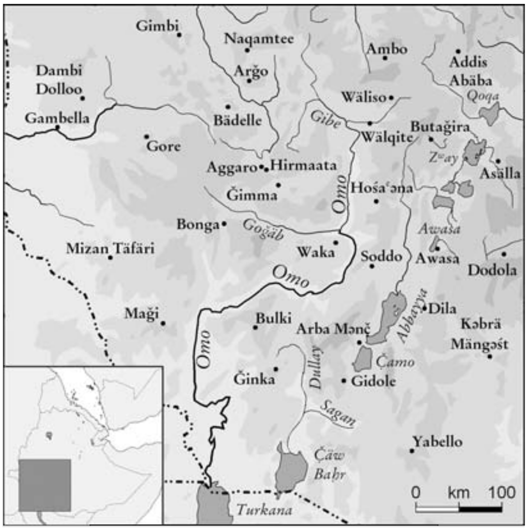
Azeb Amha

Omo

O. (ኦሞ) is the name of the southern reaches of the ↗Gibe river system. The three rivers, Gibe of Lagamara, of Ǝnnarya and of Ǧimma, have their sources in the volcanic ranges south of the River ↗Abbay (Mount Balballa, 3,261 m A.S.L.). Their eroded courses demarcated the so-called Oromo Gibe kingdoms. The three rivers flow together north-west of Abälti from where the Gibe turns southward. Called O. downstream from Hadiyya, this river flows southward parallel to the Rift in a deep and narrow canyon. The river opens up its course, interrupted by waterfalls, through lower cenozoic volcanic strata (Mäqdäla series). The difference in level between the middle cenozoic plateaus of basaltic trapps and the bed of the O. River is more than 1,000 m. As an endoreic river the O. flows after 760 km (EMAtlas) or 829 km (Guida) into the salted water of Lake ↗Turkana (ca. 375 m A.S.L.). Although Teleki (1888) had seen the delta on the Northern bank of the lake, Europeans did not known that this was the O. River until the ↗Bottego expedition (1896).



Where the river flows out of its gorges it spreads in wide meanders into a loamy plain which is floaded during the rainy season. As the gorge sunk down deeper it was filled with lacustrine and fluvial upper cenozoic sediments where human fossiles were buried. Its main right bank affluent the ↗Goǧäb with its straight course along a fault forms a 90 degree angle with its valley. To the east the O. gorges separate the highlands of Gurage, Hadiyya and Kambaata from the plateaus of Oromiyaa, to the West, dominated by Mount Malgudo (3,390 m). ↗*Ǝnsät* cultivating peoples took refuge in the eastern highlands. Since 2000 a main road connects ↗Soddo (Wälaytta) with ↗Ǧimma across the O. at an altitude of 700 m. On the right bank the new road passes through a triple wall built with drystones which protected the kingdom of ↗Däwaro from the ↗Wälaytta. The middle and lower parts of the Gibe-O. basin: 77,206 km² (EMAtlas) or 67,450 km² (Guida) are located in the South *kəlləl*. The Gilgäl Gibe dam and powerplant are on the way to completion. There are many suitable sites for the construction of hydroelectric installations along the river which brings abundant water to one of the most humid regions of Ethiopia. The recently inaugurated Gibe 3 dam at the Ethio–Kenyan border, however, is highly problematic due to its supposed negative effect on ecology and on the traditional economy of the people inhabiting the area.

The banks of the O. canyon are densely populated while its narrow and malaria proned bottom is almost uninhabited. Various ethnic groups live in the lower valley, growing cereals after the floods and keeping cattle in spite of trypanosomiasis. This region is divided between Nilo-Saharan languages (↗Mursi, Bodi [↗Meˀen] ↗Ñaŋatom, ↗Turkana), to the east, Omotic languages (↗Bäšada, Aari, ↗Banna, ↗Kara, ↗Hamär), to the west, and the Cushitic-speaking ↗Đaasänäč, to the south. Sometimes, bloody feuds broke out because of grazing quarrels and spread over the Ethio–Kenyan border.

Omo valley

The Lower O.v. features prominently in the history of research on human evolution. It is the oldest Ethiopian palaeoanthropological research area, and was exploited by a diversity of teams with diverse methods, goals, and theoretical frameworks (Guillemot 1997). Fossils were first collected by Emile Brumpt in 1902, during ↗Bourg de Bozas' trans-African expedition. This led the French palaeontologist Camille Arambourg to investigate the fossiliferous deposits of the southern part of the Lower O.v. in 1933. He recognized the Plio-Pleistocene age of these localities and made an abundant collection of fossil vertebrate samples (Arambourg 1947). In this material, he identified a number of new taxa of bovids, hippopotamids, and elephant relatives described in the 1930s and the 1940s. Until 1967, the O.v. was visited only briefly by a few palaeontologists, without adding significantly to the previous work.

In 1967 F. Clark Howell (USA) formed the second major research expedition in the O.v. with Arambourg, Yves Coppens (France), and Louis Leakey (Kenya). The International Omo Research Expedition (IORE) worked for nine years between 1967 and 1976, with the aim of understanding human evolution within its temporal, environmental, cultural, structural, and climatic context. Howell's drive determined a resolutely multidisciplinary approach, involving notably geologists, radiochronologists, palaeontologists, palynologists, archaeologists and anthropologists. The research was performed at the interface of all disciplines related to human evolutionary studies, from tectonics to artefact technology, and included emerging methods, such as radiochronology. This approach became a model for later palaeoanthropological studies in Africa.

The IORE identified several groups of deposits in the Lower Omo Valley. The most important one is the "Shungura Formation" (Šungura). This formation is located on the western bank of the ↗Omo River, about 20 km north of its delta. It is constituted by tilted and faulted fluviatile sediments interbedded with stratified volcanic ashes (tuffs), spread north-south over approximately 60 km (de Heinzelin 1983). More than 25 Šungura tuffs were dated by measuring radioactive element decay, indicating that the Šungura sediments were formed between ca. 3.6 million years ago (Ma) and ca. 1 Ma. This allowed building a chronological scale, with sometimes less than 100,000 years between two dated layers. This framework was ideal examining local vertebrate evolution. About 50,000 fossils were collected in hundreds of localities; they are now preserved at the National Museum of Ethiopia in Addis Abäba. These fossils represent more than 150 species, most of them now extinct. Dominant groups include notably various antelopes, monkeys, hippos, and pigs. These fossils and other data (fossil plants and pollens, natural sediments) provided detailed pictures of the O.v. environments in the past. Several ↗hominids inhabited these environments. *Paranthropus aethiopicus*, a species characterized by its powerful cheek teeth, was first identified in the O.v. by Arambourg and Coppens (1967), and dated to 2.5 Ma. The lineage that led to modern humans was also represented, notably with fossils probably close to the earliest ↗*Homo* around 2.5 Ma, and with *Homo erectus* after 2 Ma. These human ancestors left remains of their activities in the Šungura Formation. Early Stone Age artefacts, mostly knapped flakes of quartz, were unearthed in levels dated ca. 2.4 Ma–2.3 Ma, and figure among the oldest evidence for human cultural evolution (Chavaillon 1976).

Other palaeoanthropological sites are known in the Lower Omo Valley. The Usno Formation is contemporary or slightly older than Šungura, and the Mursi Formation was dated as somewhat older than 4 Ma. Both contain fossil vertebrates, with a few remains at Usno of hominids probably close to "Lucy's" species, ↗*Australopithecus afarensis*. The extended Kibiš Formation, displaying little tectonic distortion, includes sediments younger than 200 thousand years. In 1967 Richard Leakey's IORE team discovered several remains of advanced *Homo* in this formation, which is also known for its recent fauna and numerous Middle Stone Age artefacts (Fleagle et al. 2008).

The fossil collection from the Lower Omo Valley is now regarded worldwide as a critical reference for studying environmental, biological, and cultural evolution during the Plio-Pleistocene. It is constantly used for age correlations between the O.v. and other palaeontological sites. It can be used to explore the connexions between global and regional changes (climatic, tectonic) and human evolution. It was the background for the "(H)omo event" theory of Coppens (1994), proposing that global climate changes after 3 Ma triggered the emergence of our genus, *Homo*, characterized by a larger brain and advanced technological skills.

Research in the Lower Omo Valley was reactivated in 2006: new fieldwork with more recent methods was developed by the Omo Group Research Expedition, a multidisciplinary Ethio-French team. This research discovered new hominid remains and archaeological evidence (Boisserie et al. 2008), which should allow more complete knowledge of the critical transition between small-brained human ancestors with no known material culture, and our genus.

Jean-Renaud Boisserie

Omotic

O. is a controversial language family found exclusively (aside from Ganza and rare individual emigrants) within Ethiopia. Its classification as an independent branch of ↗Afro-Asiatic was proposed by Fleming 1969 (who rejected their classification as a subbranch of Cushitic by Moreno 1940). The limits of this proposed family are subject to several interpretations. The core of the family consists of those languages forming the "West Cushitic" or "Sidama" family. This less controversial grouping (*Ta/Ne* family) includes ↗Ometo (together with ↗Č̣ara), Gimira (= ↗Benç̌), ↗Yäm (= Ğanğäro), and ↗Gonga (= Käfoid), all of which are characterized by having independent pronouns of the form 1st pers. sg. *ta*/2nd pers. sg. *ne*. A more radical approach includes the ↗Dizoid languages (↗Dizi and relatives) and the ↗Aroid languages (↗Aari and relatives). Still more radical is the inclusion of the ↗Mao group.

The name "Omotic" was suggested by Fleming (1969; in BendNonSLang; in BendLang), taken from the salient position of the ↗Omo River of south-western Ethiopia in the family's geographical spread. Earlier, Cerulli (1929: 1) gave Omētō or Omētī as a name for the people of the Omo River vicinity (s. also Bender 2000: 7, 236 n. 1).

Membership and Demography

A brief gazetteer of languages follows, with estimates of native-speakers from Hudson (1999; 2004).

Ta/Ne (TN) languages:

Ometo: three genetically differentiated branches, usually referred to as West (Fleming 1969: North; Bender 2000: North-west) and East (Fleming 1969: South; Bender 2000: South-east), and the single language Č̣ara. West Ometo is by far the larger, consisting of a large dialect cluster (↗Wälaytta, ↗Gamo, ↗Gofa, ↗Dorze, Dawro [↗Kullo], and others: about 2.5 million speakers), plus ↗Malo, ↗Oyda, ↗Basketo, and ↗Maale (perhaps 150,000). East Ometo has three languages: ↗Koorete, ↗Zayse, and ↗Harro cluster, totalling about 127,000 speakers. Č̣ara has about 7,000 speakers. Locations are in the former ↗Gamo Gofa province: West Ometo: between the Omo River on the west and Lake Abbaya on the east; East Ometo: south and east of Lake Abbaya; Č̣ara: north of West Ometo across the Omo River. Gimira (Benč̣) is a single language with two main dialects: Benč̣ and Še, located south of ↗Käfa and west of Konta (↗Kullo-Konta), the most north-westerly of the Ometo varieties. The total number of speakers is about 188,000. Yäm is also a single language, formerly known (derogatorily) as Ǧanǧäro. It is isolated from other O. languages along the upper Goǧäb River, east of Ǧimma. Speakers number ca. 82,000. The Gonga family consists of Käfa-↗Šakačo, Anfillo, and Boro (= ↗Šinašša). Käfa is a major language with as many as 510,000 speakers, while the closely related Šakačo (= Moča) has about 55,000. Both are located on the headwaters of the Baro River, north-west of the Ometo area in the former Käfa province. Anfillo, an outlier in the former Wälläga province, north of Gambella, numbers now about 14,000, being displaced by Oromo. Boro is a dialect cluster spoken by ca. 20,000 to the north of most other O. languages, along the Blue Nile (Abbay) River, mostly on the northern side (former Goǧǧam province).

Non-*Ta/Ne* languages fall into three families. Dizoid has three languages: Dizi (= Maǧi) around the town of Maǧi between the Omo River and Sudan border; ↗Nayi, between Gimira and Ometo, and ↗Šeko, south of Käfa-Šakačo, west of Gimira. Dizi has about 21,000 speakers. Nayi has about 4,000, but the younger generation speaks only Käfa, so the language is dying out. Šeko has about 24,000. Aroid also has three languages: Aari (= Bakko, the name of the former main town; ↗Hamär-Bakko) is in the former Gamo Gofa east of the Usnu River and west of Arba Mənč̣, with dialects Galila in the north and ↗Ubamär in the south; Hamär is south of Aari extending to the Kenya border, Banna is the northern dialect forming a buffer with Aari, and Kara is a dialect found along the lower Omo River (s. ↗Hamär cluster); ↗Dime is located just north-east of Aari. Population estimates are about 159,000 Aari, 43,000 Hamär, 7,000 Dime.

Mao languages are four: Hozo and Sezo (s. ↗Hozo-Sezo) in the former western Wälläga province near the Sudan border; ↗Mao of Bambasi north of Hozo with a small group transported east to the Diḍessa River near Naqamtee; and the little-known and nearly extinct Ganza, around Ǧabal Bange west of Bambasi, all or mostly in Sudan. There are said to be about 3,000 speakers each of Hozo and Sezo and 5,000 of Bambasi.

The demographic total for O. is probably about 4 million.

Internal and External Classification

Some aspects of the internal structure of O. are clear, though a generally agreed-on family tree remains elusive. Within the *Ta/Ne* languages, Fleming proposed a Gonga-"Gimojan" family, consisting of Gonga vs. Gimira-Ometo-Yäm (latter Fleming's Ǧanǧäro), which is still widely accepted, though it is probably incorrect. Bender (2000: 135) suggests that Yäm and Käfoid belong together on a morphological basis. On a lexical basis, Bender (2003a: 156f.) posits Yäm as being most divergent among *Ta/Ne* languages, though the differentiation among *Ta/Ne* branches is relatively small and ambiguous.

What we may call "the O. question" is now very complex and richly documented. A brief summary follows. It may conveniently be seen as beginning with Moreno's (1940: 320) observation of the split between languages such as Oromo and Sidaama with 1st pers. sg./2nd pers. sg. pronouns of form *aní/atí* and Wälaytta and Käfa with *ta/ne*, calling the latter "West Cushitic". Following the Oromo use of the term Sidaama as a general term for strangers, West Cushitic was also referred to as "Sidaama" (Sidamo and its near relatives later became known as ↗Highland East Cushitic). As noted above, Fleming judged the differences between "West" and other Cushitic to be so great that he proposed setting up "West Cushitic" as a separate ↗Afro-Asiatic family he called O. Moreno included Ometo, Gimira, "Janjero", and Gonga in his grouping. Fleming (e.g. in BendNonSLang 299) brought in Č̣ara, Mao, and Aroid. Fleming's original list of O. traits is weak, e.g., he includes absences such as lack of pharyngeals in phonology and weakness of gender distinctions in pronouns. Fleming also introduced the unfortunate terminology of "South Omotic" (Aroid) vs. "North Omotic" (all the rest) in his 1976 article (replaced by "East" vs. "West" in Fleming in BendLang).

Andrzej Zaborski has been the most ardent defender of retaining O. as West Cushitic, though without Aroid and Mao, both said to be ↗Nilo-Saharan. The first statement of this may be Zaborski 1986 (from a 1980 conference). A recent and more detailed statement is Zaborski

2004. The earlier paper is unconvincing, since it argues for retaining West Cushitic on the basis of a single systematic isomorph: verbal conjugation with markers of imperfective _-a_, perfective _-i_ ~ _-e_, and dependent _-o_ ~ _-u_. Bender (1986) replied to this and suggested that Cushitic and O. may be part of a genetic unit he called "Cushomotic", though he no longer supports this (s. Bender 1990, 2000: 217). Bender 2000 and Zaborski 2004 contain the most detailed and refined proposals to account for Moreno's West Cushitic plus Dizoid, Mao, and Aroid. Both of these have strengths and weaknesses.

Bender (2000: 198ff.) suggests that the _ta_ morpheme of _ta/ne_ is in origin a copula. It might derive from the suffix _+ta_ found in some ↗Surmic languages in independent pronouns of 1st and 2nd persons. This copula occurs in an Afro-Asiatic emphatic nominative construction "it is I, thou, etc. that …" (Diakonoff 1988: 70). This construction accounts for the presence of suffixal _+ta_ in Dizoid and Aroid languages, found in instances of all persons except 3rd pers. sg. (Bender 2000: 145, 163) and also possibly for the _-ši_ suffix found in Käfoid (ibid. 103). In the _Ta/Ne_ languages, the process has gone furthest, with _ta_ itself assuming the role of 1st pers. sg. pronoun. It is worth noting that Nilo-Saharan has widespread _n_(_i_) ~ _in_ as 2nd pers. sg. pronoun, including West ↗Nilotic, but not in East Nilotic, ↗Berta, ↗Gumuz, or ↗Koman. Mao is variable and mysterious in the forms of pronouns. However, there are _t-_ in 1st pers. sg. in Mao and Ganza, _ye_ in Ganza 2nd pers. sg. (like Dizoid), and various suffixes: _-ga_, _-še_, pl. _-le_ (ibid. 183). Aroid pronouns also have a plural pattern _w/y/k_, identical to a West Nilotic pattern (ibid. 200). Cf. "Characteristics" below for O. morphemes deriving from Proto-Afro-Asiatic.

Zaborski 2004 makes many good points, but is a bit vague on the source of 1st pers. sg. _ta_. It is stated without evidence that Proto-Cushitic 1st/2nd pers. sg. were _*ana-te/*anta_, in which 1st pers. sg. _-te_ was from proto-Afrasian _*-tV_, "oblique case marker" (ibid. 178). These were mutated as follows: _*ana-te_ > _ante_ > _atte_ > _ate_ > _te_ (not _ta_!) and _*anta_ > _anne_ > _ane_ > _ne_. It is also stated in various places that 1st pers. sg. _t-_ is from Nilo-Saharan, though Bender (1989:23) shows that Nilo-Saharan 1st pers. sg. is _*-k-_, with _-t-_ showing up only in distant Saharan and sporadically elsewhere, e.g. in ↗Mağaŋgir _eet_ (probably from _an-eta_, as in other Surmic). Ethiopian Nilo-Saharan languages do not have 1st pers. sg. _t-_: ↗Nara has _ag_, Nilotic and Surmic have _an+_, Berta has _ali_, Koman has _ka_ ~ _aga_, Gumuz has _ada_, ↗Kunama has _aba_. Zaborski's comparisons with Nilo-Saharan are dubious, often based on morphemes consisting of single segments or chosen from widely separated and distant languages. It is misleading to make comparisons to Nilo-Saharan in general. Within the Ethiopian area, a few Nilotic languages (↗Añwaa and ↗Nuer of West Nilotic, ↗Ñaŋatom of East Nilotic) and most Surmic languages, by reason of their proximity today, are candidates for strong interaction with Dizoid and Aroid. Mao is in contact with or near to Berta, Gumuz, and ↗Kwama. Nara and Kunama are too far away in Eritrea to be of concern.

Another approach is that of Lamberti (typical is Lamberti 1993), who proposes retaining West Cushitic, including Dizoid but without Mao, and splitting off Aroid (his "Ari-Banna") as a separate branch of Cushitic.

Many papers, not all of them of high professional quality, have been published on the lexicon of Nilo-Saharan and its branches. If Aroid and Mao are actually Nilo-Saharan languages, as maintained by Lamberti and Zaborski, one would expect a fair amount of basic lexicon to align with Nilo-Saharan. This did not show up in Bender's systematic lexical work (1996 for Nilo-Saharan, 2003a for O.). Possible Dizoid and Aroid lexical correspondences with Nilotic and Surmic are taken up by Bender (2003a: 222ff.) with negative results.

Although Mao grammar is very distinctive compared to other O. (e.g., s. Bender 2000: 229 for a list of 14 isomorphs shared by all O. except Mao), Mao shows strong lexical affinity to _Ta/Ne_ languages, especially Ometo (Bender 2003a: 284ff.), less so to Dizoid, and even less so to Aroid. If Mao speakers are "Omoticized Nilo-Saharans", the most plausible places to look for correspondences are nearby Berta, Gumuz, and Kwama. Bender (ibid. 284f.) lists 33 very basic "pan-Mao" items (three in all Mao languages; 12 in all but Ganza, 18 in Hozo-Sezo only). Only two items show reasonable resemblances to Berta: 'kill' Sezo and Mao _piy-_, Berta _fi_(_y_)_a_; 'sleep' Hozo-Sezo _he-_, Berta _iha_(ˀ). Gumuz has only one: 'say' Hozo-Sezo-Mao _ko_(_l_)_i_, Gumuz _kəl_. Kwama has five: 'all' Hozo-Sezo-Mao _muk_(_q_)-, Kwama _muuko_; 'die' Hozo-Sezo _zi_(_z_)-, Kwama _ṣii_ (?); 'fish' Hozo-Sezo _waṣ+_, Kwama _waaṣ_;

‘swim’ Hozo-Sezo-Mao *paaŋg-*, Kwama *paŋ*; ‘three’ Hozo-Sezo *siyazi*, Mao *tyaaze*, Ganza *tizi*, Kwama *twasan* (?). Two of these are doubtful and three look like loans (‘fish’, ‘swim’, ‘three’). The Kwama are immediate neighbours of Hozo-Sezo. The case for loans seems more compelling than that for Mao as “Omoticized Kwama”.

Scholars have taken various positions on the place of O. within Afro-Asiatic. Ideas about Proto-Afro-Asiatic have been dominated by Semitic scholarship, with such striking characteristics as laryngeal and pharyngeal consonants, morphology based on consonant roots and vocalic patterns, and prefix verbal conjugations. O. does not have any of these nor does it show convincing traces of any of them (Bender 1997). Two major interpretations are possible: the Semitic characteristics are innovations within the branch which includes Semitic (“Macro-Cushitic”, consisting of Semitic, Berber, and Cushitic), or they were proto-features, lost in O. (and in Chadic, where they also are conspicuously absent). Zaborski denies the first interpretation outright (2004: 182f.) on the grounds that some branches of Cushitic have levelled-off morphology. Of course both innovation of new morphology and levelling-off of old morphology are found in language phyla and sorting it all out is a difficult problem, but one expects to find relics of old morphology.

Linguistic Characteristics: Phonology – Morphology – Syntax

The largest compilation of O. descriptions to date is Hayward 1990, but many more studies, especially by Ethiopians, have been appearing recently.

Syntactically, all O. languages are of basic word order S[ubject]-O[bject]-V[erb]. This is a characteristic of the ↗Ethiopian Language Area (or Northeast African Language Area), which may have its origin in O. For a recent summary, see Bender 2003b. Features associated with SOV order such as use of suffixes for most grammatical categories and subordinate verbs known as “converbs” are widely distributed among O. languages. O. lacks the prefix conjugation found strongly in Semitic and as a remnant in Cushitic (Hayward 2000: 90 states that Yäm has a trace, though this is debatable).

The segmental inventory of Proto-O. as reconstructed in Bender (2003a: 309ff.) is:

	Labial	Dental/ Alveolar	Palatal	Velar	Glottal
Stops	*p*, *b*	*t*, *d-*		*k*, *-g-*	
Glottalized Stops		*ṭ-*, *ḍ*		*q*	
Fricatives		*s*	*š*		*h-*
Affricates		*-ts-*	*-č-*		
Glottalized Affricates		*ṣ*	*č̣-*		
Nasals	*m*	*-n-*			
Liquids		*-l-*, *-r-*			
Semivowels	*w*	*y-*			

Vowels

i	*i-* ~ *u-*	*-u-*
-e-		*o*
	a, *aa*	

Positional restrictions applying to consonants: initial only: *d-*, *ṭ-*, *č̣-*, *y-*, *h-*; medial only: *-g-*, *-ts-*, *-č-*, *-n-*, *-l-*, *-r-*. Vowels: initial only: *i-* ~ *u-*, medial only: *-e-*, *-u-*.

Only *i* and *u* occur as second vowel in CV_1CV_2C. For family-to-family correspondences and lexical series, s. Bender (2003a: 310–13). Regarding suprasegmentals, neither long consonants (“geminates”) nor diphthongs can be reconstructed with any certainty; the only reconstructable long vowel is *aa*. Tone and stress are not well-enough documented at this time to be reconstructed. Certainly tone (sometimes best interpreted as pitch-accent) is important in many languages and more recent papers are appearing on the topic: Wedekind 1990 on a purported six-tone system in Gimira and Azeb Amha 1996 on tone-accent in Wälaytta are just two examples.

The O. system includes features which could be attributed to Proto-Afro-Asiatic, e.g., the “triads” *d*, *t*, *ṭ* and *g*, *k*, *q*. O. provides evidence for the precedence of ejectives, not “emphatics” in the Arabic manner, and there is no evidence in favour of uvulars, pharyngeals, or laryngeals except initial *h-*. There is a five-vowel system with the uncertain addition of an initial high vowel indicated by /*i-* ~ *u-*/. Length in consonants and vowels in general is not supported. The voiceless labial stop /*p*/ is reconstructable, so O. is not the source of the “lack of *p*” feature of the Ethiopian Language Area (s. Bender 2004). Comparison to Cushitic shows a fair amount of agreement but special features such as the existence of pharyngeals and laterals seem to be innovations within branches of Macro-Cushitic or Cushitic.

A few selected morphological features follow. For comparative purposes, Afro-Asiatic morphology is surveyed by Hayward (2000) and

Zaborski (2003 in EAE 1). The 1st- and 2nd-pers. independent pronouns of O. (3rd-pers. is variable, being based on various demonstratives) can be summarized:

Pers.	*Ta/Ne* Family	Dizoid	Aroid
1st sg.	*ta*	*ǹ*	*i*(*n*)*ta*
2nd sg.	*ne*	*ye*	*aana*, (*y*)*in*(*a*)
1st pl.	*nu*	*ń*	*wot+* ~ *wos+*
2nd pl.	*int+*	*it+*	*yet+* ~ *yes+*

	Mao:		
	Hozo-Sezo	Mao of Bambasi	Ganza
1st sg.	*d-*, *n-*, *haa+*	*ti*(*ya*)	*ti*
2nd sg.	*hin+*	*hiya*	*ye*
1st pl.	*nu+*, *d-*	*hamb+le*	*mu*
2nd pl.	*d-*, *n-*	*hawe+le*	*näm*

The *Ta/Ne* family is constant with only minor variation throughout North-West Ometo, South-East Ometo, Ç̣ara (Bender 2000: 77), and Gimira-Yäm-Käfoid (ibid. 102). Dizoid (ibid. 145) is more variable in 1st pers. (high vs. low tones differentiating pl. from sg.), but consistent in 2nd pers. Aroid is somewhat more variable in all persons (ibid. 163), and plurals (also 3rd pers. pl.) are like Nilotic. Dime 1sg. is anomalous, but one form is *a*(*a*)*t+*. Mao pronouns (ibid. 183) are even more variable, but some patterns emerge: 1st pers. sg. *t-*, 2nd pers. sg. *-y-*, 1st pers. pl. *n* ~ *m*. All three (Dizoid, Aroid, Mao) seem to have been influenced by West Nilotic.

Given space limitations, only a summary of the best proposed O. isomorphs follows (from Bender 2000: 223ff.). Those which might be derived from Afro-Asiatic are shown in bold. No number or gender markers used with nouns have been strongly reconstructed for O.

1st/2nd pers. sg. independent and verb-suffix pronouns: *t*(*a*)/*n*(*e*);

2nd pers. sg. independent pronoun: *y*;

3rd pers. masc. sg. independent pronoun: ***is***;

1st/2nd pers. pl. independent pronouns: ***nu-/i*(*n*)*t***;

verb-affix pronouns: ***uni/eti***;

nominative: +*i* (?);

absolutive/accusative: +*n*(*a*);

near/far demonstrative: ***ha*** ~ ***ka***/*ye*;

demonstrative: *so*(*k*);

interrogatives: ***ay***; *al* ~ *ar*; *am*;

nominal genitive: +***ka***; *n*;

nominal dative: +***s***;

imperative pl.: *-te*;

perfective: *-i* ~ *-e*; *-a*;

jussive: *-o* ~ *-u* (weak);

verbal negative: ***ay***; ***b***; ***k***;

copulas: *de-*; *en* ~ *an*; *k* ~ *g*; *te* ~ *ti*;

causative-transitive/passive-reciproc: ***-s/t***.

Some morphemes are as in Cushitic: 1pl. and 2pl. independent pronouns *nu-/i*(*n*)*t*; nominative +*i* (but weak in O.); perfective *-i* ~ *-e*; jussive *-o* ~ *-u* (weak in O.); causative/passive *-s/t* (or *-š~/t*). The absolutive/accusative +*n*(*a*) might be related to Afro-Asiatic +*a*.

Lexically, Bender (2004) refutes the largely negative conclusions of Bender (2003a) about O. lexicon from Afro-Asiatic, listing 21 items from a corpus of 105: ‘ashes’ *bi/end+*, ‘bone’ *qus*, ‘come’ *y-*, ‘count’ *paid-*, ‘cut’ *qaaṭ-*, ‘dog’ *kan+*, ‘eat’ *m-*, *t-*, ‘elephant’ *dang-*, ‘eye’ *aap+*, ‘give’ *ta-*, ‘go’ *t-*, ‘head’ *mat+*, ‘horn’ *quš+*, ‘meat’ *ač+*, ‘monkey’ *gVr*, *qar*, ‘moon’ *arf*, ‘night’ *ṭum*, ‘nose’ *sinṭ*, ‘sew’ *sip-*. Of these, ‘ashes’ (↗Agäw?), ‘come’ (↗Beğa?), ‘cut’ (East), ‘eat’ (both Beğa?), ‘elephant’ (Agäw, East, South?), ‘head’ (Agäw?, East), ‘meat’ (Cushitic?), ‘monkey’ *gVr* (East, South), ‘moon’ (Agäw), ‘nose’ (East) are found in Cushitic families as indicated. This is about half the total of O. < Afro-Asiatic and only one of these is in Cushitic. This does not support O. as part of Cushitic. Another eight items found in O. sub-families may derive from Afro-Asiatic: ‘come’ *aad-* ~ *aat-* (Aroid), ‘cut’ *tič-* ~ *teč-* (Aroid), ‘dig’ *huʣ-* (Mao), ‘goat’ *der+ti* (Mao), ‘knee’ *gurmat+* (*Ta/Ne*), ‘neck’ *kum* (Dizoid), ‘sew’ *šak-* ~ *žak-* (Aroid), ‘skin’ *gonq+* (Mao), *goog+* ~ *gook+* (*Ta/Ne*). Of these, ‘come’, ‘dig’, ‘knee’, ‘sew’, ‘skin’ are also found in Cushitic sub-families (only ‘knee’ is perhaps Cushitic).

These O. isoglosses frequently include Aroid, Dizoid, and Mao. In view of the dearth of evidence for Nilo-Saharan lexicon in these families (s. Classification above), it is impossible to say that these languages are Nilo-Saharan.

In fact, O. has a high incidence of basic lexicon not cognate to Afro-Asiatic, Cushitic, or Nilo-Saharan. This supports the idea of O. languages as being languages of a prior substratum in south-western Ethiopia, but not as currently “West Cushitic” or Nilo-Saharan languages. A sample of idiosyncratic O. items follows (from Bender 2003a: 301–05): ‘ask’ *oʦ-*, ‘bird’ *kap+*, ‘bite’ *saaṭ-*, ‘buffalo’ *mi/en+*, ‘cry’ *yep-*, ‘die’ *he-*, ‘drink’ *i/uš-*, ‘ear’ *we/al+*, ‘fire’ *tam+a*, ‘foot’ *tu/o*(*g*), ‘full’ *ṣo-*, ‘god’ *yer*, ‘head’ *tok+*, ‘hide’ (verb) *ač-*, ‘honey’ *i/es+*, ‘house’ *kett+*, ‘liver’ *mel+*, ‘moon’ *aʦ+*, ‘one’ *is-*, ‘rat’ *i/unt+*, ‘scratch’ *qu/oč̣-*, ‘sister, mother’ *ind+*, ‘smoke’ *č̣ub+*, ‘snake’ *šoš*, 'sun' *ab+* > *aw+*, 'tooth' *aṣ+*, 'tree' *int+*, 'water' *haaṣ+*.

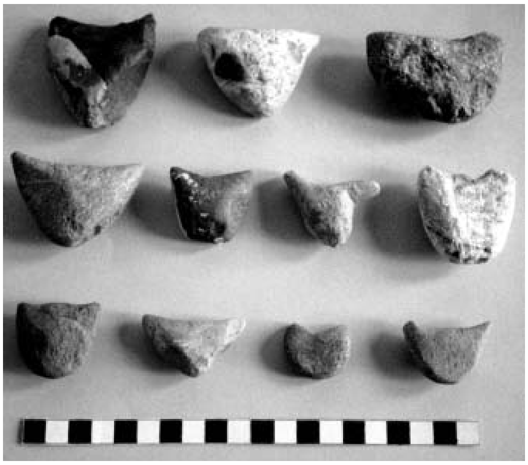
ᶜOna culture

The term ᶜO.c. (ዖና, Tgn. '[ancient] ruins') was introduced in the archaeological literature in the 1960s by Giuseppe Tringali to indicate a number of sites dating to late prehistoric and historical times he recorded around ↗Asmära in Ḥamasen. They include the remains of settlements and cemeteries, sometimes with ↗stelae. Two main groups of ᶜO.c. have been distinguished on the basis of the pottery: ᶜO.c. with red ware and ᶜO.c. with black ware. They represent two distinct periods of occupation of the region.

The ᶜO.c. sites with red ware date to late prehistoric times (early to mid 1st millennium B.C.) and can be considered an indigenous culture of Eritrea. The occurrence of small stone "bulls' heads" (abstract figurines made of stone, and, sometimes, fired ceramic, that may depict the head and horns of cattle) in some finds may also point to contacts with the ↗Arabian Peninsula. A few flat clay stamp seals from ↗Sämbäl Kušät, near Asmära, suggest social complexity with a form of administration. Typical features of this culture were the construction of stone buildings and the use of polished axes. Pit-graves sometimes marked with a stela are also associated with this culture. ᶜO.c. site communities lived in villages covering an area from 1ha to more than 15ha and characterized by multi-room buildings made of stone. ᶜO.c. communities possessed an agropastoral economy, including grain agriculture and the keeping of domesticated cattle, goats, and sheep.



ᶜOna culture bulls' heads from a survey of the greater Asmära area; photo 1999, courtesy of Matthew Curtis

The ᶜO.c. with black ware can safely be dated to ↗Aksumite or sometimes to ↗Post-Aksumite times. Most ᶜO.c. of this period can be ascribed to rural villages, although the occurrence in some of them of imported ceramics suggests that they were not excluded from long-distance trade. The remains of an Aksumite church have been recorded at ↗Dəbarwa.

ᶜOna Gudo

ᶜO.G. (ዖና ፡ ጉዶ) is a village ca. 5 km west of Asmära and 1 km north of ᶜAddi Qušät, in ↗Ḥamasen, Eritrea (for location s. map for ᶜOna culture). It gained importance due to the archaeological site (OG01) to the north of the village, on a gentle upland ridge area above the May Bäla valley, to the south of the old Italian ↗railway. Oral traditions link ᶜO.G. with the nearby, now completely destroyed, archaeological site of ᶜOna Hašəl.

Intensive archaeological survey, mapping, and test excavation were conducted in February of 2000 at the OG01 site as part of the 1999–2000 Greater Asmara Regional Archaeological Survey Project. The ca. 5-ha site is characterized by a series of five platforms on which eroding ash and multiple linear stone walls are found. One 2 x 2 m test excavation unit was placed on the top-most platform near an exposed wall and excavated to sterile bedrock at a depth of 2.3 m. Radiocarbon dating suggested the site's occupation between the 9th and 4th cent. B.C. (although one analysis may suggest occupation as late as the 1st cent. B.C.). These dates, combined with stratigraphy, features, and material culture, suggest continuous occupation for much of the first millennium B.C.

Excavation revealed layers of ashy loam punctuated by thin layers of red clay and intense ash deposits. Several hearths associated with areas of dense charcoal were documented and a wide range of 1st millennium B.C. ↗ᶜOna culture ceramics and chipped stone artefacts were recovered from the test excavation. Also recovered were various milling stones and handstones, chipped stone debitage, textile fragments, possible iron slag, bulls' heads stone figurines, stone beads, a stone lip or ear plug, and an unidentified ceramic figurine. Faunal and archaeobotanical material recovered from the test excavation included cattle and goat/sheep bones and carbonized specimens of emmer wheat, indeterminate wheat, hulled barley, linseed, and lentil.

Matthew C. Curtis

ᶜOna Hašel

ᶜO.H. is an ancient ↗ᶜOna culture archaeological site area located a few hundred metres north of the May Bäla stream, ca. 6 km west of central ↗Asmära, Eritrea (for location s. map for ᶜOna culture). Local oral traditions link it with the nearby site of ↗ᶜOna Gudo and emphasize conflict between the two communities in the late historical period.

The site was first explored by Tringali and later by Anfray. During 1999–2002 systematic archaeological survey carried out by the Greater Asmara Regional Archaeological Survey Project and Asmara University documented ancient walls, architectural rubble, artefact scatters, and dense ash deposits occupying an area of ca. 10 ha and representing what was probably once an enormous complex of ancient residences that were part of a town dating back to the first millennium B.C. The site was largely destroyed by road and building construction in 1999–2000.

Matthew C. Curtis

Ončo

O., the second ruler of the Gibe state of ↗Guummaa, reigned from 1810 to the 1830s. He and the other kings of Guummaa continued to use the pre-state title, ↗*abbaa dulaa* (‘war leader’), rather than ↗*mooti* (‘king’) that was adopted by the rulers of most Oromo states. O. is said to have solidified and expanded the newly formed state that his father Ǧiilčaa had founded by aggressively warring on his neighbours, especially ↗Limmu-Ǝnnarya. It is said that O. treated his own people very harshly as well; he was reputed to sell whole families into ↗slavery for offences committed by one of their members (cp. ↗Ruufoo).

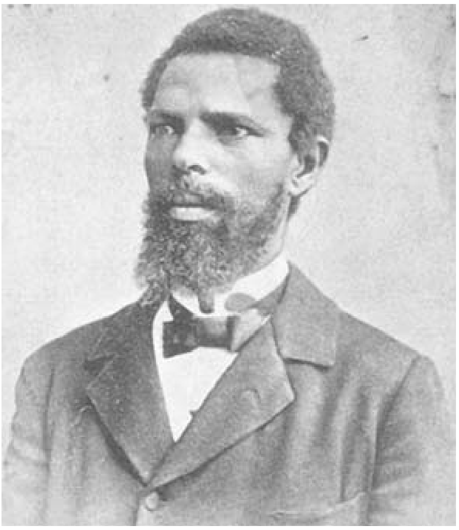
Onesimos Näsib

O.N. (Oromo: Onesimoos Nasiib, birth name Hiikaa, lit. ‘translator, problem solver, one who liberates’; b. 1855/56, Hurrumu, Illubabor, d. 21 June 1931, Naqamtee, Wälläga), was an Oromo evangelist, translator, teacher and pioneer of ↗Oromo literature.

O.N. was only four years old when his father died. At that time, he was captured by slave-traders (Leepisaa Tito 1973: 10; Arén 1978: 164f.; Terfassa Digga 1973: 2f.). After having changed owners several times, he was liberated in 1870 in ↗Massawa by Consul ↗Munzinger and handed over to the ↗Swedish Evangelical Mission. According to Terfassa Digga (1973: 3), it was then that O.N. took the name of his master, called Nasīb (though it is also possible, that he took this name from a previous master). Later, after being baptized at the Mission, he received the Biblical name Onesimos (also Onesimus, lit. ‘useful’; after St. Onesimus, an escaped slave). O.N. studied at the mission school in ↗Ǝmkullu, and later moved to Sweden, where, between 1876–81, he studied at the Johannelund Missionary Training Institute in Stockholm (Hylander 1969: 81).

In 1881–82, having returned to Massawa, O.N. was engaged in a missionary expedition to “Oromo country” via Khartoum and Famaka, and in 1885–86 in an expedition to the court of *aṣe* ↗Mənilək II in Šäwa, via Tağūra. From 1882 onwards he worked on the translation of literature into ↗Oromiffa. Around 1890, he had become an active member of the Oromo language team, organized in Gäläb, Eritrea, with the aim of promoting the develoment of written Oromo literature (Mekuria Bulcha 1995: 41ff.). In 1903 he went to Ethiopia via Djibouti, planning to go to ↗Illubabor, but at the invitation of *mooti* Kumsaa Moroda (↗Gäbrä Ǝgziʾabəḥer) settled in Wälläga, where he started teaching and spreading literacy. He stayed in Naqamtee, Wälläga, until the end of his life.

Among O.N.’s important contributions to Oromo literature, his translation of the Bible stands out. His predecessor in this field was ↗Krapf, who, based on translations by ↗Ruufoo and ↗Zännäb, made an Oromo translation of the N.T. During his work on the Bible, O.N. decided not to rework Krapf’s translation, but rather to retranslate the Bible from the Amharic and the Swedish versions, keeping Krapf’s translation “in front of me all the time” (Kebede Hordofa



Onesimos Näsib, on a postcard from ca. 1880; from the collection of Ezekiel Gebissa

2005:65; Norlander 1998:38f.; ↗Bible translation into Oromo).

At the Ǝmkullu mission station, under the supervision of the Swedish missionary society and with the assistance of ↗Aster Gannoo, O.N. produced the following literary works in Oromo, written in *fidäl* (Hylander 1969; ArEvang): *Galata Waaqayyo Gooftaa Maččaa* (‘Evangelical Songs and Psalms’, 1887); *Kakuu Haaraa* (‘the New Testament’, 1893); *Mačaafa Qulqulluu* (‘the Holy Bible’, 1899); *Katekismos* ([Luther’s] Catechism); *Garaani Namaa Mana Waaqayyoo Yookis Bultii Seeṭanaa* (‘Man’s Heart either God’s Temple or Satan’s Abode’, 1899). The following were co-authored with ↗Aster Gannoo: *Dr. Barth’s Bible Stories Translation* (1899); ↗*Ǧalqaba Barsiisaa. The Galla Spelling Book* (*and Reader*) (1894). All, except the *Spelling Book*, were scripture-based translations into Oromo.

Kebede Hordofa Janko

ᶜOngota

ᶜOngota language

ᶜO. (*Íifa ᶜongóta*, ‘the language [lit. mouth] of the ᶜO.’) is the original language of the ᶜO. people, who live on the west bank of the Wäyṭo River, in the South-Omo Zone. The majority of the ᶜO. use Ṣamakko (the westernmost dialect of the ↗Dullay cluster of East Cushitic) for everyday communication. The ᶜO. language is still spoken by a handful of elders, although code switching in Ṣamakko is the rule. A few more ᶜO. understand, at least partially, portions of the ancestral language. Approximately half of the lexicon and most of the limited morphology of ᶜO. is from Ṣamakko.

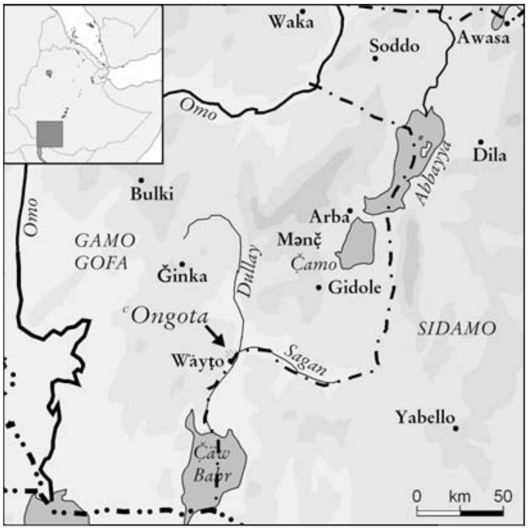
The classification of ᶜO. is uncertain. It is probably affiliated to the ↗Afro-Asiatic phylum (either ↗Cushitic or ↗Omotic); at the same time, its lexicon shows elements of ↗Nilo-Saharan origin, and certain features of the grammar suggest origin from a creolized pidgin (as suggested by Aklilu Yilma).

The ᶜO. vowels are *a*, *e*, *i*, *o*, *u*. The consonants of ᶜO. are: plosives *b*, *t*, *d*, *k*, *g*, *q*, ʾ; implosives *ɗ*, *ɠ*; nasals *m*, *n*; affricates *ʦ*, *č*, *ǧ*; fricatives *f*, *s*, *z*, *š*, *x*, *ḥ*, ᶜ, *h*; trill *r*; liquid *l*; glides *w*, *y*. The status of the voiced-voiceless opposition is unclear. Final stops are devoiced. Vowel length and consonant gemination are phonemic, as in *áka* ‘foot, leg’ vs. *áaka* ‘women, females’ vs. *ákka* ‘grandfather’.

Pitch-accent is also phonemic: cf. *yóoba* ‘men, males’ vs. *yoobá* ‘see!’. On long vowels, pitch can fall on the first or second mora: cf. *ka=xáab* [*kaxáàb̥*] ‘I scratched’ (= marks clitic boundaries) vs. *ka=xaáb* [*kaxàáb̥*] ‘I (will) scratch’ (pitch opposition is extensively used in the verbal system; s. below). The syllable structure is (C)V(V)(C).

ᶜO. nouns, as a rule, are invariable. In a few cases, the Ṣamakko number affixes (both sg. and pl.) are used. A few nouns have suppletive plural forms: cf. *áyma* (sg.)/*áaka* (pl. or collective), ‘woman, female, wife’; *ínta*/*yóoba* ‘man, male, husband’; *máara*/*éela* ‘boy, son’.

The personal pronouns follow the usual Cushitic seven-member system, with separate masc. and fem. elements for the 3rd pers. sg. Six se-



ries have been identified: emphatic, subject clitic, object, adpositional, and possessive, with a sixth series, the indirect clitics, having separate forms for the singular only. The emphatic (independent) pronouns are: *káta* 'I', *ǧánta* ~ *ǧáama* 'you (sg.)', *kíta* 'he', *kúta* 'she', *ǧúta* 'we', *gitáta* 'you', *kiˀíta* 'they'. Morphologically simpler forms exist among the object clitics: *ka* 'me', *ǧámi* 'you (sg.)', *ki* 'him', *ku* 'her', *ǧu* 'us', *gíta* 'you', *kíˀi* 'them'. The subject clitics are the same as the object pronouns, except for the 2nd pers. sg., which has a separate form, *i*=.

When a noun is followed by modifiers, it generally appears with the determining element =*ko* or =*nki* attached. The main deictics are *índa* 'this' and *áddate* 'there'.

There are a few basic adjectives in addition to deverbal ones. E.g., basic colour terms of ᶜO. are: *áttomuni* 'white', *ɗákkamuni* 'black', *róomini* 'red', *čárkamuni* 'green', and *sílbe* 'yellow'.

Verbs do not agree with their subject through affixes, but subject clitics obligatorily precede the verbal form in declarative clauses. The following verbal categories exist: past vs. non-past tense; unmarked vs. progressive aspect; indicative, imperative, jussive and infinitive moods. Moreover, there are distinct positive and negative forms. Derivation is represented by a causative (marked by the affix -*san*, with allomorphs -*is*, -*as*), a reflexive-middle (marked by -*iˀ*; its productivity is unclear), and a few non-productive affixes. A few verbs have different stems for sg. and pl. subjects and/or objects: *gay*- (sg.)/*bagat*- (pl.) 'to run'; *gad*- (sg.)/*qits*- (pl.) 'to cut'.

The past tense is marked by an accent on the first (or only) mora of the verbal form. The non-past tense is used for an incomplete action, either present or future, and is marked by the absence of an accent on the mora of the stem if it is monomoraic (CVC). In this case, the subject clitic bears the accent (cf. *ka=čóq* 'I hit' vs. *ká=čoq* 'I (will) hit'). If the verb is at least bimoraic, the past has the accent on the first mora of the stem, and the non-past on the last (cf. examples of 'to scratch' above). An ongoing action is expressed through the ending -*i* (for consonant-final stems) or -*ni* (for vowel-final stems); the verbal form has the accent on the first mora. The positive imperative singular is marked by final -*á* for consonant–final verbs and by -*é* for vowel-final stems; the imperative plural is expressed by the affix -*´ta*.

ᶜO. is a verb-final, dependent-marking language. The verb is the last element of a sentence, but a pronominal object often follows the verbal form: *kita čata ki=gáᶜ* (he meat 3SG.MASC–bite.PAST) 'he bit the meat' vs. *gabare ki=gáᶜ=ki* (snake 3SG.MASC–bite.PAST–him) 'a snake bit him'. Modifiers follow the head.

The standard ten-word list is as follows: (*ak*)*kálbano* 'one', *láma* 'two', *záḥa* 'three' (from Ṣamakko), *oxóni* 'fire', *čaᶜáwa* 'water', *áxačo* 'sun', *leeᶜá* 'moon' (from Ṣamakko), *šóxo* 'blood', *ᶜádaba* 'tongue', *itíma* 'tooth'.

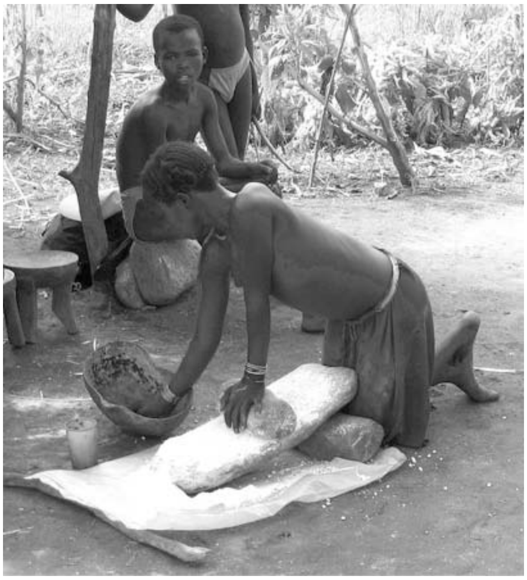
Mauro Tosco

ᶜOngota ethnography

ᶜO. (*ᶜongóta*) is the self-denomination of a small ethnic group called Birale by the neighbouring peoples. The community lives in a section of the forest on the western bank of the Wäyṭo River, in today's South Omo Zone. Their only village, Muṣe, is not far from the small town of Wäyṭo. Researchers estimated their number to be ca. 100 (Melesse Getu 1997; Savà – Tosco 2000), 84 (Fleming et al. 1992/93) and 78 (Aklilu Yilma 1997). The ᶜO. are not mentioned in the 1994 census. The main language of the ᶜO. today is ↗Ṣamakko. Only few elders speak the ᶜO. language, which is, therefore, highly endangered. Neighbouring populations are the Ṣamakko (or ↗Ṣamay), ↗Gawwada (s. also Dullay), Gollango, Harso, ↗Arbore, ↗Boorana Oromo, ↗Konso, ↗Banna, ↗Hamär and ↗Maale.

Fleming et al. (1992/93) propose to identify the ᶜO. with a "Borali" people, about which Donaldson Smith (1896) heard during his travels in South Ethiopia. According to the British traveller, the Borali were affiliated to a mysterious group of "pygmies", the "Dume". The ᶜO. do not look like pygmies nowadays, but they are known as the only hunter-gatherers in a wide area dominated by pastoralists. They hunt and collect plants in the forest on the banks of the Wäyṭo River and fish in its waters. However, they also practice small-scale agriculture (mainly maize) and keep some sheep, goats and chickens. Cultivation of banana-trees and collecting incense are also common.

It is not clear if the ᶜO. were originally hunter-gatherers who have moved to ↗pastoralism or if they used to have larger herds of cattle and abandoned them for some reason. According to Melesse Getu (1997) as well as ᶜO. informants, the ᶜO. were agro-pastoralists who had to abandon cattle because of the massive presence of tsetse flies in the Wäyṭo River area. Hunting, collecting wild plants and ↗bee-keeping are not activities exclusively characterizing the life of hunter-gatherers. Those practices are spread all over the neighbouring pastoralist groups. On the other hand, the ᶜO. are the best beehive builders and the only fish eaters (fish is ↗taboo among their neighbours). Information which supports the hunter-gatherer origins have been collected by Savà and Thubauville (2006). Probably, the ᶜO. were never cattle-herders. Moreover, it seems that the ᶜO. arrived only in relatively recent times along the shores of the river. Savà and Thubauville collected a long list of ᶜO. toponyms which correspond to villages inhabited by ᶜO. during the last decades. The direction of movement was from the Maale area towards the Wäyṭo River, where it seems the ᶜO. arrived about 150 years ago, since they claim to have changed their villages about 30 times and to have lived in each of them for about 5 years. These frequent movements are also an indication of an original hunter-gatherer population. Apart those which they have probably adopted from the Ṣamay, the ᶜO. perform only few rituals — another typical feature of hunter-gatherers.



ᶜOngota girl grinding grain in the village of Muṣe; photo 2007, courtesy of Mauro Tosco

The influence of the Ṣamay on the ᶜO. is due to the particularly strong relationship between the two groups. The ᶜO. have, in fact, begun to assimilate to the Ṣamay. The members of the two communities intermarry, the ᶜO. take part in the Ṣamay market in Wäyṭo, young people attend the Ṣamay dances and the fertility of their land depends on the blessings of the same ritual leader living among the neighbouring Arbore. The ᶜO. openly imitate Ṣamay dressing and ornaments and have adopted their language. The ᶜO. clans have the same names as those among the Ṣamay. Some ᶜO. migrated with their families to the neighbouring town of Wäyṭo, the only urban-like place in Ṣamay country.

In spite of their efforts to adopt a pastoralist life style, the ᶜO. are perceived as being "strange" by their neighbours and are often target of derision. The main reason for this is their limited knowledge in domestic animal keeping, when compared with their cattle-keeping neighbours. Their life is seen as "wild" because they are "chicken herders" and fishermen. In spite of neighbours' opinion, the ᶜO. have to be acknowledged as being among the best producers of honey and bananas. Due to the presence of the Wäyṭo River they do not have problems with drought. Since their animal herds are small, young boys and girls have more time to go to school than the children of the pastoralists who are needed for herding.

In the 1990s a huge cotton farm, the "Birale Cotton Company", was established in the plain of the Wäyṭo River. The declared aim of the enterprise to employ ᶜO. workers and to contribute by this to the preservation of their culture and language failed because nobody from the ᶜO. community accepted employment there.

Graziano Savà

Onnis, Eleonora

O. (b. 23 March 1922, Napoli, d. 28 March 2007, Arco [Trento], religious name: Sr. Marianora) was the founder of the University of Asmara (UoA; ↗Asmära University). She took her vows in the Institute of the "Piae Matres Nigritiae" (Comboni Missionary Sisters), at Verona, in 1942. In the same year the Institute assigned her to Asmära, where she remained until 1971.

From the beginning, O. dedicated her intellectual resources and energies to education. In this, O. was inspired by the founder of the Comboni Missionary Sisters, the later St. Daniele Comboni (1831–81) who, in his "Plan for the Regeneration of Africa" (1864), had envisioned the founding of four theological-scientific institutions of higher education in strategic locations in Africa.

Together with Sr. Fosca Berardi, she founded the UoA in 1958. O. involved eminent politicians, religious figures and education experts, also overcoming some anti-Catholic resistance in Asmära (Branca 2004: 44f.). Following its foundation, the UoA was officially recognized by the Eritrean Federal Government; the Ethiopian Government; the Italian Consiglio Superiore dell'Istruzione Universitaria Italiana; and by the Holy See (↗Vatican and Holy See), whose "Sacra Congregatio de Seminariis et Studiorum Universitatibus" recognized it as a Catholic University. O. and other Comboni Sisters worked indefatigably at planning, developing and setting up the University's academic programs and curriculum.

On 26 January 1967, the new building of the UoA, planned by O.'s brother, the architect Tonino Onnis, was inaugurated in a ceremony attended by many officials and religious dignitaries including *aṣe* ↗Ḫaylä Śəllase I, who had accepted to serve as the UoA's Great Chancellor. O. held an inauguration speech (*Il Quotidiano Eritreo*, 28 January 1967, 1). On the occasion of the graduation ceremony on 3 August 1972, the Emperor praised O. and Sr. Fosca's success in establishing and running the UoA (*Il Quotidiano Eritreo*, 4 August 1972, 3). His speech concluded several years of discussions over the future of the University – the Italian founders wishing to keep it under Italian Catholic influence, the Ethiopian government aiming to integrate it into the Ethiopian educational system.

O. served as president of the UoA until 1971 when she left Eritrea for Italy and then Israel to take up a position as a faculty member of the

Ezio Tonini

Ecumenical Institute for Theological Research – Tantur, Jerusalem. She remained there until her return to Italy in 2003.

O. is the author of two voluminous tesi di laurea for which she was awarded two degrees from Padova University. The two studies, *La città di Asmara* (1956–57) and *Aspetti e problemi educativi e scolastici nella città di Asmara* (1958–59), are still highly valued by social scientists studying Eritrea.

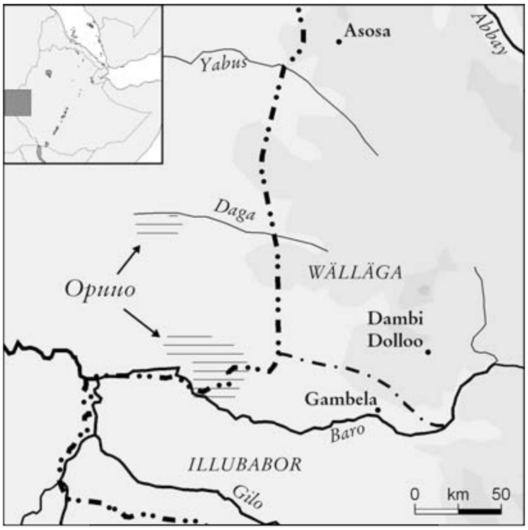
Opuuo

Opuuo language



O. (also (an)Šita, Čiita, Madiin, Opo, and Lʌŋa [last is said to be a derogatory name used by ↗Añwaa]; self-name: *Ṭa-apo*, lit. ‘mouth (of) O.’) is a ↗Nilo-Saharan language of the ↗Koman group. It shares about 61 % basic vocabulary with ↗Ṭwampa (Uduk) and ↗Komo, while ↗Kwama and Gulé are more distant. The Ethiopian O.-speakers are found in five villages north of ↗Gambella on the Sudan border. The 1994 census reported 301 speakers within Ethiopia (Gordon 2005: 117), though a previous edition of *Ethnologue* (Grimes 1996: 265) mentions 2,000–5,000 speakers in Sudan and Ethiopia. The most recent numbers for Ethiopia are 1,602 (CSA, 2008).

The segmental phonemes are a reduced version of the extensive system of Ṭwampa, except for the addition of *f*: labials *p*, *ḃ*, *f*, *m*, *w*; alveolars *t*, *d*, *ṭ*, *s*, *n*, *l*, *r*; palatals *č*, *ǧ*, *č̣*, *š*, *y*; velars and post-velars *k*, *g*, *q*, *h*, ᵓ. The vowels are: *i*, *e*, *a*, *o*, *u*, with allophones (within this entry, phonetic rather than phonological transcription is given).

There are a number of gender markers in nouns; singular is usually unmarked, plural is sometimes marked by *-sai*. Verbal derivations were not recorded.

The independent pronouns of O. are 1st pers. sg. *aga*, 2nd pers. sg. *ay*, 3rd pers. masc. sg. *ɔtaare*, 3rd pers. fem. sg. *baare*, 1st pers. pl. inclusive *mana*, 1st pers. pl. exclusive *mina*, 2nd pers. pl. *uma*, 3rd pers. pl. *biare*. The lack of gender in 2nd pers., as well as presence of inclusive/exclusive pronouns are very unlike Afro-Asiatic languages, but in a pattern common to several Nilo-Saharan families (s. Bender 1996). Demonstrative elements are: ‘this’ (*yo*)*ge*, *ñene* (sg.)/*dianere* (pl.), ‘that’ (*ye*)*re* ~ *dere* (sg.)/*hɛre* (pl.) ~ *tere*. Interrogatives include: ‘what, why?’ *tʌna*, ‘who?’ *tawa* (sg.)/*tʌmo*(*wa*) (pl.), ‘where?’ *taai*, ‘when?’ *gawe*. Copulas are: existence: *čɔrʌ*, possession: *čɔrɔ*, identity and attribution: Ø (sg.)/ *ka* (pl.), place: *ǧe* (?), *a*, (*a*)*bi*, locative particles. Connectives are: ‘and’ *gɔ*, *sai* … *sai* (?), ‘or’ *ta*.

The basic word order of O., like all Koman, is S[ubject]-V[erb]-O[bject], not SOV as in languages of the ↗Ethiopian Language Area.

The ten basic word-list of O. is: ‘one’ *ɗeɗe*, ‘two’ *suka*, ‘three’ *tʊsu*, ‘fire’ *wɔṭi*, ‘water’ *ǧi*, ‘moon’ *dwəi*, ‘sun’ *tai*, ‘blood’ *č̣əma*, ‘tongue’ *liṭa*, ‘tooth’ *se*. These are very similar to Ṭwampa or Komo except for ‘blood’ (like Kwama) and ‘moon’ (unique to O.).

There are no special studies on O. An early reference to the language with a little data (as Madiin) is found in Corfield 1938. The above analysis is based on the author's fieldnotes (1980–81). Harold Fleming also collected basic data on O. (Lʌŋa) in the 1960s at Pokwo, near Gambella. There is no known literature in O.

M. Lionel Bender

Opuuo ethnography

The O. (also Opuo, Opo, Šita, Šyita, Šiita, Čita, Čiita, Ansita, Kina, Kʷina, Burun) live on both sides of the Ethio–Sudanese border. Their ↗Nilo-saharan language belongs to the ↗Koman cluster (together with ↗Ṭwampa, ↗Kwama, ↗Komo). Traditionally the O. inhabited the area around the rivers Daga and the Yabus (Corfield 1938: 130). Schuver's description tells us that the O. lived also around the River Ǧal, west of Ǧäbäl Bangé. Their current population size is estimated at 1,602 living in Ethiopia (CSA, 2008).

Opuuo men drinking local beer at a social gathering; photo 2006, courtesy of the author

According to James, who calls them Šyita, the O. inhabit the "hilly country to the south of the Yabus" (James 1999: 27). There are settlements found around Mayǧud and Kigille in the Sudan, and, in Ethiopia, there are five settlements in Gambella regional state (Wankey, Akula, Longkʷey and Kela) as well as the Bonga refugee camp, where Sudanese O. are living.

The O. practised a marriage system with sister exchange: in exchange for the bride, the bridegroom is obliged to find a sister or close relative (e.g., a cousin) to marry into the bride's family. Today bride-wealth is the more accepted pattern in marriages.

The settlements have an egalitarian organization headed by village headmen, called *umnda*. The *umnda* are represented by the *liqna*. The holders of both offices are elected by the village community, which includes all men and women from the age of about 15 onwards. The Ethiopian O. recognize similar offices, which are called *qworeton* and *nykuku* respectively.

Little is known about the history of the O. or about their present situation. Historically they belong to those groups who fell prey to frequent slave raids by the ↗Leeqaa Oromo from the Ethiopian side and the ↗Watāwīṭ from the Sudan, which led to their dispersal along the Ethio–Sudanese border. Historical accounts are few and confusing because of the variety of ethnonyms given to the O. Schuver (1883) calls them Gambiel or Kilai and Corfield (1938), who visited them much later, calls them Čiita and distinguishes three dialect groups, namely *Castillo*, *Kigali* and *Buldiit*. He tends to identify them with the ↗Komo under the name "Koma", which is probably derived from the term *koomoo*, the Oromiffa blanket term for enslavable people. The O. of Ethiopia divide themselves into two subgroups, namely *Šilkong* and *Tutš*. In his description of an O. slave he bought from an Oromo, Schuver deduces the small size the group must have already had in his time: "I find it remarkable that he has never been able to find another Negro of his race, although this individual has travelled the Sudan with me for one and a half years" (James – Baumann –

Johnson 1996: 336). According to Schuver the O. kept a considerable number of cattle, but these were taken from them by their hereditary enemies the Dinka and Nuer, especially, when the Dinka were raided by Sobat Arabs. Schuver says that the O., ruined by the loss of their cattle, accepted voluntary slavery in the service of the Oromo or even as far south as the region around the Baro River with the Ǧambo (↗Añwaa) to avoid starvation (ibid.). The Añwaa called the O. *Lᴀŋo*, a rather derogative term meaning ‘slave’ or ‘worker’, which is occasionally still used today.

Some Sudanese O. have adopted the term Burun, originally an Arabic blanket term for enslavable people, as their autonym. These O. fled the Sudan as a result of heavy raids by Nuer under the flag of the Sudanese People’s Liberation Army. The term Čiita is also used for the Burun language. This indicates that the O. of both the Sudan and Ethiopia have little contact and also the difficulties of reconstructing a common history of these peoples who have fallen prey to a long history of migration and dispersal.

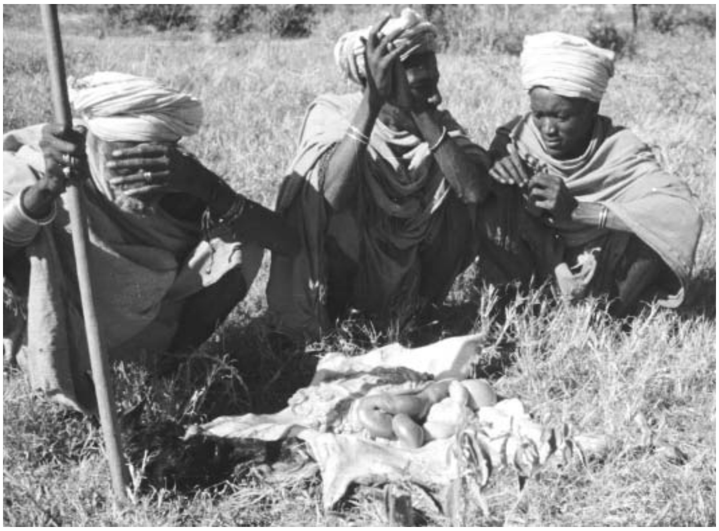
Alexander Meckelburg

Oracles and divination

O. and D. are magical practices aimed at revealing the unknown and to predicting the future. The term O. may also refer to the diviner who carries out such practices. In O. techniques, an event or fact considered to be beyond human control is taken as a supernatural sign in accordance with a culture-specific symbolic system. To consult an O. means to induce and/or identify (in the case of an omen, s. below) such a sign or set of signs and to interpret it. While some O. can be consulted only with the help of a specialist (s. for example ↗*Däbtära*; ↗*Qaallu*; ↗*Qalləčča*), other techniques of reference and interpretation are widespread in the particular society. An O. can be part of a religious system or constitute a cognitive system of its own. The consultation of an O. is often related to an altered state of consciousness in which inspiration is received. In many cases ↗spirit possession is involved, and often spirit mediums (e.g., the ↗*Gäramanǧo*) function as diviners.

Reasons for consulting an O. are manifold: people may want to know about questions of health and possible cures, public affairs, the coming year’s harvest, the outcome of a battle, whether a marriage is auspicious, or where a lost object is to be found. In general, O. and D. are believed to give advice concerning contact with the spiritual world as well as moral or even judicial questions. An example of the latter, was the ↗*leba šay* O., which was consulted when searching for a thief. In Gurage and Səlṭe the *raga* specialist is asked to reveal certain misdeeds of the ancestors in order to find reasons for the misfortune of their descendants as well as ways to break a spell originating from the past (Bustorf 2009; among the Boorana *raga* is a general term for a diviner, VSAe II, 166).

The Ethiopian Orthodox Church formally condemns the consultation of O. and D. The function of the diviner was superseded by the (monastic) ↗holy men – seers and prophets; the rest were ousted and stigmatized. Later, the persistence of these practices was frequently ascribed to the influence of “pagans”, primarily the Oromo (thus, the description one finds in the Christian sources is certainly not unbiased). However, O. and D. practices were so widespread and deeply rooted in the life of Christian society that it was virtually impossible to exterminate them. The zealous *aṣe* ↗Zärʾa Yaʿəqob is remembered for his attempts to uproot all kinds of O. and D. (referring to the books of Church law, such as the ↗*Senodos*). An insight into 15th-cent. O. and D. methods is given in his ↗*Ṭomarä təsbəʾət* (Getatchew Haile 1991: 40–45) and the *Mäṣḥafä* ↗*bərhan*. The latter mentions, among various kinds of O. and D., specifically the diviner who, on occasion of an individual’s rite of passage, “looks for an omen in the blood of a dog, and by [observing] donkeys, bedbugs, fleas and hyenas […]” (CRRicBerhan II, 51 [text] = 30 [tr.]). Certain diviners are accused of having manipulated major conflicts. ↗Ṣabraddīn b. Dalḥūy b. Manṣūr who fought against *aṣe* ʿAmdä Ṣəyon I, for instance, apparently relied on the help of di-



Divination from the intestines of a goat (haruspicy); photo 1950–52 by Eike Haberland, courtesy of Frobenius Institut, Frankfurt am Main (23-Ha248-15a)

viners (s., e.g., KrAmdS 6f. [text] = 10f. [tr.]; but cp. MarAmdS 38f.). Consulting different sorts of diviners (and the "hidden" usage of ↗magic in general) was widespread among both commoners and nobility, and in times of instability and struggles for power D. may have perpetuated political unrest (as seems to have been in the cases of *ras* ↗Atnatewos, ↗Kəflo and Wälättä Giyorgis, PerChron ch. 49).

Under the surface of official Church doctrine, a great variety of O. and D. practices were handed down from generation to generation. Examples are astrology (**ራእየ፡ ኮከብ**, *raʾəyä kokäb*, lit. 'vision of the stars'), haruspicy (s. ill.), the "pebble O.", the interpretation of dreams (**ራእየ፡ ትንቢት**, *raʾəyä tənbit*), only the latter beeing not mentioned in written religious texts.

Aside from practices of non-Christian origin, different D. techniques were elaborated in the Christian milieu, in fact, in the ecclesiastic (monastic) environment. For example, to reveal the future, the Bible or the Psalter is opened at random and a passage is chosen and interpreted. Among Muslims the Qurʾān or other sacred books are used (Rodinson 1967: 45, n. 4). Another practice was the calculation of the "lucky days" for important actions (cp. the 16th-cent. Vita of ↗Yəmrəḥannä Krəstos, where the king's advisers had to understand "the computation" to decide whether Yəmrəḥannä should be killed or not, s. Marrassini 1995). Different kinds of numerology and methods of performing "D." through the interpretation of ↗numbers and letters were elaborated upon in texts such as the ↗ʿ*Awdä nägäśt* and the *Tərgʷame fidälat* (cp. Griaule 1934). Such numerological books were used by the *mäṣḥaf gäläč̣* ('book revealer, astrologer'; s. Aspen 2001: 119–24), an *awaqi* ('a knowledgeable one') or a *ṭänqʷay* ('magician').

Like the official Christian Church(es), Islamic orthodoxy rejects D. However, it is traditionally carried out by certain *šayḫs* and other specialists, such as the *raga* and *miskeen* ('diviner, magician') among the Muslim Gurage and Səlṭe. *Istiḫāra* or *ḫayra* (Arab. 'divination') is a practice in which God is asked for the inspiration needed to decide between different choices. After certain rituals and prayers the question is expressed. The answer follows in a dream or by other manifestations of God's will (EI^2, 259f.). Trimingham (TrIslam 264) relates that *istiḫāra* carried out by specialists such as *qalləčča* or *wadād* were frequently used before major enterprises.

A widespread traditional D. technique, mostly carried out by specialists, is haruspicy. It is practiced, among the Meʾen (Abbink 1993), Dizi, Gofa, Kuča, Maale, Hadiyya (CerPeople 50, 94, 114ff., 129) as well as Oromo (VSAe II) and Gurage (for an early description s. Bermudez 1875: 101f.). In haruspicy the characteristics of certain inner organs of a slaughtered (usually sacrificed) animal are analysed and interpreted as divinatory signs. Variations of this principle can be identified by the organs (e.g., liver, abdomen, abdominal fat) examined and by the system of interpretation used. The type of animal slaughtered may vary, e.g., goat, sheep or cattle. In some cases a certain skin colour of the animal is required. Sacrificed animals may be examined in order to find out if a further sacrifice is needed (VSAe I, s. index; VSAe II, 139; VSAe III, s. index). In Amharic haruspicy is called **አንጀት፡ ማየት** (*anğät mayät*, 'looking at the entrails') and **ሞራ፡ ማየት** (*mora mayät,* lit. 'to see abdominal fat', cp. KaneDic 174; cp. BTafA 95, 705, n. 933). The word *mora* for 'abdominal fat' is also used in Oromiffa. Among the Oromo the O. is carried out by interpreting the lines drawn by the fatty membranes of the abdomen which is stretched out on the ground (s. PankSoc 203 and s. ill.). Interestingly the word *mora* in Banna designates the diviner of the "sandal O." (s. below) while in Konso the holy places where sacrifices and the haruspicium are carried out have this name (VSAe I, 328).

A prominent type of O. was the "bee O." (↗Bees and beekeeping) which, in many variants, is reported from Amhara and Təgray, Harär, Basketo, Dokko, Maale, Yäm, Šeko. In all cases this D. practice is carried out in connection with rituals of kingship (cp. HabKön 123ff.; ↗Kingship, divine). In Dokko, Balta and Malo, for instance, the "bee O." played an important role in the election process of the new *kati* ('king, chief'). A beehive was emptied in the presence of the candidates to the chieftaincy. When the bees gathered on the body of one of the candidates this was taken as a sign of his suitability (VSAe I, 204–07; for a variant of the ritual s. idem. 271). According to tradition it was a bee O. that foretold *aṣe* ↗Lalibäla's rise to power and ↗Aḥmad b. Ibrāhīm al-Ġāzī's suitability was indicated, beside other omens, by bees swarming around his head (HabKön 123ff.; BassHist 26ff., n. 1, 30).

Many O. techniques are based on the interpretation of numerical patterns and/or graphical configurations of pebbles (also coffee beans). Among the Amhara the *ṭäṭär ṭay* ('pebble thrower') divines by throwing 34 pebbles and analysing their configuration after they fall on the ground or a special plate. For the interpretation the numerical value of the letters of the client's name are additionally considered. Some specialists combine this practice with elements of the cult of *wəqabi* spirits. The *ṭäṭär ṭay* O. is traditionally said to originate from "ᶜAdal" [ᶜAfar] (Aspen 2001: 124; Molvaer 1995: 50; for a variant cp. KaneDic 2188). Among the Aari groups of Šangama and Bakko the *azi baab* diviner is specialized in the identification of the causes of his client's illnesses. He interpreted the pattern of black and white stones which he had thrown. Similarly, the *ṣoma baab* of the ↗Ubamär, the *kaisa* of the ↗Basketo and the *garoo* of the ↗Dime used stones for D. (VSAe I, 139, 180, 219, 257). Small stones are also used by the Kuča (CerPeople 115). Straube (VSAe III, 167) reports on an O. in Hirbo, Gamo, which was consulted with the help of 19 small stones which were set in parallel lines. In this case divinatory practice was not restricted to specialists.

Different O. techniques derive from an Arab divination system called *ᶜilm al-raml* ('science of the sand' or *raml*, 'sand'; s., e.g., Savage-Smith – Smith 2004 for a description). Examples are the ↗ᶜAfar *ramri* O., described by Morin (MorDicAfar 235–38), and the Somali *faal* O. For the *faal* (from Arab. *faᵓl*, 'omen', cp. *faᵓl* in EI², vol. 2; Mohamed Mohamed Abdi 1992), stones are placed on grooved dots on a rectangle drawn into the sand. According to certain rules the stones are moved from dot to dot. At the end an expert interprets the pattern constituted by the positions of the stones. The Hirbo O., the *faal* and the *ramri* or *raml* eventually have historical links with the ↗*gäbäṭa* game and with several D. techniques in Africa, such as the *ifa* of the Yoruba. The *raml* O. was mentioned in the Chronicle of ᶜAmdä Ṣəyon I as a D. method typical among Muslims (Marrassini 1993: 59).

The "sandal O.", e.g., used among the Banna, Bäšada, Meᵓen and Ṣamay, is a method to discover the causes of different diseases and their cures, and, among the hunters of Baača, to learn the outcome of a future hunt. In most cases the O. advises the afflicted to carry out a sacrifice to the ↗ancestors. For the "sandal O." a pair of miniature "sandals", i.e. pieces of leather in the shape of feet, is thrown and the practitioner's interpretation is based on how they fall (VSAe I, 328, 346, 369, 372ff., 416 [ill.]; cp. VSAe II, 166).

A common belief is that hidden knowledge may be revealed by visions and dreams. Ordinary people may ask a specialist to interpret such a "message" or may try to find an explanation on their own. A widespread principle here is that events in a dream may designate the opposite of their obvious meaning, e.g., to dream of quarrelling is interpreted to mean love (cp., also Leslau 1983: 64). Possession spirit mediums and other kinds of magical and religious functionaries including Christian, Muslim and Betä Əsraᵓel holy men are believed to receive supernatural messages concerning the future through dreams. An example is reported by Pearce and Gobat from Gondär, where a Betä Əsraᵓel woman made a prophecy based on a dream that the town would be attacked by enemies unless the whole population held extensive collective prayers (PankSoc 263). Another example is related by ↗Aṣmä Giyorgis, who reports that Mənilək II, ca. 1889, was warned by the prophecy of a monk not to spend the rainy season in Wällo in order to prevent his country from being destroyed.

The Emperor followed the advice and went to Ǝnṭoṭṭo where he learned that *ras* Gobäna had died and his presence was urgently needed as the monk had predicted (BTafA 802).

A special technique of foretelling the future is practiced by interpreting given natural events as divinatory signs, i.e. as omens. Widespread and well documented is the reading of "animal omens". Haberland (VSAe II, 257, 330, 341f., 405, 486, 502, 551) documented examples of such a practice among the Oromo. Before making an important choice, e.g., of the bride for a son or of a place to construct a house, people observe the behaviour of animals and listen to their sounds. Whether the omen is positive or negative largely depends on the direction from where the sound comes, the left or the right. A famous bird of augury is the *guramayle* ('Black Crow'), but also the sounds of the owl and the hornbill are interpreted as signs. Other animals taken into consideration are ↗lions, ↗leopards, ↗hyenas and jackals. In traditional Oromo culture a ↗serpent visiting the house had a very positive meaning. Similarly, animal sounds as omens are attested from northern Ethiopia by Lobo as early as the 17th cent. and a strong belief in such signs is confirmed by travellers such as Bruce, Parkyns, Plowden and Gobat (PankSoc 47, 85, 202).

Exceptional events are often taken as an omen, for instance certain weather phenomena such as "sand devils" (small tornados; e.g., taken as a sign as to who shall be appointed as the new *saᵓamar dam* priest of ↗Ǝndägañ; oral informants) or the birth of an animal or human child with physical deformities (e.g., congenital deformations, or a child's first tooth growing from the upper jaw etc.; BrHad 266; VSAe II, 328, 401). Cerulli relates that among the Meᵓen, D. was practised according to the direction of flames (CerPeople 50).

Today, in spite of modern education and the dominance of the "world religions", D. techniques continue to be used. Concepts from Western as well as Arab countries have resulted in the emergence of new forms including consulting cards as well as European astrology. Continuing of the above-mentioned Christian traditions of computation, various Amharic and Gəᶜəz divinatory texts (↗magic literature; e.g. studied by ↗Strelcyn) circulate in Ethiopia and enjoy considerable popularity. Some exist only in the form of a manuscript, while others are printed (some including prayers). New "guide books" are prepared on the basis of "new" divinatory methods, sometimes borrowed from European/American popular literature.

Dirk Bustorf – Denis Nosnitsin

Oral literature

O.l. is a term that has been used since the 19th cent. for referring to several unwritten, oral forms of expression with a "literary" character, that makes them different from everyday speech. Finnegan (1970) made one of the first systematic surveys of Africa including the ↗Horn of Africa to use this term. The field of interests of O.l. partially overlaps with oral tradition, folklore, verbal art, performance literature and ethnopoetics (s., e.g., Hymes 2003) as well as "orature", that are sometimes used as synonyms or quasi-synonyms.

The term O.l. has been criticized because of its implicit reference to the concept of "text", and the allegedly controversial epistemological status of an "oral text". Yet recent research (e.g., Barber 2005) has stressed that, even though oral discourse is a sequence of physically evanescent utterances, some kinds can be remembered in a more or less exact manner, detached from their immediate context and recontextualized in subsequent performances. Oral utterances thus can become texts, i.e. mental or ideal objects that can be identified independently of their particular instantiations, be quoted, and become the focus of commentary and exegetical attention.

There is a growing awareness that a proper understanding of O.l. requires the multiple competences of linguistics, anthropology, ethnomusicology, anthropological linguistics (especially ethnography of speech), cultural studies and not only of literature studies. However, there is no consensus on the boundaries of O.l., e.g., of which oral genres should be regarded as part of a community's O.l. vis-à-vis other speech genres (s., e.g., Bauman 2001). This is due, in part, to different approaches in the definition of what has a "literary" character, e.g., whether this is defined by an external observer or by the people who produce, perform or make use of oral texts. For instance, many Somali regard as literature proper only the genres of ↗*maanso* oral poetry, but not other genres such as the *ḍaanto* dance songs and the goat-herding songs that are for them just *hees* ('song'), even though their formal organization does not differ substantially from the former genres.

Another issue of boundaries has to do with popular culture, which is mainly an oral one in most contemporary African societies because of low levels of literacy (s. Barber 1997, esp. "Introduction").

Indeed, also in Africa, contemporary popular culture incorporates and modernizes several aspects of traditional culture and O.l., e.g., in the formal organization of ↗song texts and in their ↗music. For instance, some Somali poets such as ᶜAbdi Muḥumud Amiin perform their political poems to the accompaniment of a guitar or a *kaban* lute rather than without musical instruments like more traditional poets; and several modern Oromo singers actually sing ↗*geerarsa* songs accompanied by electronic musical instruments. Contemporary O.l. thus merges with popular culture in many urban settings.

A quite different type of boundary issue is represented by genres that are composed and performed orally and then sometimes recorded and transmitted to posterity in written form. A typical example are the ↗*qəne* hymns improvised during Ethiopian Orthodox celebrations, that could, under certain conditions, be included in written works of ↗historiography (like chronicles) and other historical texts. The introduction of ↗literacy and of modern technology in recent decades for several languages that had been more or less exclusively oral in the past has induced several oral poets either to write down what they compose orally or to avail themselves of audio recordings for preserving and transmitting their poems. The latter case has been called "electronically aided" O.l. by Andrzejewski (1985: 43).

An ethnography-of-speech approach to O.l seems particularly useful. This means that the following aspects should be taken into account when analysing O.l.:

(a) in which community does it circulate?
(b) what are its genres and subgenres, and what are their distinctive features?
(c) who creates which genres and subgenres, when and for whom?
(d) who performs which genres and subgenres, when and for whom?
(e) who listens to, looks at, or anyhow acts as an audience to which genres and subgenres, when and how?
(f) what kind of action is carried out by creating, performing or, anyhow, disseminating which genres and subgenres? That is, to what purpose is this done?

The different O.l. of only some linguistic communities in the Horn of Africa have been studied in detail: the ↗Amhara, the ↗Təgrəñña speakers (KolTrad I–III), the ↗Oromo, the ↗Somali, the ↗ᶜAfar and the ↗Beğa. There are also good studies on specific aspects of ↗Gurage (Shack – Habte Mariam 1974), Harari, ↗Təgre (LitPEA), ↗Betä Ǝsraʾel (↗Folktales of the Betä Ǝsraʾel), ↗Hadiyya (Braukämper – Tilahun Mishago 1999), ↗Sidaama (Lonfernini 1971), ↗Sāho (Morin 1995; 1999), ↗Səlṭe (Wagner in SegBodLes), ↗Käfa (Lange 1979) and ↗Šakačo (Lange 1979). Very little is known about O.l. in the other ↗Omotic languages or in any of the ↗Nilo-Saharan languages of Ethiopia and Eritrea.

Several distinctions can be drawn for classifying the different genres of O.l. One is between open and closed genres, i.e., genres that are "transmitted freely, changing with differences of time, place, and individual speakers" (Mphande 2003: 580) versus genres whose texts are fixed and undergo little, if any, variation when they are transmitted from mouth to ear. Good examples of the first group are narratives such as ↗folktales and legends, but also epic oral poems that are recomposed by bards out of sets of more or less fixed formulas at each performance as shown by the so-called "oralist" school of Milman Parry and Albert B. Lord or Paul Zumthor (1983), who focused on European traditions, as well as Ruth Finnegan (1970; 1992) for African oral literature. Instances of the second group are proverbs and certain kinds of oral ↗poetry that are circulated verbatim like the Somali *maanso*.

Another distinction should be drawn between oral texts that have the same organization of ordinary discourse vis-à-vis oral texts whose formal organization marks them off as special, not ordinary speech, e.g., poetry. The latter are frequently characterized by some kind of metric organization, special grammar, lexicon, and style, i.e., by different kinds of poetic procedures that act as framing devices (s. Banti – Giannattasio 2004; Foley 1997, esp. 259–378). This broadly corresponds to the traditional distinction between prose and poetry.

Importantly, there are several intermediate genres in many communities that are characterized by poetic procedures sometimes or in a reduced way, such as proverbs, riddles and question-and-answer games, curses (e.g., the Somali alliterated and metrically balanced *habaar*), etc. Ethnomusicologists have also highlighted how special speech can be distinguished from ordinary speech by means of changes of voice register (i.e., its frequency range, timbre and intensity), melodic contour and rhythm. This occurs both (i) in kinds of special speech that are not O.l., such as when addressing babies, (ii) in some genres that are intermediate between normal speech and O.l., such as Oromo oratory, and (iii) in several kinds of special speech that are O.l. proper, such as performances of oral poems and songs. Banti – Giannattasio (1996) studied in detail the *luuq*, i.e., the different rhythms and melodies that characterize how seven different genres of Somali oral poetry and songs are performed, as well as of their metric organization (scansion patterns).

When classifying genres of O.l. it is important to be aware that distinctions made by western-educated scholars can be based upon features that are quite different from those that are relevant for ethnoclassifications. One important such feature in different O.l. is whether the theme is religious or not. For instance, western Gurage poems in praise of traditional deities are called *bädəra* and are clearly distinguished from the secular *wäyäg* poems that praise chiefs, famous warriors, clans and lineages (Shack – Habte Mariam 1974: 2f.). Similarly, the ↗Sāho regard religious *nazme* as a quite different genre from non-religious poetry, and the Somali call *masafo* several poems of religious exhortation composed by well-known ↗*šayḫs* such as *šeeḫ* Aḥmad "Gabyow" and *šeeḫ* ᶜAli ᶜAbdiraḥmaan even though their respective scansion patterns and *luuqs* (s. above) are quite diverse (s. Banti – Ciise Maxamed Siyaad 2000; Banti – Giannattasio 1996).

Another important feature is the performance style, e.g., its rhythm and melody. For instance, the *guurow* of the Abgaal Somali is distinguished from the *gabay* of other Somali-speaking areas because of its very fast performance style, even though its lines have the same scansion pattern as the *gabay*. Also gender can be relevant, e.g., some kinds of poems and songs are distinctively performed by males versus females among the Somali, the ᶜAfar and the Oromo.

Broadly speaking, the following genres of O.l. are known to occur frequently among the communities of the Horn of Afica:

(a) Major oral poetry: Several instances of religious poetry have been mentioned above. But different kinds of secular poetry enjoy a high status among different peoples. In many cases these are praise poems such as the Gurage *wäyäg*. A widespread type are poems in praise of oneself or, more precisely, epinicia such as the Amharic ↗*fukkära* and *qärärto* and the Oromo ↗*geerarsa* (↗Oromo oral literature), or even poems for important domestic animals such as the Somali *geeraars* that praised famous war horses. Several kinds of social poetry, i.e., poetry for achieving social or political effects and for political debate are not in the form of praise poetry; for instance the Sāho *ʿadar* (↗Sāho literature), and most genres of Somali *maanso*. Even the *geerarsa* has developed into a tool of political and social critique among the Ethiopian Oromo. Interestingly, epic poetry *stricto sensu*, i.e., narrative poetry that depicts the deeds of heroes, does not seem to occur in the known O.l. of the Horn of Africa. Professional itinerant performers such as the ↗*azmari* and the ↗*lalibäla* of northern and central Ethiopia sing praise poems and blessings that are regarded as having a somewhat lower status than the above-mentioned genres.

(b) Minor oral poetry and songs: Most communities of the Horn of Africa have different kinds of wedding songs, dance songs, mocking songs, work songs (s. ↗ᶜAfar literature, Amharic poetry: ↗Gəṭəm, , ↗Harari literature, ↗Oromo literature, Poetry in EAE 5, ↗Somali literature). Love songs existed traditionally only in some oral traditions, as the young men's *faaruu* and the young women's *qarillee* love songs of the ↗Gabra Oromo; yet they have acquired considerable importance in contemporary urban popular culture.

(c) Prophetic texts: Soothsayers who foretell future events are known from some communities, those of the Christian Highlands (↗Hermits), the *ginnili* of the ᶜAfar and the *raaga* of the ↗Boorana Oromo. Their prophecies are both in poetic and in prose form.

(d) Laws and decrees: Oral texts of ↗customary law exist, e.g., among the Təgrəñña speakers, whose elders (↗*Šəmagəllä*) meet to discuss and rehearse them in their capacity of "holders of tradition" (Conti Rossini 1948–53). Texts of customary law have also been published by Cerulli for some Somali-speaking groups (Cerulli 1918). Traditional Oromo ↗*ç̣affees* frequently issued their decrees in verse.

(e) Historical oral chronicles and genealogies: Historical oral texts are known for all the peoples of the Horn of Africa. Since the 19th cent. they have often been collected and published and include genealogies, traditions of origin, legends about ancient heroes, etc. But they existed in much earlier times; for instance, Oromo oral chronicles might have been the main source for the early history of the Oromo *luubas* as it is depicted in Baḥrəy's ↗*Zenahu lägalla*, dated 1593. Not infrequently one of the purposes of oral chronicles was to exalt the noble origin and deeds of local dynasties, and many were soon forgotten after their demise.

(f) ↗Folktales and anecdotes.

(g) Proverbs: More or less extensive collections of proverbs have been published for most of the communities, discussing different aspects of human experience in detached and generalized ways, yet at the same time obliquely and allusively. Not infrequently, they share some formal aspects with oral poetry, such as rhyme, alliteration, organization into parallel cola or lines, etc. Among the Somali and in ↗Harär there is a strong tradition of numerical sayings.

(h) Riddles: Highly formalized riddles are known from several language-communities. e.g., the Amharic ↗*ənqoqəlləš*, the Somali *googgaale*, or the Oromo *hiibboo*. These three genres are introduced by fixed formulas uttered by the participants and are frequently characterized by formal features that are similar to those of poetry.

Only in a few cases are O.l. texts authorial, i.e., composed by an author, who is remembered by name. This is sometimes, through rarely, the case with the above-mentioned *qəne*, that are improvized only once for a particular occasion, by a particular individual and in a particular church. Another example are the Somali *maanso* poems, composed by individual poets on particular occasions, and later disseminated orally and verbally by memorizers, or quoted as compositions of their particular authors. Individual authors of particular oral poems are also known among the ᶜAfar (e.g., Ḥanfaḍe), the Sāho (e.g., ↗Faḍakoobe) and, less frequently, among the Oromo. Interestingly, also some particularly elaborate proverbs are authorial among the Somali. In the other cases, O.l. texts are transmitted as anonymous texts, even though their performers may be quite famous.

The status of oral poets and of other specialists of O.l. varies considerably in the different communities of the Horn of Africa. For instance, the *azmari* and the *lalibäla* of northern and central Ethiopia are generally regarded as marginal groups of low social status. Traditional Sāho poets, even though their verbal skills are highly appreciated, were treated with suspicion, probably because of the power and potential effects of their words. Among the Somali skilled poets are important persons, and some leaders such as the *sayyid* ↗Muḥammad ᶜAbdallāh Ḥasan owed part of their charisma to their poetic force. A clan's strength consisted in its military power and in its having a skilled poet among its ranks, who would defend its cause in the public arena. Among the Käfa and the Šakačo the minstrels (*šattos*) were a low and landless caste, but the *šatto-raša* 'head of the bards' had important ceremonial functions extending beyond singing (s. Lange 1979: 2).

Orbis Aethiopicus

O.Ae. ('Ethiopian World') is a recent Latin neologism (Scholz 1992) in imitation of the well-known expression *orbis Romanus* ('Roman World') – a classical designation of the Roman empire in its political and cultural unity, as opposed to the rest of the world.

One is reminded of the king of the ↗Monumentum Adulitanum speaking of the κόσμος, *kósmos*, i.e. the "world", he ruled over (RIÉ no. 277: 39), since Gr. *kósmos* conveys in fact the notion of Lat. *orbis* (*terrarum*), i.e. the "known world" (Fiaccadori 2004: 139f.). Similar labels are found such as "Oceanus Aethiopicus", used for the Atlantic Ocean to the west of the South African coast, e.g., in Mercator's map of Africa (1595; s. also Uhlig – Bühring 1994: 177f., n. 123). A western creation, the term O.Ae. should apply to either the Nubian–Ethiopian area (Scholz 1992: xxvf.) or, more extensively, the ↗Horn of Africa with special focus on the highlands and the adjacent, culturally interlinked areas (↗Abyssinia; ↗Aithiopía; ↗Ḥabašāt). If one follows a pivotal concept in ↗Ethiopian studies, the latter meaning is preferable, insofar as the O.Ae. is understood as a concept independent from modern political boundaries, as a cultural region centered in the Ethio–Eritrean highlands which are distinguished by a common history and strong cultural interconnections. Since the 17th cent., in fact, Ethiopian studies developed as a philological and historico-ethnographical discipline focusing on the Christian state (with its ↗Ethio-Semitic languages) and on the neighbouring regions (where ↗Cushitic and ↗Omotic languages dominate; cp. the similar notion of the ↗Ethiopian Language Area).

With the name "O.Ae. – ውርሰ፡ ኢትዮጵያ", a Society for the Preservation and Promotion of Ethiopian Culture was founded in Frankfurt in 1995. The corresponding Amharic term *Wərsä Ityop̣ya* means 'Ethiopian [Global] Heritage', *Wərs* specifically implies the idea of 'encompassing, including' (cp. Amh. *wərəss adärrägä*, 'to invade, to surround').

Orchestra Ethiopia

O.E. was founded in 1963 at the Haile Sellassie I University's Creative Arts Center by Professor Halim El-Dabh (Ḥalīm aḍ-Ḍabᶜ), an Egyptian composer well versed in 20th cent. trends in music, who was invited in 1961 by the Ethiopian government and the University. In contrast to the folklore ensembles which preceded O.E., El-Dabh created an indigenous pan-Ethiopian ensemble reflecting the ideal of a multi-ethnic, yet unified culture. O.E. served as a forum combining modern presentations of orchestral music with Ethiopian traditional musical modes and instruments. Orchestral members included Amhara, Dorze, Gurage, Oromo, Wälaytta,

The Orchestra Ethiopia rehearsing with its first conductor, Prof. Halim El-Dabh, at the Creative Arts Center at the Ḫaylä Śəllase I University; photo 1964, from the El-Dabh collection

Təgrəñña, Harari, ᶜAfar, and Somali musicians.

The O.E.'s twelve-year tenure under various directors began with El-Dabh in 1963 and included American Peace Corps volunteers who served as directors and/or managers: John Coe (1964–66), Charles Sutton (1966–71), and Marc Weishaus (1971–72). The first Ethiopian who served as director (1966–75) was Täsfaye Lämma. In July 1974, together with Nəguśu Rätta and Abbäbä Wälde, he elaborated and introduced an innovative system of musical notation, based on the traditional church notation system (↗*Mələkkət*) and allowing musicians from diverse backgrounds to perform together (Shelemay in SegBodLes 571–82, 1991: 123f.).

In 1968, the O.E. was dismissed from the University and had to become independent and self-supporting. In 1969 it toured the United States for the first time, renamed "The Blue Nile Group".

After the ↗Revolution of 1974, the O.E. was officially dissolved on 8 June 1975. Most O.E. members joined groups that toured the Middle East, Europe, and the United States. While participating in the official "People to People Tour" in 1987, Täsfaye Lämma defected in the United States. Soon after, he founded the Nile Ethiopian Ensemble and the Center for Ethiopian Arts and Culture based in Washington, D.C. He also became advisor and community scholar for the African Immigrant Folklife Project at the Library of Congress. As executive director, he managed the Center until his retirement due to ill health in 1999, at which point the Center's current operations ceased.

Orders and Decorations

O. (Amh.: **ኒሻን**, *nišan*, from Ottoman Turkish *nīšān*) and D. in the European sense were a rather late invention of the latter half of the 19th cent., starting with *aṣe* ↗Tewodros II. However, the bestowal of honorific vestments (↗Clothing; ↗*Lämd*), which had the function of D., had been institutionalized in the Christian empire and also among several Muslim kingdoms in the region at a much earlier stage already. They usually corresponded to ↗titles granted by a ruler or a prince. Even after the invention of modern O. and D. this ancient system of honorary D. continued parallelly till 1974. Both kinds of D., ancient and modern, then played a role in diplomatic relations between Ethiopian rulers and Europe, both O. and honorific vestments, intended as D., being sent as gifts to foreign sovereigns; e.g., *ləǧ* ↗Iyasu sent a purple vestment to the Austrian Emperor Franz Josef I with his diplomatic envoy to ↗Austria (Volker-Saad – Greve 2006: 160f.).

Investitures were normally accompanied by the bestowal of richly ornamented vestments. These vestments differed according to rank, but there was no pronounced difference between the vestments bestowed to the clergy and the laymen (i.e., those bestowed to the vestments of the ↗*əč̣č̣äge* and a ↗*ras* were largely the same). Every honorific vestment had to be given to the church after the death of the title holder; this custom was also applied to O. and D., which after death were either given back to the state or to the patronatic church (i.e., of which the decorated noble was a ↗*gäbäz*). Locally, such vestments remained in high esteem, local leaders therefore being bestowed such traditional D. rather than O. (e.g., Muslim Somali *šayḫs* were honored by ↗Ḫaylä Śəllase I with vestments).

These vestments were produced by Indian and Yemenite ↗gold embroiderers, thus the ornaments used were influenced by Indian motives and arabesks. The material of which the vestments were made as well as the ↗colours played an important role in determining the stature of the bearer. Mostly those vestments were made of ↗cotton (*abu ǧädid*) for the lower rank (e.g., servants), ↗silk and velvet for the higher ranks (e.g., *aṣe* Yoḥannəs IV decorated high officials with *kabba lanqa* and velvet clothes on the occasion of his ↗coronation, s. BTafY 127ff.).

Purple was the colour of the kings, green was reserved for the *ras*, and blue for the *däǧǧazmač*; the more gold was used in the embroidery, the higher the rank. The colours of umbrellas (↗*Dəbab*) used by nobles corresponded to their vestments.

Other objects could also serve as D. The king of kings decorated ↗Nägaśi Krəstos Wärädä Qal of Šäwa by awarding him a ↗*matäb* made of blue silk (CecZeila 1, 238), which seems to have been a common D. for princes and nobles. High ranking notables were also decorated with headgears of gold (e.g., *nəburäʾəd* Iyasu of Aksum on the occasion of *aṣe* Yoḥannəs IV's coronation, s. BTafY 129) or by a gilded saber (e.g., *aṣe* ↗Mənilək II decorated the influential governor *ras* Wäldä Giyorgis of Käfa with a saber mounted

in gold as a military distinction, s. Bulatovich 2000:262).

The oldest known D. in Ethiopia is the Order of Solomon (sometimes also referred to as the Order of the Seal of Solomon), which was invented by *aṣe* Tewodros II (Pankhurst 1996) and casted by his German worker Eduard ↗Zander (s. fig. 1). There was only one class of this D. originally, and it was worn on a golden necklace. This D. was normally given to foreign envoys. It is possible that John ↗Bell, his closest advisor, suggested him to found such an award. The ruler who established O. in the proper sense, i.e. with different classes was *aṣe* Mənilək II. The Order of Solomon (under Mənilək also known as The Cross of Solomon) already existed in five classes under him (s. Montandon 1913). It appears that even earlier, Mənilək had founded another O., the Order of the Star of Honor of Ethiopia (*yäʾItyopya yäkəbər kokäb*), which according to Montandon (1913:409f.; s. Copley 1998:157) was established in 1884/85 whilst Mənilək was king of Šäwa.

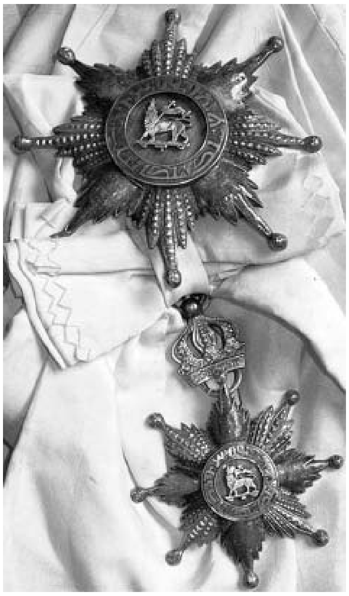

Fig. 6: The only known order established by *nəguś* Mikaʾel of Wällo and Təgray, from the Nachlass of the German envoy Friedrich von Syburg; photo courtesy of Jürgen Otto, from Smidt 2005:72

The Order of Solomon, the first D. founded, was later, when O. were established, regarded as the highest ranking O. of Ethiopia. Its collar was established in 1922 during the reign of ↗Zäwditu by *ras* Täfäri (later *aṣe* Ḫaylä Śəllase I) in 1922 (Copley 1998:146; s. fig. 5). It was a magnificent piece made out of gold, enamel and diamonds and was only given to ruling monarchs, the Emperor's sons and to the two highest Ethiopian princes, *ras* ↗Kaśa Ḫaylu and *ras* ↗Śəyyum Mängäša.

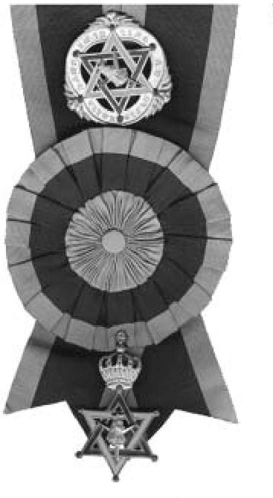

Fig. 4: The Order of the Queen of Sheba, founded in 1922; photo courtesy of the author

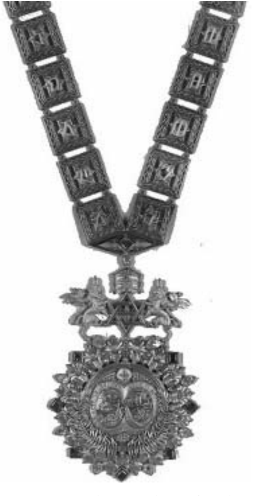

Fig. 5: The Order of Solomon, founded in 1922; photo courtesy of the author

The second highest O. was the Order of the Queen of Sheba (*yänəgəśtä Saba nišan*) which was established in 1922 (according to Copley 1998: 151) or perhaps only in 1930 (s. fig. 4). However, its use is not documented until the liberation of 1941. The third highest O. was the Order of the Holy Trinity which was established by *aṣe* Ḫaylä Śəllase in 1930 (Copley 1998: 153). The fourth in rank was the Order of Mənilək II which was established in 1924 by Empress Zäwditu (Copley 1998:155 attributes it to *ras* Täfäri, her regent; s. fig. 2). An interesting fact is that the fifth-ranking O. is that of the Star of Honor of Ethiopia, which as mentioned above is supposedly the oldest O. in the proper sense. The ranking of O. was established by Ḫaylä Śəllase in 1930 after his coronation. All the O. had five classes, plus collars in the cases of the two O. of Sheba and Solomon (cp. fig. 5).

Regional governors also bestowed O.; e.g., *ras* ↗Śəyyum Mängäša gave a cross of the Order of Solomon to the traveller Jean Duchesne-Fournet in ca. 1901/03 (Duchesne-Fournet 1909:306, with ill.; it was done by a local silversmith). An unusual O. which depicts the ↗Lion of Judah was established by *nəguś* Mikaʾel ʿAli of Wällo and Təgray after his coronation as the king of northern Ethiopia in 1914, an indication of the sublime position he held during the reign of his son, *ləǧ* Iyasu. One grand cross and a star, bearing the King's name in Amharic and Arabic, is documented, which was awarded to the German envoy to Ethiopia, Friedrich von Syburg (Smidt 2005:72; s. fig. 7).

Other D. were invented after 1930 by *aṣe* Ḫaylä Śəllase. He awarded golden coins as honorary gifts (↗Coinage), and medals. Medals were

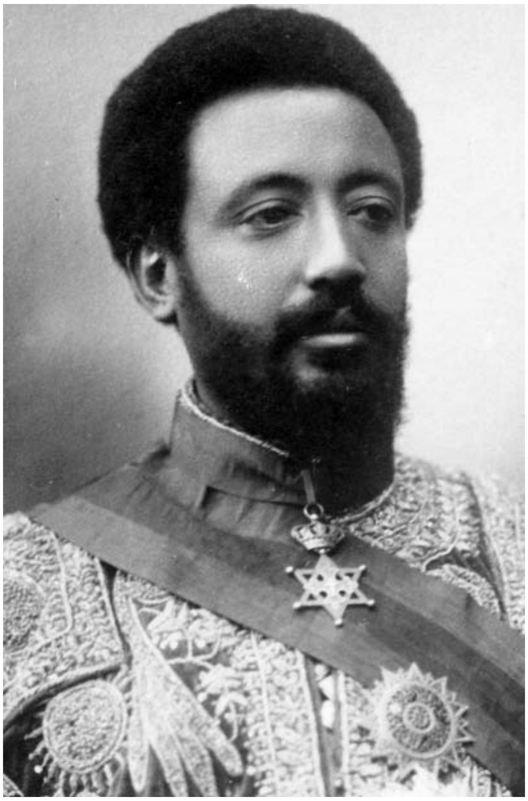

Fig. 7: *Ras* Dästa Damṭäw with orders; from the collection of the IES (no. 23 D, 770)

struck on specific occasions, such as the silver jubilee of Ḫaylä Śəllase's coronation or other events celebrated by the state. There are, for example, medals created for those who participated in the Korean War under the auspices of the ↗United Nations in 1950–53 (s. fig. 8), and later members of the Ethiopian UN troops in the Congo.

Medals

Besides the O. in the strictest sense which are insignia of honour worn (at least in theory) by a community of entitled bearers, a much larger and complex group of related objects is composed of various kinds of D. or distinctions, badges, bars and pins. Some were bestowed by the government as a reward and in memory of certain services, especially in wartime. These D. are typically similar to medals in their form and manufacture, but only in part by their purpose and use. Medals could be turned into D. (or simply ↗jewellery) by mounting them with a loop. Many kinds of medallic objects in Ethiopia show European influence.

The borderline between medals and coins is sometimes difficult to draw, especially when the coin standard of weight and fineness was applied to the medals. Even if they were not made for monetary circulation, these pieces had the same metal value as the full value coins struck in silver and gold which in turn were issued according to the weight unit of the ounce (*wäqet*) corresponding to 1 *Bərr* in silver (or 5 *Wärq* in gold). Basically they were not to be worn, but rather kept in a case as souvenirs.

The first true medal manufactured in Ethiopia probably dates to 1903; it has been embossed, and the two sides (showing ↗Mənilək II and St. George) were soldered together by a court jeweller of emperor Mənilək on the occasion of the seven years celebration of the ᶜAdwa victory. Separately the two sides were also used to decorate crowns given to *rases*.

Later presentation pieces were struck in the palace mint of Addis Abäba which operated from 1905 to 1936. Some were only off-metal strikes from coin dies. But after *ras* Täfäri had visited the Paris mint in 1924 he wanted to have medals in different gradations at his disposal, commemorating special events. Therefore these pieces were issued in silver and (from the same dies) in gold in the sizes of one *Bərr*, ½ *Bərr*, ¼ *Bərr* silver and 8, 4 and 2 *Wärq*. The dies were procured by the mint master Hagop Bagdassarian in Paris and Vienna and occasionally muled with primitive reverse dies of his own workshop. The distribution of such medals was occasioned by *ras* Täfäris's coronation as *nəguś* in 1928, by the landing of the first airplane in Addis Abäba 1929 and by the imperial ↗coronation of ↗Ḫaylä Śəllase I 1930; the latter issues were in continued use, and even after the closure of the mint the court jeweller, Bedros Sevadijan, who had saved part of the minting machinery, did restrike them for the Emperor with new dies of his own. The last set of medals in the standard sizes was issued at the silver jubilee of Ḫaylä Śəllase in 1955. Afterwards one of the functions of these medals was taken over by pseudo-coins, pieces carrying a coin denomination but intended to be sold to collectors for a price and were therefore not in circulation.

Medals serving as distinctions are produced with an added loop to be worn on a riband. They appeared during World War II and were inspired by the habitude of the Italians. Their mass production was met by foreign firms, e.g., in England or ↗Sweden.

Official medals are accompanied by a puzzling lot of private fabrications mainly serving as cheap jewellery, being mostly made in base metal and often imitating coin types. The small ones (usually called jetons) could be produced by simple screwing presses. The earliest example of this kind was made in 1889 in Ankobär by Alfred ↗Ilg on a machine constructed for the production of cartridges (s. fig. 9).

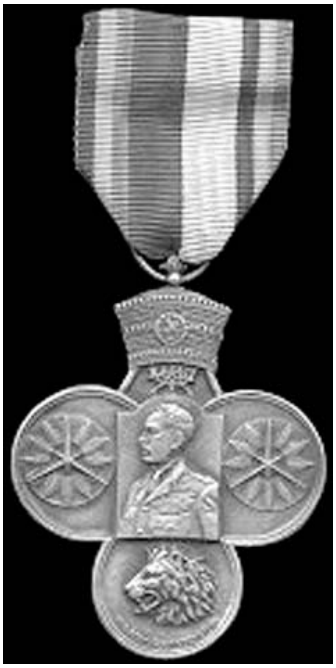

Fig. 8: Commemorative medal for the Korean War, created by Ḫaylä Śəllase I; photo courtesy of the author

The same categories apply to the medallic objects connected with the Italian Impero in the period when it controlled Ethiopia: official medals were struck by the royal mint in Rome, but they were exceeded by the numerous productions of private firms such as Johnson in Milan. They celebrate the victorious battles and conquered cities in the 1935/36 war and the proclamation of ↗Africa Orientale Italiana on 9 May 1936. An official medal for the participants of the campaign to be worn on a riband was created by decree on 27 April 1936 and was also bestowed for further service with annual bars added to the riband until 1940. Badges were also produced for the different combat units and volunteers (even of Eritrean askaris). In 1940 the conquest of British Somalia by the viceroy Amedeo di ↗Savoia, Duke of Aosta was commemorated by a medal as well as his death in captivity in 1942.

Ordination

The ritual of O. specifies the procedure for the consecration of the clergy. Today the ↗Ethiopian Orthodox (Täwaḥədo) Church (EOTC.) has four main orders of ministry: ↗*diyaqon*, ↗*qäsis*, ↗*qomos*, and ↗*ep̣p̣isqop̣p̣os*.

The rite presently in use by the EOTC, and by the Eritrean Orthodox Church, known as 'The Book of Ritual for the Nomination of the Elected of the Church', hereafter M.ś. (**መጽሐፈ፡ ሥርዓተ፡ ሢመት፡ ዘሥዩማን፡ ቤተ፡ ክርስቲያን፡ ኢትዮጵያዊት**, *Mäṣḥafä śərᶜatä śimät zäśəyyumanä betä krəstiyan ityop̣yawit*) seems to have been translated into Gəᶜəz from Arabic in the mid-20th cent. (during the Italian period), as it is confirmed by a colophone note to the manuscript written in 1935 A.M. [1942 A.D.]. There was no need for an indigenous rite before the emancipation of the EOTC from the ↗Coptic Church (cp. the description of O. in BeckHuntAlvar 348–56) and the nomination of the first Ethiopian patriarch, as his Egyptian predecessors used the rite in the liturgical language of their mother church. The M.ś. is therefore the translation of the O. rites used for centuries by the Coptic Metropolitan (↗*P̣ap̣p̣aṣ*) in Ethiopia.

The earliest known manuscripts containing the M.ś. in Gəᶜəz date to mid-20th cent.: (a) a collection of prayers and passages from ancient ecclesiastical writings such as the ↗*Testamentum Domini*, the ↗*Senodos*, the *Canons of Church Fathers*, etc. which belonged, judging by the stamp, to *abunä* Filəp̣p̣os (later the first Patriarch of the Eritrean Orthodox Church, d. 2005); (b) ms. EMML 1204 from ↗Qəddəst Śəllase Cathedral, Addis Abäba. The two serve as the basis for numerous copies, at least one in the possession of every bishop. According to one manuscript, the M.ś. was translated in 1968, by *abunä* Abrəham, into Amharic.

The M.ś. (a) gives prayers and rubrics for the consecration of *liqä p̣ap̣p̣asat* (archbishop; p. 4), *p̣ap̣p̣as* (bishop; p. 13), *ep̣p̣is qop̣p̣os* (p. 24, after Trisagion), *anagʷənəsṭis* (lector), *diyaqon*, *liqä diyaqonat* (archdeacon), *mäzämmər* (psalmist), *qäsis*, *qomos*, guardian of the gate (*ᶜaṣawe ḫoḫət*) and deaconess (cp. ↗Churches and church administration). The ministries are divided into four groups in accordance with the type of consecration:

(i) by anointing (**ቅብዐት**, *qəbᶜat*) and/or afflation (**ንፍኀት**, *nəfḫat*): *p̣ap̣p̣as* (only anointing) and *ep̣p̣isqop̣p̣os* (anointing and afflation);
(ii) by imposition of hands (**አንብሮ፡ እድ**, *anbəro əd*) and afflation: *qomos*, priest (*qäsis*), *diyaqon*, *liqä diyaqonat;*
(iii) by benediction (**ቡራኬ**, *burake*) and afflation: *nəfqä diyaqon* (sub-deacon), *däbtära*, *mäzämmər*;
(iv) only by word (*bäqal*): the guardian of the gate, the deaconess, the regular widower and widow (husbandless).

The M.ś. (b) does not provide any text for the O. of a bishop (this being reserved to the Holy Synod only and thus rarely copied). Both (a) and (b), resp., contain O. prayers for lector (pp. 78–87; fols. 1a–4a); *nəfqä diyaqon* (pp. 70–78; fols. 4a–8a); *diyaqon* (pp. 57–70; fols. 8a–13b); *liqä diyaqonat* (pp. 49–57; fols. 13b–15a); *mäzämmər* (pp. 87–98; fols. 15a–17b); *qäsis* (pp. 36–49; fols. 17b–22b); *qomos* (pp. 27–36; fols. 22b–27b). They also contain the prayers for blessing the *qəddəst* (pp. 113–18; fols. 28b–29b), and the ↗*tabot* (pp. 108–11; fols. 29b–31a); the prayer for blessing the altar (cp. ↗*Mäqdäs*) and the vestments is found in (b) only (fols. 27b–28b). Other similar manuscripts, probably with the same EMML 1204 as their *Vorlage*, additionally provide a prayer for blessing the ↗*maᶜəṭänt* and for the reconsecration of the *qəddəst*, in the event that it has been touched by a man not properly ordained.

The M.ś. of the EOTC has not been edited yet. The Pontifical (**መጽሐፈ፡ ጳጳስ**, *Mäṣḥafä p̣ap̣p̣as*), used by the Catholics of Gəᶜəz rite, was edited and published by van Lantschoot in 1940. It was immediately put into the use by *abunä* ↗Kidanä Maryam Kaśa for O. in the Gəᶜəz rite at ↗Santo Stefano dei Mori.

The 15th-cent. *Mäṣḥafä* ↗*məśṭir* mentions seven orders of ministries with their respective functions (**ተልእኮ**, *tälʾəko*, ‘service’) and duties (**ሥልጣን**, *śəlṭan*, ‘power’), corresponding to the Coptic Pontifical (cf. Burmester 1985), meaning that ↗Giyorgis of Sägla was familiar with the O. rite as it was practised either in Egypt or in Ethiopia in his time (cp. YaqMis II, 273–77):

(i) *mäzämmər*, with the duty to say the liturgy of the hours of the day and of the night (cp. ↗*däbtära*);
(ii) lector (**አናጕስጢስ**, *anagʷəsṭis*) who reads the Scriptures from a special desk;
(iii) *nəfqä diyaqon* who helps the *diyaqon* to serve at the altar and to watch over the assembly during the religious service;
(iv) *diyaqon* who serves the celebration of the Eucharist;
(v) *qäsis* (here also **በርዘቤጤር**, *bärzəbeṭer*, **ጤርዘቤጤር**, *ṭerzəbeṭer*, i.e. presbyter) who celebrates the Divine Liturgy, teaches, absolves sins, baptizes and blesses;
(vi) chorepiscopos (**ኮሮ/ኮሬ፡ ኤጲስ፡ ቆጶስ**, *koro/kore ep̣p̣is qop̣p̣os*) who blesses the baptistery and the sacred vessels of the Church;
(vii) *ep̣p̣isqop̣p̣os* is the highest rank, who lays on hands for the O. of lower orders (on a Sunday) and consecrates the holy altar with the Holy Myron.

The EOTC, which was headed by a foreign (Egyptian) bishop for centuries, inherited a practice of O. utterly different from its bishop’s mother Church. As the Egyptian bishop would not celebrate the Divine Liturgy (↗*Qəddase*), he conferred O. without liturgical celebration. In fact, even in today’s Ethiopian and Eritrean Orthodox Täwaḥədo Churches, all the rites of O., both the “minor orders” (doorkeeper, singer, reader, subdeacon) and the “major orders” (deacon, priest) are ordained separately from – before, after, or simultaneously with the Liturgy. Priests and deacons are ordained on the feasts of Our Lord or of Mary, on Sunday, or on any occasion when the bishop is present. If the newly ordained deacons and priests are ordained in the context of the *Qəddase*, they receive communion from the presiding celebrant first, before other communicants of the same rank. All the “minor orders” are always given communion together immediately before the deaconate. O. takes place in the *qəne maḫlet*. Rarely, O. can also take place in private, in the bishop’s house. In that case, fasting is required from both the ordainer and the ordained.

The rite of episcopal consecration (*täkriz* or *śimät*) is performed during the Sunday Mass, preferably on the feast of Pentecost or of the Apostles Peter and Paul, after the reading of the Acts and the singing of the Trisagion (s. *abba* Marqos, *Mäṣḥafä śərᶜatä śimät* … 1941/42:4, 13, 28). The rite is preceded by ↗*wazema* the day before and by the ↗*Səbḥatä nägh* in the morning (ed. van Lantschoot 1940:2f.). As in the Coptic tradition, in the Ethiopian and Eritrean Orthodox Täwaḥədo Churches, the newly consecrated bishop is expected to read the Gospel, to preach, and to preside over the *Qəddase* (unless the presiding bishop is the Patriarch or the *liqä p̣ap̣pasat*).

Orero, Baldassarre

O. (b. 1 June 1841, Novara, d. 11 November 1914, Novara) was an Italian general and governor of the Colonia ↗Eritrea.

Baldassarre Orero; from Cesari 1935:214, table XXVIII

O. graduated in 1859 from the Military Academy of Turin as sergeant. In the same year, as a first lieutenant in the 4th Bersaglieri battalion, he fought in the Risorgimento campaign against Austria. In 1860, as a lieutenant in the headquarters corps, O. fought in Umbria and the Marche against the Bourbons. In 1866 he became captain and in 1870, as an officer in the headquarters of General Nino Bixio, participated in the occupation of Rome. From 1880 to 1882 he commanded the 21st infantry division with the rank of colonel; in 1887 he was promoted to major-general and was given command of the Calabria brigade.

On 6 November 1889 O. succeeded Antonio ↗Baldissera as the comandante of the ↗Colonia di Assab and dependent territories, arriving at Massawa on 24 December. On 1 January 1890, with the formation of the Colonia Eritrea, he became its governor. O. followed the pro-Šäwan policy. On 26 January 1890, he started a march to ↗ᶜAdwa believing that a temporary occupation of the town, by then free of the armies of *ras* ↗Alula Ǝngəda and *ras* ↗Mängäša Yoḥannəs, who had withdrawn beyond the May Wärᶜi River in Tämben and Ǝndärta, would facilitate ↗Mənilək II's advancement. The Emperor himself, however, never wanted this military intrusion and regarded it as an act of conquest. Nor did the

Italian government of Rome order or approve of the operation. Prime Minister Francesco Crispi telegraphed O. to cross back the ↗Märäb, but on finding out O. was already in ᶜAdwa, the President of the Council ordered him to stay there. O., however, left native troops at ᶜAdwa under the command of Major Di Majo and moved to Eritrea. In April 1891 O., embittered by the lack of appreciation, asked to be transferred back to Italy; on 4 June he was succeeded by Antonio Gandolfi.

Back in Italy, O. commanded the Parma brigade (1890–92), the Brescia military division (1892–95), Rome military division (1895–98), and the 11th armed corps, as a colonel general, from 1898 onwards. A cavalier of the Military Order of Savoia, he was awarded two gold medals for his participation in the Risorgimento wars. After the Congress of Berlin, he became the Italian commissary for the demarcation of borders between the Balkan states. Upon retirement, he returned to Novara where he was actively involved in local administrative and political life.

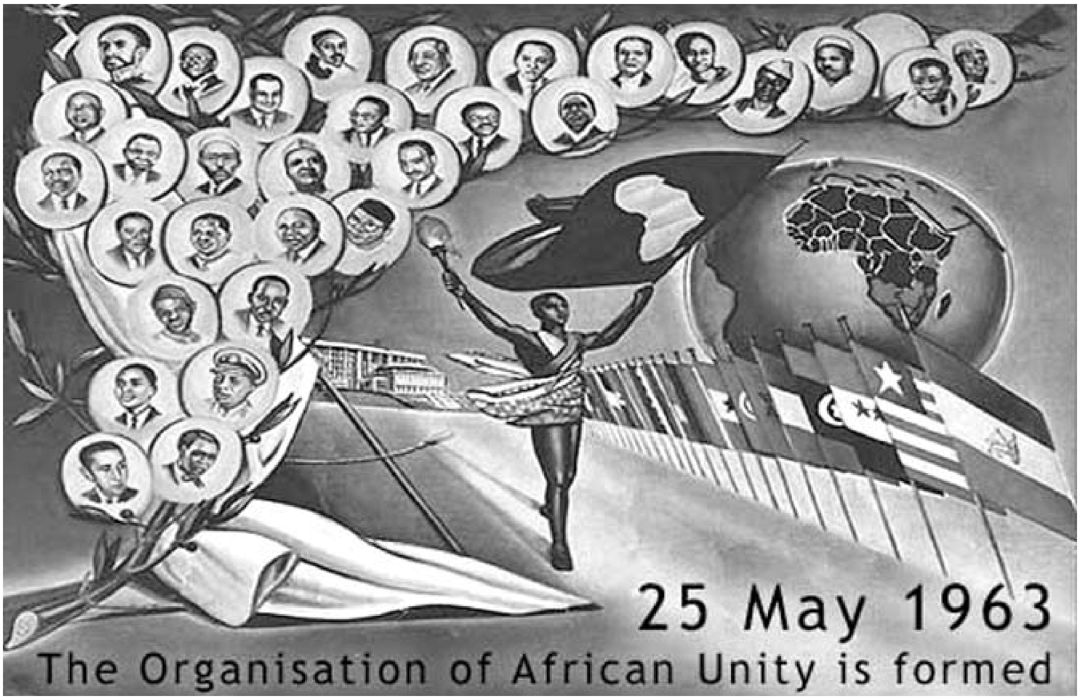
Organisation of African Unity

The OAU (today African Union) was established in ↗Addis Abäba on 25 May 1963 by 30 independent African states. As the independence process continued, new members signed the OAU Charter. In 1994 the Republic of South Africa became the 53rd member. Morocco left the organization in 1984 in protest against the admission of Western Sahara. The main objectives of the organization, as established in its Charter, were to promote African unity and co-ordinate and strengthen regional economic and political co-operation and to fight for the eradication of ↗colonialism from the African continent. After a hard competition and effective Ethiopian lobbyism, Addis Abäba became headquarter of the organization. In return, Ethiopian diplomats nominated Guinea's permanent representative to the United Nations, Diallo Telli, as first OAU chairman (Makonnen Ketema 2006: 4f.).

The OAU was established in a period of political division, which was reflected in two rival groups within the organization. The radical "Casablanca group", led by Kwame Nkrumah fought for a closely integrated union, and the majority in the more conservative "Monrovia group" preferred a more gradual approach towards African unity, emphasizing economic integration. Ethiopia, under the leadership of Foreign Minister ↗Kätäma Yəfru and Emperor ↗Ḫaylä Śəllase I, played a mediating role, to prevent a lasting division between the two blocs and to show a united stand of all Africans (Makonnen Ketema 2006: 2ff.; Van Walraven 1999: 128).

The OAU established several institutions: the Assembly of Heads of State and Government; a Council of Ministers [Foreign Affairs]; a Secretariat; and the Commission of Mediation, Conciliation and Arbitration. Specialized Commissions were created later. The Pan-African Telecommunications Union and the Pan-African News Agency were autonomous specialized agents under the auspices of the OAU. Already in 1964 the OAU contributed to the establishment of the African Development Bank.

The members agreed to struggle for self-determination for all of Africa and to combat apartheid, but their practice differed. State leaders were very eager to defend their newly won national sovereignty, and used the OAU Charter to defend the sanctity of state sovereignty and independence. However, the OAU affirmed as inviolable the African borders as inherited from colonial powers, thus being incapable of acting in border conflicts between members or in internal matters of member states. The preservation of colonial borders as well as the principle of non-interference in internal affairs, have both been named "the OAU doctrine". Harsh criticism of and interference with the apartheid regimes, while remaining silent about the former abuses, earned the organization the nick-name "a



25 May 1963
The Organisation of African Unity is formed

Poster announcing the opening ceremony of the Organisation of African Unity, 1963; from the collection of CORBIS (U032)

trade union of African leaders". Criticism of such double standards was a major factor that made the OAU adopt the African Charter of Human and Peoples' Rights in 1981. However, the Charter is generally considered a weak instrument for human rights protection (Naldi 2002: 5ff.).

The OAU Commission of Mediation, Conciliation and Arbitration never functioned as intended. During the period 1963–93, the OAU mediated in 44 inter-state or domestic conflicts, half of the mediations being described as successful, most often in the early years of the organization (Van Walraven 1999: 295). Ethiopia was a party in five conflicts under OAU mediation: on her relations to ↗Somalia in 1964, 1967, 1973 and 1977–78 (two successes and two failures), and on her relation to the ↗Sudan in 1977 (success).

In the 1990s, the OAU played a more active role in conflict management. In 1993, a new Mechanism for Conflict Prevention, Management and Resolution was established, which increased OAU's institutional capacity. However, economic strains limited it to co-ordination and prevention, thus proving little effective in the conflicts in Liberia, Rwanda and the Comoros (Espegren 1999: 40ff.). A joint OAU and ↗United Nations brokered peace agreement brought an end to the Ethiopian–Eritrean war in 2000, but no lasting solution has been reached so far (Tronvoll 2004: 48ff.).

For Ethiopia the establishment of OAU marked a shift in foreign policy from isolationism towards a more active regionalism. The presidency of OAU circulated among African heads of state, but Ethiopia got the chairmanship four times (Ḫaylä Śəllase twice, Mängəśtu Ḫaylä Maryam and Mälläs Zenawi), more than any other member. ↗Aklilu Habtäwäld played also a prominent role in its early stages and Täsfaye Gäbrä Əgziʾ was its provisional Secretary General. Formally the chairman did not have much power, but he was a major spokesman of the OAU between sessions. Respect for Ḫaylä Śəllase and Ethiopia's role as a host prevented the OAU from discussing Ethiopian–Eritrean relations as long as the Emperor was in power. When OAU later accepted the independence of ↗Eritrea, the main argument was its separate colonial history, not the principle of self-determination, nor a general acceptance of secession.

The prestige of being host was expensive for Ethiopia. 16 of the 40 annual summits of OAU were held in Addis Abäba, at great expenses for the Ethiopian government. Shortage of qualified personnel was particularly pressing in the early years, and Ethiopians had the highest share of professional staff at the OAU. On 9 July 2002, the OAU was disbanded and replaced by the African Union.

Origen

The Greek writer O. of Alexandria (b. ca. 185, d. ca. 254) is one of the most prominent theologians of the first Christian centuries, but none of his work has been translated into Ethiopic. However, traces of his thinking can still be detected in ↗Gəʿəz literature, where he is known under the name Argenəs (**አርጌንስ**).

Being strongly influenced by Platonic ideas, O.'s theology was the object of controversy after his death. In 543 an edict of the Emperor Justinian condemned him for his Christology and for his doctrines on the psyche: e.g., the pre-existence of human souls and their embodiment in flesh as a consequence of the fall, the spherical shape of human bodies at the time of the resurrection, and the *apokatástasis*, or "restoration" (of souls), meaning the universal salvation of human beings.

Some of the views of O. are discussed in ↗Giyorgis of Sägla's *Mäṣḥafä* ↗*məsṭir*, compiled before 1425 from more ancient (even Aksumite) sources. In chapter 6, Giyorgis opposes the thesis of the subordination of the Son to the Father (**ሑጻጼ፡ ወልድ፡ እምአብ**, *ḥuṣaṣe wäld əmʾab*), supporting the "orthodox" doctrine of the equality of the Father and the Son (**ዕሪና፡ አብ፡ ወወልድ**, *ʿərinna ab wäwäld*). In chapter 26, he opposes the opinion that the creation of human bodies is a consequence of original sin. In both cases, the condemnation of O. seems to contain a hidden polemic against Ethiopian monastic circles, such as that of the monk Zämikaʾel (↗Zämikaʾelites), who was condemned by *aṣe* ↗Zärʾa Yaʿəqob for his anti-materialistic and spiritualistic ideas of "Gnostic" derivation.

The 15th/16th-cent. ms. Paris, BN d'Abb. 51 (= CRAbb no. 37), fols. 131v–57v, contains an eschatological *dossier*, translated from Arabic but hitherto unknown in the Arabic original. This series of texts opens with the translation of the *Apocalypse of* ↗*Peter*, fols. 131v–37, rearranged and treated as a prologue to the treatise **ዳግም፡ ምጽአቱ፡ ለክርስቶስ ፡ ወትንሣኤ ፡ ምውታን** (*Dagəm məṣʾatu läkrəstos wätənśaʾe məwətan*, 'Second Coming of Christ and Resurrection of the Dead'; cp. ↗*Dagəm məṣʿatu läkrəstos*), fols. 131v–46v. A second treatise, **በእንተ፡ ኵነኔ፡ ኃጥአን** (*Bäʾəntä kʷənnäne ḫaṭəʾan*, 'On the Judgement of Sinners'), fols. 146v–57v, completes the short collection (↗Eschatology). In both works, the Origenian concept of *apokatástasis* left its traces in several passages: e.g., "all the sons (of Adam) will become an army of angels, instead of an army of the devil", fol. 144v (= Grébaut 430), "God did not create Adam for punishment and decay, but for happiness and joy", fol. 154 (= Grébaut 170), and "(God) will not make (Adam) die twice" (ibid.).

Ms. Paris, BN d'Abb. 51 comes from ↗Daga Ǝsṭifanos, and the same *dossier* is found in the 18th-cent. ms. Ṭānāsee 35, fols. 46–70v, from ↗Kəbran Gäbrəʾel. This may indicate that in Lake ↗Ṭana monasteries a theological school was active, preserving such ancient Christian ideas as the Origenian *theologoúmenon* of the universal salvation of human souls, and elaborating on them. In keeping with the dating of ms. Paris, BN d'Abb. 51, that school might have flourished towards the end of the 15th cent.

Orit ↗Octateuch

Orléans, Henri d'

Prince O. (Henri Philippe Marie d'Orléans; b. 15 October 1867, Ham, Surrey, England, d. 9 August 1901, Saigon, Vietnam) was a French traveller. He was a great-grandson of the last French king Louis-Phillipe I and son of Robert of Orléans, Duke of Chartres. He became an insatiable traveller and explorer and between 1889–90 he travelled with Gabriel Bonvalot to Asia.

O. went to Ethiopia in 1892 and explored the city and area of ↗Harär. In February 1897, he travelled again to Ethiopia with Viscount Edmond de Poncins, officially on a private mission, yet with the support of French industrialists and a small military force (d'Orléans 1898: 8). The mission coincided with mounting French involvement in the Horn, as proven by the simultaneous presence of three other French missions in the area (Henri Nicolas ↗Clochette, Léonce ↗Lagarde and Bonchamps/Bonvalot in ↗Fashoda). In France the mission aroused suspicion because of fears that the prestige of O. might overshadow the official mission led by Lagarde.

O. met *ras* ↗Mäkʷännən Wäldä Mikaʾel in Harär and ↗Mənilək II in Addis Abäba and befriended Nikolaj ↗Leontiev. He also became a staunch critic of Italian and British colonialism and a supporter of a Franco–Ethiopian alliance. In June 1897, he went back to France with Leontiev, with the intention of gathering forces and official support for his project to participate in Mənilək's colonization of southern Ethiopia (d'Orléans 1898:195, 262; Marcus 1975: 188). He brought back photographs and film footage and published an account defending France's role in Ethiopia (d'Orléans 1898). His anti-Italian stance led him to fight a duel with Prince Vittorio Emanuele di Savoia, leaving the two wounded. O. could never put into practice his Ethiopian project and instead returned to Asia where he died of malaria.

Lukian Prijac

Orma

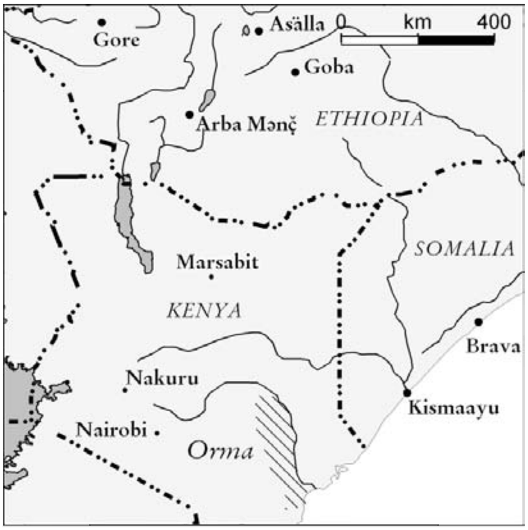
O. (Orom. sp.: *Ormaa*, also Wärr Day or Tana O.) is the name of an ethnic subgroup living near the River Tana in Kenya and the supposed name of the ancestor of the ↗Oromo. They are the southernmost speakers of ↗Oromiffaa.

O. or *ilm*(*a*) *Ormaa* ('sons of Ormaa'), a self-designation of the ↗Boorana, is sometimes interpreted as the original name of the ↗Oromo in general (d'Abbadie: *Ilmorma*) and *afaan Ormaa* ('language of the Ormaa') was even used to name their language (cp. Conti Rossini 1904: 307, 321). Although O. seems to be the name of an apical ancestor, Horro instead of O. appears in the genealogies recorded by Haberland (VSAe II, 24).

The Tana O. seem to represent one of the earlier waves of Oromo expansion from southern Ethiopia starting in the 16th cent., having preceded the Boorana. They live on the right bank of the lower Tana River, to which they were confined by the British in 1909, in order to separate them from the Ogadeen ↗Somali (↗Ogaden) at whose hands they had suffered heavy losses. Previously, under the name of Wärr Day, the southern Oromo had occupied vast areas of what is now eastern Kenya and southern Somalia.

Although these 19th- and 20th-cent. events have had an influence on the composition of the Oromo and Somali groups of the area, the comparison of clan lists and hints found in the literature (s. Schlee 1991) point to a much earlier event as the trigger of the ethnogenesis of the Tana O. In the oldest source on the Oromo and the O. we have (under their alternative name Wärr Day), the 16th-cent. Ethiopian monk ↗Baḥrəy in his ↗*Zenahu lägalla*, provides a clan list. If we compare this list with Haberland's (VSAe II) Boorana clan list and a Tana O. clan list compiled from Werner (1914) and Kelly (1979), the following pattern is revealed: all three groups have a primary division in moieties. Baḥrəy's "Galla" were divided into Boorana and into ↗Baarentuu (or Bareytuma). The modern Boorana name their moieties Goona and Sabbo, and the Tana O. divide themselves in Irdida (also known as Arsi) and Bareytuma.

The overlap of clan names (↗Inter-ethnic clan relations) is strong enough to suggest that the 16th-cent. "Galla" split along the moiety line. Their Boorana moiety became the Goona moiety



of the modern Boorana, their Baarentuu moiety the homonymous moiety of the modern Tana O. Since the moieties were (and among some Oromo still are) exogamous, the missing moiety needed to be reconstituted in order to have ↗ marriage partners, following such a split. These new moieties were composed of remnants of the moiety which had left and of people of heterogeneous origins, including non-Oromo. This is in complete agreement with Haberland's general hypothesis about the emergence of Oromo subgroups, according to which, after the separation into Boorana and Baareentu, the exogamous moieties were re-established and that, today, there is no major subgroup which does not show at least traces of such a division, even if this is no longer reflected by rules of exogamy (VSAe II 120).

There is evidence that the split between those Oromo who became the modern Boorana and the ancestors of the Tana O. took place at an early stage of the Oromo expansion. A Portuguese source (cited in HuntGal 11) states that there were "Galla" called "Britamos" (Baareentu/Baraytuma?) in the Juba/Šäbälle area of what is now southern Somalia in 1620.

In northern Kenya the Wärr Day are associated with giant stone circles which are said to mark their graves and are attributed mythical features. According to P. Léon des Avanchers (1859) in the mid-19th cent. the Wärr Day extended from Salmate, which now belongs to Marsabit district, to the vicinity of Mombasa.

By 1979 there were 32,127 O. in Kenya, 30,607 of whom were living in Tana River District. They form about a third of the total population of the district (92,401), being only slightly outnumbered by the Bantu-speaking Pokomo (32,539) who traditionally practice agriculture. Grazing and raiding by their Somali neighbours continues to be a problem for the Tana O. who now live as sedentarized market-integrated cattle pastoralists. Only the younger men, in some cases employed labourers, move with the cattle camps. Between 1920 and 1940 the Tana O. converted to Islam. Conversion, like the colonial conquest which had preceded it, contributed to breaking up earlier power structures and social norms. Internal tensions stem from the fact that traditional forms of wealth distribution have declined and property rights have become more narrowly circumscribed. These developments have divided the O. into a class of wealthy entrepreneurial ranchers and another one of poor agro-pastoralists (Ensminger 1992).

Competition for riverine lands with Pokomo whose farms even block the access of herds to the river, as well as the development of state-sponsored irrigation agriculture affect the O. adversely. Also commercial ranching and game parks encroach on O. pasture lands. Increasingly, conflicts about land are taking a violent form (Abdullahi A. Shongolo 2003).

Günther Schlee

Oromiffaa

O. (Oromíffáa, or Oromo language) and *afaan Oromoo* are modern terms used in Ethiopia for the language spoken by the ↗ Oromo. In the 19th and most of the 20th cent. it was usually referred to by its speakers as *afáan Oromóo* 'language of the Oromo' or as *afáan Órmáa* 'language of the people' or 'language of the [↗]Orma', but also other names of major Oromo sections have been used for designating it, e.g., *afáan Booráná* 'language of the [↗]Boorana' – still the most common term in Kenya. In Amharic this language has been called *Gallǝñña* (ጋልኛ); the early 19th cent. booklet of the same name uses the Gǝᶜǝz form *nägärä Galla* (ነገረ፡ ጋላ, 'language of the [↗]Galla'). The modern Amharic term is *Oromǝñña* (ኦሮምኛ).

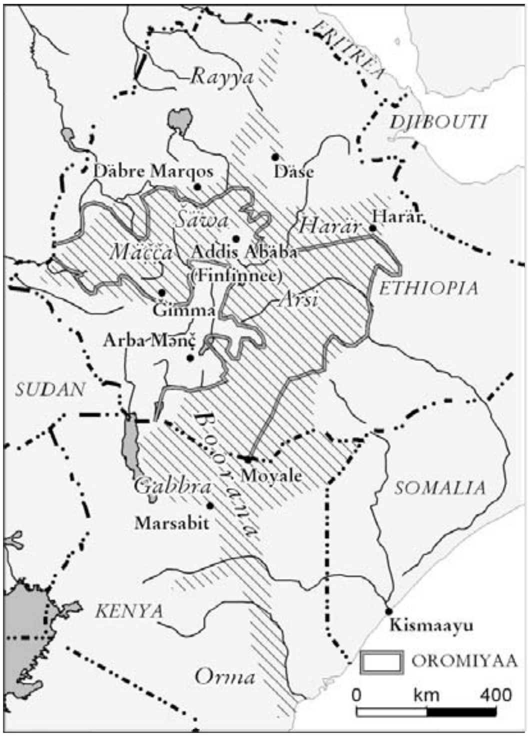
Together with the ↗Konsoid dialect chain spoken west of the southern Rift Valley in Ethiopia, O. forms the Oromoid subgroup of East Cushitic, one of the major branches of the ↗Cushitic language family. O. distinctively palatalized *t to s after *y as in the nominal suffix -eesá (-éssá in West-O.) < *-ayta, and developed *s to f in most environments, e.g., 'horn': O. *gaafá* vs. Konso *kaasa*, Somali *gêes*; 'urine': O. *finčáan* vs. Konso *sindaa*, Ɖáasanač *sínna* (cf. Sasse 1979).

O. is the Cushitic language with the highest number of native speakers (17,268,000 according to *Ethnologue*, cf. Gordon 2005: 117f.), and is used as a language of inter-group communication in several parts of Ethiopia. It is now spoken from eastern ↗Tǝgray to the Kenyan coast south of Malindi, and from ↗Wälläga to the ↗Harär area.

The major dialect groups of O. are (i) western Oromo (West-O., mainly ↗Mäčča), (ii) northern Oromo (such as ↗Rayya), (iii) highland Šäwan Oromo (mainly ↗Tuulama), (iv) eastern Oromo (East-O., including the dialect of Harär), (v) the central dialects (mainly ↗Guǧǧi and ↗Arsi), (vi) Boorana and the related varieties of northern Kenya and south-western Ethiopia, and (vii) Tana River dialects. The last, southernmost, group (s. Heine 1981: 14ff.), includes a dialect which Heine (ibid.) and Stroomer (1987) call Waata, which is spoken by a group of hunters and farmers along the Kenyan coast. This dialect should not be confused with the jargons of small groups of low-caste hunters and potters, called ↗Waata, who live among several O.-speaking communities.

The earliest known text with identifiable O. words is Baḥrǝy's ↗*Zenahu lägalla* (cf. Guidi 1907), dated 1593. It mentions not only tribal names such as *Baraytumaa*, *Bartumaa* and *Booran*, or personal names such as *Roobalee* or *Mulʾataa*, but also common words such as *saqalaa*, 'tent, dwelling', *mučaa*, 'child', *gurbaa*, 'young man', *qondaala*, 'young uncircumcised man', etc. A local grammatical tradition of the O. language, based on the Ethiopian model of the ↗*säwasǝw*, had developed by the beginning of the 19th cent. and produced such works as Habtä Śǝllase's *Nägärä Galla* (cf. Conti Rossini 1904) with basic grammatical data such as verb paradigms, plural forms of nouns, nouns with possessives, etc., as well as O.-Amharic word lists organized in semantic fields. During the following decades Christian and Muslim missionary efforts identified the social importance of O. With the spread of ↗Islam, religious poems for the *zikri* and *hadra* ceremonies (↗*Ḏikr*) were also composed in O., and were written down in Arabic script (the oldest known manuscripts are from the early 19th cent.).

Christian missionaries of different denominations as well as scholars produced grammars, dictionaries and ↗Bible translations, using both the Ethiopic and the Latin scripts, cf., e.g., ↗Tutschek, ↗Massaja, ↗Krapf, ↗Praetorius. In 1894 and 1899 ↗Onesimos Näsib published a collection of Oromo stories and poems and a full translation of the Bible in an adapted form of the Gǝᶜǝz ↗script. Yet the policy of nation building that promoted Amharic as the national language of Ethiopia severely restricted the spread of ↗literacy in O. During Italy's occupation of Ethiopia, O. received some official promotion: O. periodicals were produced using a Latin orthography, and there were regular O. radio broadcasts; both were discontinued at the end of the ↗British Military Administration of Ethiopia (s. EAE vol. 5; cf. RicLett 897; Gragg 1976: 171). Even *šayḫ* ↗Bakri Sapaloo's attempt to develop a new Oromo syllabic script in the early 1950s (cf. Hayward – Mohammed Hasan 1981) was prevented from spreading beyond his closest associates. The *Därg* (↗Provisional Military Administrative Council) launched publications in O. with an adapted Gǝᶜǝz script. Yet the O. opposition movements opted for a Latin orthography without diacritics, the *qubee*, and introduced it among the diaspora and in some areas of Ethiopia. After 1991, when Ethiopia adopted its new system of "ethnic federalism", O. written in *qubee* was introduced in elementary schools and in the administration of Region 4, Oromiyaa. Printing in O. spread quickly in the ensuing years, and there are now periodicals, novels, dictionaries (e.g., Akkaadaamii Afaan Saboota Itoophiyaa 2004), etc. As shown by Griefenow-Mewis (2001), O. has now developed a written standard based upon its Šäwan and western varieties, that also incor-



Maximum extension of the Oromo language including linguistically mixed areas

porates features of East-O. Some Muslim O. still use Arabic script, especially for religious texts.

In Kenya, Boorana O. has been used at least since the 1980s in broadcasts by the Voice of Kenya, but it has been little used in publishing.

Most varieties of O. have the following consonant phonemes (*qubee* spelling in brackets): plain stops *b*, *t*, *d*, *k*, *g*, ˀ (’); retroflex implosive *ḍ* (*dh*); ejective stops *p̣* (*ph*), *ṭ* (*x*) and *q*; plain palatal affricates *č* (*ch*), *ǧ* (*j*); ejective palatal affricate *č̣* (*c*); voiceless fricatives *f*, *s*, *š* (*sh*), *h*; nasals *m*, *n*, *ñ* (*ny*); liquids *l*, *r*; glides *y*, *w*. East-O. frequently develops *k* into the velar fricative *ḵ* (*kh*). The vowels are: *a*, *e*, *i*, *o*, *u*. Consonant gemination and vowel length are phonemic. Word final vowels are subject to change in allegro and normal speech in most dialects: short final vowels are frequently devoiced and, in southern O., even deleted while long vowels are shortened and glottalized, e.g., [*gúddáˀ*] (< *gúddáa*, ‘big’).

All accurately described varieties of O. display tonal alternations that have been treated as systems of pitch accent (cf. Owens 1980, 1985; Banti 1988; Hayward – Gemetchu Megerssa 1996). There are many minimal pairs such as Boorana O. *hín-ḍufani*, ‘they are coming (~ they will come)’ vs. *hin-ḍúfani*, ‘they don’t (~ won’t) come’. Tonal alternation plays a major role in inflectional morphology. The current *qubee* orthography does not represent tones, and indeed representing them in the standard orthography is not easy because of regional tonal differences and of complex phenomena of tonal sandhi. In this entry tones are indicated only when it has been possible to check them. The O. tone system distinguishes high (H) and low (L) tones, with occurrences of falling tones in the southern dialects. Tonal sandhi frequently changes the basic tonal patterns of words, and serious work on O. tones began only after Owens (1980) identified syntactic contexts where sandhi does not modify them. O. verbs belong to a single lexical tone class, while nouns and adjectives belong to several lexical tone classes, e.g., in all the described dialects nouns and adjectives with long final vowels have either HH or LH basic tonal patterns in their final two syllables, like *utúbáa*, ‘central pole of a house’ and *maqáa*, ‘name’. Two tonal classes are also distinguished in nouns and adjectives with final short *-a* in some dialects, e.g., in Harär-O. they are HH and, resp., LH like *galgálá*, ‘evening’ vs. *intalá*, ‘girl’, but they have merged into a single HH class in Mäč̣č̣a (*galgálá*, *intálá*).

Personal pronouns have separate nominative (NOM) and absolutive (ABS) forms. As in most Cushitic languages, seven persons are distinguished: East-O. NOM 1st pers. sg. *ani*, 2nd pers. sg. *ati*, 3rd pers. sg. masc. *inní*, 3rd pers. sg. fem. *isíin*, 1st pers. pl. *nu*, 2nd pers. pl. *isin*, 3rd pers. pl. *isáan*; ABS 1st pers. sg. *na*, 2nd pers. sg. *si*, 3rd pers. sg. masc. *isá*, 3rd pers. sg. fem. *isíi*, 1st pers. pl. *nu*, 2nd pers. pl. *isin*, 3rd pers. pl. *isáan*. Minor variations occur in some dialects, like ABS 3rd pers. sg. fem. *išíi* or *išée* in the west and in the south, NOM 1st pers. pl. *nuy* in West-O., 2nd pers. pl. *isan* in southern O. There are no object clitics and no subject clitics, except for the phrase-final H-toned 1st pers. sg. subject clitic *-n~-ín*, e.g. Harär-O. *qóttoon*$_1$-*ín*$_2$ *qoráan*$_3$ *č̣ap̣se*$_4$ ‘I$_2$ cut$_4$ wood$_3$ with the axe$_1$’ vs. *qóttoon qoráan č̣ap̣se* ‘he cuts wood with the axe’.

The 3rd pers. possessives are genitive forms of the above independent pronouns that frequently drop their initial *i-*: 3rd pers. sg. masc. *isáa* ~ *sáa*, 3rd pers. sg. fem. *isíi* ~ *síi*, 3rd pers. pl. *isaaníi* ~ *saaníi*. E.g. Harär-O. *abbáan*$_1$ *sáa*$_2$ *eesá*$_3$ *ǧira*$_4$? ‘where$_3$ is$_4$ his$_2$ father$_1$?’. The other possessives form together with *kana*, ‘this’, *kám*, ‘which?’, *káan*, ‘the other (anaphoric)’ and the associative pronoun *ka* ~ *kan* a special class of definitives that have masc. forms with *k-* and fem. ones with *t-*: *koo/too* 'my', *kee/tee* 'your (sg.)', *keeñña/teeñña* 'our', *keesan/teesan* 'your (pl.)'. Some O. dialects have 1st pers. sg. *kiyya* instead of *koo*. All definitives follow their head nouns.

The demonstratives are *kana/tana* 'this (masc./fem.)' (NOM *kuni/tuni*), *sana* ~ *sani* 'that' (NOM *suni*; southern and East-O. dialects use *suni* also as ABS form). The main interrogatives are *éeññú* 'who?', *máal* 'what?', *máal-íf* 'why?' (with the case marker *-f*), *meeqá* 'how much?', *eesá* 'where?', *yóom* 'when?', *kám/tám* 'which? (masc./fem.)', *ak-kám* 'how?'.

O. has two genders, masc. and fem. Adjectives, definitives, 3rd pers. sg. possessives and verb forms mark gender agreement (although West-O. tends to use the masc. definitives with *k-* everywhere). Apart from the nouns with the suffixes *-eesá* (masc.) and *-éettíi* (fem.), only some nouns are overtly marked for gender (e.g., *ǧaarsá* 'old man' vs. *ǧaartíi* 'old woman'). Plural is marked by suffixes such as *-óotá* (*-ótá* after long syllables), *-wwán*, *-lée*, *-íi* etc.; sometimes the stem is changed as in West-O. *kórmá* 'bull' (sg.) – *koromm-íi* (pl.). However, plural forms are not used when plurality is contextually clear. In southern O. nouns in *-áan* like *bisáan* 'water' and *miḍáan* 'grain' are *pluralia tantum*. Singulatives indicating an individual out of a group are marked by *-iččá* (masc.), *-íttíi* (fem.); in West-O. they can mark anaphoric definiteness.

Adjectives follow their head nouns. Some have the same form for masc. and fem., e.g., *ǧágná* 'brave' and *adíi* 'white'. Other ones are marked for gender: *gúddáa* 'big' (fem. *gúddóo*), *ḍéeráa* 'long' (fem. *ḍéertúu*), etc. Adjectives frequently have reduplicated plurals like *ḍeḍḍéeráa* or *ḍeḍḍéeróo* from *ḍéeráa* 'long'.

Verbs are usually cited with their infinitive form in *-úu*. As in all Cushitic languages, a system of stem extensions derives O. verbs from other verbs, nouns or adjectives. The most important are: middle *-at-* (infinitive *-aččúu*), causative *-s-* ~ *-siis-*, passive *-am-*, inchoative *-oom-* ~ *-aw-*. E.g., West-O.: *banúu* 'open (tr.)', middle *banaččúu* 'open for oneself', causative *bansiisúu* 'cause somebody to open something', passive *banamúu* 'be opened'; *baʾúu* 'go out', causative *baasúu* 'cause to go out, take out', middle of causative *baafaččúu* 'undress', passive of causative *baafamúu* 'be taken out'. Harär-O.: *duresá* 'rich', inchoative *duróomúu* 'become rich', causative of inchoative *duróomsúu* 'make rich'.

Partial reduplication of the first root syllable of primary and derived verbs indicates that the action is performed more than once, frequently or intensely; e.g., East-O. *deddéemúu* 'wander about' vs. *déemúu* 'walk', *č̣ač̣č̣ápsúú* 'break something in several pieces' vs. *č̣ápsúú* 'break something', West-O. *aʾargúu* 'look attentively' vs. *argúu* 'see'.

Verbs have two simple tenses, called "present" and "past", or "imperfect" (IMPF) and "perfect" (PERF) resp.: affirmative impf. 1st pers. sg. *rafa* 'I sleep', 2nd pers. sg. *rafta*, 3rd pers. sg. masc. *rafa*, 3rd pers. sg. fem. *rafti*, 1st pers. pl. *rafna*, 2nd pers. pl. *raftan*, 3rd pers. pl. *rafan* (2nd pers. pl. and 3rd pers. pl. regionally also *raftu* and *rafu*); affirmative perf. 1st pers. sg. *rafe*, 2nd pers. sg. *rafte*, 3rd pers. sg. masc. *rafe*, 3rd pers. sg. fem. *rafte*, 1st pers. pl. *rafne*, 2nd pers. pl. *raftan*, 3rd pers. pl. *rafan*. The corresponding negative tenses are: negative impf. 1st pers. sg. *hin ráfu*, 2nd pers. sg. *hin ráftu*, 3rd pers. sg. masc. *hin ráfu*, 3rd pers. sg. fem. *hin ráftu*, 1st pers. pl. *hin ráfnu*, 2nd pers. pl. *hin ráftan*, 3rd pers. pl. *hin ráfan*; negative perf. *hin ráfne* for all persons. Relative and other subordinate clauses have partly different tenses: the affirmative dependent (DEP) imperfect is like the negative independent imperfect but is L-toned, e.g., 1st pers. sg. *rafu*, 2nd pers. sg. *raftu*; the affirmative dependent perfect is like the independent perfect, while the invariable form *hin ráfne* is used for the negative dependent imperfect and perfect. The affirmative jussive is like the affirmative negative imperfect preceded by *ha* (regionally *haa*), e.g., 3rd pers. sg. masc. *ha ráfu*, 'he should sleep, let him sleep', while the negative jussive is *hin rafín* for all persons. This distribution of person-marked vs. invariable tenses, and of person-marked forms with final *-u* in the affirmative jussive and in the negative non-dependent and affirmative dependent imperfect, is typical of Oromoid and most Omo-Tana languages, but does not occur in other Cushitic languages. The affirmative imperative is 2nd sg. *ráfi*, 2nd pers. pl. *ráfaa*; the negative one 2nd pers. sg. *hin rafíni*, 2nd pers. pl. *hin rafína*. The affirmative perfect with a H final tone and, optionally, a lengthened final vowel forms a consecutive or "converbal" tense, e.g., West-O. *mač̣áafá*$_1$ *buttée*$_2$ *dúbbisi*$_3$, 'pick$_2$ (2nd pers. sg. consecutive) up the book$_1$ and read$_3$ it! (lit. 'having picked up the book, read it!'). Several compound tenses are formed with auxiliaries such as *ǧirúu* 'exist', *turúu* 'be', etc. The infinitive with *ǧirúu* is much used in southern and East-O. for progressive tenses, while West-O. uses the invariable same-subject converb in *-áa*, e.g., East-O. *ammá ḍúfúu ǧira* vs. West-O. *ammá ḍúfáa ǧira* 'he is coming now'. The consecutive with *ǧirúu* forms a perfect tense, e.g., *beekée ǧira* 'he has known it', contracted to *beekéera* in central, Šäwan and West-O.

Owens (1985: 98f.) distinguished word cases vs. phrase-final cases in O. The former are marked on nearly all words in a phrase, the latter only on the last word. Word cases are the nominative, used for non-focussed subjects, and the absolutive, the unmarked form used *inter alia* for direct objects, or with phrase-final case markers. (The term "absolutive" is now widely used for this unmarked case form in Cushitic and Omotic linguistics, even though it does not involve ergativity here.) The nominative is marked in most varieties of O. by *-ní* (masc.)/*-tí* (fem.)/*-í* (after geminates and consonant clusters) in words with final short *-a*, and by *-n* after long vowels, e.g., East-O. *fardí*$_1$ *adíin*$_2$ *kun*$_3$ 'this$_3$ white$_2$ horse$_1$' (NOM) vs. *fardá adíi kana* (ABS). Phrase-final cases are, e.g., the genitive, the L-toned instrumental *-iin ~ -n*, and the benefactive *-iif ~ -f*. The genitive is marked by a lengthened H-tone final vowel on the last word of a genitive phrase as in *maqáa*$_1$ *intalá*$_2$ *saníi*$_3$, 'that$_3$ girl's$_2$ name$_1$' where only *saníi* is marked as genitive. When a genitive-marked word gets a further inflectional suffix, the genitive ends in *-t*, as in Harär-O. *makiináa*$_1$ *namiččá*$_2$ *saníit*$_3$*-iin*$_4$ *ḍufe*$_5$, 'he came$_5$ with$_4$ the car$_1$ of that$_3$ man$_2$', where the genitive *saníit-* is followed by the phrase-final L-toned instrumental suffix *-iin*.

The instrumental and benefactive suffixes can also be suffixed to verbs as in *ḍufan-iin*, 'they came with (it)' and *bitee-f*, 'he bought it for (him)'.

O. clauses have Subject–Object–Verb word order; however, modifiers follow their head nouns (for examples s. above). Also relative clauses generally follow their antecedents. They lack resumptive pronouns and are marked only by having dependent verbal forms, as in East-O. *bakkí*$_1$ *at*$_2$ *déemtu*$_3$ *fágoo*$_4$ 'the place$_1$ (NOM) you$_2$ are going$_3$ (DEP.IMPF) to is far$_4$'. But they can be additionally characterized by the associative pronoun, as in *bišáan*$_1$ *haróo*$_2$ *kan*$_3$ *qulqúllúu*$_4$ *ture*$_5$ *heddúu*$_6$ *boraˀe*$_7$ 'the lake$_2$ water$_1$ that$_3$ was$_5$ pure$_4$ became very$_6$ dirty$_7$'. Preposed relatives also occur, but apparently never in southern or in East-O.; e.g., *kan*$_1$*-ín*$_2$ *barbaadu*$_3$ *qorqorróo*$_4$ 'the cans$_4$ that$_1$ I$_2$ need$_3$'. West-O. typically has relative clauses introduced by 3rd pers. sg. pronouns, like *namiččí*$_1$ *inní*$_2$ *kaléessá*$_3$ *argine*$_4$ *abbaa*$_5$*-kóot*$_6$*-i* 'the man$_1$ (NOM) that$_2$ (lit. 'he' NOM) we saw$_4$ yesterday$_3$ is my$_6$ father$_5$'.

O. has no proper affirmative imperfect copula. Adjectives and nouns used as predicates are marked phrase-finally by a special tone pattern, e.g., Harär-O. *fárda*, '(it) is a horse' (from *fardá*, 'horse') or *fágoo*, '(it) is far' (from *fágóo*, 'far'). Words ending in a consonant such as *bišáan* also add an *-i* in most dialects: *bíšaani*, '(it) is water'. Genitives and some possessives occur with their forms in *-t* and the same final *-i*, as Harär-O. *makiináa*$_1$ *namiččá*$_2$ *saníiti*$_3$, '(it) is the car$_1$ of that$_3$ man$_2$', or *abbaakóoti*, '(he) is my father' (vs. ABS *abbáakoo*). In *qubee* spelling this *-ti* is frequently reanalysed orthographically as a sort of copula and spelt as a separate word. Words ending in long vowels add *-ḍa* in Šäwan and West-O., and sometimes also in East-O.: *fágooḍa*, '(it) is far' (vs. *fágóo*, 'far'). This *-ḍa* is also spelt as a separate word in *qubee* orthography even though it is the same morpheme *-ḍa-* which, in these same varieties of O., can be added to (non-genitive) words in long vowels before phrase-final suffixes such as the benefactive *-iif ~ -f* and the instrumental *-iin ~ -n*, as in *qóttooḍaan*$_1$ *qóráan*$_2$ *čạp̣se*$_3$, 'he cut$_3$ wood$_2$ with the axe$_1$' or *Gálmooḍaaf*$_1$ *fóon*$_2$ *kénni*$_3$, 'give$_3$ the meat$_2$ for Galmoo$_1$!' Negative adjective and nominal predicates are characterized by different tonal patterns and by a negative copula, invariable *miti* in several dialects (even *nii ~ niini* in southern dialects), but masc. *mihi* and fem. *miti* in the east (Owens 1985:80), e.g., Harär-O. *ḵun bišaaníi mihi* 'this is not water' vs. *ḵun bíšaan,* 'this is water'. As seen in this example, *mihi* also requires *-íi* when following a word ending in a consonant.

As in some other East Cushitic languages, subject focus is marked in O. both on the verb and on the subject noun phrase. The former is invariably in the 3rd sg. masc., while the subject is not in the nominative but has a phrase-final suffix in *-t*. In most varieties of O. this is *-tu*, in the east *-túu*, while in southern dialects it is *-tti*, e.g., Arsi *aannán*$_1$ *intala*$_2$ *ḍéertú*$_3$*-tu* *ḍúgé*$_4$, 'it is the tall$_3$ girl$_2$ who drank$_4$ the milk$_1$' (vs. *aannán intaltí ḍéertúun ḍugde* without subject focus).

The basic ten-word list is: *tokko* 'one' (regionally *takka*), *lamá* 'two', *sadíi*, 'three', *ibiddá*, 'fire', *bišáan*, 'water' (regionally *bisáan*), *ádúu,* 'sun', *ǧiˀá*, 'moon', *ḍiigá*, 'blood', *arrabá*, 'tongue', *ilkáan*, 'tooth'.

A major reference grammar of O. has still to be written. Several grammatical and lexicographical works on O. represent important phonological features such as vowel length and tones with little or no accuracy. Many regional varieties, especially the northern ones, have not yet been described.

Oromo

Oromo ethnography

The O. people, in earlier literature referred to as "↗Galla" or "Ilma Orma", are one of the most numerous in Africa. Their territory, although not always contiguous, extends over some 1,600 km from ↗Rayya ᶜAzäbo in the north to the Tana River in ↗Kenya in the south and from the regions of Harär and the Ogaden in the east to the borderlands of the Sudan 1,000 km to the west. In Ethiopia, where they constitute the largest ethnic group and make up about one third of the population, their number is estimated to be some 30 million. In Kenya, they (under the names ↗Boorana and ↗Orma; Gabra and Sakuye) occupy about a quarter of the territory. Their language is thus one of the five or six most important in Africa, both in terms of the number of speakers and geographic area (Hudson 1982; Baxter 1986). Their vast country shows great ecological variation and the modes of subsistence and ways of life of the various O. groups are manifold. They are specialized, mobile pastoralists (↗Pastoralism) in the arid and semi-arid lands of the South and sedentary mixed farmers and plough cultivators in highland regions with high precipitation.

In O. lore, major divisions, such as Boorana, ↗Gabra, Orma, ↗Guǧǧi, ↗Arsi, ↗Tuulama, ↗Mäçça (Maccaa), ↗Qottu (Afran Qaalluu) and ↗Wällo, are defined with reference to myths of origin and to patri-genealogical constructs as well as to territorial boundaries and resource borders. Each division has, or had, its own cyclical generation set system, ↗*gadaa* (↗Age group systems), with its own shrines and ritual centres.

For the Boorana and the Guǧǧi, the blessings of the ↗*qaallu*, their hereditary ritual figureheads, are crucial for the peace and well-being of the country. Although the majority of the O. today are Muslim or, as in parts of ↗Šäwa and ↗Wälläga, Christian, recent research shows that *gadaa* is still a viable institution amongst the Tuulama of Šäwa (Nicolas in PICES 15); Tuulama settlers in ↗Bale (Blackhurst 1974; 1978); the pastoral Karrayyo (Karrayyuu, s. ↗Baarentuu) of the middle Awaš valley (Ayalew Gebre 2001: 170ff.); the Arsi in the highlands of Bale; and the southern O., such as Boorana, Gabra and Guǧǧi (VSAe II; AsmGada; Baxter – Almagor 1978; Hinnant 1978; Van de Loo 1991: 23–68; Tablino 1999; Wood 1999: 70–76, 166–99). In addition, most O. communities still adhere to the deliberations and decisions of their many traditional assemblies. Thus, Bassi's (1996: 153) observation of the Boorana that "all binding decisions, concerning virtually all spheres of social activity, have to be reached during an assembly", is typical of most O. communities (Helland 1982; Abdullahi Shongolo 1994; Bassi in BHTOrom; Nicolas in PICES 15).

The bulk of publications over the past 50 years have dealt with the southern O. of Ethiopia and Kenya and with the Mäçça and Tuulama of cen-

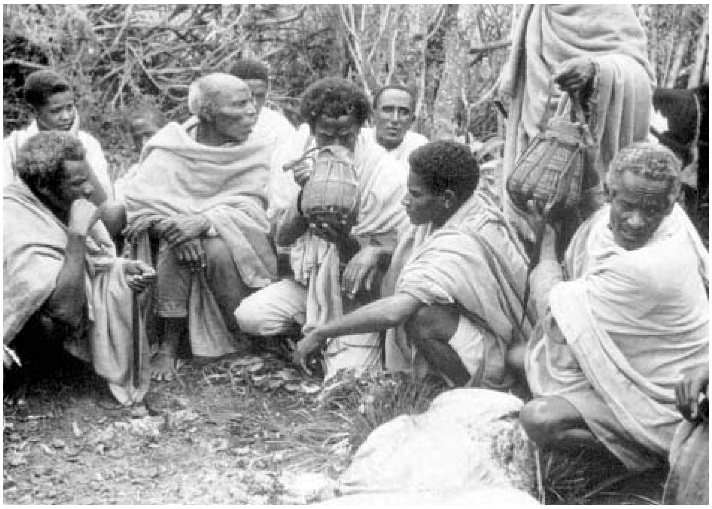

Fig. 1: Ceremonial drinking of milk during a *buttaa*-celebration in Arsi; photo 1954/55; from VSAe II, pl. 76.2

tral Ethiopia. In contrast, there is a lack of ethnographic documentation out of modern field research on the northern and eastern O. In the north, the ↗Rayyaa inhabit the district that carries their name in south-eastern Təgray and northern Wällo. Until famine and conflicts in the second half of the 20th cent. disrupted their lives, they combined pastoralism with maize and millet cultivation along the semi-arid eastern escarpment.

The Yäǧǧu and Wällo, to the south, are ↗plough farmers in the highlands and along the escarpment of Wällo and northern Šäwa. They adopted the ↗Islam of the autochthonous peoples early and have later also assumed their dialects, except in the east. Names of O. divisions and groups are reflected in the names of districts and places throughout north-eastern Šäwa and Wällo: e.g., ↗Wärrä Illuu, ↗Wärrä Himäno, ↗Wärrä Qaallu, Wärrä Babo, Kobbo, Kombolča, ↗Wəč̣ale and Boorana (HusIslam).

The eastern O. groups of Harärge do not refer to themselves with a common name. The ↗Ittuu in the west live in ↗Č̣ärč̣är and adjacent lowlands. To the east are the Annya and the Afran Qaallu, the 'Four Qaallu', who also refer to themselves as Qottuu (lit.: 'peasants'). They are both further subdivided into a large number of clans. They are all Muslim and adherence to *gadaa* has waned (VSAe II, 14f.).

The Tuulama are divided into a large number of groups. They inhabit the fertile Šäwan plateau where they practice agriculture and animal husbandry. They are Orthodox Christians or Muslims, although they adhere to *gadaa* and its rituals and councils (Blackhurst 1978; Nicolas in PICES 15).

The Mäč̣č̣a are mixed farmers in the highlands of western Šäwa, southern Goǧǧam, Walläga, Käfa and ↗Illubabor. Mäč̣č̣a clans are not localized and the same names of descent groups and categories appear repeatedly throughout their country. Over time, the Mäč̣č̣a *gadaa* system became increasingly locally organized and the influence of its assemblies (↗*Č̣affee*) and officers waned. Instead, local war leaders and men of wealth became increasingly influential (Knutsson 1967; Hultin 1987). In the 19th cent. a number of kingdoms, the so-called ↗Gibe states, emerged in southern Mäč̣č̣a: the most important being ↗Ǧimma Abbaa Ǧifaar (LewJimm).

The Arsi in southern Šäwa, Arsi proper, northern Bale and western Harärge are one of the largest O. groupings. They are divided into two main categories, Sikko and Mando, that in turn, are made up of a large number of patrilineal divisions. Although Arsi have always lived with Islamic contacts and influences, massive conversion began only in the 20th cent., i.e. after the Šäwan conquest in the 19th cent. (Abbas Haji Gnamo 1990; BrHad; Braukämper in PICES 8).

Their southern neighbours, the agro-pastoral Guǧǧi, live in the Rift Valley and its adjacent highlands to the east of Lake ↗Abbayya. The Guǧǧi are a confederation of four divisions: the Alabdu, the Uraga, the Mati and the Hoku (VSAe II; Hinnant 1977; Van De Loo 1989).

The heartland of the pastoral, cattle oriented Boorana is in southern Ethiopia, but Boorana also live throughout northern Kenya on Mount Marsabit and along the Waaso-Nyiro River in Isiolo district north and north-east of Mount Kenya. Boorana have generally been regarded by scholars as the most "traditional" O. group and since the 1950s more has been written on the Boorana than on any other O. people.

The Orma, the southernmost O., live along the Tana River in Kenya. The Sakuye, to their north, were in the past mobile camel nomads. During the war in northern Kenya in the 1960s the herds of the Orma were killed, the population forced into camps and many perished. After the emergency many lived as peri-urban paupers; a few managed to build up new herds. The Gabra camel nomads live in the arid lands from the Marsabit mountain in Kenya northwards into Ethiopia. They are divided into two groups, Malbe and Miigo. The Gabra Malbe, that includes the majority of Gabra, lives in Kenya, while the smaller group, Gabra Miigo, lives mainly in Ethiopia and in northern Kenya's Wajir district (Torry 1973, 1978; Schlee 1989; Tablino 1999; Wood 1999).

Jan Hultin

Oromo history

In the first decades of the 16th cent., the O. began to move in large numbers into the central and north-western highlands from their cradleland in the plains and plateaux of what today is southern Ethiopia. Prior to their movement, several O. groups were organized into two moieties called *boorana* and ↗*baarentuu* who lived to the west and east of the ↗Rift Valley, respectively. As early as the 12th and 13th cent., all aspects of O. life were governed by the ↗*gadaa* system, a politico-military and ritual system based on an egalitarian ethos, age-grade social organization (↗Age group systems), and highly structured institutions. The political system was supported by a complementary and equally complex religious organization. The position of the ritual leader, the ↗*qaalluu* served at the centre of the O. religion.

In the early 16th cent., an O. population movement (↗Population history: migrations) began, which took them eastward to the territories of the medieval Muslim sultanates (↗Šäwa, ↗Ifat, ↗ᶜAdal, ↗Fäṭägar, ↗Bale, ↗Däwaro, ↗Arabäbni, ↗Därа), northward to the Christian kingdom, and westward to the ↗Sidaama and ↗Omotic kingdoms. At the initial stage of the O. expansion, only the pastoralist O. moved to other areas. The settled agriculturalists stayed in their cradle land and in the territories then ruled by the sultanates of Däwaro, Ifat, ↗Wäğ, and Bale and within

the medieval Christian kingdom. In the early 16th cent., the *baarentuu* branch moved in the eastern and north-eastern direction, eventually settling into today's ↗Arsi, Bale, ↗Harär, ↗Goğğam and ↗Wällo regions. The *boorana* trekked in north-west, west and south-west directions to the regions of Šäwa, ↗Wälläga, ↗Illubabor, Goğğam, and ↗Gondär. As a result, the O. today are one of the largest and most widely spread ethnic groups in Africa.

In explaining this dramatic expansion, some scholars readily refer to historical coincidence. They suggest that the military campaigns of *imām* ↗Aḥmad b. Ibrāhīm al-Ġāzī and of the Sultanate of ↗ᶜAdal against the Christian kingdom created a political and military vacuum that allowed the O. to move relatively unhindered into the territories of both. Others cite military factors that, during their expansion, the O. learned the use of cavalry and body-length shields, which allowed them to fight more effectively and break the resistance of their opponents. Still others identify cultural factors as contributing to O. successes. The O. institution of *moggaasa* (↗*Moassa*, i.e. adoption), which facilitated the quick and smooth assimilation of non-O., opened the way for the O. to consolidate their control over their enemies and augment their numbers against future opponents. One contemporary observer offers a sociological explanation: ↗Baḥrəy argues that it was because all O. men were trained as warriors, while among Ethiopian Christians only the warriors fought, leaving a large section of the population, including monks, priests, artisans, farmers, traders, and servants, uninvolved in the defense of their country.

The early 17th cent. witnessed the continued expansion of the O. into the area west of the Abbay River and the steady absorption of O. into the Ethiopian state. After decades of conflict and interaction, following their arrival in this region, some O. groups were gradually integrated into the existing political establishment and became defenders of the Christian kingdom. Of the contemporary Ethiopian emperors, *aṣe* ↗Susənyos, who came to power with O. support, did much to make them part of the Christian Ethiopian political establishment. Having grown up among the O., he spoke their language and knew their way of life. He employed O. fighters, military tactics, and combat formations against his rivals for the throne. Once in power, he filled high-level offices with his O. supporters and settled various O. groups in both Goğğam and ↗Bägemdər to defend his empire from attacks by other O. groups. Many of these O. converted first to Orthodox Christianity and then later to the Catholic faith (↗Catholicism). They became assimilated into highland Ethiopian society, and, in the process, became permanently separated from their fellow O.

Under Susənyos's successors, several O. warriors rose to positions of prominence in imperial service, specifically during the reigns of *aṣe* ↗Bäkaffa and his successors. In fact, *aṣe* ↗Iyasu II married an O. from the ↗Yäğğu family in Wällo and was succeeded by his "half-O." son, *aṣe* ↗Iyoᵓas I. By the late 18th cent., the O. had become such a dominant political force in Gondär that ↗Oromiffaa was the main language spoken at the imperial court.

The increasing influence of the O. did not sit well with the powerful regional lords. In 1769, ↗Mikaᵓel Səḥul of ↗Təgray, determined to restore Ethiopian Christian control, removed the influence of the Yäğğu O. from the imperial court, killed the reigning monarch, and inaugurated the era of political turmoil known in Ethiopian history as the ↗*Zämänä mäsafənt*.

Political disorder did not disrupt the economic unity of the region. The provinces, including the territories south of the Abbay, remained connected to the seaports and to the inland commerce with the Sudan. ↗Trade routes and merchants looking for export commodities linked with Christian Ethiopia the O. who had settled in the territories south of the Abbay River in the late 17th cent. The O. who settled in this region saw their lives transformed in a completely different direction than those who settled in the regions north of the river.

Within 60 years after their arrival, five O. states (↗Limmu-Ǝnnarya, ↗Gomma, ↗Guumaa, ↗Ǧimma, and ↗Geeraa) had emerged in the ↗Gibe region and two more in the ↗Wälläga region (Leeqaa ↗Naqamtee and Leeqaa ↗Qälləm, cp. ↗Leeqaa). In the formation of the political institutions and symbols, the Gibe states may have been influenced by pre-existing states of ↗Omotic-speakers and ↗Sidaama. However, these states arose through internal processes of evolution, particularly the transformation of the mode of production from ↗pastoralism to mixed ↗agriculture and the relationship of ↗trade to the political economy of the region. The fertile and adequately watered land increased the importance of agriculture and consequently led to the emergence of a landowning class. The rich natural environment produced commodities that were in high demand and facilitated the rise of a strong merchant class. These changes allowed former *gadaa* officials to acquire more authority and gradually convert their elective offices to permanent monarchical institutions (cp. ↗*Mooti*). Eventually, processes of intermarriage and continued immigration of the O. into the area led to the emergence of an O.-Sidaama state, Limmu-Ǝnnarya, and other states by the middle of the 19th cent.

In the southern and eastern part of the country, especially in Bale, ↗Arsi, Harär and ↗Boorana, the O. continued a pastoral life into modern times. After settling in the territories west of the ↗Wabi Šäbälle in the early 16th cent., the Arsi O. began some agriculture for ritual purposes, but they remained predominantly pastoralists. Despite evidence of some differentiation, based on cattle possession and instances of hereditary *gadaa* offices prior to the mid-19th cent., the *gadaa* system remained the dominant sociopolitical organization among the Arsi until their conquest by Mənilək's forces. Similarly, the O. who settled in the ᶜAdal sultanate remained pastoralist until the mid-19th cent. Only those who settled in the immediate periphery of the city of Harär adopted agriculture as their main occupation. This was likely the consequence of their involvement in exchange relationship with the inhabitants of the walled city that resorted to trade after the emigrating O. expelled them from their farmlands. The O. who inhabited the areas beyond 30 miles of Harär remained pastoralist and governed by their own *gadaa* "parliament" known as the *raaba-dori*, until the late 19th cent. The *gadaa* system has remained a practising institution among the pastoral Boorana, the southernmost O. group in Ethiopia, to the present day.

In the last third of the 19th cent., these O. groups and kingdoms fell under the rule of *nəguś* Mənilək of Šäwa (↗Mənilək II). Beginning in the 1870s, the Šäwan kingdom conquered and annexed one O. territory after another with unprecedented speed owing to the advantage of military technology Mənilək acquired from European powers and disunity among the various O. groups with whom he engaged in battle. After defeating his main rival, *ras* Adal of Goǧǧam (later *nəguś* ↗Täklä Haymanot), at the battle of ↗Ǝmbabo in 1882, Mənilək was able to occupy the O. states of Leeqa Naqamtee and Leeqa Qälləm as well as the Gibe states within four years (s. also ↗Nonno). His forces gained control of ↗Arsi in 1886, after breaking a fierce resistance put up by the Arsi O. The subjugation of Arsi opened the way for the conquest of Harär, which was completed after Mənilək's victory at the battle of ↗Ç̣állänqo in 1887.

The manner in which the conquest was carried out determined the form of administration that was subsequently set up in the newly acquired areas. In areas where the Šäwans encountered resistance, such as in the countries of the Arsi and Noolee (s. also ↗Qottu) clans, the conquering generals were installed as governors and northern soldier-settlers, or ↗*näfṭäñña*, were moved in. Military garrisons known as ↗*kätäma* were built throughout the conquered regions and later became the administrative centres of Šäwan rule. These officials and the soldier-settlers drew no payment from the government; they lived off the land and the labours of the local farmers, or

↗ *gäbbar*. In those areas where independent kingdoms existed and the indigenous rulers submitted peacefully, the former kingdoms were made tributaries to the crown with their rulers left in place, subject to the acceptance of the Šäwan king's suzerainty and the payment of an annual tribute. The Wälläga kingdoms and the Gibe states avoided war and managed to remain autonomous through the first quarter of the 20th cent.

During ↗ Ḫaylä Śəllase I's rule the O. lost even the autonomous status Mənilək had been willing to grant to some O. regions. Finding his predecessor's administrative system incongruent with his vision of an empire ruled from the centre by an all-powerful sovereign, Ḫaylä Śəllase abolished the semi-independent status of such O. regions as Wälläga and Ǧimma, and appointed only Šäwans to rule the subordinate regions. He sought to secure the fidelity of the O. by co-opting the thoroughly assimilated or Amharized O. notables. The vast majority of O. farmers became tenants of feudal lords. Pastoralists were evicted to make room for mechanized farming. The few members of the educated O. élite were prevented from holding positions congruent with their education. Despite the great contribution of the O. region to the country's agricultural economy, O. areas were left out of the modernization projects of the state. The discontent emanating from political marginalization, economic exploitation, and cultural domination of the O. fuelled sporadic revolts throughout the period of Ḫaylä Śəllase's rule, the ↗ Rayya ʿAzäbo (Azeboo) revolt of 1928–30, the ↗ Western Galla Confederation of 1936, and the Bale uprising of 1964–70. The failure of Ḫaylä Śəllase's approach to ruling the O. through political co-optation became evident in 1963 when an organization known as the ↗ Mäč̣č̣a and Tuulama Association was established, ostensibly for organizing O. self-help, but in fact to promote O. identity (↗ Ethnicity). The declared objective of the organization was to struggle for the equitable allocation of the country's resources and an end to the second-class treatment of O. The Mäč̣č̣a and Tuulama Association was quickly disbanded, but its impact was far-reaching. The movement raised the consciousness of the O. regarding the significance of their own culture and historical unity and their status as a people within the Ethiopian state. It is in this condition that the popular ↗ revolution of 1974 erupted.

Oromo religion

O. traditional ↗ religion cannot be considered as uniform or monolithic. The wide distribution and cultural variation of the different O. groups as well as interethnic and interreligious exchange of ideas (↗ Syncretism) with ↗ Islam and ↗ Christianity along with processes of historical transformation produced a diversified religious landscape. Furthermore, as it is the case with other autochthonous folk-religions, in traditional O. society religion was inextricably interwoven with other social institutions, such as ↗ *aadaa*, ↗ *seera* and the ↗ *gadaa* system. One of the uniting concepts of the holistic socio-religious system of the O. was the principle of ↗ *safuu*.

The pantheon of O. religion was dominated by a duality of the male divinity of the sky ↗ Waaqa and Lafa, the female chthonic divinity; the significance of the latter being diminished in time. The old Oromo religion was characterized by the idea that most, if not all, things have a sacred aspect, personified by an individual *ayyaana* ↗ spirit or spiritual force. According to explanations given to Bartels, people, animals, plants as well as mountains or rivers have their own *ayyaana*, which is thought of as a manifestation of Waaqa's creative power. The *ayyaana* protects the person with whom it is linked. Thus, the killer of a man has to appease the *ayyaana* of his victim. The term *ayyaana* is also employed for various types of possession spirits (↗ Possession cults). Harmful *ayyaana* are called *seeṭana* ('demons'; BartOrom 112, 159, 221; cp. Knutsson 1967: 53ff.; VSAe II).

According to traditional O. belief, various sets of rituals have to be carried out in order to maintain human well-being, fertility and rain (↗ Rainmaking) and to prevent disease and misfortune. ↗ Sacrifices play an important role in this respect (cp. also ↗ *Buttaa*, ↗ *Dibaayyuu*). According to social position, defined by gender, *gadaa* class etc., and situational context every member of society takes part in several different ritual sub-systems. As a household head one is responsible for certain domestic rituals, as member of a *gadaa* class one is involved in the rituals of ↗initiation and passage. The women, again, have their own ritual sub-system which is centred around fertility, health, child-↗birth and solidarity (cp. also ↗*Ateetee*).

Important ritual experts of O. religion are the ↗*qaalluu*-priests. They are believed to have the power to bless and the ability to control certain dangerous animals (e.g., ↗Serpents). Ritual functions are fulfilled by the authorities of the *gadaa* system as well, such as the ↗*abbaa gadaa*, the ↗*gadaamooǧǧi* and the ↗*hayyuu*. The highest ritual agent is the ↗*abbaa muuda*. The annual ↗pilgrimage (Orom.: *ǧila*) to his shrine has an integrating function for all Oromo subgroups.

O. religion became an object of research and scholarly discussion already by the middle of the 19th cent.; it was initiated mainly by Catholic (e.g., ↗Azaïs [1926], de Salviac [1901], ↗Massaja [1867]) and Protestant (e.g., ↗Krapf [1885]; s. also ↗St. Chrischona-Pilgermission) missionaries. Early non-missionary researchers were ↗Cecchi, Antoine ↗d'Abbadie (1880) and ↗Paulitschke, and then, in the first half of the 20th cent., ↗Cerulli (esp. 1922 [= CerFolk] and 1930, 1933 [= CerEt]). A first ethnographic synopsis of the O. religious system was provided by ↗Haberland (1963 [= VSAe II]), who disproved earlier interpretations of O. religion that were more influenced by a missionary bias rather than based on ethnographic fieldwork (VSAe II, 566, 621). Other well-reputed scholars who worked on O. religion are, e.g., Bartels (1983 [= BartOrom]), Van de Loo (1991), and Asmarom Legesse (1973 [= AsmGada]).

The Islamization of several O. groups, such as the O. of ↗Wällo, ↗Yäǧǧu, the ↗Gibe region and ↗Arsi during the 18th and 19th cent., the Christianization by the Ethiopian Orthodox Church, e.g., among the ↗Šäwa O. and, since the 19th cent., by European missions, together with the decline of the *gadaa* system, has resulted in the vanishing of traditional O. belief as a fully functioning socio-religious system. On the local level strong elements of it have been able to survive. Features of O. religion, especially those connected to the *ayyaana* and the *qaalluus*, are also kept alive in the widespread (and probably still growing) possession cults. Today, *waaqeeffanna* ('belief in Waaqa [i.e. God]') is sometimes used to designate O. religion. This notion, singling out religious belief from the social system, seems to have developed in 20th-cent. O. identity discourse.

Oromo literature

Oromo oral literature

Different forms of ↗oral literature have played an important role in the ↗Oromiffaa-speaking communities, and a considerable body of studies and collections of texts has been written on several of their genres. There are also surveys of the oral literary traditions of some major ↗Oromo groups; for instance, Cerulli depicts western Oromo traditions at the end of the 19th cent. and the beginning of the 20th, based on Loränsiyos Wäldä Iyäsus and Cerulli's two other informants, ↗Onesimos Näsib and ↗Aster Gannoo (CerFolk; *Awaǧ* Onesimos – Gänon Aster 1894). Tablino (1980) is the only available survey for one of the southern Oromo groups, the ↗Gabra; Van de Loo (1991) surveys the ↗Guǧǧi oral literature, and Jeylan W. Hussein (2005) that of ↗Arsi. However, few studies tried to deal with the known oral literature of all the major Oromiffaa-speaking groups: Haberland (VSAe II, 595f.), Andrzejewski (1985), and Eshete Gemeda (2009) are the major ones.

An early glimpse of some genres of O.o.l. from the first half of the 19th cent. can be found in ↗Tutschek's dictionary and grammar (Tutschek

1844; 1845): a few short wisdom poems that he calls “*magmaga*”, i.e., *makmaaka* ‘proverb’, and some other short poems on love, social satire and other topics that he calls “*wetu*”, i.e., ↗*weedduu* ‘song’, such as the following complaint of a returning warrior (Tutschek 1844: 148):

Silaa simalan yaabaa
Simalli dameen qabu
Silaa gandarran galaa
Gandatu wareen qabu

‘Should I climb on a bamboo cane?
Bamboo canes have no branches;
Should I come back to the village?
The village has no respect for fame’

Also a few prayers were recorded by him (Tutschek 1845: 84–88). One of them, “composed and offered after the close of a long and bloody war” between Hamb^u and Hamaya, begins with the following paragraphs (ibid. 84):

Waaqayoo laftanaa, gooftaa koo! *Ati na gubba tessa, ani si jalan ta’a.*
Hoo hamaan natti ḍufe, akka mukni aduu narraa qabu, ati hamaa natti qabi, gooftaa koo, gaddisa naa ta’ï! …

‘Oh God of this earth, my Lord! Thou art above me, I am below thee.
When misfortune comes to me, as a tree keeps off the sun from me, mayest thou keep off misfortune from me, my Lord, be thou my shadow! …’

A fourth genre is represented by the narratives collected by Tutschek, that were published by ↗Praetorius (1893: 305f.) posthumously (↗Folktales in Oromiffaa).

At that time the Oromo were already organized in different ways, even though a majority probably still followed the ↗*gadaa* system and their traditional religion. Indeed, there were also Oromo kingdoms in the west (↗Gibe), different Oromo-speaking groups were being increasingly incorporated into the Ethiopian state and converted to Orthodox Christianity, while Islam was spreading in the east, in ↗Bale and also in pockets elsewhere. Since the second half of the 19th cent., the life of the Oromo-speaking communities underwent several dramatic changes: (i) the Ethiopian state incorporated most of them, with the exception of the southern Oromo living in present-day Kenya and of the few Oromiffaa-speaking pockets in southern Somalia; (ii) a partial differentiation between urban and rural Oromo resulted from urbanization; (iii) the Oromo kingdoms were dismantled and the *gadaa* system came under increasing pressure, surviving only in southern Ethiopia and in Kenya; (iv) organized movements struggling for Oromo self-determination developed in many areas of Ethiopia; (v) policies of centralized nation-building under the monarchy and the *Därg* (↗Provisional Military Administrative Council), that discouraged writing in Oromiffaa, were followed after 1991 by a partial regionalization of Ethiopia and the official creation of Oromiyaa, where written Oromiffaa was introduced in the regional administration and in the school system. These changes had an impact on several aspects of O., not only on the topics it had hitherto been dealing with, but also on its genres and on how they are produced and circulated.

One of its major poetic genres is the ↗*geerarsa*, traditionally an epinicion, i.e., a poem of triumph by a warrior concerning his feats. Among several Oromo groups this is performed in a loud recitative form and can refer to the killing of a large wild animal or an enemy. ↗Boorana *geerarsa*s are performed on the spot when the heroic feat is done, and when the hero returns to his settlement (Leus – Salvadori 2006: 260b), but among other groups they are also heard during *gadaa* ceremonies and other feasts. The *geerarsa* is also a genre used for criticizing one’s lineage, explaining specific facts, and reflecting upon one’s self. During recent decades, long *geerarsa*s have dealt with the political situation of the poets’ regions or countries, and thus frequently have strong nationalistic tones. Also, *walaloo* ‘sung poem’ is used nowadays as a name for the genre that includes major political poems.

Several examples of major political poetry also deal with razzias, challenges from field commanders, laments over dead heroes, pleas of mercy addressed to the victors, etc. (cf. CerFolk). Moreno (1934; 1935: 160f.) and Tamene Bitima (in Griefenow-Mewis – Tamene Bitima 2004: 41–48) provide examples of short poems commenting on social and political events current to when they were composed.

Cerulli (CerFolk 70; cf. also Littmann 1925: 49f.) writes that decrees issued by Oromo ↗*č̣affee*s were usually in verse. Very little is known about the oral poetry that was performed at the courts of the Oromo kings, it probably included major political poetry and praise poetry; possibly also many of the decrees were in verse. For the prose genres such as historical chronicles and jester tales that were performed in those courts see below.

Religious texts are particularly sensitive to cultural changes in the communities where they are performed. Traditional ceremonies, festivals and sacrifices generally involve not only prayers and blessings, both in prose and in verse, but also hymns and songs such as the *gadaa* songs of the ↗Guǧǧi (cf. Van de Loo 1991: 32f.), the *dikira*s of the Gabra (cf. Tablino 1980: 142f.), the ↗*Ateetee* and ↗rainmaking hymns (cf. Onesimos – Gänon Aster 1894; CerFolk), etc. Spirit ↗possession cults have their own songs, such as the *mesmuri addaraa* described by Van de Loo (1991: 288f.), while different brands of Christianity have produced their own religious hymns such as the Sabbath and *masqala* (↗*Mäsqäl*) songs of Orthodox western Oromo (Tesema Ta'a in Griefenow-Mewis – Tamene Bitima 2004: 25f.; Triulzi – Tamene Bitima 1996) or the *Ṗenṭe* songs of the Guǧǧi Pentecostals (Van de Loo 1991: 296f.). Moslem *manzuuma*s and *qasiida*s in praise of major local saints from ↗Ǧimma in the west and from northern Kenya have been published by Ishihara (1996) and Stroomer (2001: 94f.). ↗*Mawlid* hymns are widespread among all the Oromo who celebrate this major Islamic ceremony. Hymns connected to the cult of *šayḫ* ↗Ḥusayn in Bale are called *baahroo* by the ↗Arsi, and have been extensively analyzed by Andrzejewski (1972), Jeylan W. Hussein (2005) and Stroomer (2001: 71f.).

The Western Oromo *weedduu jaalalaa* is a genre of love songs that can also be of considerable length (cf. Tesema Ta'a in Griefenow-Mewis – Tamene Bitima 2004: 13f.). They use an elaborate lexicon and complex literary tropes. The same author (ibid. 36f.) mentions Oromo *asmaarii* poetry (↗*Azmari*) sung for entertainment during weddings and festivals in the ↗Naqamtee area.

Minor poetic genres are known from most Oromiffaa-speaking groups, and are frequently characterized as male or as female songs. For instance, the short ↗Arsi *weelluu* love songs described by Baxter (1974) are sung only by young men and, because they frequently involve humorously vulgar language, are never performed in the presence of elderly people. Tablino (1980: 130) distinguishes young men's *faaruu* love songs from young women's *qarillee* love songs among the Gabra. According to Leus – Salvadori (2006: 591) the *kaarilee* is instead a genre sung by ↗Boorana women for praising or insulting men, e.g., when fetching firewood or water. A rich collection of short love and wisdom poetry from Wälläga and Šäwa can be found in Moreno (1935: 140f.).

Other kinds of minor poetry include satirical and humorous songs, that can even become plainly insulting such as the *arrabsoo* songs. Farewell songs, songs for weddings, childbirth, and other kinds of important events have been published, e.g., from the western Oromo, the Guǧǧi and the Gabra. Van de Loo (1991: 225f.) provides many examples of Guǧǧi work songs, such as beekeepers' songs, women's work songs, men's songs performed when tilling the soil or threshing collectively, etc. Western Oromo cooperative work songs have been published by Triulzi – Tamene Bitima (1996: 251f.).

Children's songs such as those in Haberland (VSAe II, 601f.) are sung on different occasions; Van de Loo (1991:265f.) provides examples of those sung by Guǧǧi children when tending cattle.

Littmann (1925) already showed that Oromo oral poetry counts the number of syllables. In the corpus he gathered from early publications, six- and seven-syllable lines were the most frequent ones, but five- and eight-syllable lines were not rare. Lines of different lengths occurred in the same poem, e.g., for highlighting a particular point or for separating stanzas. Word repetitions, syntactic parallelism and extensive vowel parallelism are features that also occur frequently in western and central Oromo poetry. For instance, in the above short poem from Tutschek, line 1 is syntactically similar to 3, and 2 to 4; in addition to this, lines 1 and 3 have *i-a*-x-*a-a-a-a* vowels and lines 2 and 3 x-*a*-x-*a-e-a-u* vowels. No systematic study is available yet for southern Oromo poetry.

An important aspect of O.o.l. is that early sources from the 19th cent. and the first decades of the 20th cent. mention well-versed performers such as Loränsiyos Wäldä Iyäsus (cf. CerFolk), but not major poets, even though there are some examples of authorial poems, such as the two ones by Walgaafa Qumbii and Ilaansoo Halloo of the Waliso Oromo mentioned in Tamene Bitima (Griefenow-Mewis – Tamene Bitima 2004: 43f.). Prominent *asmaarii* poets such as *abbaa* Qašuumee are mentioned by Tesema Ta'a (ibid. 37) for the western Oromo during the second half of the 20th cent. Major oral poets who composed long poems of social critique and comment on current events have emerged during recent decades, such as *šeek* Ṭahaa Umar and Jaarsoo Waaqoo Qooṭoo (Schlee – Abdullahi A. Shongolo 1996; Assefa Tefera Dibaba 2003).

Soothsayers foretelling future events are known from several Oromo areas, the major ones are called *raaga* by the Boorana. Cerulli provides examples of prophetic prose texts from Ǧiǧǧoo Baččoo, also known as Abbaa Raǧǧii, a famous western Oromo soothsayer (CerFolk 181f.). Both prose and poetic prophecies by Areeroo Boosaaro, a Boorana *raaga* who died at the beginning of the 20th cent. are discussed by Bassi – Boku Tache (2005).

The Boorana *ḍaaduu* is a "narrative recitation in which the person tells of his own heroic deeds […] at top voice and top speed" (Leus – Salvadori 2006: 162bf.). It is thus quite similar to the *geeraarsa* in its topics, but seems to differ from this in how it is ritually performed and in its being in prose rather than in verse.

Cerulli mentions "professional jesters" such as Abbaa Wadaaǧoo, and provides some examples of their witty tales (*haasaa* 'conversation, story') and sayings (CerFolk 190f.). They were maintained at the expense of western Oromo courts, and were quite similar to the *ac̣c̣awač* of the Amhara. Their *haasaa* tales are quite similar to some of the folktales that have been collected in considerable number for different Oromiffaa-speaking communities.

Historical oral chronicles are also mentioned by Cerulli, such as the *Dubbii mootumma Gumaa* 'Chronicle of the kingdom of Guma' (ibid. 148f.). One of their purposes was to exalt the noble origin and the deeds of the dynasties that ruled over the western Oromo kingdoms, but already at the beginning of the 20th cent. such chronicles were known only to the elders.

Minor oral prose genres in O.o.l., are proverbs and riddles. The former (*makmaaka* or *mammaaksa*, a term that may also refer to short gnomic poems or tales) are of quite diverse types, e.g., short sentences, sequences of two or three clauses, wellerisms, etc. When they consist of (at least) two parts, these tend to have parallel syllable numbers as well as syntactic and lexical parallelisms, sometimes also vowel parallelism and even alliteration, like the following proverb:

Namni ḍaḍaa afaan kaa'an, / ḍagaa afaan nama kaa'a.
'The person who has been fed with butter, / feeds you with stones' (about ingratitude; 8 + 8 syllables, *a*-x-*a*-*a*-*a*-*a*-*a*-*a* vowels, *ḍ*- alliteration in *ḍaḍaa* and *ḍagaa*).

There is a huge literature on Oromo proverbs, that includes collections (e.g., Abarraa Nafaa et al. 1991–2004; Cotter 1990, etc.), and attempts at explaining their meanings and structure (e.g., Tasgara Hirpo 1996; Abdullahi A. Shongolo – Günther Schlee 2005; Eshete Gemeda 2009: 136f.; etc.).

Riddles (*hiibboo*) have a strongly formalized structure like proverbs, as shown by Tamene Bitima (Griefenow-Mewis – Tamene Bitima 2004: 81f.). The game of asking and answering riddles is a highly ritualized one; among the western and central Oromo it has to be introduced by saying "*hiibboo*!", and answered with "*hiibbakka*!" by the person who is willing to answer.

It appears that O.o.l. is a huge field, with a considerable degree of variation in the different regions where the Oromiffaa-speaking communities live. The Oromo oral literary traditions of several areas, such as Wällo and the lower course of the Tana River are still almost unknown.

Giorgio Banti

Early writing in Oromiffaa

Early ↗Oromo writing, characterized by scattered texts written for diverse purposes in at least four different scripts, has not been fully studied yet. A few locally produced documents in ↗Oromiffaa did exist, but most of them are now lost; more texts have been preserved, which were produced in the context of Catholic and Protestant missions, which reached the Oromo already from around 1840.

It seems that among the first texts in Oromiffaa were 19th-cent. Muslim *ağami* texts (i.e. Oromiffaa in Arabic script), written by ↗Wällo religious leaders, who, also used the Ethiopian *fidäl* (Mohammed Hassen 2008:213). Some *ağami qaṣidas* in Oromiffa were brought by Cerulli from Harär. An obscure diplomatic document "in Oromiffaa" sent from the Oromo kingdom of ↗Limmu Ǝnnarya to ↗Goğğam of 1839 (RubActa I, 40f.) was written in an unknown script (largely reminiscent of the later ↗Harari secret script and even of the "Oromo" script developed much later by ↗Bakri Sapaloo; it might be influenced by secret scripts of Syriac origin known to Arabic learned men in Ethiopia). Its translation into Arabic assured that it was understood; it does not seem that this script was much used.

Title page of the Gospel of Matthew, translated in Ankobär by Krapf and his assistant Barkii into the Galaan Oromo, before the introduction of the *fidäl* script for Oromiffaa; from the collection of Ralf Rickli, São Paulo, Brazil

Because of ↗slavery, individual Oromo settled in numerous countries, especially in the Muslim world, a few also in Europe; some freed Oromo (e.g., Karl ↗Habasch, tutored by ↗Tutschek) lived in southern German principalities from the 1830s onwards and exchanged letters in Oromiffaa amongst themselves in Latin script, and documented some oral literature. Some of it was published, for scholarly use (Tutschek 1845; Praetorius 1889; these also served as source materials for a grammar and the first Oromo dictionary). When the Protestant missionary ↗Krapf established himself in Ankobär, in 1839 he immediately began a Bible translation; he hired the Galaan Oromo Barkii ("Berki") from "Kum Dengai", with whom he produced translations of St. Matthew (s. ill.), St. Mark, Genesis and Epistles to the Romans in Latin script (Krapf 1839; 1841; 1872; 1874). It is known from missionary archives that these translations were actually used for preaching (at least in missionary stations of the "Apostles Road" where young freed Oromo slaves were taught; cp. ↗St. Chrischona-Pilgermission). The transliteration used was rather approximate (e.g., the consonants *q* and *ḍ* were confused with *k* and *d*), but vowel length is already, at least partially, taken into account. The lexicon shows Gəᶜəz and Amharic influence. These texts served as the basis for the continuation of the Bible translation by the former Oromo slave Ruufoo, who lived in Krapf's house in the 1860s (Smidt in PICES 14; Smidt 2001). Together they produced a New Testament in Oromiffaa, at first in Latin script. This, however, was retransliterated into *fidäl*, as a new Oromo mission had just been re-established in Šäwa (Johannes ↗Mayer), which ensured the further integration of the Šäwa Oromo into *nəguś* Mənilək's (↗Mənilək II) realm. Also the Ethiopian cleric *aläqa* ↗Zännäb translated the New Testament while staying in Təgray, with the help of Oromo whom he knew from the court of Tewodros II in Mäqdäla. This text was used by Krapf to check Ruufoo's translation; the manuscript itself is lost. The first printed Oromo Gospel of 1870 was immediately shipped to Ankobär; the full New Testament produced on the basis of Ruufoo's and Zännäb's translation (1876) was also later used in the mission (especially in Balli near the Awaš). Around the same time a Catholic mission was established in Šäwa, with a station in ↗Finfinnee; within this mission, prayers and songs were produced in Oromiffaa. A curious re-transliteration of Ruufoo's and Zännäb's text into the Latin script is reported by Darlow – Moule (1903: 469): the Gospel of St. Mark had been re-transliterated into Latin letters by several Oromo in South Africa and printed in 1893 at the Lovedale Mission press, South Africa, because most former Oromo slaves in the South African Lovedale Mission could read Latin letters, but almost none knew the *fidäl*.

Around the same period the Swedish Mission sponsored the first important and also locally influential writings (with texts from Oromo tradition, 1894) and translations, by ↗Aster Gannoo and ↗Onesimus Näsib, the latter becoming the most important Oromo Bible translator (Onesimos Näsib 1899). They chose another transcription in *fidäl* letters. Starting from this period, Oromiffaa was more than only occasionally written in *fidäl*, but very few examples have survived; administrative documents are only known in Amharic (with the occasional use of Oromo words). In Muslim ↗Harär, a secret script developed, in which allegedly full Oromiffaa manuscripts were written (in Oromiffaa), which, however, were burnt during persecution of Muslims in the period of *aṣe* ↗Ḫaylä Śəllase I in the 1950s.

Wolbert Smidt

Contemporary writing in Oromiffaa

Until the mid 1970s the only writings published in Oromiffaa were a few sponsored by Christian missions (↗Aster Gannoo; ↗Onesimus Näsib) and biblical translations. Service books and hymn books still continue to be important repositories (↗Bible: Bible translation into Oromo; Anon. 2000; Anon. 2001). Some texts of stories, poems and songs appeared in overseas publications as illustrative components of ethnographies and linguistic studies, of which the best known is probably Cerulli's *Folk-literature of the Galla of Southern Abyssinia* (CerFolk), but they addressed Western scholars rather than Oromo readers. Such cultural studies remain important sources of texts in Oromiffaa; Van de Loo's study of the ↗Guǧǧi, e.g., is a mine of both traditional songs and locally composed Pentecostal hymns which "integrate traditional […] values and concepts with a fundamentalistic […] reading of the Bible" (1991: 291–321).

↗Oral literature has demonstrated an inexhaustible appetite and capacity for adaptation and the oral and the literary are complementary, though the words used in oral performances do not become set as written texts must do. A feature of social gatherings, rituals and political meetings is robust participation by respected locals who, to suit the occasion or their own feelings, may alter lines, reorder the narrative and make their own additions. A publication is often a piece of oral literature which happens to have been written down and subsequently published as, e.g., the poems of Ǧaarso Waaqo Qooto. Ǧaarso, a ↗Boorana, grew up as a rural herdboy but went to town as a young man where he eventually gained a reputation as a composer and reciter of verses about local politics, development and the dangers of alcohol abuse. In 1991 or 1992 Ǧaarso became an active member of the Oromo Liberation Front (OLF) and used his poetic skills in "the war of words". He adapted the ↗*geerarsa* genre (traditionally composed by warriors in praise of their exploits) to honour the OLF and its cause. The genre had demonstrated its suitability for declamations of political and nationalistic passions in theatrical performances in Addis Abäba during the "Oromo cultural revival" of the mid-1970 (Addisu Tolesa 1990: 178). Ǧaarso recorded his poetry on cassettes which became very popular, played in public places throughout the Oromo-speaking areas. By the time of his death in 1994 Ǧaarso had come to be regarded by the southern Oromo "as the greatest poet of his time" (Abdullahi Shongollo in BHTOrom 265, 270). His unpublished poems have been transcribed and are being prepared for publication (Asafa Tefera Dibaba 2004).

Tapes of poems and songs which examine current issues in a style in which everyone, schooled or unschooled, can participate are listened to avidly whereas books have a limited readership. The innovative poet Zalaalam Abarra (2002), e.g., has published a tape of his poems as well as a book. Tapes of songs by performance groups, which tackle new issues in a partly traditional style, have contributed to the creation of a common Oromo literary and political consciousness: indeed *Oromiyaa*, as sung by Ali Birraa and Magi Harun (1992), has become an "unofficial national anthem" which "expresses the common experience of disconnectedness felt by Oromo exiles throughout the world" (Gow 2002: 57).

Oromo scholars turned to the scholarly exegesis, translation and publication of their shared store of oral literature (Addissu Tolesa 1990, Fuglich Wako 2002, Tegegn Nuresa Wako 1993, 1994, Sahlu Kidane 2002, Tamene Bitima 1983, 1986). They, like the new novelists and poets, relish the literary worth of the oral sources and utilize the representations which they give of an idyllic, precolonial past for "creating and advancing self and cultural awareness" (Zelealem Aberra 2003: 133). Literary and national feelings reinforce each other and those intellectuals who write in English or French also draw strength from oral sources (Mekuria Bulcha 1993; Ficquet 1997).

When the *Därg* (↗Provisional Military Administrative Council) eased restrictions on vernacular publications, as long as the Ethiopian script was used, there was a brief blossoming of Oromo written literature. Dafaa Ǧammoo's didactic allegory *Huursaa* (named after the Hursa River in ↗Wälläga), e.g., contained Oromo characters and backgrounds. The most influential publication in Oromiffaa was the newspaper ↗*Bariisaa* which published the revolutionary poems of Mahdi Hamid Muudee. For a brief period it seemed that the new ↗language policy would favour the spread of ↗literacy in Oromiffaa. At the same time, some Oromo expatriates published literary texts abroad in different Latin orthographies (e.g., Taammanaa Bitimaa 1986).

Publications using the Latin alphabet in the orthography called *qubee* only began to appear in Ethiopia after the fall of the *Därg*. Official recognition of *qubee* produced a torrent of officially sponsored educational publications; e.g., 83 "items of school material" were produced in 1992 and 29 school textbooks were published in 1995 and 1996 (Tamene Bitima 2000: 12–19). The Regional Administration continues to publish extensive collections of oral literature from across Oromiyaa. A succession of magazines, often short lived, also appeared: *Biiftuu*, *Gadaa*, *Ichima*, *Kiilolee*, *Madda Walaabuu*, *Odaa*, *Qabee*, *Simbirtu*, *Urjii* published locally, and *Ejersa*, *Qunnamtii Oromiyaa*, *Finfinnee* and *Sagalee Waldanso* overseas. Tamene Bitima (2000: 18–22), himself a poet and writer of stories, has published a comprehensive list of journals and books published up until the end of 1997.

Most stories and novels show political concern and tend to take a rather bleak view of contemporary life. Ḍaaba Wayyeessaa is probably the most prolific and best established author (Kifle Djote 1993). His play *Dukanaan Duuba*, which depicts what used to be the harsh lot of Oromo tenants, was first performed at the National Theatre in 1991. Despite harassment and eventual exile he has had other plays performed on the radio and stage and has published two novels. *Godaannisa* (1992) is the story of the tribulations of a student who is trying to realize his talents, and his fraught, but eventually happy, love affair. *Gurraacha Abbayaa* (1996), originally serialized on national radio, is set among the ↗Gumuz. It is a tragic story of the sufferings of two star-crossed lovers named Teeto and Yenče. They are prevented from marrying by the traditional rules of sister exchange marriage which give preference to the marriage of a brother and a sister to a sister and a brother (Arsi Oromo practice a similar form of exchange). The heroine Yenče is forced by her kinsfolk to marry a man who, when he discovers she is not a virgin, beats her and rejects her and shoots her lover Teeto dead. Yenče drowns herself in the Blue Nile just as Teeto's sister had done, rather than be married to Yenče's brother.

Gaaddisaa Birruu's *Kuusaa Gadoo* (1991), a novel of suspense, describes the corruption and nepotism of officials who take bribes, send people to the front and misuse their power to seduce their victim's wives. *Suuraa Abdii* (1993) by Kumsaa Braayuyu tells the story of a young high school graduate who comes to Addis Abäba in search of a better life. Takilee Qinaaṭṭii's *Dirmammuu* (1995) is a dramatized call for Oromo unity. Daraaraa Maati's novel *Gaaf Tokko* is concerned with the life stories of some Oromo young men and women after the OLF's withdrawal from the transitional government in 1992.

There has been neither sufficient time nor the proper conditions for the creation of an aware and reactive Oromo "reading public", and there is not an established market for books nor a literary journal. These limitations are particularly constricting for reflective poets, such as Asafaa Tafarraa Dibaabaa, Taha Abdi and Zalaalam Abarra, who explore personal feelings and responses. Not surprisingly most writings in Oromiffaa still "fall short of meeting the qualitative standards of modern literature" (Ḍaaba Wayyeessaa quoted in Kifle Jote 1993: 23).

Paul T.W. Baxter – Gaddisa Birru

Orthodox Students Association ↗Haymanotä Abäw

^{c}Oṣ

Abba ^{c}O. (ዖጽ, also ዖፅ ^{c}Oṣ́, ኦጽ Oṣ, ኦፅ Oṣ́) was a monk allegedly from K^{w}əzara, "Caesarea" (Marrassini 1990: 35f.). He is connected with the hagiographic cycle of the ↗Nine Saints, but his role within this group is still unclear. The evidence about him is quite scanty:

1) his name appears in the *Gädlä Gärima* as a substitute for that of ↗Zämikaʾel Arägawi, on account of which Conti Rossini surmised a hostile relationship between ↗Däbrä Damo (founded by Zämikaʾel Arägawi) and the clergy of ↗Aksum or Däbrä Mädära, the monastery founded by *abba* ↗Gärima (↗Ǝndä Abba Gärima; Conti Rossini 1897: 174, vs. 109);
2) his name also replaces that of *abba* ↗Ṣəḥma in two mss. exemplars of the *Gädlä Liqanos*, from Aksum Ṣəyon and Däbrä Q^{w}änaṣəl respectively;
3) at least two hymns, in the 18th-cent. ↗*Zəmmare* in ms. BN Éth. 372 (GrébGriaule III, ms. no. 68), fols. 44vb–45ra and in the 18th-cent. ↗*Zəmmare* in ms. Città del Vaticano, Biblioteca Apostolica Vaticana Aeth. 280, fol. 43v (van Lantschoot 1962: 483) are dedicated to ^{c}O.;
4) a fragment of his *Gädl*, translated by Cerulli, is included in a Paris ms. of the ↗*Täʾammərä Maryam* (CerLett 76f., probably ms. BN Éth. 130, 18th cent., ZotBNat 62–67, esp. 65 n. 73);
5) he is mentioned as *mänäkos romawi zäsəmu ^{c}Oṣ bädäbrä Kuraza* ('the Roman monk whose name is ^{c}Oṣ from Däbrä Kuraza') in the *Täʾammərä Maryam* in mss. EMML 2058, fol. 11v, 18th cent. (EMML VI, 71) and Lund, Universitätsbibliothek 61, fols. 197ra–198va (LöfUpp 150) and as ^{c}O., the Roman monk from Däbrä K^{w}əzara in a miracle in the *Täʾammərä Maryam* ms. EMML 2800, fol. 96v, 19th cent. (EMML VII, 142).

Kinefe Rigb Zelleke (KinBibl 90, no. 141) seems to assume that ^{c}O. and Ṣəḥma are one and the same person, while according to Getatchew Haile (1991: 1047), ^{c}O. could be another name of either ↗Alef or Ṣəḥma. Much earlier, Mendes (BecRASO VIII, 70 [I, 7]) and Ludolf (LudHist III, 3) had identified him with *abba* ↗Guba.

In the Ethiopian ↗*Sənkəssar* a certain "*abba* ^{c}O. and the virgins" are mentioned on 4 *Taḫśaś*, but the identification of the former with *abba* ^{c}O. of the Nine Saints is uncertain.

Antonella Brita

Osgood, Wilfred Hudson

O. (b. 8 December 1875, Rochester, New Hampshire, d. 20 June 1947, Chicago) was a zoologist educated at Stanford University and the University of Chicago. During 1897–1909, O. worked as a biologist in the U.S. Department of Agriculture. From 1909–21, he was Assistant Curator of Mammalogy and Ornithology at the Field Museum of Natural History in Chicago, Illinois. O. then became the museum's Curator of Zoology until his retirement (1941). He conducted biological explorations and surveys throughout North and South America and in Indo-China.

In 1926–27, O. led the Field Museum – *Chicago Daily News* Abyssinian Expedition, whose other members included Louis Agassiz Fuertes, Jack Baum, Alfred M. Baily and C. Suydam Cutting. During the seven month, 2,000-mile expedition, O. and his team travelled throughout southern and northern Ethiopia and collected examples of nearly 2,000 mammals and 2,000 birds.

Thomas P. Ofcansky

Ossola, Giacomo Leone

O. (b. 12 May 1887, Vallò di Caluso, Turin, d. 17 October 1951, Brescia) was the Vicar Apostolic of ↗Harär from 1937 to 1943 (↗Catholicism).

O. attended the Seraphic College of Sommariva Bosco. In 1909 he graduated in Literature at the Apollinare and was ordained priest in Turin. In 1919 he was appointed to the office of the Secretary General of the ↗Capuchin Order and in 1922 he was called to Rome as parish priest of San Lorenzo al Verano.

In 1937, O. was appointed by Pope Pius XI as titular bishop of Salona and was summoned to manage the apostolic Vicariate of Harär, previously run by the French Capuchins under ↗Jarosseau. O. settled in Harär officially on 1 January 1938, when the mission had already transformed itself into a colony. In his published writings, he welcomed the creation of the fascist empire, firmly convinced of the close relationship between the "Italianization" of the region and the promotion of the Roman Catholic faith. However, his unpublished writings reveal cautiousness regarding Fascism. In the first three years of his apostolate in Ethiopia O. restored some missionary structures damaged by Italian military operations, among which were the orphanage of Sofi, and the Lazarist printing press; he undertook the construction, financed by the Italian government, of the cathedral of Harär; promoted the publication of the Italian–↗Oromiffaa dictionary (da Thiene 1939) and the Harär parish bulletin *Il Seminatore*. O. dedicated particular attention to professional schools and to the formation of the indigenous clergy and nuns, for which reason he ordered the construction of an episcopal seminary and a monastery. The British intervention in Ethiopia interrupted the activities of the Vicariate. O. was deported together with other Italian missionaries and repatriated at the beginning of 1943.

In October 1943 O. became Apostolic Administrator of the diocese of Novara. He helped the anti-Fascist resistance, and after the war Novara conferred on him honorary citizenship and the title of "Defensor Civitatis". On 19 September 1945 he was appointed bishop of Novara. He retired on 12 June 1951.

Lucia Ceci

Ottoman Empire, relations with the

First contacts

The O.E. started influencing North-eastern Africa directly during the sultanate of Selim I Yavuz. In 1517 this sultan conquered ↗Egypt and the Ottomans rapidly extended their control over the African coast of the ↗Red Sea. At an unknown date (but probably around 1527/28; Orhonlu 1974: 10, n. 54) they managed to enter ↗Sawākin (Turkish: Sevakin). At the same time the O.E. expanded also in the Ḥiǧāz and in 1538/39 the ↗Yemen was eventually occupied, including ↗Zabīd and Aden (Ṣanʿāʾ only in 1547). The conquest of Yemen put the O.E. in contact with Ethiopia and also confronted it with the simultaneous maritime expansion of the Portuguese in the Indian Ocean and the Red Sea [note on the transliteration: in this entry Ottoman Turkish is transliterated from the Arabic script; in some cases modern Turkish spelling is added].

In a sort of indirect war against the Ethiopians but especially their Portuguese allies, the new Ottoman *beylerbeyi* ('governor') of Zabīd, Muṣṭafā *pasha*, repeatedly supported the army of *imām* ↗Aḥmad b. Ibrāhīm al-Ġāzī ("Grañ") with ↗fire-arms, cannons and artillery soldiers. After the Ethiopian prince ↗Minas had been captured (and apparently forcefully converted to ↗Islam), he was sent in ca. 1541/42 as a captive to the Ottoman "*pasha* in Arabia" (BTafA 950), i.e. Muṣṭafā, and was released only in 1544 in an exchange of captives. The victories of the *imām* were apparently well known in Istanbul where a *kanunname* (decree) was issued in an uncertain year (most likely 1541–42) in which Aḥmad b. Ibrāhīm was called *sulṭān* Ahmed *el-hākim be-vilāyet-i habeš*, ('*sulṭān* Aḥmad the ruler in the province of Habeš [= ↗Abyssinia]'; Orhonlu 1974: 27).

In the hinterland south of Egypt, the O.E. penetrated into Nubia where ↗Özdemir *pasha* occupied Qaṣr Ibrīm and ad-Darr during the campaign in Upper and Lower Nubia in ca.

1540/41. In 1554 Sawākin was declared a *sanǧak* (‘province’, Turkish: *sancak*) within the Ottoman Egyptian administration. The following year, however, all the areas of “black people” (considered to be part of a “greater Abyssinia”) around Sawākin were unified under one new administrative unit, the ↗Habeš *beylerbeylik* (Turkish: Habeš *beylerbeyliği*, ‘the governorship of Habeš’), which was officially created on 15 July 1555 and given to Özdemir’s rule (Orhonlu 1974: 37). The necessity to counterbalance the Portuguese presence in the Red Sea and in the Indian Ocean pushed the O.E. to launch a full-fledged military initiative on the Eritrean shore. Özdemir headed a large army which managed to occupy ↗Massawa (Turkish: Massava) on 2 April 1557. Subsequently, ↗Ḥərgigo was also seized, becoming a *sanǧak* for its own in 1580 (Orhonlu 1974: 113f.). Also the ↗Dahlak islands which were originally under the control of the Yemen *beylerbeyi* were annexed to Özdemir’s Habeš *eyaleti* (ibid. 43f.). Further south, ↗Zaylaᶜ was occupied in 1559 and became a *sanǧak* within Habeš *eyaleti* (at times including ↗Berbera), which became the basis for later Ottoman claims over the northern Somali coast (ibid. 44). Also ↗Zanzibar south of the Red Sea accepted Ottoman sovereignty. However, Zaylaᶜ seems to have been at least de facto independent soon thereafter; in 1581 it was ruled by *imām* Aḥmad. In Lower Nubia, Ibrīm (before administrated under Ottoman Egypt) was integrated into Ḥabeš *eyaleti* in 1573 until it was again reassigned to Egypt in 1589 (in 1584–85, however, it was an *eyalet* for its own; Orhonlu 1974: 113f.).

Habeš *eyaleti* and the Turkish–Abyssinian war

Massawa became the administrative and economic centre of the new Ottoman province. Starting from this base, Özdemir moved towards the interior and clashed several times with the armies of *aṣe* ↗Gälawdewos and of *baḥər nägaš* ↗Yəsḥaq. He conquered ↗Dəbarwa and sacked surrounding areas (including the monastery of ↗Matyas of ᶜAddäqe and ↗Däbrä Damo). At a certain point he also obtained the support of ↗Gaᶜəwa, the queen of ↗Mäzäga.

There were counteroffensives by *baḥər nägaš* Yəsḥaq, who, for some time, pushed the Ottomans back down to the coast (Marrassini 2003: 598ff.). However, under *aṣe* ↗Minas and even more frequently during the reign of *aṣe* ↗Śärṣa Dəngəl, the Ottomans again managed to extend their rule over the northern highlands, exploiting the harsh rivalry between the *baḥər nägaš* and the Ethiopian ruler (for details s. Conti Rossini 1921–22, 1922–23; Marrassini 2003: 600–07); the *baḥər nägaš* Yəsḥaq changed sides and accepted Ottoman overrule.

The epicentre of this lasting conflict was Dəbarwa. In 1562 the town was once again under Ottoman rule. Dəbarwa became the centre of a new *sanǧak* (called Dawarya [Devarya]). A fortress was constructed with a main ↗mosque (*ǧāmiᶜ*) and some smaller mosques were also built. The importance of the *sanǧak* of Dawarya is demonstrated by the fact that coins were struck there (two well-preserved coins are dated 974 H. [1566–67 A.D.], the year of *sulṭān* Selim II’s accession; Kabaklarlı 2007). Dəbarwa was eventually lost by the O.E. in December 1578 (*Muḥarram* 987 H.; February/March 1579 according to some Ottoman sources) in the aftermath of the battle of ᶜAddi Qorro where the Ottoman *pasha* Ahmed fell as martyr (*şehit*) and his ally *baḥər nägaš* Yəsḥaq was killed fighting against Śärṣa Dəngəl’s troops (Conti Rossini 1922–23: 55; Orhonlu 1974: 56–60). Also other areas in the highlands were temporarily made *sanǧak*, such as Bor (↗Bur), and given to local vasals of the Ottomans (Orhonlu 1974: 57, 109f.). In the following years, only partially successful attempts to reaffirm the rule of the O.E. on the highlands were carried out by Hızır *pasha* (1579–82) and his successor Hüdaverdi (1588–93; in Ethiopian sources known as ↗Kädawərd; cp. BTafA 932). By the beginning of the 17th cent. the O.E. eventually desisted from trying to expand its territory in the interior and limited its control to the Red Sea shores. In this first period, Habeš *eyaleti* developed a complex internal system of government which can be partially reconstructed on the basis of the available Ottoman archive sources (Orhonlu 1974: 93–128). pecially noteworthy is the presence of a *qāḍī* appointed for Habeš who basically resided in Sawākin (ibid. 1974: 114f.). Most probably these judicial administrators were instrumental in the spread of the ↗Ḥanafism on the shores of Eritrea (later a *qāḍī* was appointed also in Massawa, assuming probably the same role).

The decline of the ↗Portuguese presence in the area helped consolidate the position of O.E. in its relation with the Ethiopian Empire; from the 16th cent. onwards the Ottomans controlled the trade routes from the sea to the highlands. Over the following centuries, the Ottoman-controlled ports of Massawa and Sawākin remained important for the trade with inner Ethiopia (also for the import of fire-arms). They were the most important slave markets at the Red Sea coast (↗Slavery); slaves from inner Ethiopia were exported to many regions within the O.E., including Istanbul. Black slaves coming from North-east Africa (called Habeši, but more often also Zenği and Arap) were well present in Ottoman society: their most renowned representatives were the black eunuchs (Turkish: *kızlar ağası; kara ağalar*) in service in-side the harem of the Topkapı sarayı (Goodwin in EI^2 vol. 19; Jennings 1987; research on Ottoman slave biographies confirms the Ethiopian background of many, cp. the 19th cent. slave Sarah La Preta in Jerusalem, Glass – Kark 2008; also cp. the biographies of Pauline ↗Fathme, Karl ↗Habasch, ↗Maḥbūba).

17th to 19th century: administrative changes

Following the loss of the highlands and the parallel loss of the Yemen (1636), Massawa and Ḥərgigo remained the only important towns under Ottoman administration. For obvious commercial reasons, the Ethiopian state sought good relations with the O.E., but at the same time attempted to avoid Ottoman-controlled ports. Between 1642 and 1647 *aṣe* ↗Fasilädäs made direct contact with the Yemenite Zaydī *imām* to try to gain his support in fostering the port of ↗Baylūl as an alternative to Massawa (DonHaySirat; van Donzel 1994). In 1672–73 ↗Evliya Čelebi visited the *eyalet* of Habeš and was a guest of the Ottoman ↗*nāʾib* in Ḥərgigo (Prokosch 1994).

The peripheral position of the Habeš *eyaleti*, which did not contribute sufficient revenue in the 17th cent., and the necessity to strengthen the role of Jeddah in the control of the maritime movements in the Red Sea (especially in connection with the pilgrimage caravans) led to an administrative reform in 1701. Habeš formally remained an *eyalet*, but was put under the administration of the *šeyhü'l-haremlik* of Mecca and the *sanğak* of Jeddah. The new administrative entity thus encompassed three units, Habeš, Jeddah and ↗Mecca under the full name [in Turkish] *Habeş eyaleti ilhakı ve Cidde-i maᶜmûre sancağıla Mekke-i Mükerreme Şeyhü'l-haremliği* ('The province of Habeš together with the *šeyhü'l-haremliyi* of the glorious Mecca and the *sanğak* of the prosperous Jeddah'; Orhonlu 1974: 96, 132ff.). When the *vilayet* system was introduced in the mid-19th cent., it was mostly called Hiğaz *vilayeti* ('the governorate of the Ḥiğāz'). In the official titulature of the Ottoman *sulṭān*, however, Habeš is still proudly mentioned in the 18th cent. to magnify the extent of Ottoman rule in the world (e.g., a letter to Frederick the Great of Prussia, 1763, Scheel 1950: 31; later, the *sulṭān* shortened his titulature, and this territory disappeared, s. Kütükoğlu 1994: 149).

Throughout the 18th and 19th cent. Massawa and Sawākin were the only two *sanğak* belonging to Habeš *eyaleti* (Birken 1976: 254f.). The *beylerbeyi* now resided most of the time in Jeddah and entrusted the administration of Habeš to two deputies (one for Massawa and one for Sawākin), the *mütesellim* ('tax collector'). At Massawa, the *mütesellim* controlled only the port itself, while the administration of the hinterland, still formally Ottoman, was in the hands of indigenous administrators, the *nāᵓib* at Ḥərgigo controlling the whole coast adjacent to Massawa (cp. Miran 2009: 33–64), and the Təgrəñña-speaking ↗Ṣänᶜadäglä of the ↗Akkälä Guzay highlands still receiving an Ottoman rent (*sandık*) until 1846 (AbbGeogr 330), but keeping full autonomy. Descendants of the contingent of Ottoman troops from Bosnia intermarried with coastal ↗Təgre families and became a Təgre subgroup, the ᶜAd Bušnaq̠.

Contrary to their claims, the Ottomans did not control the whole Red Sea coast. Already in the 17th cent. their control did not extend beyond ↗ᶜƎdd. To the south lay the small ↗ᶜAfar emirate of Baylūl which had allied itself to the Zaydītes (Kropp 1994; Orhonlu 1974: 79, 215) of Yemen, who were struggling against the Ottomans and preventing them from further expansion southwards. Claims of Ethiopian rulers over the whole coastal territories were regularly repeated, especially after the Ottoman-Egyptian control over the coastal strip of Ḥərgigo was reinforced in 1847, and the *nāᵓib* stopped paying tributes to Təgray (e.g., *däğğazmač* ↗Wəbe Ḫaylä Maryam in a letter to the French President, 1849, RubActa I, 174, asking for support to make the *sulṭān* of "Ǝsṭənbul" evacuate the coast; cp. RubActa I, 128, 158f.). Again, such claims were reinforced, unsuccessfully, by *aṣe* ↗Yoḥannəs IV.

Starting from the early 19th cent. Ottoman Egypt's expansion into Africa helped to renew Ottoman claims; first Kordofan and ↗Sinnār were annexed in 1821, in 1840 the province of ↗Taka at the northern borders of Ethiopia was occupied. At the coast, Egyptian influence was rising starting from the 1810s, and ↗Ibrāhīm, the son of Egypt's ruler ↗Muḥammad ᶜAlī, was made Ottoman governor of the Ḥiğāz (i.e. including Sawākin and Massawa), and the Yemen was also occupied (Orhonlu 1974: 142, 258). The Ḥiğāz *vilayeti* and Yemen were under Muḥammad ᶜAlī's control until 1840, when Egypt was obliged by the Treaty of London to give up these and other territories. However, in 1841 the Sudan was officially made his personal possession under the O.E., and in 1846 Habeš *eyaleti* was broken off the Ḥiğāz and transferred as *salyane* ('tributary fiefdom') to Muḥammad ᶜAlī (but given back to the Ottoman Ḥiğāz after his death in 1849; Orhonlu 1974:147, 263f.). In 1865/66, Sawākin and Massawa were finally transferred by the O.E. to the now largely independent *ḫidīw* dynasty of Egypt (Turkish: *Hidiviyet-i Mısriyye*) and a new governorate-general was created in 1869, the "Governorate of the Red Sea Coast and Eastern Sudan". Habeš *eyaleti* thus ceased to exist. In 1873 Werner ↗Munzinger *pasha* was nominated Egyptian–Ottoman governor-general of this Governorate; however, after his death in 1875 the new administrative unit was integrated into the administrative structures of the Egyptian–Ottoman Sudan and ceased to be of any importance. Still, the Ottomans continued to claim a formal sovereignty over the coast. The Egyptians then also tried to occupy large parts of the highlands, which caused the ↗Egyptian–Ethiopian war, 1875–76, ended only by the Anglo–Egyptian–Ethiopian ↗Hewett Treaty of 1884. In 1872 the Ottomans defeated the Zaydī *imām* and conquered the Yemen once again.

At the Somali coast, Muḥammad ᶜAlī successfully took over control of Zaylaᶜ in ca. 1823 (until 1841), with the local governor ᶜAlī Šarmarke. It then became Ottoman, but Egyptian expansion starting from the 1860s again led to the inclusion of the northern Somali coast into Ottoman Egypt. First in 1867 ↗Berbera was annexed (Orhonlu 1974: 150), in 1867/68 the Egyptian Ǧa^{c}far *pasha* hoisted an Ottoman flag in Ras Hafun (repeated by McKillop *pasha* in 1875), and in 1875 Zayla^{c} was included into the African empire of Egypt, and from here the Emirate of ↗Harär was occupied. In a treaty of 1877, Great Britain recognized these new possessions by Egypt, and the Ottoman cabinet transferred the northern Somali coast to Egypt under Ottoman suzerainty in 1880 (ibid. 154f., 269f.). When Egypt de facto lost its independence, however, the O.E. ordered its administration in Yemen in 1884/85 to take over Zayla^{c} and Berbera, and Harär was to be given back to its hereditary rulers; however, the British then had already taken over northern Somalia (ibid. 270, 273f., 284), and the Italians Massawa, without Ottoman consent. This caused a harsh confrontation with Italy, which increased when it proclaimed the Colonia ↗Eritrea, and lasted through the Italian–Turkish War of 1911–12 (Labrousse in PICES 13, vol. 1) until ↗World War I (Lenci 1990). The last territory in the region which could be regarded as Ottoman were the ↗Ḥaniš (Ḥunayš) islands, which were formally given up by the O.E. only after World War I. In the 1923 Treaty of Lausanne the O.E. renounced sovereignty over all territories in the Red Sea region. Since then, however, the sovereignty of the Ḥaniš islands had remained in suspense, being finally settled in 1998 only.

Ottoman relations with Ethiopia from the 19th century to *ləǧ* Iyasu

In the mid 19th cent., the O.E. and Ethiopia established direct diplomatic contacts, first through the exchange of letters. The question of the control of ↗Dayr as-Sulṭān in Jerusalem was the main reason for the two countries to come closer (e.g., in April 1848 the king of Ethiopia, *aṣe* ↗Śahlä Dəngəl, sent a letter to *sulṭān* ^{c}Abd ül-Meǧīd of "the kingdom of Islam" asking him not to allow the "Greeks" to take possession of this Ethiopian convent; RubActa I: 144). The status of the Ethiopian pilgrims and monks in Jerusalem was another point of discussion (Orhonlu 1974: 163f.). Moreover, the fact that the metropolitans of the ↗Ethiopian Orthodox (Täwaḥədo) Church traditionally came from Egypt, which made gifts to the Ottoman governor of Egypt necessary, was interpreted by the Porte as a proof of suzerainty (Beke 1867: 16).

A change in the general attitude towards Muslims in Ethiopia under Mənilək helped to increase contacts with the O.E. For example, *näggadras* ↗Muḥammad Obaker, one of the richest merchants in Addis Abäba (and the son of the *pasha* of Zayla^{c}, ↗Abū Bakr Ibrāhīm Šaḥīm), in the foremath of the Battle of ↗^{c}Adwa successfully organized the delivery of weapons to Mənilək via Zayla^{c} from Ottoman merchants.

An Ethiopian official mission was sent to Jerusalem in O.E. territory in 1902 to inquire about the ownership of the Ethiopian monastery, and to hire Ottoman and other citizens as craftsmen for the Ethiopian court (e.g., Jakob Hall, cp. ↗Wälättä Iyäsus). The first Ottoman diplomatic envoy to visit Ethiopia was ↗Ṣādiq *pasha* al-^{c}Aẓm, who was sent to Ethiopia in 1904 by *sulṭān* ^{c}Abd al-Ḥamīd at the head of a mission which lasted three months. Once back, he published a travelogue in Ottoman Turkish, later translated into Arabic. The first Ethiopian diplomatic mission to the O.E. was dispatched in 1904, with the Harari merchant ↗^{c}Abdullahi ^{c}Alī Ṣādiq as the official envoy. He was, however, dismissed and replaced by another mission in 1905, led by *däǧǧazmač* ↗Mäšäša Wärqe. He soon returned for a second mission in 1906/07, accompanied by *grazmač* ↗Yosef Nəguśe, Ethiopian consul at ↗Djibouti, and the interpreters Jakob Hall and and "Gabrihet Soernej", an Ethiopian from Austria (s. Smidt 2005a: 50; 2005b: 200, 217); both interpreters were Germanophone, as the mission was to proceed to ↗Germany (in 1907), where they hoped for an intervention of Emperor Wilhelm II in the question of Ethiopian ownership of Dayr as-Sulṭān (the latter interpreter later became famous under the name ↗Gäbrä Ḥəywät Baykädañ, s. Fasil Täšomä – ^{c}Alämu Täbäǧǧä 1981: 41). A permanent Ethiopian representation in the O.E. was not established. The mission first visited ↗Jerusalem and then Istanbul; on their way back (in 1907 until early 1908) they again visited Istanbul, but still without reaching a positive conclusion for the Dayr as-Sulṭān affair (s. letter from Istanbul, Smidt 2005b: 214–21).

However, as the number of Ottoman citizens in Ethiopia increased quickly (including Christian ↗Armenians, such as Sarkis Terzian, close to Mənilək; cp. Smidt in PICES 16), the O.E. was pushed to open a fixed diplomatic representation in Ethiopia. The German legation, established in 1906, first took over care for the Ottoman citizens in Ethiopia. To this aim a German consulate in the Muslim city of ↗Harär was built up in 1910 by Lorenz ↗Jensen. In the same year the Austrian Franz Kaden was nominated Ottoman honorary consul in Harär. In 1912 *ḥāǧǧī* Naǧīb (Necip *haci efendi*), the first official Ottoman consul sent to Harär, with his secretary Michel Ackad, established a general-consulate (*baş şehbenderlik*) in the town (ZerÉth 490; Orhonlu 1974: 166). Necip died shortly thereafter in Harär and was replaced in early 1913 by Consul Aḥmad ↗Maẓhar *bey*. Consul Maẓhar *bey* acquired an influential position, as the heir-to-the-throne *ləǧ* ↗Iyasu used his advice to develop a new policy towards Ethiopian Muslims. In 1915 Maẓhar *bey* moved the consulate to Addis Abäba. His greatest success was reached in 1916, when Iyasu handed over the "jurisdiction over Muslims" to the O.E., which was understood by Iyasu's adversaries as "selling out Ethiopia to the Turks" (or even, wrongly, as the acceptance of the *sulṭān*'s claim over entire Ethiopia, but above all meant the recognition of the Sublime Porte's religious jurisdiction over Muslims, as practised in some other countries; for a popular interpretation cp. Greenfield 1965: 138). Iyasu hoped to profit from World War I without directly participating in the war itself. He sent weapons (and a German weapons instructor) to the rebellious Somalis, who were trying to establish links with the O.E.; in turn, the O.E. as a member of the "Axis" promised to hand over parts of the African coast to Ethiopia (now under control of Italy in Eritrea and France in Djibouti, the adversaries of the Axis powers, but still claimed by the O.E.) in case of victory (Erlich 2010: 43–92; BZHist 127; s. also Tepedelen 2007). Iyasu's political proximity to the Ottomans decisively contributed to his overthrow in the ↗Coup d'état of 1916 (s. EAE vol. 2, 1081). Maẓhar then moved back to Harär and run the consulate until the end of 1919. *Ḥāǧǧī* Tawfīq (Tevfik) *bey*, his deputy and the consulate's *imām* since 1913, entertained close relations with several influential Muslims in Ethiopia, such as the trader Muḥammad as-Saqqāf (i.e. perhaps the abovementioned Maḥammad Obakar, who was an important contact person with the O.E. and grandfather-in-law of *ləǧ* Iyasu); Tawfīq also stayed for a longer period with the Islamic leader *šayḫ* ᶜIsa b. Ḥamza of ↗Qätbare in Qabeena and married a lady of the Wäläne Gurage. Tawfīq continued the consulate's administration as chargé d'affaires even after the dismemberment of the O.E. of 1920, and finally closed the consulate in 1921/22 (Kadir Dikbaş 2007). After that the consulate remained vacant, until being reopened in Addis Abäba by the new Republic of ↗Turkey in 1926.

The Ottomans were also active in other regions of the Horn of Africa during World War I. The Ottoman commander-general of the Yemen, ᶜAli Saᶜīd *pasha*, in 1916 signed a protectorate contract with ↗Muḥammad ᶜAbdullāh Ḥasan, who had parts of Somalia under his control; due to the defeat of the O.E. in the War, it became obsolete (Hess 1964).

Ottoman Empire in Ethiopian culture and literature

Ottomans are well documented in ↗Gəᶜəz literature where they are characterized especially as valorous fighters and well armed soldiers (Marrassini 2003: 614ff.). Ottoman superior military power was apparent in their use of ↗fire-arms and artillery: the fighting capability of the army of Aḥmad b. Ibrāhīm al-Ġāzī was highly improved by the supply of Ottoman fire-arms and cannons. After the fall of Dəbarwa in December 1578 Śärṣä Dəngəl incorporated the remnants of the Ottoman garrison in his own army and created a special artillery corps with the *turk* ↗*bašša* at its head (Marrassini 2003: 607). The influence of Turkish military organization on the Ethiopian ↗army is most probably also evident in the rank terminology (e.g. ↗*Šaläqa*, *mäto aläqa*) which is following the model of the Egypto-Turkish one (*binbaşı*; *yüzbaşı*). Also the colonial administration of Eritrea took over several Ottoman administrative and military terms in the beginning of Italian rule (cp. ↗*Šumbaš*[*i*]). Some Ethiopian terms from the economic sphere are influenced by the Ottoman contacts; the Amharic term of measurement *oka* (for weight) is derived from Ottoman *okka* (1283 g); a specific kind of cloth is called *azmir* after the city of Izmir (Knüppel 2009: 66f). The name Afändi (after Ottoman *efendi* 'Mister') is found among Muslims in Ethiopia and Eritrea (ibid. 67).

The term *Turk* usually meant people from the O.E., including Egyptians, who were under Ottoman rule; both Ethiopian documents and oral tradition call the Egyptians of the Egyptian–Ethiopian war of 1875–76 as "*Turk*" (cp. BZHist 26, 36; KolTrad). The term sometimes extended to mean people coming from other regions. In the mid-19th cent., light-skinned individuals were often referred to as *Turkočč* (instead of the then still less known ↗*Färänǧ*), such as the Protestant missionaries who settled in western Ethiopia in 1856–62. Among Muslim states south of Christian Ethiopia, the Ottomans often enjoyed a very high reputation; e.g., in the late 19th cent., king ↗Abba Ǧifaar II of ↗Ǧimma believed that “Stambul [i.e., the O.E.] was the most powerful state of the world” (Bulatovich 2000: 199). The Islamic element of the Ottoman identity is on the contrary less underlined in the Ethiopic sources even if it is always present in the background (Marrassini 2003: 611f.). In some Arabic sources, however, the religious aspect of the first Ethiopian–Ottoman clashes is somewhat highlighted (Nahrawālī 1967: 120).

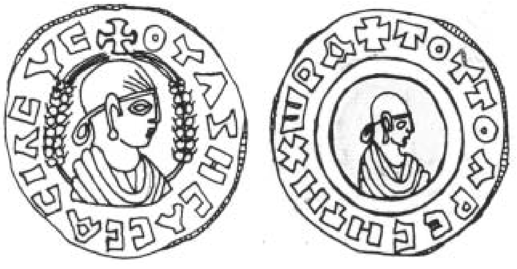
Ouazebas

Ou. (Gr. ΟΥΑΖΗΒΑϹ, i.e. Οὐαζηβας, *Ouazēbas*) was a Christian king of ↗Aksum in the late 4th or early 5th cent. ("385 ca./400?" for Pedroni 1997: 44f., 62, 80, within a controversial reconstruction of the royal succession). Possibly an immediate predecessor rather than a successor of ↗Eon, he is known from his ↗coinage alone, which is all copper and seems to have been extensive, as suggested by the number and diffusion of surviving examples, found not only at Aksum and Adulis, but as far as ↗Lalibäla (yet, with no archaeologically attested context: s. MHAksum 183). Only a few of these examples are in good conditions.

Ou. is portrayed on the two sides of his coins, within a beaded or ribbed or, respectively, plain border, head and shoulders profile bust facing rightwards, wearing a head cloth, with a rounded ribbon behind (Types 54–58 Munro-Hay – Juel-Jensen 1995). On the obv., the bust is framed by two curved wheat stalks (as on the gold Aksumite issues) and a cross at the top, which also appears on the rev., along with a feature new to copper: a halo of gold around the king's head. On the rev., a similar but smaller bust is backed by an overlay of gold. Gr. legends, with slight vars. and many incomplete or badly formed letters, run all-round: on the obv., ΟΥΑΖΗΒΑϹΒΑϹΙΛΕΥϹ, i.e. *Ouazēbas basiléus*, 'King Ouazebas'; on the rev., ΤΟΥΤΟ ΑΡΕϹΗ ΤΗ ΧѠΡΑ, i.e. *Toûto arésē tê chora*, 'May this please the country'.

The name *Ouazēbas* [Ouazibas], as inscribed in Greek, is but a calque of an original Ethiopic *W^{c}zb* or rather *Wzb*, both known for Aksumite kings: ↗W^{c}ZB and ↗Wazeba, vs. whom Ou. should then be Wazeba II.



Copper coin of Ouazebas, diameter ca. 17 mm; drawing courtesy of Wolfgang Hahn

At Aksum, coins of Ou. were found in association with the fallen fragments of the great stele, which might indicate that the latter fell during his reign (de Contenson 1959: 29–32; Munro-Hay 1989: 151; Id. in AfrZion 109, no. 28; Phillipson 2000: 160).

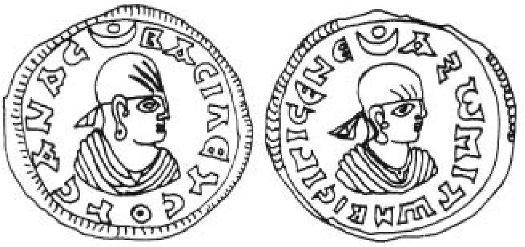
Gianfranco Fiaccadori

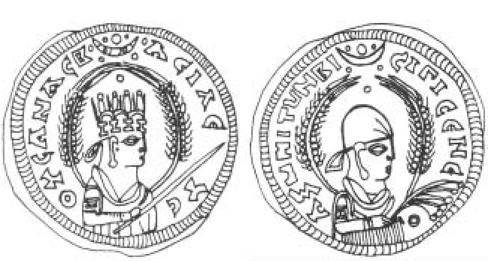
Ousanas I

Ou. I (Gr. ΟΥΣΑΝΑϹ, i.e. *Οὐσανᾶς, **Ousanâs*) was a king of ↗Aksum of the early 4th cent., possibly a son of ↗Ǝllä ʿAmida and a(n elder) brother and immediate predecessor of ↗ʿEzana, whose figure ended by dimming Ou.'s in literary sources (↗Historiography).

In fact, Ou. is chiefly known from his ↗coinage, where his "clan-name" appears: ΒΙϹΙ ΓΙϹΕΝΕ, *bisi Gisene*, in Greek, i.e. **bəʿəse gəšän* (or *gəšən*), 'man of Gəšän', in Ethiopic – likely to be connected with ↗Amba Gəšän in Ambassäl (Fiaccadori 2004: 110). Yet, he was also responsible for a royal Aksumite inscription usually attributed to ʿEzana: DAE IV 8 = RIE no. 186, in pseudo-Sabaic script, concerning an expedition against north-western people, from which the victorious king returns to Aksum via ↗Səmen. The name of such king is missing at the top of the text, but in the first surviving line he is called [*w*]*l*[*d*^{m}] *ʾl*^{m} *ʿmd*^{m}, 'son of Ǝllä ʿAmida', and his "clan name" also occurs that can be better restored to *bʾs*[*y*^{m} g]*śn*^{m}, i.e. **bəʾəs*[*yä gə*]*šän*, 'man of Gəšän', as suggested by the Greek legend above (Schneider 1987: 614f.; s. Fiaccadori 2004: 109f.). This would set definitely aside the previous identifications of Ou. with ↗Sembroutes and/or ʿElla Amida himself (cp. ↗*Monumentum Adulitanum*). In the coin hoard from Mangalore, on the south-west Indian coast, 17 pieces of Ou. (including a contemporary forgery) are symptomatically associated with six of ʿEzana (s. ↗India, relations with).



Silver coin of Ousanas I, diameter ca. 16 mm; drawing courtesy of Wolfgang Hahn



Gold coin of Ousanas I, diameter ca. 19 mm; drawing courtesy of Wolfgang Hahn

Ou.'s gold coins, with disc and crescent at top, have his portrait on both sides, half-length bust rightwards, wearing a quadruple-ended arcaded tiara or a head cloth respectively, a rounded ribbon falling behind; the bust descends to the base of the coin. His figure, robed in a garment with a round collar (sometimes doubled on the rev.) and curved-v shape above it (and below the second collar) is flanked by two small wheat stalks (in a few instances with three additional intermediate spikes) and contained in border of often elongated pellets; his arm, with armlets and bracelet, is holding a spear. The obv. is inscribed in Greek all round: ΟΥϹΑΝΑϹ ΒΑϹΙΛ(Ε)ΥϹ, i.e. *Ousanas basil*(*é*)*us*, 'Ousanas king'; continued likewise on the rev.: ΑΞΩΜΙΤΩΝ ΒΙϹΙ ΓΙϹΕΝΕ, i.e. *Axōmitôn bisi Gisene*, 'of the Aksumites, man of Gəšän' (Types 20–24 in Munro-Hay – Juel-Jensen 1995: 103ff.; AfrZion 106, no. 21).

His silver issues display on both sides the king in a (plain) beaded border, head and shoulder profile bust rightwards, wearing headcloth with ribbon behind (Types 25–28, ibid. 106–12; AfrZion 107, nos. 22–23); only in some cases the bust extends to the base of the coin (Type 27 in Munro-Hay – Juel-Jensen 1995: 109; AfrZion 107, no. 22). Greek legends like the previous ones are found (Types 25, 27 in Munro-Hay – Juel-Jensen 1995: 106), occasionally with abbreviations (Type 24, ibid. 105) or such vars. as ΑΞΩΜΙΤΩΝ, i.e. *Axōmitôn*, 'of the Aksumites', on the obv., ΟΥϹΑΝΑϹ ΒΑϹΙΛ(Ε)ΥϹ, i.e. *Ousanas basil*(*é*)*us*, 'Ousanas king', on the rev. (Type 28, ibid. 110). Silver exemplars without religious symbols are also known, labelled ΟΥϹΑΝΑ(Ϲ), i.e., 'Ousana(s)', on the obv.; ΒΑϹΙΛΕΥ(Ϲ), *basiléu*(*s*), 'king', on the rev. (Types 32–33, ibid. 115ff.). Differing in weight, they might represent another denomination.

The same iconography and legends are repeated, with minor changes, on Ou.'s copper coins (Types 29–31, ibid. 112ff.), among them an issue without religious symbols as well (Type 34, ibid. 117f.).

Ousanas II s. EAE vol. 5

Ousas s. EAE vol. 5

Oviedo, Andrés de

O. (b. 1518, Illescas, Toledo, Spain, d. 19 September 1577, Fəremona) was a Jesuit missionary. Born to a noble family, he studied Philosophy at the University of Alcalá. On 19 June 1541 he joined the ↗Jesuits. Subsequently, he studied in Paris and Leuven. In 1544, O. was ordained priest in Coimbra and the next year was appointed as the first rector of the college of Gandia, where his mystical inclination caused controversy among the Jesuit superiors (cf. Ruiz Jurado 1974). In 1549 he made the profession of four vows and in 1550 obtained a doctorate in theology. One year later, he was sent to open a new college in Naples.

In 1554, O. was appointed for the mission to Ethiopia and was nominated bishop of Hierapoli with rights to succeed to the patriarchate of Ethiopia (Bull *Cum nos nuper* by Julius III, in BecRASO X, 39ff.). In 1556 he left Lisbon for India and with five other companions reached ↗Ḥərgigo in early April 1557, shortly before the ↗Ottoman occupation of ↗Massawa. In 1562, at the death of João Nunes ↗Barreto, O. succeeded as Catholic Patriarch of Ethiopia.

In Ethiopia, O. and his companions initially lodged at the *kätäma* of *aṣe* ↗Gälawdewos, where they led theological discussions with Ethiopian monks. Reportedly, O. also wrote a treatise against the Ethiopian errors, today lost (cf. ARSI). Soon the Jesuits had to abandon the royal camp and to move to Təgray, where they had the protection of *baḥər nägaš* ↗Yəsḥaq. Towards 1565, after a stay in ↗Dəbarwa, O. and his companions settled in ↗Fəremona. News of the difficulties in Ethiopia convinced the Jesuit authorities in Europe and India to request O. to abandon the mission and go to Japan, but he refused (cf. Wicki 1958: 163, 521, 585, 667, 669). He died without having accomplished any of the objectives determined by ↗Ignatius of Loyola. At his death the Catholic Patriarchate remained vacant for several decades until the nomination of Alfonso ↗Mendes.

According to the missionary record, O. was highly esteemed by the local population, his burial place being the object of a pilgrimage (BecRASO XI, 115; Arana 1631: 153ff.). In 1605, Pedro ↗Páez exhumed his "relics" and sent them to ↗Goa (BecRASO XI, 14, 58) and on 8 June 1630 his cause of beatification was promoted. A history of his life was written by the Spaniard Antonio de Arana (1631).

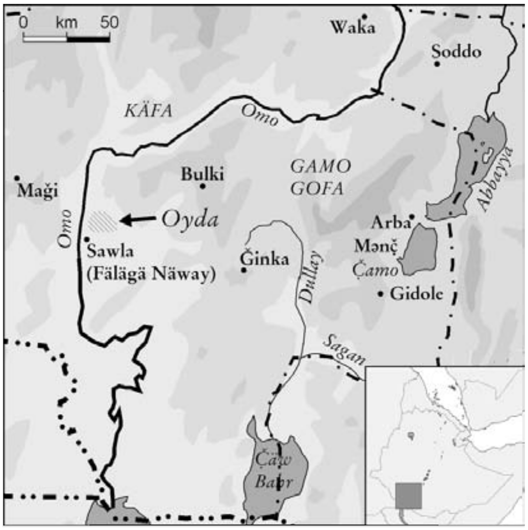
Andreu Martínez d'Alòs-Moner

Oyda

Oyda language

The O. language is classified under the ↗Ometo subgroup within the ↗Omotic language family. Together with ↗Wälaytta, ↗Dorze, ↗Daç̣e, ↗Gamo, ↗Gofa, ↗Kullo, ↗Malo, ↗Maale, and ↗Basketo, O. belongs to the North Ometo (Fleming in BendLang 47), called Northwest Ometo by Bender (2000: 7). The O. people are located north-east of Sawla (Fällägä Näway) in Gamo-Gofa Zone in the Southern Nations, Nationalities and Peoples' Region. Their population is estimated to be 16,597.

The consonant inventory of O. contains: stops *p, b, d, t, g, k*, ejectives *p̣, ṣ, č̣, q*, implosives *ɓ, ɗ*,



sibilants *z, s, š*, affricates *ğ, č, ʣ, ʦ*, nasals *m, n*, liquids *r, l*, glides *w, y*, glottals *ˀ, h.* O. has a five-vowel system: *i, e, u, o, a.* Major phonological processes in O. include assimilation, insertion, deletion and vowel harmony.

Simple nouns in O. are mainly disyllabic and terminate in a vowel. Polysyllabic nouns are uncommon and are either compounds such as *woosa-ˀas* (lit.: 'beg-man') 'beggar' or ideophones such as *č̣alqič̣alqo* 'bat'. Nouns are inflected for number (sg. and pl.), gender, definiteness and case. Morphology in O. is suffixal. Terminal vowels of nouns are deleted during suffixation. Plurality is indicated by the element *-uns*, as in *kana* 'dog' (sg.) – *kan-uns* (pl.), *tolko* 'hyena' (sg.) – *tolk-uns* (pl.). Definiteness (def.) is marked via portmanteau morphemes that co-mark gender: *-z-* (def., masc.); *-t-* (def., fem.). Nominative (nom.) and accusative (acc.) cases are also marked via gender sensitive elements: *-a* (nom., fem.); *-e* (nom., masc.); *-a* (acc., masc.); *-o* (acc., fem.). E.g., *kan-z-e* 'dog' (def., nom.); *kan-t-a* 'bitch' (def., nom.); *kan-z-a* 'dog' (def., acc.); *kan-t-o* 'bitch' (def., acc.).

O. has two sets of subject pronouns: full and reduced forms. These are: *tani/ta* 'I', *neni/ne* 'you (sg.)', *ezi/e* 'he', *iza/i* 'she', *nuni/nu* 'we', *yinti/yi* 'you (pl.)', *unti* 'they'. Object pronouns have full form: *tana* 'me', *nena* 'you (sg.)', *eza* 'him', *izo* 'her', *nuna* 'us', *yintan* 'you (pl.)', *untan* 'them'. Demonstratives distinguish three degrees of distance: *ha* 'this', *senda* 'that', *sekka* 'that farther away'. Like other North Ometo languages, O. has a quinary numeral system (Hirut Woldemariam 2008).

Verbs in O. are inflected for aspect, subject agreement and mood. In the indicative, an aspectual distinction between the imperfect (impf.) and perfect (perf.) is drawn. The imperfect is marked by suffix *-ne* or *-oda*, e.g., *eke-ne/ekk-oda* 'takes, will take'. The perfect is marked by *-en*(*e*) or *-ida*, as in *dos-en*(*e*)/*dos-ida* 'have loved', *ekk-en*(*e*)/*ekk-ida* 'have taken'. Further moods are imperative, negative and interrogative. The imperative markers are *-o* (sg.) and *-oyta* (pl.), e.g., *yeˀ-o* 'Come!' (sg.), *yeˀ-oyta* (pl.). Negation is expressed via suffixes *-os* or *-am*(*a*) in the imperfect and -*kay*(*a*) in the perfect, e.g., *tani kara yeˀ-os/-ama* 'I don't (I will not) come home', *tani kara yeˀ-kay*(*a*) 'I didn't come home'. The prohibitive is indicated by *-ippe* (sg.), *-ippe-te* (pl.) as in *yeˀ-ippe* 'Don't come!' (sg.), *yeˀ-ippe-te* (pl.). Converbs (CONV) are derived by suffixing *-i*: *tani očč-i ye-en* (I work-CONV come-PERF) 'Having worked I came'.

Passive, causative and frequentative stems are formed from verb roots by attaching the suffixes *-int, -iz,* and *-iʦ* resp. E.g., *ekk-int-* 'be taken', *ekk-iz-* 'cause to take', *ekk-iʦ* 'take frequently'.

O. is a Subject-Object-Verb, head final language: *tolk-uns-i kan-z-a da-en* (hyena-PL-NOM dog-DEF-ACC bite-PERF) 'The hyenas bit the dog'.

The copula verbs are *bee* and *yezin* for present and past tenses resp. The former is optional and can be dropped: *tani wooʦ-ˀas* (*bee*) 'I am a farmer'.

The ten-word list is as follows: *petto* 'one', *namˀi* 'two', *hayʣi* 'three', *tama* 'fire', *haʦi* 'water', *awa* 'sun', *agina* 'moon', *suʦ* 'blood', *ilanʦ* 'tongue', *ač̣č̣i* 'tooth'.

Hirut Woldemariam

Oyda ethnography

The O. live in Gofa Zuria *wäräda* in the North Omo Zone of the Southern Nations, Nationalities and Peoples' Region. Their territory is bordered by the ↗Gofa to the north and north-east, the country of the ↗Aari in the west and of the ↗Maale in the South. They inhabit a mountainous region which is part of the southern Bakko mountain ranges and rises as high as 3,000 m A. S.L. The 1994 census estimates the population at 16,000 (CSA 1996).

Agriculture and artisanship are the mainstays of the O. economy. The majority of the population cultivates various types of crops: grains, coffee and oil seeds. Six different kinds of crafts are practiced: carpentry, masonry, weaving, pottery, tannery and blacksmithing. The first three crafts provide the most lucrative off-farm income generating activities. However, potters, tanners and blacksmiths are discriminated against and have a low social status.

O. tradition recognizes two categories of people subsumed under the ethnonym O.: Gezo and Zazo. The term Gezo designates the earlier inhabitants of the region and includes the Uba, Mello and the O. proper. Zazo connotes the later immigrants who are associated with the Gofa. The Gezo/Zazo division is also made on the basis of topography, language and cultural practices. The Gezo are highlanders and the Zazo are lowlanders. In cultural terms, the Zazo are distinguishable from the Gezo by the fact that they practice circumcision. Within the Gezo the O. recognize close affinity with the Mello and the Uba, whose dialects are spoken near Dime and Gofa, respectively. They also recognize close cultural links with the Aari.

On the basis of traditional ritual practices O. society is also divided into two groups called Gamitse and Area. One of the main differences between the Gamitse and the Area is that the latter, who are believed to have come from Aari (as the name suggests), practise an elaborate seclusion rite during child birth. The name Gamitse might have connections to ↗Gamo country, whence the O. kings (*kati*) claim to have come. Furthermore, O. society consists of three hierarchically ordered social groups: the *Maala, Ṣoma* and *Männa*. The Maala are the traditional ruling families, the Oydina and the Debina clans. Ṣoma is a cluster of clans that form the bulk of the farming population. The Männa are marginalized occupational groups (↗Marginalized people, s. EAE vol. 5) consisting of largely the Otto (potters) and Kotsi (blacksmiths).

The O. have developed a political system which is less authoritarian than that of their neighbours. The O. *kati* ('king, chief') resembles the ↗Gamo *haleqa* who are selected, "caught" in local terms, for a position of authority (Dereje Feyissa et al. 1995). The *kati*-capturing ceremony is called *katsida*. The O. *kati* could be readily deposed if he failed to protect the people from misfortune (*tonimiča*) or lacked charisma and valour (*aštime*). Although the office of *kati* is not hereditary he is nevertheless "caught" only from the Oydina clan. The principle of selection is also determined by personality traits (such as wisdom and prudence), confirmation by an haruspicium (intestine reading) ↗oracle (*mirka adde*) and by the candidate's economic status. A *kati* needs to be wealthy enough to sponsor the installation feast and the accompanying ritual raiding. A *kati* is expected to observe food taboos (pig, wild goat, chicken, eggs and cabbage); avoid *tuna* (i.e., 'impurity', such as contact with mourners or women during seclusion periods); hold the annual rain sacrifice; and organize a collective sacrifice (*tumea*) in order to ensure the well-being of the people (↗Kingship, divine). A *kati* is also responsible for maintaining law and order through the institution called *buča*, a sacred place where justice is served.

The O. belief system recognizes two divinities: the sky-god Ṣozi and an earthly spirit called Ṣelahe. Having created the universe, Ṣozi is believed to have ceased direct communication with his creatures. He rather manifests himself through proxies and through a religious office called *zorsi*. The O. belief system is embedded in a customary law called *zaga woga* (↗Law: traditional legal institutions; ↗Wäğ). *Zaga woga* was first challenged by a local religious reformist movement called called *Esa woga*, named after the person who initiated the movement. There are also followers of the ↗Qalä Ḥəywät church, an offshoot of the Sudanese Interior Mission, and the Ethiopian Orthodox Church.

O. society has undergone tremendous changes since its incorporation into the Ethiopian state in 1894 following the imperial conquest. Most importantly, the traditional political system was altered, whereby the *kati* was transformed into a ↗*balabbat* (imperial agent or representative) and the onerous *gäbbar* system was introduced. The social organization of the O. was further affected during the *Därg* period. The 1974 revolution and its egalitarian ideology undermined the local social hierarchy. Traditional office holders were dishonourably deposed and occupational groups were "liberated".

Making use of the institutionalization of ethnic rights in 1991 the O. have been involved in what could be described as re-traditionalization and a political struggle for recognition. A political organization called the Oyda Nationality Democratic Organization was established to fight for the political autonomy of the O. from their dominant neighbours, the Gofa.

Dereje Feyissa

Özdemir

Ö. *pasha* (in Ethiopia **ዑዝድሜር**, 'ᶜUzdəmer', **ዝሙር**, 'Zəmur', cf. ConzGal 164 [text]; d. 1559, Dəbarwa) was the first governor of the ↗Ottoman province of Ethiopia. An Egyptian military slave of Circassian origin, his date of birth is not known. He entered service with the Ottomans after their conquest of Egypt in 1517 and, in 1538, joined the naval expedition of Süleyman *paṣha* to Gujarat. Upon the latter's return, he remained in ↗Zabīd with the rank of ↗*amīr*. In 1547, Ö. took part in the capture of Taᶜizz and, elected locally as deputy commander, conquered the Zaydī capital Sanᶜāᵓ. In 1549 he was appointed governor of the Yemen, and, in 1552, concluded a peace treaty with the Zaydī *imām* al-Muṭahhar b. al-Mutawakkil ᶜAlāᵓllāh (r. 1548–72).

Dismissed from the Yemen in 1554, Ö. persuaded *sulṭān* Süleyman I the Magnificent (r. 1520–66) to conquer the western coastlands of the Red Sea in order to protect the access of Muslim pilgrims to Mecca and to check Portuguese ambitions (↗Portugal). The *sulṭān* agreed, though reluctantly. A first attempt to reach Ethiopia with 3,000 men through the Nile valley failed. The second started from ↗Sawākin, which, in 1555, was made capital of the ↗Ḥabeš *eyaleti* with Ö. as *beylerbeyi* ('governor'). The new province further included the ports and districts of ↗Zaylaᶜ, ↗Massawa, ↗Ḥərgigo, and, on the Arabian coast, Jeddah.

In 1559, Ö. marched against ↗Dəbarwa, governed by *baḥər nägaš* ↗Yəsḥaq, who was then campaigning with *aṣe* ↗Gälawdewos against ↗Harär. In Dəbarwa Ö. built a defensive wall, a mosque and a tower, said to be filled with costly valuables, looted or extracted as taxes. Yet the Turkish position was precarious. The local peasantry annihilated a Turkish contingent sent to the coast in search for water and provisions and the heads of the commander and his officers were sent to Gälawdewos (ConzGal 165 [text]). When the Ottomans massacred the monks of ↗Däbrä Damo and desecrated its church, the Təgrayans gathered around Yəsḥaq who had then returned. He defeated the Turkish troops sent to occupy the ↗Buri peninsula, and moved against the independent tribes of ↗Mäzäga in ↗Wälqayt, united under a Muslim queen called ↗Gaᶜəwa. Her forces were defeated, and she fled to Dəbarwa. Allured by the treasures she had left behind, Ö. invaded her country, but during his absence the Ethiopians took Dəbarwa. Suffering severely from the heat, Ö. and the remainder of his army withdrew to Sawākin. Ö. is said to have died of sunstroke (ErlEth 34) in 1559 in Dəbarwa (al-Nahrawālī 1967: 129) and to be buried there. His remains, al-Nahrawālī adds, were later transported to Massawa, where his son ᶜUṯmān erected a *qubba* for him. After his death, the Turkish presence was limited to Sawākin, Massawa and Ḥərgigo.

Emeri van Donzel

P

Pachomius

P. (Eth. ጳኰሚስ, Ṗakʷəmis; Copt. ⲡⲁϩⲟⲙ, *Paḫom*, lit. 'The Falcon'; Gr. Παχόμιος, *Pachómios*; b. 294, Šneh, south of Thebes [Luxor], d. 346 or 347) is considered the father of coenobitic ↗monasticism (s. EAE vol. 5). He is commemorated by the ↗Coptic Church on 14 *Bašans*, corresponding to 14 *Gənbot* for the ↗calendar of the ↗Ethiopian Orthodox (Täwaḥədo) Church (cp. the ↗*Sənkəssar,* BudSaint 887f.; ColSyn XIII, 260–63).

The main source for P.'s biography is his Vita. Several Greek versions are known, as well as a Latin one, translated from Greek, and two Coptic (Saidic and Bohairic) ones; a few Arabic recensions also survive that are translated from either Greek or Coptic. No Ethiopic translation is known for the entire Vita, but P. is featured prominently in several classical collections of Ethiopian ↗monastic literature. The *Asceticon* (*Zena zäʾəmʾabäwinä qəddusan*, ed. Arras 1984, §§35, 37) and *Geronticon* (*Gädlä abäw qəddusan*, ed. Arras 1986, §§99, 141, 142, 169, 352) include both texts from the *Lausiac History* by Palladius and passages occurring in Greek and Coptic versions of P.'s Acts. The collection published as *Quadraginta historiae monachorum* (Arras 1998, "stories" nos. 6, 32, 33) presents a number of stories on Pachomian monks.

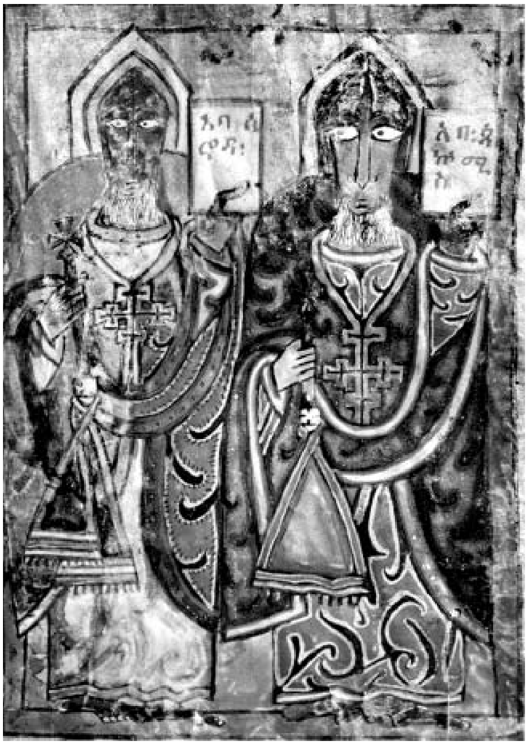
The catechism of P. has been translated into a number of languages but no complete Gəᶜəz translation is known. The *Geronticon* (ed. Arras 1986, §§223, 228, 231, 235, 261–62, 414–42, 445, 484) contains texts attributed to P. and possibly harking back to his own works.

The so-called *Rules of P.* consist of four parts, fully extant in a Latin version as, namely, *Praecepta*, *Praecepta et Instituta*, *Praecepta atque Iudicia*, *Praecepta ac Leges*. The partial Ethiopic translation (ሥርዐተ፡ ማኅበር, *Śərᶜatä maḫbär*, 'The Rules of the [Monastic] Community') depends on a Greek *Vorlage*. It has two parts: the first are the so-called *Rules of the Angel* (from the *Lausiac History* by Palladius), the second is a text based upon the Greek *Excerpta*; following these a third part is a late Ethiopian compilation attributed to P., but unknown in other languages. The Gəᶜəz of the first parts is additionally not always faithful to the original either (Veilleux 1968: 119).

Ethiopian tradition attributes the translation of the *Rules of P.* to the ↗Nine Saints. The first two parts were most probably translated in the Aksumite period. The Ethiopic version was published by Dillmann (DillmChr 57–69) and then translated into German (König 1878), English (Schodde 1885), French (Basset 1896) and Swedish (Löfgren 1948). A partial Italian translation of the third part exists (Cerulli 1968: 24ff.). Another text was edited by Arras as part of the *Collectio monastica* (1963, § 9).

Whilst in Egypt Pachomian monasteries did not survive long beyond the Arab conquest (639–40), the coenobitic ideals continued to the north, in the West, and to the south, especially in Ethiopia, whose monasticism is rooted in Egyptian Pachomian tradition. Ethiopian monastic ↗genealogies list St. ↗Anthony, Macarius, P., and only after them the Ethiopian founders of monasticism. The Acts of *abba* ↗Libanos claim that the saint was the first disciple of P., sent to Ethiopia by his teacher himself (Bausi 2003, §§26, 130, 302, 306, 412, 524; s. CRStor 157, and also Marrassini 2003: XXXIX). ↗Zämikaʾel Arägawi, another disciple of P., is believed to have reached Ethiopia after his teacher's death, in the time of Emperor Theodore (Guidi 1894:58; CRStor 158f.). According to his Acts, however, the Saint flourished in the age of St. ↗Yared and King ↗Gäbrä Mäsqäl, i.e. around the mid 6th cent. (cp. CRStor 161). According to tradition, each of the Nine Saints founded a monastery in Ethiopia organized according to Pachomian *Rules*.

Coenobitism being the most wide-spread monastic form in Ethiopia, it is no wonder that references to P. and his *Rules* appear in numerous Ethiopian ↗hagiographies: e.g., the Acts of the 14th-cent. saint ↗Samuʾel of Däbrä Halleluya (Colin 1990: 18, 46) and of the 15th-cent. ↗Giyorgis of Sägla (Colin 1987: 45). He is mentioned several times in the Acts of the 17th/18th-cent. *abunä* ↗Abranyos (Raineri 1983: 446, 466), credited with the foundation of a commu-



Abba Shenute and *abba* Pachomius, illumination from a 15th-cent. *Mäṣḥafä säᶜatat* manuscript, fol. 29v, from Däbrä Qʷäyäṣa monastery, Šire, Təgray; photo 2000, courtesy of Michael Gervers

nity “like those of Macarius and P.” (ibid. 450). Introduced as a disciple of all three Egyptian fathers, i.e. ↗Anthony, Macarius and P., Abranyos is known, however, for having experienced different forms of monastic life: anchoretic (like Paul the Hermit), vagrant (like Paul of Tamma) and coenobitic (like P.). In the Vita of the 18th-cent. ↗Säyfä Mikaᵓel, P. is evoked together with Anthony and Arsenius of Scetis (Ayele Teklahaymanot 2003: 82, 116).

It is difficult to assess the extent to which the *Rules of P.* are really applied in Ethiopia, for this matter has not been thoroughly investigated (s. Cerulli 1958). The Lives of the aforementioned saints show, however, distinctive traits of Pachomian coenobitism. Such founders of ↗monasteries, in fact, did feel the need to teach their disciples through catechism and homilies; sometimes, also, dependent ↗nunneries were opened adjacent to male monasteries. Finally, we find traces of the three principal activities according to P.: prayer, work and study. Nevertheless, the spirit of these Ethiopic hagiographies seems closer to ↗Shenute’s than P.’s, that is more democratic and moderate.

Awad Wadi – Red.

Páez, Pedro

P. (also Pais, Paes; b. 1564, Olmeda de las Cebollas [today Olmeda de las Fuentes], Spain, d. 20 May 1622, Gorgora) was a Jesuit (↗Jesuits) missionary. Allegedly the son of Juan Páez Xaramillo and Elvira Campuzano (Alcázar [1710]), he had two sisters, Maria and Isabela, and a brother, Juan. A cousin, Esteban Páez, was Jesuit Provincial Superior in Mexico and later Peru (BecRASO II, ix).

On 18 June 1584, P. was admitted into the Society of Jesus at the Probation House in Villarejo de Fuentes, Cuenca. From about 1584 to 1587, he studied Philosophy at the Jesuit college of Belmonte, Cuenca, where he befriended one of his teachers, the Navarrese theologian Tomás de Ituren (Pérez 1931; for possible studies of P. at Coimbra, cf. Tacchi Venturi 1905: 563). In 1588, he was sent to India and in ↗Goa he pursued studies in Theology. In January 1589, the Jesuit Provincial in India, Pedro Martínez, chose him as the companion of the Catalan Antonio de Montserrat to be sent to Ethiopia. Soon afterwards he was ordained a priest and made the profession of four vows.

The two missionaries then travelled to ↗Diu via Chaul and Baçaim. Having abandoned a plan to reach Ethiopia by land through the Arabian Peninsula, at the end of 1589 they finally set sail for Zaylaᶜ from Muscat, then a Portuguese port. However, on 14 February 1590, soon after their ship had left the Khuriya Muriya Islands they were captured by Arabs from Dhofar and were taken to al-Balīd (today Salalah). From there they were forwarded to the Kaṯīrī *sulṭān* ᶜUmar b. Badr Bī Ṭuwayriq: they were taken by boat to the ↗Ḥaḍramawt coast, landed probably near Aš-Šiḥr and then proceeded by foot to Tarim and Haynīn (BecRASO III, 164–70; Beckingham – Serjeant 1950). After four months at Haynīn under the custody of *sulṭān* ᶜUmar, the Ottoman *baša* called them to Ṣanᶜāᵓ, which they reached crossing the Ḥaḍramawt desert and ↗Marib. The two Jesuits remained in Ṣanᶜāᵓ until mid-1596, when they were taken to Mocha. They spent some months there before being ransomed by ↗Banyan merchants at the prize of 500 *cruzados* each. Somewhere in late 1596 they reached Goa, although Montserrat was to die shortly after as a consequence of the long captivity.

In Goa P. studied for a short time Theology at the College of São Paulo and, between 1597 and 1600, worked at the Jesuit residences of Assalona (Salsette) and Chaul (Wicki-Gomes 1979: 24 [introduction]). In early 1599, P., who by then had some command of Arabic and Persian, failed to be sent to the Mughal mission to erect there a church (BecRASO XI, 28). In 1600, he moved to Diu, where he helped found the residence and might have taken part in the early stages of construction of its college and church of São Paulo (BecRASO XI, 30).

Finally, on 22 March 1603, P. set sail for Ethiopia aboard a Banyan ship. On 26 April he arrived at Massawa and on 15 May, accompanied by João ↗Gabriel and other Ethio-Portuguese (↗Portugal, relations with), reached ↗Fəremona. Thereby started the second and most fruitful period of the Jesuit mission. P., who was soon joined by four other companions, initially followed a prudent strategy, ministering to the Ethio-Portuguese and trying to approach powerful figures in the kingdom. In this way he met *aṣe* ↗Zädəngəl shortly before the latter's death, *ras* ↗Atnatewos, *ətege* ↗Maryam Śəna (Mäläk Mogäsa) and *aṣe* ↗Yaᶜəqob (BecRASO XI, 63ff., 235, 248).

When ↗Susənyos came to power, a friendship soon developed between him and P. Under the patronage of the ruler and his brother ↗Səᶜəlä Krəstos, P. reorganized the residence of ↗Gorgora ("Velha"), which was to become his main base, and expanded the mission's scope and infrastructure. As the head of the mission until 1618, when he was replaced by António ↗Fernandes, he was the one responsable for the policy of concealed opposition to Orthodoxy and the introduction of Catholicism into the royal court (e.g. BecRASO XI, 324–28; PerChron ch. 48). From at least the early 1610s until his death, P. also became a close adviser to Susənyos and took part in important political decisions (e.g. BecRASO XI, 236, 376).

P. contributed to the early building projets of the mission. In 1614, he allegedly built a "palace" for Susənyos at Gorgora, which was to be later used in the church of Iyäsus erected by João Martins at Gorgora "Nova" (BecRASO VI, 293f.; VIII, 105; XI, 305; XII, 273f.; ARSI, Goa 39 II, 423r). In 1618, at the expense of Susənyos and Səᶜəlä Krəstos he constructed the first European-style church of the mission at Gorgora "Velha", made of ashlar masonry and clay and on lands that had belonged to ↗Fasilädäs (BecRASO III, 496; XI, 403, 406f., 413–16, 484f.). In 1621, he began working on a similar building at ↗Gännätä Iyäsus, the capital he had helped to found (BecRASO VI, 357, 387f.; PerChron ch. 65). The church in Gorgora soon collapsed due to its weak structure and the one in Gännätä Iyäsus was continued by Luís de ↗Azevedo and Manuel Magro (BecRASO VI, 390; XII, 449; ARSI, Goa 39 I, 223v). P. died in Gorgora of a violent fever.

P. authored several letters addressed to fellow Jesuits, friends and relatives in India and Europe, which for the most part have been published (cf. BecRASO XI, index). In 1615, he also began to compile sources for his *História da Etiópia* (BecRASO XI, 359), which he completed in 1621. The *História* was initially conceived to challenge Luis de ↗Urreta's treatise and turned out as a pioneer work in the ethnography and ↗historiography of Christian Ethiopia (for the sources used by P. s. BecRASO II, xxx–xlvi; III, iii–xi). It contained translated excerpts of such works as the ↗*Haymanotä Abäw*, the chronicles of ↗ᶜAmdä Ṣəyon (MarAmdS 13ff.), ↗Zärᵓa Yaᶜəqob, ↗Śärṣ̌ä Dəngəl and Susənyos as well a version of the Vita of *abunä* ↗Täklä Haymanot. Although the *História* remained unpublished until the 20th cent., it was quoted and used by a number of authors. Manoel de ↗Almeida used most of P.'s text in his own *História de Etiópia a alta*, removing most of the references to Urreta and extending the narrative to the fall of the mission. Scholars such as the Jesuits Athanasius Kircher and Kaspar Schott used P.'s description of the sources of the Blue ↗Nile (↗Abbay), which is considered the earliest reliable account of this river (Kircher 1652–54; Schott 1663).

Painting

This article covers the following aspects of painting:

I. Technical aspects of painting
II. Main subjects of Ethiopian painting
III.Miniature painting
IV. Monumental painting
V. Painting on wood
Other aspects s. also ↗art (s. EAE, vol. 5)

I. Technical aspects of painting

A P., regardless of its materials is composed of two essential elements: a prepared foundation, followed by an application of paint. P. may also be finished with a sealant.

Parchment foundation

For decorative headings and miniatures in ↗manuscripts, the foundation is parchment, the material from which the entire manuscript is composed. In Ethiopia, parchment is generally produced from the skin of goats, although bovine parchment may be used for large manuscripts, such as *de luxe* ↗Gospel books. (Bovine parchment is distinguishable by its visible subcutaneous vein patterns on the flesh side; all types of parchment are generally identifiable.) After soaking in a lime bath for several days, both sides of the skin are carefully scraped; the skin is then mounted for drying upon a vertical wooden frame. Parchment leaves for a manuscript are cut to a given uniform size, scored with lined columns for texts or simple frame outlines for full-page miniatures. Priming the parchment is unnecessary; the text is copied by a scribe and the illuminations are executed by a painter directly upon the parchment. When the work of the scribe and painter is complete, the leaves are gathered into quires and bound, i.e. sewed together within wooden end-boards.

Mural foundation

The preparation of wall surfaces in churches excavated from living-rock (cp. ↗Rock-hewn churches) consists of smoothing and then coating the walls with a layer of chalk or gypsum. The paint is applied al secco. Round churches (cp. ↗Church buildings) are constructed either of stone or wattle-and-daub; the interior walls, finished with plaster or clay, are prepared for P. by the application of a sized fabric, sized with chalk or with a slick, sticky substance prepared from grain. The fabric is then glued to the wall with a mixture of casein and ox blood. The point at which the primed fabric was painted varies – the painter may choose to execute the P. on the sized fabric before gluing the fabric to the wall. This latter procedure is presently favored. Since the mid-20th cent., undecorated walls of Ethiopian Orthodox churches may be hung with framed icons and other religious P., painted upon prepared canvas mounted upon wooden stretchers.

Wood panel foundation

Portable P. on wood panels (known as icons) were evidently not produced by Ethiopian painters until the early or mid-15th cent. (Heldman 1994:165-68; Ead. in StudAeth 447ff.), although this form of P. was popular in Byzantine Church practice by the 6th cent. The average size of the Ethiopian icon board ranges from ca. 65 x 50 cm to 25 x 13 cm; lateral panels of the standard triptych are narrower by half. Panels of personal icons may be as small as 9 x 9 cm.

Various kinds of wood were used, primarily *wanza* (*Cordia abyssinica*). The icon board was hewn from a log with an adze (*mäṭräbiya*); the adze and a rasp or file were used for the final dressing of the surfaces. (Saw-marks are not observed until the 18th cent.) The panel may be absolutely flat, but more often is carved with an engaged frame. In the case of older icons, panels to be prepared for a diptych or triptych were cut from a single board. (Recent icons may be composed of different pieces of available wood, even salvaged shelves and ledges.) Before being primed for P., the freshly cut board was dried, usually by burial in the earth, for up to a year. The process of preparing the wooden ↗*tabot* board is identical to the preparation of the icon panel.

If, during the drying process, a crack parallel to the grain of the board developed, the crack was repaired by drilling a pair of holes on either side of the crack in order to sew or tie the crack together with a string of cotton, a thread of animal tendon, or leather thong. This repair would be covered by the primer and the P. (In later times, iron clamps might be used.)

Because Ethiopian icons are usually composed of two or three attached panels, i.e. in the form of a diptych or triptych, the final step in the preparation of the wood foundation is joining the panels with cords threaded through two or three sets of holes bored diagonally through the edge of each panel. The panels may have been painted before they were joined together. (From the 17th cent. onward, metal hinges have also been used.) The exterior sides of small late-17th and early-18th cent. pendant icons of wild olive wood (*Olea europaea subsp. cuspidata*) are carved with intricate cruciform designs.

Priming the foundation

Mural surfaces of churches are primed with a thin layer of chalk or gypsum, or sized fabric, depending upon the construction material. Wood icon panels are first covered with a thin cloth (*šaš*) that serves as a stabilizing element, to which gesso (a mixture of glue and gypsum or chalk) is applied. Icons are often primed and painted on the external sides. 19th-cent. icons are sometimes primed with thicker cloth, which may prevent the glue from adhering effectively to the wood panels.

Paint: pigments and binding agents

Ethiopian painters have, until the 20th cent., used tempera paint, i.e. pigments combined with a protein or vegetal binder. The tempera medium was well adapted to the formal style of Ethiopian P., which may be characterized as two-dimensional forms, flat areas of colour, sometimes overlaid with linear geometric and floral patterns. Limited modeling of the human figure, primarily the face, was introduced by court painters around 1725; such modeling became a typical attribute of the Second Gondärine style. Presently Ethiopian painters work predominantly with commercially prepared paints.

Pigments

Recent scientific development of sensitive non-destructive analytical methods, such as Raman

Laser Microspectrometry (Wion 2004), have allowed a more precise identification of the pigments used by Ethiopian painters. The following mineral and organic pigments have been identified scientifically: gypsum ($CaSO_4$) for white. Various kinds of ochre (iron oxide); cinnabar (HgS), in artificial and in natural form for red; orpiment (As_2S_3) for yellow, also the orange pararealgar (AsS); indigo ($C_{16}H_{10}N_2O_2$), often mixed with white lead ($C_2H_2Pb_3O_8$) for blue, also smalt (cobalt coloured glass = SiO_2K_2OCoO) and *Lapis lazuli* (natural ultramarine), small quantities of Prussian blue have been found; since the middle of the 19th cent. synthetic ultramarine has been imported. For green a mixture of orpiment and indigo was used, as well as plant extracts, but also green earths and malachite for a turquoise green; red lead was used for orange. In addition to simple extracted organic paints dyes were also used: a dark red transparent similar to madder (an anthraquinone dye) and a very pure yellow (not yet identified). Soot and a mixture of burned cereals, plants and other organic material were used for black, also for the preparation of inks. Gold was not used in P. except in some miniatures.

Although it is assumed that most pigments used by Ethiopian painters were imported, proof of these assumptions awaits further application of modern scientific testing of the inks as well as of a larger sample of P. ↗Schimper (1877) reported deposits of natural cinnabar in ↗Təgray, geological deposits predict the occurrence of orpiment and Ethiopian flora allows the preparation of many organic pigments locally. There are various reports on locally produced paints and dyes. The relatively standard palette of colours used by Ethiopian painters increased significantly during the 17th and 18th cent. 17th-cent. painters, working in the First Gondärine style, introduced a dark red transparent dye similar to madder, which, when applied over a light opaque cinnabar, created a mulberry red. Around 1725, a distinctive rich green colour was created by applying a transparent dark green over a layer of malachite green. This colour is typical of royal manuscript illuminations painted in the Second Gondärine style.

Binding agents

Binding agents, obtained locally from plant and animal sources, were mixed with pigments so that the colours would adhere to the prepared foundation. Determining the correct binding agent and mixing it in the correct proportions was a special skill. A weak binding agent results in a loose bonding of paint to the foundation. An overly strong binding agent will cause the paint to peel off after drying. (In some P., black painted outlines and pupils of eyes have broken away because of the excessive use of a binding agent.) Animal protein binding agents include egg, animal-skin glue, and casein. Plant derived binding agents include vegetal gums, oils, and resins. Scribes and painters would also add certain vegetal ingredients to prevent insect infestation. P. were sometimes covered with a varnish to act as a sealant; aloe sap is also mentioned.

Annegret Marx

II. Main subjects of Ethiopian painting

Whilst Ethiopian imagery is not different from what was current in the other Oriental Christian communities, there are certain particularities as to which subjects were preferred. A universal pictorial repertory dominated when the choice of representation was dictated by liturgical or theological needs; when popular devotion was taken into consideration, holy figures and religious themes favoured by the people were displayed. A constant requirement for protection, the call for the miracles, an apotropaic way of thinking, all deeply rooted in Ethiopian religious spirituality, resulted in an active cult of holy figures known for their beneficiary actions toward believers, and stimulated a constant demand for their images and illustrated life-stories. The motifs, scenes and pictorial cycles once introduced and accepted were copied and endlessly repeated thanks to the pronounced traditionalism characteristic of Ethiopian art. The wide spectrum of the most popular representations is evident from the universally applied patterns established for monumental P. in the second half of the 17th cent. and finalized during the 18th cent. The pictorial repertory spread mostly through those illuminated ↗manuscripts that were frequently used either during the liturgy or in private devotion.

O.T. manuscripts were never illustrated with narrative scenes. The customary decoration system of O.T. books with its selection of single or grouped figures inserted into the relevant parts of text, often as full-page, frontispiece miniatures (e.g., ms. BritLib Orient. 481, 17th cent., *Maṣḥafä ↗ṭefut*) promoted their popularity. The variant with groups of figures is typical of the manuscripts produced in the Stephanite scriptoria, primarily in ↗Gundä Gunde. Miniatures representing ↗Moses, ↗David and ↗Solomon regularly illustrated 15th- and 16th-cent. ↗Psalters. Enthroned O.T. kings first appeared in the wall-paintings of the 17th-cent. churches (e.g., ↗Däbrä Sina, ↗Qoma Fasilädäs).

Narrative O.T. scenes also appear in monumental P. In the 13th- and 14th-cent. churches (e.g., ↗Gännätä Maryam, ↗Ǝmäkina Mädḫane ᶜAläm, ↗Qorqor Maryam), the focus is on the episodes that transmit the idea of divine deliverance (the Sacrifice of Abraham, the Three youths in the furnace, Daniel in the lion's den, etc.). Less popular during the following two centuries, these scenes reappear at the end of the 17th cent. (Däbrä Sina, ↗Wəqro Mäsqäl). Larger cycles illustrating Genesis (e.g., the Creation of Man, the Original Sin) and Exodus (the story of Moses) were first incorporated in the extensive 19th-cent. programmes and became a regular feature (e.g., churches of Lake ↗Ṭana).

The standardized illustration of early ↗Gospels was also transferred to Ethiopia. In the 14th and 15th cent., the popular sets contained, beside the ↗Canon tables and the portraits of the ↗Evangelists, one of the two types of Christological cycles: the short (three miniatures of the Passion) and the developed (ca. a dozen episodes covering the whole life of Christ). At the end of the 17th cent., a large group of *de luxe* Gospels was produced and illustrated with miniatures copying Western European models. Each Gospel was supplied with an extensive Christological cycle which included a large selection of the miracles of Jesus, previously omitted, and various episodes drawn from the Passion (e.g., ms. BritLib Orient. 510). From the late 18th cent., this cycle enters the programme of monumental P. alongside the large composition of the Last Judgement conceived as the Second Coming (Mt 23; ↗Eschatology; ↗*Dagəm məṣᵓatu lä-Krəstos*). On wood (panels, diptychs and triptychs), the most frequent images were the Christological scenes transmitting pivotal theological messages: the Nativity, ↗Crucifixion and Anastasis often combining the elements of the Resurrection. The beheading of ↗John the Baptist depicted in some old manuscripts (e.g., *Məṣlä Fasilädäs*, Ṭana, 15th cent.) was chosen to join the standard series of the ↗martyrdoms of the saints, set up in the second half of the 17th cent., within the programmes for monumental P. In the 18th cent., this was extended by scenes depicting the death of each apostle based on the apocryphal Acts.

The most popular depictions of the apocryphal stories concern St. ↗Mary. The ↗*Nägärä Maryam* was extensively illustrated at the end of the 18th cent. (up to 250 miniatures, e.g., ms. BritLib Orient. 607). This set, reduced to ca. 20 episodes but extended by a group of apocryphal miracles of the Child Jesus and scenes connected to the death of St. Mary, was added to the pictorial programme designed for 18th-cent. monumental P. There, the representation of Hell inspired by different apocryphal texts was juxtaposed with a depiction of the Last Judgement. The collection of ↗*Täᵓammərä Maryam*, illustrated in the second part of the 17th cent. with a set of 32 narrative scenes, gained particular popularity due to wide distribution of the manuscripts. Two of the miracles, the story of the "cannibal of Qəmər" (*Bäläᶜe säbəᵓ*) and the Apparition of Mary at

↗Däbrä Məṭmaq, entered the programmes of monumental P. in spectacular form: the former was displayed on the southern sanctuary door, the latter was placed above, on the tambour.

Similarly favoured was the pictorial story of the Archangel Michael composed in the second half of the 18th cent., as an illustration to the *↗Dərsanä Mikaʾel*. One of the stories (Crossing the Red Sea) was equally selected to join the 18th-cent. wall-P. programmes and reappears in almost every church on the main, western entrance to the sanctuary.

Among ecumenical saints, the martyrs enjoyed particular veneration and were frequently represented. Heading the list in popularity were always the ↗Equestrian saints, especially the representation of St. ↗George killing the dragon. When, in the 18th cent., the text on his martyrdom and the collection of his miracles received an extensive pictorial version, the abbreviated variants were almost immediately introduced into monumental P. and P. on wood. The scenes depicting the martyrdoms of St. ↗Qirqos and his mother Julitta, St. Stephen and the story of St. Alexis (↗Gäbrä Krəstos) became, from the second half of the 17th cent., recurrent elements in the mural programmes.

Five Ethiopian saints regularly reappear in almost any kind of painting: ↗Täklä Haymanot, ↗Gäbrä Mänfäs Qəddus, ↗Samuʾel of Waldəbba and ↗Ewosṭatewos. When, in the second half of the 17th cent., their representations became a part of mural programmes, *abba* ↗Zämikaʾel Arägawi was added to the group. Since the ↗Nine Saints were usually also depicted as a group in the same programme, Zämikaʾel appeared twice. The extended programme of the second half of the 18th cent. introduced St. ↗Yared to the group, where he is shown singing in front of king ↗Gäbrä Mäsqäl.

The special place of ↗Angels in Ethiopian spirituality is reflected in the popularity of their representations. Besides Michael, closely followed by Gabriel, other angels, single and in groups, were always present in any kind of Ethiopian P.

Amongst subjects with a specific theological concept, the *↗Maiestas Domini* dominated in the 14th and 15th cent., and was replaced in the late 15th cent. by the Ancient of Days and later on by the ↗Trinity. The popularity of representations of the *↗Kidanä məḥrät* was reinforced by the cult of Mary. The same factor is true for the uniquitous production of iconic pictures of St. Mary with Child, appearing in many iconographical variants and in innumerable copies (↗Mary in art).

The specific origin of the representation known as the *↗Kʷərʿatä rəʾəsu* explains the particular popularity of the subject, esp. between the late 16th cent. and the end of the 19th cent.

The longstanding popularity of exclusively religious subjects was changed in the 18th cent., when murals started to include a very large scene depicting a royal or aristocratic procession, iconographically standardized but always enriched with individual historical details (including representations of the ↗donors). Another secular theme which appears from the 19th cent., mostly in murals, is the allegory of human vanity originating from the text of Barlaam and Josaphat (*↗Bärälam wäyəwasəf*).

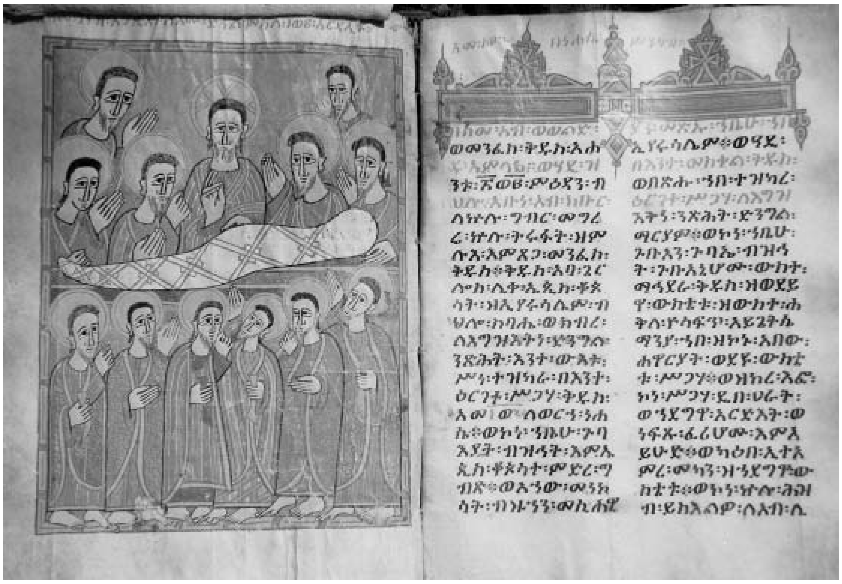
III. Miniature painting

Christianity was introduced in Aksum in the first half of the 4th cent. (cp., e.g., Hahn in PICES 15), but it was evidently not until the 6th cent. and the translation of the ↗Gospels and the Septuagint into Gəʿəz (cp. ↗Bible) that the tradition of illustrating ↗manuscripts with painted miniatures was introduced to the Ethiopian Orthodox (Täwaḥədo) Church. The historical record of highland Christian Ethiopia is discontinuous because of periods of external and internal de-



"Assumption", frontispiece miniature of the Homily for the Feast of the Assumption (ʿƎrgäta), *Dǝrsanä Maryam*, fol. 136v–37r, Betä Lǝḥem, ca. 1400; photo courtesy of Stefan Bombeck

struction (Heldman 2007: 86f.; Getatchew Haile 1985: 41, 47 n. 2; Chernetsov in PICES 11, vol. 1, 87). Few extant Ethiopic manuscripts are earlier than the 14th cent. Nevertheless, a small family of ↗Gospel manuscripts produced in northern Ethiopia in the 14th cent., which includes the ↗Däbrä Mäʿar Gospels, provides insights into Ethiopic decorated Gospels of the 6th cent. These manuscripts are decorated with a frontispiece of three full-page miniatures, the iconography of which reflects the Early Byzantine cult of holy places in ↗Jerusalem. Their prototypes were introduced to Ethiopia during the 6th cent. (Heldman 1979; Lepage 1987; AfrZion nos. 54ff.). Their decorated ↗Canon tables follow a 6th-cent. Greek prototype.

Several Gospel manuscripts at the ↗Ǝnda Abba Gärima monastery contain miniatures of decorated ↗Canon tables and ↗Evangelist portraits dating to the Late Antique period, the agency by which they were brought to Ethiopia is unknown. The miniatures were inserted some time later into these two Ethiopic Gospel manuscripts, the dates of which have not been established with any precision (cp. Mercier 2000: 35–45; Leroy 1960, 1968).

The earliest extant manuscript decorated with miniatures by an Ethiopian painter(s) is the Four Gospels of ↗Iyäsus Moʾa, dated 1280/81 (EMML V, 293–301; Heldman 2007: 97ff.). These miniatures reflect visual models that were Copto-Islamic in style, brought to Ethiopia by a metropolitan bishop who had been sent to Ethiopia by the Patriarch of Alexandria (Heldman 2007: 97–100). The pattern of illumination is typical of Ethiopic *de luxe* Gospel manuscripts produced during the 14th, 15th and early 16th cent. (UNESCO 1961; AfrZion nos. 65, 69). The text is preceded by decorated Canon tables and an extensive Christological frontispiece; each of the four Gospels is introduced by a full-page portrait of the Evangelist. Miniatures are not inserted within the Gospel texts. This pattern of frontispiece decoration may represent a tradition inherited from 6th-cent. Aksum (Heldman – Devens in VarAeth 77–82; Lepage 1987). Most Ethiopic Gospel manuscripts of this period have no decoration, others have Canon tables with simple arcade frames and full-page author portraits that introduce each respective Gospel text.

This frontispiece pattern of manuscript illumination is typical of all Ethiopic illustrated manuscripts produced during the Early Solomonic period (1270–1529). Full-page miniatures in a beautifully copied manuscript of the ↗*Dǝrsanä Maryam* from the church of ↗Betä Lǝḥem function as a frontispiece for each of the different homilies (Bombeck 2007). The manuscript probably dates to ca. 1400. A unique miniature of the Assumption of the Virgin, inspired by a Byzantine representation of the Dormition of the Virgin Mary, introduces the "Homily of the Bishop Cyril of Jerusalem on the Assumption of the Virgin" (Heldman 2007: 101–04). The opening shows the miniature on the verso page, paired with the text that begins on the facing recto (s. ill). The decorative headpiece in the form of a ↗*ḥaräg* marks the text *incipit*. This pattern of introductory frontispiece appears in a manuscript of the ↗*Gädlä sämaʿǝtat* (EMML 7602); a full-page portrait introduces each martyr's and saint's Vita (AfrZion no. 70).

Monasteries were important centres of training for painters and scribes during the early Solomonic period, although identifying the site of a specific style or workshop – monastery or royal court – is rarely possible. The illuminated manuscripts of the *Dərsanä Maryam* of Betä Ləḥem and the ↗*Täᵓammərä Maryam* of ↗Amba Gəšän were created at the court of *aṣe* ↗Dawit II (Heldman 1974: 101–08; 2007: 101–05).

Two monastic houses located in northern Ethiopia developed distinctive styles of manuscript illumination in the late 15th cent., the ↗Stephanites (at ↗Gundä Gunde) and the ↗Ewosṭateans (at ↗Däbrä Maryam Qʷäḥayn). The Gundä Gunde style (Heldman in PICEA 1, 8–14, figs. 11–27) is best illustrated by Gospel books with *ḥaräg*-decorated Canon tables and a distinctive frontispiece with portraits of St. ↗Mary and the Christ Child accompanied by the Twelve ↗Apostles and occasionally O.T. figures (Leroy 1967, pls. 4–7; Horowitz 2001: 104–07). The Ewosṭatean "workshop" (Heldman in PICEA 1, 5–8, figs. 1–10) decorated a variety of *de luxe* manuscripts. Full-page miniatures in a manuscript of ↗*Gəbrä ḥəmamat* serve as frontispieces to each homily or major sections of Biblical texts (AfrZion no. 89). A ↗Psalter with additional prayers produced for the private use of ↗Bəlen Sägäd (BN, d'Abbadie 105) is decorated with a frontispiece composed of scenes of the life of Christ, and single full-page miniatures introduce certain text sections. A full-page miniature of Mary with the Christ Child (Heldman 1994, fig. 41) introduces the ↗*Anqäṣä bərhan*. The impact of the style of ↗Fəre Ṣəyon, a painter at the court of *aṣe* ↗Zärᵓa Yaᶜəqob, is seen in an illuminated *Gəbrä ḥəmamat* (BritLib, Orient. 597) copied for *abunä* ↗Märḥa Krəstos, abbot of Däbrä Libanos of Šäwa, probably produced at his monastery (Heldman 1994: 65ff.).

There appears to have been a hiatus in the production of *de luxe* illuminated manuscripts from ca. 1530 until the early 17th cent., when production was revived at the new capital of ↗Gondär. Miniatures in the manuscripts commissioned by Gondärine rulers (cp. ↗Gondärine kingdom) display new styles and new iconography. Patterns of illumination also changed, and Canon tables are no longer added to Gospel books. Narrative images are placed beside and within text pages of 17th-cent. religious manuscripts, not only in manuscripts of the Gospels, but also in a variety of popular religious texts, such as the *Täᵓammərä Maryam* and the ↗*Dərsanä Mikaᵓel*, as well as small prayer books for private devotions, the latter were very popular in the 18th cent. (AfrZion nos. 116, 117).

Two styles dominate manuscript illumination, icon, and monumental painting during the Gondärine period (Leroy 1967): the so-called First Gondärine style developed there in the 17th cent. (Annequin 1972) and the Second Gondärine style which appeared in the early 18th cent. The latter came to be recognized as the "royal style", and as such it continued to be predominant during the period of the ↗*Zämänä mäsafənt*. In northern Ethiopia, it continued to be the preferred style for religious art until the late 20th cent. (Leroy 1967, pl. 59).

Some dramatic changes in manuscript illumination were inspired by the introduction of Western European prints by the ↗Jesuits in the early 17th cent. (Buchthal in PICES 1). The woodcut illustrations in the *Evangelium arabicum* (Rome 1590) inspired the illumination of the large Gospel books, such as mss. BritLib Orient. 510 and 508, with illustrations placed above or below the text which they illustrate (Leroy 1967, pls. 31–34). The vivid narrative illustrations by Jerome Nadal in the *Evangelicae historiae imagines* provided inspiration as well as visual models for painted murals as well as manuscripts (Mercier 1999; Bosc-Tiessé in PICEA 5).

Texts that had not previously received painted miniatures were decorated with numerous narrative images. This is true of the manuscripts of the *Täᵓammərä Maryam* produced during the 17th and early 18th cent. at Gondär for the private devotions of the ruling elite (Annequin 1972; Berzock 2002).

Manuscripts of the *Täᵓammərä Maryam* with miniatures painted in the Second Gondärine style display a greater variety of narrative images. Indeed, the development of narrative cycles for religious texts rapidly expanded during the 18th cent., not only for Gospel books, but also for the *Gädlä Giyorgis* (St. ↗George, the earliest ms. being Ṭānāsee 17; s. HamTana pls. 10–12), as well as the *Dərsanä Mikaᵓel* (AfrZion no. 121), the *Nägärä Maryam*, and the *Dərsanä Maryam* (ibid. 249f.). Unique illuminated manuscripts of the 18th cent. include the ↗*Revelation* (BritLib Orient. 533, cp. McEwan 2005) and the *Gädlä* ↗*Walättä Peṭros*, which is illustrated with remarkable scenes of monastic life at Lake ↗Ṭana

(Bosc-Tiessé in PICES 15). Later in the century, narrative miniatures were added to the *Gädlä ↗ Täklä Haymanot* (BritLib Orient. 723; s. Budge 1906). Ethiopian rulers continued to commission manuscripts copied on parchment and decorated with miniatures until the late 19th cent.

Marilyn E. Heldman

IV. Monumental painting

Monumental P. is one of the lesser known branches of Ethiopian art due to its limited accessibility, generally poor condition and unprofessional restorations. Its origins must be connected with the introduction of ↗ Christianity into Ethiopia, although known works do not date from before the 12th–13th cent.

Until the beginning of the 17th cent., murals had been designed for basilica or hall churches, constructed or cut into the rock, mainly in ↗ Tǝgray and ↗ Lasta. They were painted with organic and mineral pigments, probably locally produced, in the *fresco al secco* technique. The pictorial programmes were similar to those applied elsewhere in the Christian Orient. The distribution of scenes had a clear liturgical connotation: in the sanctuary (↗ *Mäqdäs*) and its vicinity (or on the northern wall), scenes and figures from the O.T. and N.T. expressing the idea of God in majesty (↗ *Maiestas Domini*, Entry into Jerusalem etc.) or connected to the ↗ Eucharist (the Sacrifice of Abraham, ↗ Melchizedek) were displayed; Christological scenes were placed along the central nave; the saints and ↗ angels covered the walls of the aisles, some of them as guardians of the sanctuary or the church (↗ Equestrian saints).

Murals may be supplied with inscriptions, identifying the depicted figures and scenes, and also containing invocations or prayers (e.g., ↗ Waša Mikaʾel). Dedications from before the 17th cent. are rare (e.g., ↗ Gännätä Maryam, Baharä Maryam in ↗ Amba Sänayti). Written sources rarely mention the origin of murals, and the majority can only be dated with approximation on the basis of iconographic and stylistic comparison with dated manuscript illuminations.

The style and iconography of the oldest murals, dated to the late 12th and 13th cent. (e.g., ↗Yəmrəḥannä Krəstos, Betä Maryam, ↗Däbrä Sälam, ↗Mikaʾel Amba, ↗Qorqor Maryam) show close parallels with contemporary or slightly older Coptic murals and suggest in several cases the participation of either Coptic workshops or masters. P. from late 13th to 15th cent. (e.g., ↗Ǝmäkina Mädḫane ʿAläm, ↗Däbrä Ṣəyon, Qorqor Danəʾel) represent an artistic approach typical for old Ethiopian P. (conceptualism, lack of feeling for organic forms, rigidity of the figures, and limited variation of poses). These features intensify between the end of the 15th and the beginning of the 17th cent. when narrative scenes were almost completely replaced by sequences of stereotyped Biblical figures and saints (cp. ↗Gʷəḥ Yəmʾata, Abba Yoḥanni in Tämben). This thematic monotony was compensated by skilful use of colours, ornaments and, in the 16th cent., by realistic rendering of garments and everyday objects (Gʷəḥ Yəmʾata, ↗Yadəbbä Maryam).

In the first quarter of the 17th cent., the circular church with a square sanctuary in the middle became the dominant form of ↗church building. Large canvas P. were glued to the exterior surfaces of the sanctuary (ca. 8 m x 6 m), the plinth and the tambour, and, in some richly decorated churches, also to the walls of the *qəne maḫlet*. For this vast space, an extensive iconographic programme was designed – a genuine Ethiopian creation, displaying originally composed thematic units distributed according to strictly defined rules.

Most commonly, on the western upper wall of the sanctuary, in front of which part of the holy liturgy is performed, the History of Salvation was depicted (Annunciation, Nativity, ↗Crucifixion and *Anastasis*), extended in the 18th cent. by the Passion cycle including the ↗*Kʷərʾatä rəʾəsu*, with the ↗*Kidanä məḥrät* above; on the tambour, the *Maiestas Domini* (as the Ancient of Days) featured, replaced in the 18th cent. by the ↗Trinity; the main intercessors, St. ↗Mary with the Child and St. ↗George killing the dragon framed the door. On the southern wall, facing the women's entrance, scenes of the Nativity, Jesus's infancy and public life appeared, with the apparition of St. Mary at Məṭmäq on the tambour. In the 18th cent., the Christological scenes were extended by the apocryphal miracles of the Child (↗*Täʾammərä Iyäsus*), scenes from the life of St. Mary (↗*Lədäta*, ↗*Ǝräfta*, ↗*Fəlsäta*) as well as the Last Judgement rendered as the Second Coming. The programme of the eastern wall intended to demonstrate the unity of sacred history. It showed the O.T. prophets and kings (replaced by O.T. scenes beginning with the Original Sin in the 18th cent.) alongside with scenes of deliverance (Three youths in the furnace, Sacrifice of Abraham, etc.), and the Ascension on the tambour. The northern side, facing the "male" entrance, showed the Transfiguration on the tambour and scenes of martyrdom on the wall (Beheading of ↗John the Baptist, Death of the Apostles, Stoning of St. Stephen, Burning of St. ↗Qirqos); the Equestrian martyrs occupied the upper part of the wall. The double doors of the sanctuary, four or eight in number, were each guarded by a pair of armed archangels (↗Angels). In the 18th cent., the southern door was framed by one of St. Mary's miracles (the "cannibal of Qəmər" [*Bälaʿe Säbəʾ*]), and a large dedicatory scene appeared on the south side of the plinth: the king associated with the church approaching the building in a procession, welcomed by the clergy. The figures of ↗Gäbrä Mänfäs Qəddus, ↗Täklä Haymanot, ↗Ewosṭatewos and ↗Samuʾel of Waldəbba were painted on the western plinth, other saints appeared around the frames of the entrances or anywhere an empty space remained.

With some small changes and additions, this arrangement is still observed in the decoration of contemporary round churches. Some basilica and hall churches (hewn and constructed) adopted the new iconographical programme (e.g., ↗Maryam Dəngəlat, ↗Mäʿaquddi Yoḥannəs, ↗Ṣəraʿ Abrəha wä-Aṣbəha, ↗Wəqro Mäsqäl), but with few exceptions (e.g., ↗Däbrä Bərhan Śəllase, Maryam Ṗappasäyti) the effect was inadequate.

Whether strict iconographical rules were also imposed on the decoration of *qəne maḫlet* is not clear, usually it is covered with scenes depicting the history of biblical figures, hunting scenes with Ethiopian kings and nobles and, in some churches, the ↗Revelation (↗Č̣äläqot Śəllase, ↗Däbrä Marqos).

Wall P. in the First Gondärine style appeared from the first quarter of the 17th to the beginning of the 18th cent. Some of the pigments were imported. The portraits of ↗donors and church benefactors are rare, sometimes their names are known from the accompanying inscriptions (e.g., ↗Däbrä Sina) or church documents (e.g., ↗Qoma Fasilädäs).

From the beginning of the 18th cent., the murals follow the Second Gondärine style. Donors identified by the inscriptions are frequently depicted; in addition to the narrative scene on the southern plinth they appear as supplicants in several pictures of St. Mary, in the Crucifixion and in the representations of the most venerated saints and archangels. At that time the social status of painters rose, and their names and sometimes even portraits also appear in the P. (e.g., ↗Ǝstäzya in Təgray, Ḫəruy in Šäwa, Täwäldä Gäbrä Bərhan in Ṭana region).

P. on canvas can easily become damaged: the ground layer of gypsum is too thin leading to poor adhesion of pigments; the glue is uneven and sometimes unsuitable and the canvas may detatch from the wall. Complete and relatively well preserved P. from the 17th cent. are very few (e.g., Däbrä Sina, Qoma Fasilädäs). Even 18th-cent. and early 19th-cent. P. are rare. Original painted decoration in most churches has been replaced by sets of very recent date. These usually follow the 18th-cent. iconographic programme but are executed with acrylic paints.

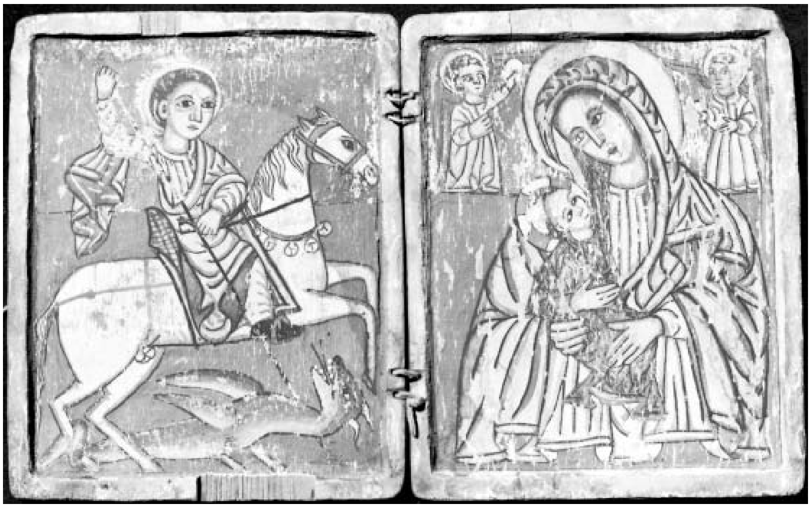
V. Painting on wood

P. on wooden panels within the context of the Eastern Churches, including the ↗Ethiopian Orthodox (Täwaḥədo) Church (EOTC), are devotional images. The term “icon” may also be used for such devotional images or portable panel P. The primary subject matter is portraits of St. ↗Mary, Jesus, the ↗Trinity, and ↗saints, either as a single portrait or in combination with others, painted often in smaller scale. These portraits are the focus of the prayers of the faithful. In addition, formal rituals of devotion were performed in church before the Marian icon displayed upon an icon stand, including the burning of candles and ↗incense, the recitation of prayers and the singing of praises (Heldman 1994: 165–72; Getatchew Haile 2005: 57, 72–75).

In Ethiopia, the practice of P. the portraits of saints on portable wooden panels dates to the first half of the 15th cent. However, indirect evidence suggests that at least a few imported Byzantine icons of the Virgin had been available as models for Ethiopian painters a century earlier. A miniature of the Virgin and Child in the Gospels of abbot Krəstos Täsfanä of ca. 1320 (Addis Abäba, National Library, ms. 28, fol. 20r) is modeled after a Byzantine icon in the type of the Virgin Eleousa (Heldman 1994, fig. 44). Furthermore, pre-15th-cent. saints’ portraits with prayers of supplication are found in the murals of churches (Heldman – Getatchew Haile 1987: 7, fig. 2); and miniatures of saints in Ethiopic ↗manuscripts also functioned as devotional images. A supplicatory prayer of Krəstos Täsfanä addressed to St. Mark Evangelist appears at the feet of the Mark’s portrait within the abbot’s Gospel manuscript (AfrZion no. 65, p. 176).

The introduction of devotional images in the form of portable wooden panels is directly related to the development of the cult of St. Mary in the Ethiopian church, *Aṣe* ↗Dawit II had a Marian



St. George of Lydda, St. Mary with her Son, dyptich, early 16th cent.; from the collection of the IES (no. 4769)

icon in his palace before which he prayed each day (Getatchew Haile 1983: 29, 31). His son, *aṣe* ↗Zärᵓa Yaᶜəqob, mandated the display of an icon of Mary upon an icon stand (*mänbär*) accompanied by a ritual of veneration in each church of the realm during the Sunday service and on Marian feast days (Heldman 1994: 165–68). Painter(s) of Marian icons working under the sponsorship of Zärᵓa Yaᶜəqob combined borrowed elements from Byzantine and Italian painting, thereby creating a new Marian iconography as well as a new Ethiopian style of P. (ibid. 137f.).

The early 16th cent. saw the development in Ethiopia of a new sensibility toward the icon, focused towards the imported post-Byzantine Cretan icons in the type of the Madre della Consolazione which had been acquired for *aṣe* Ləbnä Dəngəl. Several of these icons received an attribution to the hand of St. Luke the Evangelist, thus endowing them with a reputation of inherent sanctity and the power to work miracles. These and other Cretan icons of St. Mary are the treasured property of the monastery of Däbrä Wärq and the churches of Getesemane Maryam, Tädbabä Maryam, and Zämäddo Maryam (Heldman 2005).

Post-Byzantine icons continued to be of interest to royal patrons at ↗Gondär. An Ethiopian 18th-cent. triptych (AfrZion no. 110; Chojnacki 2000, no. 84) takes the form of certain Post-Byzantine Cretan triptychs made for personal devotions. The distinctive central panel is shaped with a semicircular arch and its base allows the icon to be free-standing, following the form of certain Post-Byzantine Cretan triptychs made for personal devotions (Acheimastou-Potamianou 1988, nos. 69–70; *Post-Byzantium* 2002, no. 22).

By the 17th cent., iconographic schemes of Ethiopian icons had become quite complex, inviting the contemplation of the theologically sophisticated worshippers upon the meaning of the scheme; other supplicant could limit their focus to addressing prayers to Jesus Christ or Mary or the saints. In order to accommodate a large portrait of Our Lady Mary with Her Son or Jesus Christ, accompanying portraits of numerous saints and abbreviated images of the Crucifixion and Resurrection were rendered in a reduced scale; and also the triptych became the most popular form of icon (AfrZion no. 104).

Less common are the 17th- and 18th-cent. diptych and triptych icons dedicated to narrative themes – the Passion and Resurrection of Christ (Bosc-Tiessé – Wion 2005: 44–47; Chojnacki 2000, no. 232) or the ↗*Nägärä Maryam* (Chojnacki 2000: 129). This innovation is related to the development of narrative schemes of Ethiopian illuminated manuscripts and to the narrative iconographies of murals painted upon the sanctuary (*mäqdäs*) walls of the ↗churches.

This period also witnessed the introduction of small double-sided pendant diptychs worn suspended by a cord around the neck. The most popular include portraits of Mary with her Son paired with St. ↗George, and the ↗Crucifixion paired with Ethiopian saints. The exquisitely carved cross designs upon the exterior surfaces of these pendant diptychs undoubtedly had an apotropaic function (AfrZion no. 102).

Examples of these double-sided pendant diptyches and other icons discussed in this essay may be seen in the museum of the ↗Institute of Ethiopian Studies, Addis Ababa University. The museum of the Cultural Association of Təgray, located at Mäq̱älä, also has an important collection of icons. Icons are stored in the treasuries of certain monasteries and churches in Goǧǧam, Wällo, and Təgray, but are not accessible to the public.

Palaeography

P. (from Greek παλαιός, *palaiós*, 'old' and γράφειν, *gráphein*, 'write') is the study of ancient writing systems considered in their internal development and changes. The origin and mutual relationships of scripts, especially as far as epigraphic writings (↗Inscriptions) are concerned, are more properly the subject of linguistics.

Substantially shaped at the turn of the 17th/18th cent. in the field of Classical and Medieval studies as the science of dating and deciphering ancient Latin and Greek scripts (the fundamental works *De re diplomatica* by Jean Mabillon dating to 1681, and *Palaeographia graeca* by Bernard de Montfaucon to 1708), P. is one of the various disciplines focusing on ↗manuscript studies. Instrumental to dating manuscript witnesses and to ascertaining the reliability of acts and documentary writings (properly, a subject of diplomatics), P. is of central importance for Ethiopian ↗philology. In its broader sense it can also include the study of writing materials (better termed codicology, or even manuscript archaeology) on the one hand, and writing practice considered both as a historical and a social phenomenon on the other, as underlined in more recent trends (cp. Bausi in StudAeth, 2008).

In ↗Ethiopian studies, P. has essentially been applied in its narrow sense of establishing correlations between graphic shapes of signs and dating of Gəʿəz (and later Amharic) manuscripts, and as such, it has always been considered a fundamental discipline for dating manuscripts and texts. It was already employed for this purpose by the authors of the first catalogues of Ethiopian manuscripts, including ↗Platt, ↗Dillmann, ↗Wright, or ↗Zotenberg, when the text itself provided no hint (such as a colophon, additional notes, etc.) as to the time of writing. The first attempts consisted in empirical comparison of the graphical elements of undated manuscripts to those of already dated or otherwise dateable manuscripts. The number of known manuscripts at that time being limited, the task was difficult (s. UhPal 41ff.). The material basis became larger with the reproduction of sample folios and photographic publication of original texts, as well as with the acquisition of a variety of non-manuscript sources (inscriptions, even on *mänabərtä tabotat* (↗Tabot), but also captions on ↗paintings, such as the exceptionally important ones in the church of ↗Gännätä Maryam).

As compared to other ancient writings, the almost total absence of cursive forms till very recent times, the rarity of monograms (attested on coins, seals and as epigraphs, or as abbreviations on the margins of manuscripts, such as the *qom*-sign, probably from Greek *kómma* [cp. Zuurmond 1989, part I, 34]) and tachygraphic forms (essentially limited to the use of the monogram *-gzi-* in *Ǝgziʾabḥer*, 'Lord' [according to Nöldeke 1907, by imitation of an attitude of the Copts], of the graphic form ፳ኤል for እስራኤል, *Ǝsraʾel*, 'Israel' [i.e. '20' *əsra* plus *-ʾel*], and of the first one or two letters to abbreviate words such as *qəddus* [*qə*], *sälam* [*sä*], and proper names, including *nomina sacra*, while a more extensive use is to be found in the ↗*andəmta* literature) severely limit the most evident palaeographic variations which can be observed in Ethiopian manuscripts to very few phenomena (for the exceptional occurrence of extremely rare abbreviated forms in ms. BN Éth. 34 s. ZotBNat 32f.). Among the most conspicuous features, one may mention the archaic forms of numerals 'one' (፩, narrow and slightly downwards-oriented triangular) and 'four' (፬, also triangular, but larger and upwards-oriented); numerals 'six' (፮, compressed and lower, with no ring) and 'seven' (፯, narrow and higher, also with no ring); 2nd and 6th order of *w* (2nd order [ዉ] with horizontal stroke by the side in the middle, not in the lower end as in later mss.; 6th order [ው] with stroke at the top, not in the middle). In very archaic manuscripts (such as the Abba Gärima Gospels) the real value of these signs cannot be exactly perceived in terms of shape, neither rightly understood but in the context and within an opposition system; the same happens for other signs (*s*, *t*, *ḫ*) in 1st, 4th, 6th orders opposing correlations (cp. Zuurmond 1989, part I, 303). Numeral 'ten' (፲) also occasionally exhibits a peculiar rare form with a ring on the right side of the leg (cp. Dillmann 1907:33, n. 1; Leroy et al. 1961:20ff.; UhPal 212).

Attempts at introducing special diacritical marks for noting gemination are also sporadically attested (by using a sign similar to Arabic *tašdīd*, cp. CRAbb 16f.). The study of normal punctuation is also part of P., yet, in the absence of reliable editions which also take punctuation into consideration, no correlation has been consistently established with manuscript dating (cp. Marrassini 1992; Bausi 2008:537, n. 105). What mainly remains to be studied is the correlation between linguistic developments (determining the phonetic, and, consequently, graphic merging of *ä*/*a* after laryngeals, as well as the interchange within the laryngeals and sibilants series) and the prevailing of certain graphic forms over their homophones (4th over 1st morphological order in some cases, 1st over 4th in others), which have been only marginally studied so far (cp. CRAbb 18).

As far as the development of graphic shapes is concerned, for dating purposes the characters can be classified in terms of size, angularity or round shape, and systematically compared to those of other carriers. Besides punctuation and paragraph marks, also the typology of ornaments (↗*Ḥaräg*) has to be considered. Other parameters such as folio format, number of folios per quire, size of margins (*mise en page*) and other physical parameters are usually considered common aspects of manuscript studies, and of codicology in particular.

For the ↗script of Ethiopic manuscripts, the following periods can be roughly identified:

1. Monumental script; the earliest manuscripts until the second half of the 14th cent. (cp. UhPal 73–176, s. ill. 1).

The characters appear to be considerably influenced by epigraphic style. They are characterized by tall and slender proportions resulting from the use of pointed pens as well as strictness and rigidity. The centre of gravity of the characters is in their upper part, the heads are pulled down (s. ill. 2); punctuation marks seem overdimensional; the characters appear in trapezoid or triangular shape (s. ill. 3).

2. Square script, second half of the 14th to mid-15th cent. (cp. UhPal 177–300; s. ill. 4).

The script shows more variability and appears less monumental. The size, slant and distance between the characters vary, making the writing appear irregular. The basic forms become wider and more rounded, the curvatures and crosses go beyond the letter limit (s. ill. 5), and the point of gravity moves towards the centre of the symbol. The number of caesura symbols grows, and the *crux ansata* is used as macrocaesura (s. ill. 6). Larger ornaments feature at the beginning of the codices, or of each literary unit (s. ill. 7).

BN Abb. 39, detail; from UhPal 668

3. Rounded script, mid-15th to mid-16th cent. (cp. UhPal 300–424; s. ill. 8).

The copyists take the effort to produce more pleasing shapes; at the same time, the tendency for standardization and mechanical handwriting appears (s. ill. 9), as revealed by the initial cross stroke (s. ill. 10). The letters are maximally rounded. Typical for the period are developed ornaments (s. ill. 7) and open vocalization loops of the 5th order.

4. Compressed slender script, mid-16th to mid-17th cent. (cp. UhPal 425–544; s. ill. 11).

The proportions change again, the letters becoming taller; the lines are even and dense, often drawn with pointed pens. The characters are of uniform height, and the strokes run parallelly (s. ill. 12). From this time on, the text usually appears in three columns; the number of characters per line increases considerably (s. ill. 13); the ornaments become simpler again.

5. *Gʷəlḫ* script, mid-17th to the second half of the 18th cent. (cp. UhPal 545–653; s. ill. 14).

The script of this period is the most elegant. The characters are evenly shaped and clear; for their size they can be said to be of uncial type. This is the script of the luxury manuscripts of the ↗Gondärine kingdom period (s. ill. 15). The impression created is that of a certain artfullness (s. ill. 16).

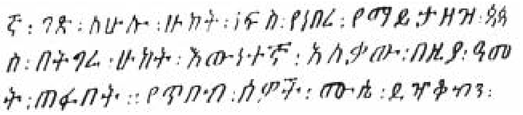
6. *Räqiq* script, mid-17th to mid-19th cent. (cp. UhPal 654–826; s. ill. 17).

The period, running in part parallelly to the previous one, is characterized by low regularity and a careless hand (s. ill. 18), smaller size of characters and the tendency to a certain clumsiness (s. ill. 19). Cursive slant becomes another trend; caesura marks disappear; different writing styles often appear side by side in the same manuscript.

7. The bulky and the cursive script, 19th to 20th cent. (s. ill. 20).

Ill. 20:
BritLib Or. 828, detail; from UhPal 809

The characteristics of different periods gradually disappear; along with irregular (clumsy) handwriting cursive forms with a right slant appear (s. ill. 21).



Ill. 21:
ANLin CR 79, detail; from UhPal 821

The material basis for manuscript studies has been steadily increasing, and in the future the periodization may be able to be refined, which will allow a more precise dating of manuscripts as well as the reconstruction of such important details as region of provenance and scriptorial style.

Siegbert Uhlig – Alessandro Bausi

Palaeontology

Palaeontological research in Ethiopia and Eritrea mostly focuses on deciphering ↗hominid evolution, i.e. on deposits of the late Tertiary age (Neogene), from 6 million years ago (Ma) to the present. Localities of this age are particularly abundant in the Ethiopian ↗Rift, where sedimentation and abundant volcanic deposits favoured the trapping and preservation of vertebrate fossils (Giday WoldeGabriel et al. 2000). Main research areas notably include the Lower ↗Omo Valley, ↗Konso, and Feǧeǧ (Fejej) in south-western Ethiopia; the Middle ↗Awaš Valley, ↗Hadar, and ↗Gona in the ↗ᶜAfar, north-eastern Ethiopia; ↗Buya (Buia) in Eritrea.

Intensive palaeontological researches were first launched in the Lower Omo Valley by the French Camille Arambourg in 1933. Basing his research on information collected in 1902 by the transcontinental expedition of ↗Bourg de Bozas, Arambourg collected numerous fossils of vertebrates in sedimentary deposits found near the village of Šungura (Shungura), on the western bank of the Omo River (Arambourg 1947). Abundant suids, bovids, hippopotamids allowed Arambourg to date most of the Šungura Formation deposits to the Pliocene age (5.3–1.8 Ma) – a critical time for early hominids.

During the following decades, the Omo sediments were visited several times, notably by collaborators of the Anglo-Kenyan Louis Leakey, with results similar to those produced by Arambourg's work. In 1967, the International Omo Research Expedition (IORE) started its work. It included a French team led by Arambourg (d. 1969) and by the palaeontologist Yves Coppens; an American team under palaeoanthropologist F. Clark Howell; and a Kenyan team headed by Richard Leakey. The latter transferred his focus to the eastern bank of Lake Turkana in Kenya in 1968. In nine years of work (1967–74 and 1976), the French and American teams unearthed more than 50,000 fossils of vertebrates in the Omo, this time including about 230 specimens of ancient hominids (Howell 1978). With decisive input from Howell, the work focused on a detailed understanding of the geological framework of the Omo fossils. This meticulous approach combining absolute and relative dating, nowadays a classical approach in P., allowed the precise dating of every collected fossil, notably in the Šungura Formation, dated between 3.6 and 1 Ma. The Omo fossil collections became a major reference on faunal and environmental evolution in Africa. Fieldwork on the Omo deposits was reinitiated in 2006 by the French palaeontologist Jean-Renaud Boisserie.

Whilst the IORE was working in south-western Ethiopia, Jean Chavaillon, a French geologist, was excavating at ↗Mälka Qunṭure (Melka Kunturé) in the Upper Awaš Valley. In order to study and describe the Awaš Valley deposits for his doctoral dissertation, Maurice Taieb from the same team explored vast portions of the ᶜAfar region (north-eastern Ethiopia), leading to the discovery of the Pliocene Hadar Formation in 1972. The Hadar deposits, mostly dated between 3.4 and 2.9 Ma, were exceptionally rich. Taieb organized an international team of geologists and palaeontologists following the IORE model: the International ᶜAfar Research Expedition (IARE). Coppens and Donald Johanson, also from the IORE, became co-directors of the team, and were joined by the American geologist Jon Kalb. The first mission (1973) discovered AL129-1, the articulated knee of a bipedal hominid. In 1974, the IARE was even more successful, with the discovery of the partial skeleton of a female australopithecine dated to 3.2 Ma (Johanson – Taieb 1976), nicknamed Lucy in English, Dənqənäš in Amharic. The description of the Hadar remains as ↗*Australopithecus afarensis*, then the oldest known and the most complete Pliocene hominid remains, had a huge impact on eastern African palaeontology (Johanson–White–Coppens 1978). At that time, the features of the species – small braincase, strong jaws and biped limbs – were not really expected. In the following years and in the 1990s–2000s, Johanson and the American palaeoanthropologist William Kimbel continued to work at Hadar, discovering further *Australopithecus afarensis* remains.

Kalb initiated independent research south of Hadar in the Middle Awaš Valley, a fossil-bearing area also identified by Taieb. At Bodo, Kalb and colleagues found a human cranium dated to ca. 500,000 years (Kalb et al. 1980). As at Hadar and the Omo, his work was stopped before the end of the 1970s, notably because of increasing political instability in Ethiopia. Researches resumed in this area briefly at the beginning of the 1980s under the supervision of British archaeologist Desmond Clark and Californian palaeoanthropologist Tim White. In 1992, an Ethio–American team, led by White, Clark, the palaeontologist Bərhane Asfaw (Berhane Asfaw), the geologist Giday Wäldä Gabrəᵓel (Giday Wolde Gabriel), and the archaeologist Yonas Bäyyänä (Yonas Beyene), again resumed palaeontological research in the Middle Awaš. Major discoveries of hominids were quickly accumulated: ↗*Ardipithecus ramidus* (4.4 Ma, publ. 1994),

↗*Australopithecus garhi* (2.5 Ma, publ. 1999), ↗*Ardipithecus ramidus kadabba* (5.8–5.2 Ma, publ. 2001), *Homo sapiens idaltu* (0.16 Ma, publ. 2003). Alongside these new hominids, the team also found previously known hominids (*Australopithecus afarensis*, *Australopithecus anamensis*, *Homo erectus*) and many other fossil vertebrates in the Middle Awaš, which is currently the most productive area for research on human evolution in the last 6 million years.

During the 1990s and the 2000s, palaeontological research on hominid evolution was not restricted to the Middle Awaš and Hadar areas. Outstanding discoveries of Plio-Pleistocene hominids and other vertebrates were made: (1) in southern Ethiopia at Feğeğ by an Ethio–French team directed by Henry de Lumley (de Lumley – Yonas Beyene 2004) and at Konso by an Ethio-Japanese group directed by Gen Suwa and Bərhane Asfaw; (2) in central ᶜAfar at Gona, Woranso-Mille, and Dikika by teams respectively led by Ethiopian scientist Səläši Səmaw (Selashi Semaw) , Yoḥannəs Ḫaylä Śəllase (Yohannes Haile-Slassie), and Zäräsänay ᶜAlämsägäd (Zeresenay Alemseged); (3) in northern ᶜAfar, at Buya in Eritrea, by an Eritreo–Italian team led by Ernesto Abbate.

The results obtained by all these research groups provide a relatively detailed, though still incomplete, picture of the last 6 million years of evolution in the ↗Horn of Africa. Older sediments have rarely been preserved and/or little research was performed on them. The oldest most important locality is ↗Ç̣əlga (Chilga), near Lake Ṭana, of the late Paleogene age, discovered in the early 2000s by an American team.

This team found that, around 27 Ma, the Ethiopian highlands were characterized by a warm and humid climate, a dense vegetation, and an endemic African fauna of primitive proboscideans (early elephant relatives) and large-sized hyraxes (Kappelman et al. 2003). There is no known fossil record in Ethiopia for the period between 27 and 11 Ma. Major changes occurred in Africa during this time period: the junction with Eurasia, the initiation of the ↗Rift Valley, the invasion of Eurasian fauna, cooling and an increase in aridity. The fragmentary fossil fauna found at Čorora (Chorora, southern ^{c}Afar) exhibit marked differences with that of Č̣əlga: it is dominated by equids, ruminants, rhinocerotids – all taxa unknown in Africa before the Neogene. Incomplete environmental reconstruction indicates the existence of rather open environments (Geraads – Zeresenay Alemseged – Bellon 2002). Recently, a fossil hominoid possibly related to gorillas was unearthed at Čorora (Suwa et al. 2007).

The late Neogene fossil record in Ethiopia becomes significant in the Adu-Asa Formation, Middle Awaš, ^{c}Afar region, dated between 5.8 Ma and 5.2 Ma. The oldest known Ethiopian hominid, *Ardipithecus kadabba*, was found in this formation (Yohannes Haile-Selassie – Gen Suwa – White 2004). *Ardipithecus* species were found with various mammals, notably small antelopes (kudus) and monkeys (colobines). These mammals and other characteristics indicate rather wooded and wet habitats at high altitude. After 3.0 Ma, the climate experienced further cooling and an increase in aridity. The fauna included more species adapted to drier, open and grassy landscapes, notably bovids such as alcelaphines (wildebeests, hartebeests). At the same time, a dramatic change affected human evolution: the development of stone tool technologies, known first ca. 2.6 Ma from Gona (Sileshi Semaw et al. 2003). The first stone tool makers are not clearly identified, but *Australopithecus garhi* from Buri (Bouri) in the Middle Awaš, *Paranthropus* from Šungura, and *Homo* from Šungura and Hadar are all possible, non-mutually exclusive candidates. *Homo* experienced further environmental changes through the Pleistocene (after 1.8 Ma), with increasing aridity and climate instability. In this context, development of always more advanced stone tool technologies were in part related to predation on large grassland herbivores.

Pan-Africanism

Considering native Africans and the descendants of Africans as part of a global African Community, P.-A. (lit. 'all-Africanism') serves as a general term for various movements that had hoped to overcome the legacy of ↗colonialism and white supremacy by uniting a fragmented Africa. P.-A. is marked by a great diversity of trends – there were political, literary, musical, cultural, and evangeli-

cal movements and projects (e.g., the "Ethiopian" churches; ↗Ethiopianism) within P.-A.

Having its historical roots in the ↗diaspora of the ↗United States of America and the Caribbean (↗Jamaica etc.), P.-A., as much as a passion as a way of thinking, drew inspiration from classical and modern Ethiopia as a symbol of black power and pride. Many Pan-Africanists supported Ethiopia to the extent that they believed a new state encompassing the whole of Africa should be created on the basis of Ethiopia – the only major African country to withstand colonization attempts. By virtue of Biblical symbolism and racial identification, Ethiopia is a major symbolic land for P.-A. (with Haiti and Liberia). In addition, after the victory of ↗^{c}Adwa (1896), Ethiopia represented the only sovereign state in Africa. Even today some Pan-African movements use the colours of the Ethiopian flag, attesting this age-old independence from European supremacy – the red standing for the blood men must shed for their redemption and liberty, the green for the vegetation of the African motherland and the gold representing the mineral wealth of Ethiopia/Africa.

Pan-Africanist ideas led to quite early and sometimes important contacts between the Black diaspora in the West and Ethiopia. For example, Benito Sylvain, a Haitian, established Pan-African links with *aṣe* ↗Mənilək II. Then, Dr. Joseph ↗Vitalien, born 1868 in Guadeloupe, became the trusted personal physician to Mənilək II from 1899. In 1911, heartened by the victory of ^{c}Adwa, the Gold Coast intellectual Joseph Ephraim Casely Hayford published his novel *Ethiopia Unbound* dedicating it to the "sons of Ethiopia the world wide over". An early Ethiopian Pan-Africanist was ↗Mälaku Amanu'el Bäyyän. The First Pan-African Conference was held in London in 1900, followed by others in Paris (1919), London and Brussels (1921), London and Lisbon (1923) and New York City (1927). The most important leaders of the early years were William Edward Burghardt Du Bois (1868–1963), Marcus Mosiah Garvey (1887–1940) and George Padmore (1903–59). Like other members of the North American and West Indian black intelligentsia, although opposing colonialism and racism, they did not favour immediate African independence but rather gradual self-government and "interracialism", on which the leading Pan-Africanists, such as Du Bois, Garvey and Padmore, however, had quite contrasting positions.

P.-A. remained a popular political idea in the interwar period and during World War II. Besides ↗Rastafarianism, a religion that considered the Ethiopian emperor ↗Ḫaylä Śəllase I to be divine, another important strand of P.-A. was *négritude*. Propounded by Aimé Césaire and Léopold Sedar Senghor in Paris in 1933, the key idea was that all Africans, be it in exile or at home, shared an "African personality". Motivated largely by racial identification with the Ethiopians and the long-standing symbolic importance of that country, a considerable number of protests against the ↗Italian war of 1935–36 emanated from black communities in the United States. Hundreds enlisted as volunteers for the war in Ethiopia, among them an important contingent of pilots (for some accounts on black American involvement s. Recking 1936). At the same time Jomo Kenyatta (↗Kenya), then a student in London, became the secretary of a pro-Ethiopian Pan-African society in England ("The International Friends of Abyssinia") hoping to assist and maintain the integrity and independence of Ethiopia. With many Ethiopians finding asylum in Kenya over time the support for Ethiopia somewhat decreased but still remained strong.

Around the same time, however, some African leaders wanted to liberate themselves instead of being liberated by Ethiopia and were afraid of becoming mere vassals of Ethiopia. In the light of these developments, Ethiopia and some other countries established the "African Alliance", a Pan-Africanist organization encompassing most of the independent African states (excluding the north African states – the Kingdom of Egypt, Libya and the Maghreb). This was primarily meant to coordinate the war effort and was basically ruled by Ethiopia as the most powerful member state.

After assembling in London in 1944, several organizations went on to form the Pan-African-Federation, which for the first time demanded African autonomy and independence. In the aftermath of the Sixth Pan-African Congress convened in Manchester in 1945, and attended by political figures such as Jomo Kenyatta (Kenya), Kwame Nkrumah (Gold Coast), Samuel Ladoke Akintola (Nigeria), Wallace Johnson (Sierra Leone) and Ralph Armattoe (Togo), P.-A. turned from a rather cultural into a more political movement now stressing the nationalistic character of anti-colonial ambitions, accompanied by a change of perspective, from a racial basis to a continental or regional (political/economical) basis (cp. the book of "Ras Mekonnen" 1973, a Pan-Africanist named after *ras* ↗Mäkʷännən Wäldä Mikaʾel).

When African independence had been achieved in most of the former European colonies, the P.-A. movement was no longer dominated by Americans and West Indians. After the First Conference of Independent African States in Ghana in 1958, followed by an All African Peoples' Conference held in December of the same year, P.-A. turned into an intergovernmental movement – pursuing the aim of national independence. In that period Ḫaylä Śəllase, besides assuming a leading role in the ↗Non-Aligned Movement, also became a diplomatic key-figure in Africa's liberation from colonialism; his speeches were strongly marked by Pan-Africanist rhetoric (Imperial Ethiopian Ministry of Information 1967). In 1963 the ↗Organization of African Unity was founded to promote unity and cooperation among all African states. In 1974 and 1994 two Pan-African Congresses were held in Tanzania and Uganda, with Ethiopian participation. In addition, new trends in Pan-African culture and practices emerged; there were for example the Arts congresses, showing a strong interest in Ethiopia (Paris 1956, Dakar 1966, Lagos 1977); Rastafarianism evolved strongly as a Pan-Africanist religion.

Currently there are Pan-Africanist political parties in most African states (legal or banned), including Ethiopia, but they are mostly not very popular and in several cases considered to be radical. Often criticized for overlooking cultural and ethnic differences as well as socio-political differences among the Blacks worldwide, P.-A., helping people who identify emotionally with black Africa, has remained an idealized wish.

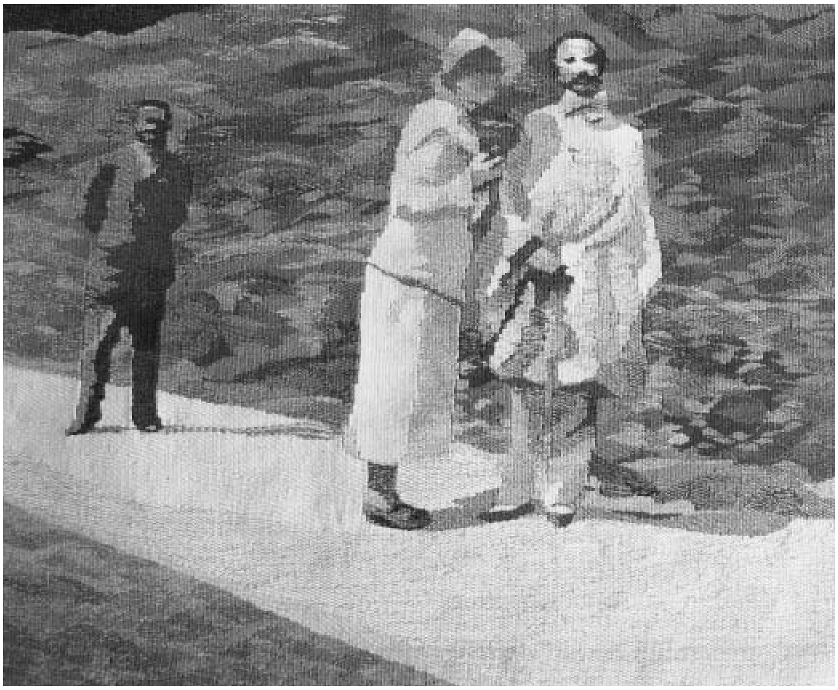
Pankhurst, Estelle Sylvia

P. (b. 5 May 1882, Manchester, d. 27 September 1960, Addis Abäba) was a 20th-cent. British artist, suffragette, anti-fascist, and friend of Ethiopia.



Woven tapestry by Berit Sahlström, 2006, portraying Sylvia Pankhurst in conversion with Ḫaylä Śəllase I in Bath; no. 6 in a series of seven tapestries showing Sylvia Pankhurst, wool on linen warp, 67 x 82 cm, property of Richard Pankhurst

P. was the daughter of Richard, a radical lawyer (d. 1898), and the feminist Emmeline (d. 1928). She studied at Manchester School of Art (1900–02), in Venice (1903–04) and at the Royal College of Art in London (1904–06). A convinced socialist and a tireless advocate of women's suffrage, she designed the logo for the Women's Social and Political Union founded by her mother in 1903 and was active in its headquarters after it moved to London in 1906. In 1909 she visited the working-class districts of northern England and Scotland to paint and describe the conditions of women workers. In 1912 she moved to London's East End and organized suffrage work there. In 1914 she formed the East London Federation of Suffragettes. She was imprisoned, went on hunger-strike, and was forcibly fed. Her organization vigorously opposed World War I, and supported socialist causes, including the Russian Revolution. After the war P. briefly immersed herself in communist politics, before devoting the remainder of her life to anti-fascist, anti-imperialist and Ethiopian causes.

In 1932 P. founded the Women's International Matteotti Committee (called after an Italian parliamentarian assassinated on ↗Mussolini's orders); and in 1934 became Treasurer of the International Women's Committee against War and Fascism. After the Italian invasion of Ethiopia in 1935 P. wrote in support of Ethiopia to the British and international press. In 1936 she launched a weekly newspaper, ↗*New Times and Ethiopia News*, which appeared for 20 years. It published news of Ethiopian ↗resistance, critiques of fascism and nazism, and defence of the Republicans in the Spanish Civil War. She was placed on a list of persons to be arrested after a Nazi occupation of Britain. When in 1940 Italy declared war on Britain, she urged that Ethiopia be accorded the full status of an ally; and the BBC was induced, largely through her pressure, to play the Ethiopian national anthem. In 1941 Ethiopia was liberated by the Allies, but much of the country remained under British occupation. P. opposed British proposals for the partition of Ethiopia, or its conversion into a protectorate. She also opposed Italy's return to its former colonies, supported Eritrean demands for "reunion" with Ethiopia, and denounced British dismantlement of the Eritrean ports. When princess ↗Ṣäḥay Ḫaylä Śəllase, a trained nurse who had wanted to establish a modern hospital, died in 1942, P. raised the funds for its establishment, in 1950. She visited Ethiopia twice, in 1944 and 1950, and described her impressions in *New Times and Ethiopia News.* Her research on Ethiopian art and culture was reflected in her *Ethiopia*: *a Cultural History* (1955).

In 1956 P. with her son Richard moved to Ethiopia, where she founded and edited a monthly journal, ↗*Ethiopia Observer* and helped to establish a social services society. She was buried in Qəddəst Śəllase cathedral.

Ṗänṭälewon

Abba Ṗ. (called **ጰንጠሌዎን፡ ዘጸማዕት**, *Ṗ. zäṣomaᶜət*, 'Ṗ. of the cell') is known in Ethiopic tradition as one of the ↗Nine Saints, a group of non-Ethiopian monks who purportedly evangelized the Aksumite population in the 5th–6th cent.

According to his Acts (*Gädlä Ṗänṭälewon*; ed. Conti Rossini 1904; critical ed. Brita 2008: 293–351), Ṗ., son of a dignitary of the king of "Rom" (cp. EAE vol. 5), spent his childhood in monasteries. He came to Ethiopia with his fellows during the reign of ↗Ǝllä ᶜAmida. Under King ↗Tazena, the Nine Saints parted company and Ṗ. settled on the top of a bare hill not far from ↗Aksum (today known as Däbrä Ṗänṭälewon, or Ǝndä Abba Ṗänṭälewon where the church of Betä Ṗänṭälewon is located). There he built a small cell (*ṣomaᶜt*) without any door or window, but fitted with a hole only, through which he interacted with the outside world. In that cell he lived as a recluse mortifying his body until his bones lost their flesh through fasting. In particular, he practised the ancient form of asceticism known as *statio* (which consists in standing upright day and night not moving, in devotional posture, without eating or sleeping), well-known among the monks of the Syrian tradition, as witnessed by Theodoretus of Cyrrhos (*Historia Religiosa* ch. IV, VII, XVII, XXIV, XXVI; Brita 2008: 184–97).

Ṗ. remained in his cell for 45 years, working many miracles. Before leaving for ↗Naǧrān to avenge the martyrs slaughtered by D̠ū Nuwās (↗Yūsuf Asᵓar Yat̠ᵓar), King ↗Kaleb visited Ṗ. to ask for spiritual support. The monk blessed Kaleb and, during the battle, miraculously appeared before the army, helping the Aksumites at decisive moments. Many monks came to his cell to ask for Ṗ.'s advice, including Kaleb's brother ↗Muse, whom Ṗ. urged to go to ↗Jerusalem and to report about its "regulations and dimensions".

Ṗ. passed away on 6 *Ṭəqəmt* (18 *Kanun* in the Byzantine calendar), in the 236th "year of Diocletian" (520 A.D.). After his death, *abba* ↗Gärima was informed by the Holy Spirit and came to Ṗ's. cell to bury his bones.

Some information contained in the *Gädl* may hint at a later date for his death: Ṗ. and ↗Liqanos settled at the same time on their respective hills; Liqanos passed away 21 years later, during the reign of Kaleb, but before the latter left for the war in South Arabia in 524 (or 518) A.D. Assuming that the Naǧrān's incidents occured soon after Liqanos' death, it follows that the saints must have separated in 503 (or 497; i.e. 21 years earlier) and Ṗ. would thus have died in 548 (or 542, i.e. 45 years later; cp. discussion in Brita 2008: 85–92).

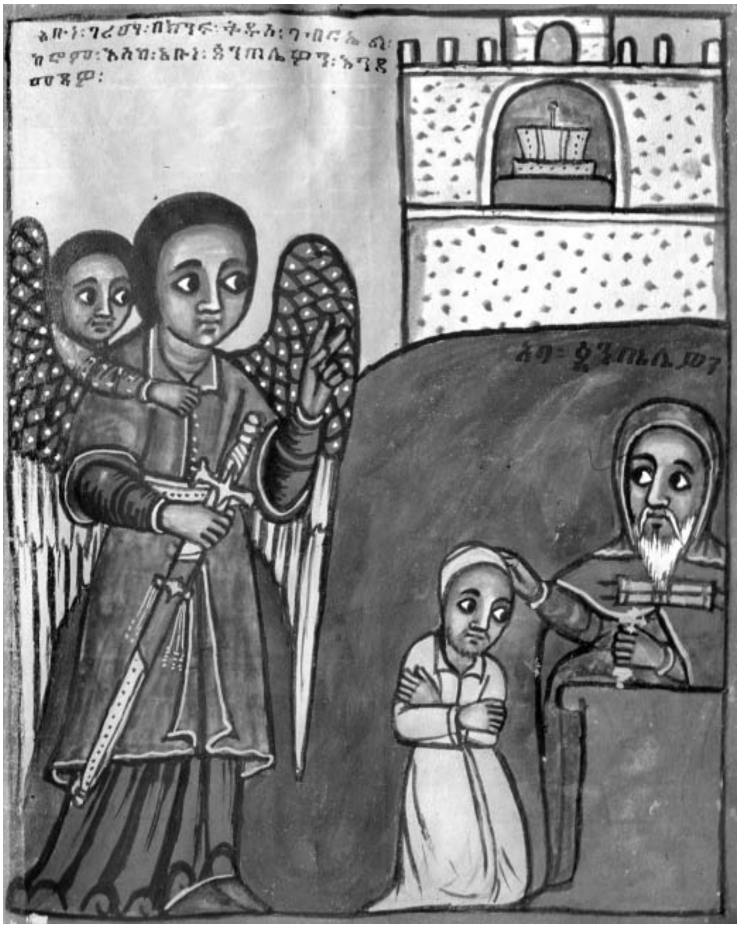
Ṗ.'s Acts were published, with a Latin translation, by Conti Rossini (1904) from the ms. Paris, BN, d'Abbadie 110, 18th cent. (AbbCat 125; ChAbb 69; CRAbb 176). Today, six more complete mss. are known:

> EMML 7602, fols. 83^{ra}–89^{ra}, 1379/80–1413; Ṭānāsee 177 = Dāgā Esṭifānos 66, fols. 81^{ra}–97^{ra}, 15th or 16th cent. (SixTana III, 233–37); EMML 1479, fols. 64^{ra}–72^{va}, 1459/60 (EMML IV, 593ff.); ms. Aksum, Betä Ṗänṭälewon, fols. 1^{ra}–19^{va}, 15th cent. (cp. Brita 2008: 156, ms. GP9); Aksum, Betä Ṗänṭälewon C_2 IV 522, fols. 1^{ra}–28^{va}, 16th cent. (Brita 2008: 156, ms. GP8); Aksum, Betä Ṗänṭälewon, fols. 7^{ra}–22^{va}, 19th–20th cent. (Brita 2008: 156f., ms. GP10); Aksum, Maryam Ṣəyon, fols. 58^{ra}–67^{rb}, 20th cent. (Brita 2008: 157, ms. GP11).

Two more fragments of the Acts are included in the ms. ANLin, Conti Rossini 134, 16th cent. (StrANLin 327ff.; Conti Rossini 1940: 45ff.). The *Gädla Ṗänṭälewon* is mentioned in the lists of mss. of ↗Däbrä Libanos of Ham (BauEr III, 29ff.) and ↗Gundä Gunde (Mordini 1953: 50).

The *Gädlä Ṗänṭälewon* is the oldest among the Lives of the Nine Saints known until now. The most ancient ms. is EMML 7602. Notwithstanding the mention of a *Gädlä Ṗänṭälewon* in the list of books given by ↗Iyäsus Moᵓa to the monastery of Ḥayq Ǝsṭifanos (prior to Iyäsus Moᵓa's death in 1291/92), included in ms. EMML 1832, fol. 25 (EMML vol. V, 293ff.), there is no reason to believe that the protagonist is Ṗ. *zäṣomaᶜt*; it is rather much more plausible to identify him with St. Pantaleon martyr of Nicomedia [d. 303]).

Several hymnological compositions are dedicated to Ṗ.: two ↗*mälkəᵓ* (mss. Paris, BN Éth. 350, fols. 30^{v}–40^{r}, 18th cent. [GrebGriaule II, 60] and London, BritLib Orient. 577, fol. 32r, 1721–30 [WrBriMus 128f.]), two hymns (mss.



Abba Gärima transported by the Archangel Gabriel from "Rom" to St. Ṗänṭälewon, from a 19th-cent. *Mäṣḥafä śəllase*, Č̣äläqot, Təgray; photo 1993, courtesy of Michael Gervers

Paris, BN Éth. 372, fols. 14va–15ra, 18th cent. [GrebGriaule III, 117] and Roma, VatLib, Aeth. 280, fols. 13r–14r, 18th cent. [van Lantschoot 1962:483ff.], one ↗*sälam* (ms. Berlin, Staatsbibliothek Preußischer Kulturbesitz, Orient. 1304, fols. 66va–67vb [HamSixBerl 159ff.]), and a blessing (ms. VatLib Aeth. 231, fol. 18, 18th cent. [GréTisVat 704f.]).

The ↗*Dərsanä Gabrəᵓel* in the mss. EMML 2958, fols. 81va–82ra, 20th cent. (EMML VII, 271ff.), EMML 4937, fol. 58r, 1930–62 (X, 363f.) and ANLin, Conti Rossini 40, fols. 64rb–vb, 19th cent. (StrANLin 118ff.) gives an account of *abba* Gärima's visit to the hermitage of Ṗ. Ṗ.'s name also appears in the *Gädlä Märḥa Krəstos* (Kur 1972), in the *Gädlä Samuᵓel of Däbrä Halleluya* (Colin 1990), and in the *Gädlä Filmona* (De La Fuÿe 1958).

Ṗ. is mainly remembered in Ethiopic tradition for the role he played in the war waged by Kaleb against D̲ū Nuwās. The account of the prayer that the Emperor adressed to the Saint and Ṗ.'s intervention in South Arabia are a central chapter in the narrative of the *Gädlä Ṗänṭälewon*, which shows peculiar affinities with a tradition different from that transmitted by the Ethiopic version of the *Martyrdom of* ↗*Arethas* within the ↗*Gädlä sämaᶜətat*, and closer instead to the Greek-Arabic version of the *Martyrdom*. In particular, (a) the mention of a certain "Gabrəᵓel" as a name given to Ṗ when he appears on the battlefield in the *Gädl* and in two invocations in the Greek *Martyrdom* and (b) the episode of the horse speared by the saint in the *Gädl* and by a soldier in the Greek *Martyrdom* are evidence for the hypothesis (Nosnitsin in StudAeth; Bausi in Bausi – Gori 2006:5, 106–10, 244–91; Brita 2008:161–84, 340–46; Fiaccadori 2006:65f., and n. 108). In the Greek *Martyrdom* the name of the saint and patron of the military expedition is "Zonaios": a monk living "in the Ethiopian town of Sabi" and native of Aila, a place identified by Fiaccadori (2006:65) with Elat, on the eastern slopes of Sinai (Détoraki 2007:266f.). His name is omitted in both Arabic versions of the *Martyrdom of Arethas* (while he is identified with Ṗ. in the Ethiopic version of the *Martyrdom*) as well as in the *Gädlä Ṗänṭälewon.*

The developments of the story, after the triumph of the Ethiopian army in South Arabia, narrated in the Ethiopic *Martyrdom*, although remembered to some extent in some narratives on the Nine Saints, are omitted in the *Gädl* (Brita 2008:162f.).

The passage in the ↗*Sənkəssar*, which commemorates Ṗ.'s death on 6 *Ṭəqəmt*, includes the episode about the ordination of Kaleb at the hands of Ṗ. lacking in the *Gädl* (BudSaint 117;

ColSyn VII, 24). P̣. is also mentioned in the readings for 17 *Säne* (GuiSyn VIII, 626ff.), 26 *Ḫədar* (ColSyn VII, 375ff.) and 20 *Gənbot* (BudSaint 299ff.).

P̣ap̣p̣as

The term P̣. (**ጳጳስ**, from Gr. Πάππας 'father, priest') refers to the "bishop" or Metropolitan who headed the ↗Ethiopian Orthodox (Täwaḥədo) Church (EOTC) and ranked just below the *liqä p̣ap̣p̣as*[*at*] (Patriarch; cp. ↗*Liq*), who, until 1959, was the head of the ↗Coptic Church. Thus, throughout most of Ethiopian history there was a single P̣. in the country. He was also commonly referred to by the title *abun* (↗*abunä*). Whilst the latter is a term of honour, which may be applied regardless of an individual's rank in the Church hierarchy, "P̣." has a clear technical meaning and can be acquired only through consecration and formal elevation to this status.

The unusual arrangement whereby the head of the EOTC was a bishop who came from outside the country is traditionally traced to the introduction of ↗Christianity in the 4th cent. and the consecration of Frumentius (*abunä* ↗Sälama Käśate Bərhan) by ↗Athanasius of Alexandria. Ms. EMML 1763 (first half of the 14th cent.) contains several homilies attributed to P̣. ↗Minas, who in the traditional lists of Ethiopian metropolitans was Frumentius's successor (s. Getatchew Haile in TedEthPrel I, 1000f.). As this example indicates, many of the texts which identify early metropolitans with the title P̣. date some centuries after the lives of the figures they record and must be viewed with some caution. Nevertheless there are a multitude of such cases, including, e.g., P̣. ↗Giyorgis, who is mentioned in a land charter granted by *aṣe* ↗Lalibäla to the monastery of ↗Däbrä Libanos of Šəmäzana (CRDLib 190; s. also the *Kəbrä nägäśt*, BezKebr 172 [text]).

Until the end of the 19th cent. Ethiopia was not divided into ecclesiastical provinces or dioceses, and hence the Metropolitan was usually the only P̣. in the country, initially residing in ↗Aksum, where the royal palace was (his title was ↗*eppisqoppos zäʾaksum*) and later in ↗Nazret, ↗Bugna, Ḥaqqalet (s. Guidi 1899:2f., 8) and a few other places (e.g., in ↗Gondär/↗Azäzo during the ↗Gondärine kingdom, and under the auspices of some regional rulers during the ↗*Zämänä mäsafənt*). Thus, despite his place at the head of the local hierarchy, he was not an Archbishop (*liqä p̣ap̣p̣as*[*at*]) in the conventional sense of the term. Nor was he allowed to ordain other clergy as bishops, although he did ordain priests and deacons (Paulos Tzadua 1968:27f.). The P̣. could have an auxiliary bishop, called ↗*eppisqoppos*, to help him.

In those rare cases in which an emperor was able to receive more than one bishop from Egypt, both held the title of P̣. Thus, when two bishops, ↗Gäbrəʾel and Mikaʾel, arrived ca. 1440 they were co-adjucators with the rank of P̣. (CerMaria 117). This also appears to be the case with ↗Marqos and ↗Yəsḥaq who came in 1480/81 (Kur 1972: 88 [text]).

In 1881, after the death of *abunä* ↗Atnatewos, *aṣe* ↗Yoḥannəs IV managed to receive four Egyptian bishops: metropolitan (**ሊቀ፡ ጳጳሳት**, *liqä p̣ap̣p̣asat*) *abunä* ↗P̣eṭros IV and three bishops (P̣.): ↗Luqas in Goǧǧam, Marqos in Bägemdər and Səmen and ↗Matewos in Šäwa (BTafY 153). The latter became Metropolitan, when his patron *nəguś* Mənilək of Šäwa became emperor.

During the Italian occupation of Ethiopia, as part of the programme to dissolve the historic ties with the Coptic Church and create an autocephalous Ethiopian Church, a local cleric, P̣. *abunä* Abrəham was elected Archbishop and, upon the latter's death, another Ethiopian cleric, P̣. *abunä* Yoḥannəs. Both of these claimed the title of *liqä p̣ap̣p̣asat* and ordained others with the rank of P̣. (Shenk 1972: 132–49.)

After the ↗Liberation and imperial restoration, the Coptic *abunä* ↗Qerəllos returned to Ethiopia and only a few of the P̣. consecrated during the Italian period remained in office. In September 1951 ↗Basəlyos I became the first legitimate Ethiopian Archbishop (*liqä p̣ap̣p̣asat*) with the power to ordain bishops (*p̣ap̣p̣asat/ep̣p̣isqop̣p̣osat*). On 28 June 1959 he became the first Ethiopian patriarch (**ፓትሪያርክ፡ ርእሰ፡ ሊቃነ፡ ጳጳሳት**, *patriyark rəʾəsä liqanä p̣ap̣p̣asat)*. Since then, the title of Archbishop (*liqä p̣ap̣p̣asat*) has been given to all diocesan bishops (P̣.). The second Ethiopian P̣., *abunä* ↗Tewoflos, was consecrated in 1970. In 1976 *abunä* ↗Täklä Haymanot was installed; after his death in 1988 *abunä* Märqorewos was installed, but he had to abdicate in 1991, with the fall of the *Därg* regime, and went in exile. Installed in 1992, the current P̣. of the EOTC is *abunä* P̣awlos.

Paribeni, Roberto

P. (b. 19 May 1876, Rome, d. 14 July 1956, Rome) was an Italian archaeologist and historian. He began work in the civil service in 1902 and in 1919 he was director of the Museo Nazionale Romano. From 1928 to 1933 P. was head of the regional office of the Ministry of Culture for Rome and the Latium. Further on he became General Director of the Ministry of Culture for Antiquities and Fine Arts. He taught archaeology and history of Graeco-Roman art at the Catholic University in Milan and was member of the Accademia dei Lincei.

P. wrote several books on Greek and Roman history and archaeology. He was also interested in the archaeology of Malta and conducted archaeological excavations outside Italy, in Libya, Egypt, Turkey and Eritrea. In 1906–07, he was appointed by the Italian Government to conduct together with Francesco ↗Gallina an archaeological expedition at the site of the ancient port of ↗Adulis, on the Eritrean coast (cf. Gallina – Paribeni 1907).

Parks, National

National P., conceived as extended natural heritage areas of a country open for ↗tourism and with special protection rules, were established in Ethiopia in the years 1966 to 1979. Similarly, game reserves and sanctuaries started in the 1980s.

The origins of the idea of P. in Ethiopia may be seen in the policy of *aṣe* ↗Mənilək II to safeguard forests for fuel production and even for environmental reasons when he established churches in ↗Männagäša and on ↗Ǝnṭoṭṭo. Traditionally, ↗trees and bushes growing around churches and sacred grounds are not cut. The ↗Awaš P. was first a royal game reserve, before being established as a P. in 1966.

The Ethiopian P. conform to the official definition established in 1969 by the International Union for the Conservation of Nature, the defining elements being the protection of the ecosystem(s) of a P. from human exploitation and excessive human settlement, and restricted entry, for recreational, educational and scientific purposes. A state-funded P. staff is supposed to guard the P., enforce these conditions and further the development of the P. as a natural reserve.

Most P. are located in sparsely settled lowlands in the border areas of Ethiopian peripheries, but none of the designated areas were unused by native peoples. Even the typical natural features of the P. areas, such as grass plains, are the result of age-old human activity (periodic burning). The P. contain important numbers of common African species, including birds, plants, reptiles and mammals, that it is deemed important to protect. The native animal and vegetal species of the highest and lower highlands are protected only in the ↗Bale and ↗Səmen P. Southern P.s contain numerous other native species. UNESCO listed the Səmen Mountains as a World Heritage Site in 1978.

The Ethiopian Wildlife Conservation Organisation plays an important role in the management of wildlife in the P. Occasional, restricted hunting by foreign, big-game hunters ("sport hunters", paying a substantial sum of money) seems to be still allowed. Traditional ↗hunting by local people has, over the past few hundred years, kept the numbers of game animals fairly constant. In the past two decades this trend was somewhat reversed.

In some areas, P. are now problematic because of the eviction of local populations and also due to growing pastoral and hunting pressure on the P.; e.g., there are at least eleven ethnic groups that partly live in or use the southern P. (↗Meʾen, ↗Aari, ↗Mursi, ↗Hamär, ↗Bäšada, ↗Guǧǧi, ↗Koorete, ↗Suri, ↗Kara, ↗Ñaŋatom and ↗Dizi), and also several in the north-eastern P. (↗ᶜAfar, Karrayyuu). Since it was prohibited for them to enter, some pastoralists and cultivators who traditionally used the P. areas (also for some hunting), started violent resistance, among them Karrayyuu and ᶜAfar, raiding in the P. and killing game. In addition, since the 1970's, many ᶜAfar have been evicted due to the establishment of mechanized farms in their traditional territories in the vicinity of the Awaš P.

Herd of *Oryx beisa* in the Awaš National Park; photo 1982, courtesy of Michael Gervers

In the 1990s, the P. in southern Ethiopia were given a boost by the EU-funded "National Parks Rehabilitation in Southern Ethiopia Project" (1993–98), whereby park development was to go hand in hand with the development of infrastructure, services and school-building for local people, whose cooperation was sought. The project ran fairly successfully at first, but declined when project funding came to an end in 1998 and institutional structures did not function properly. Despite all efforts, there is at present no well-supported or sustainable P. management in Ethiopia. This in the long run will endanger the wildlife, the landscape and the chances of the local populations, which continue to increase in number.

In 2004 the Dutch-based "African Parks Foundation" (AFP) signed an agreement with the Ethiopian government to manage the P. of ↗Omo, Näč̣č̣ Śar and Mago and develop them for conservation and wildlife tourism. For this purpose the boundaries of these P. were legally established (gazetted) for the first time, and the aim of keeping the local population out was clearly set. Controversies surrounding the government's handling of the local people led the AFP to prematurely withdraw in 2008. Currently, the issue of developing a more community-based protection area strategy instead of an exclusionary protected-area approach to the P. is being discussed.

Today, it is mainly foreign tourists who visit the Awaš P., to watch wild ↗animals. The P. can be reached relatively easily from Addis Abäba. In recent years, safaris have been organized to show the flora and fauna and populations of the more remote regions of the Omo, Bale and Səmen Parks. Tourism to the Omo P. has become more popular because of the presence of the "colourful" Kara, Suri and Mursi peoples in its vicinity – popular objects of tourist ↗photography.

Due mainly to insecurity and civil war in the 1970-80s, as well as lack of tourist infrastructure, the Ethiopian P., while long established, have never attained the fame of the well-known large natural reserves in Kenya, Tanzania or South Africa which were, to some degree, similar to Ethiopia.

Parkyns, Mansfield

P. (b. 16 February 1823, Caen, Normandy, France, d. 19 January 1894, Woodborough Hall, Notts) was an English traveller – and amateur artist – from a Nottinghamshire landed family, who lived in ↗Təgray from 1843 to 1845, and fathered a son prominent in Ethiopia during the reign of *aṣe* ↗Yoḥannəs IV.

Mansfield Parkyns in the conservatory of Woodborough Hall in 1890; photo courtesy of the author

P. was a son of Sir Thomas Boultbee Parkyns, and younger brother of the 5th Baronet, Thomas George Augustus Parkyns of Bunney Park. P. was educated at Uppington public school and enrolled in Trinity College, Cambridge, but was involved in a brawl obliging him to leave. He then conceived the idea of seeking the source of the White ↗Nile and of walking across Africa from east to west. He duly sailed to Alexandria, and made his way by dhow from Suez to ↗Massawa, which he reached in 1843. Learning of the presence in the interior of two other Englishmen, John ↗Bell and Walter ↗Plowden, he proceeded inland. He visited *däǧǧazmač* ↗Wəbe Ḫaylä Maryam's camp, as well as ↗ᶜAdwa, where he resided in the Muslim quarter; in ↗Aksum, he sketched the standing stelae and adjacent sycamore tree. He also encountered the ↗Nara people, and collected information on them; he travelled to Roḥabäyta, where he married a local woman. Variously remembered by her Ethiopian descendants as being called Kaśa or Kaśäč (daughter of Kidane, of Aksum, son of *nəburäʾəd* Zämäday), she bore him a son, John. Later, P. lived in the Sudan, among the nomadic Kababiš in the area around al-ᶜUbayd, also visiting Khartoum, where he met the local chief *al-makk* ↗Nimr. P. obtained a copy of the ↗*Funǧ Chronicle* (↗Sinnār) but did not realize his plan to write a history of the Sudan (Holt 1988: 245).

Learning that he had inherited considerable wealth, P. decided to return to Britain in 1848, after a stay of several months in Cairo. On reaching Britain in 1849 he wrote his two-volume work *Life in Abyssinia* (1853), which is illustrated with his sketches – and is his main claim to fame, remarkable for its impartiality. Much more than a travelogue it contains an account of the history of Təgray, as well as detailed descriptions of the people, their system of government and law, social customs, clothing, weapons, food and drink, religious beliefs, foreign missionary activities, etc. His paintings and sketch books are still kept by descendants and in a public collection (Pankhurst, in preparation).

In 1854 P. married a British woman, the daughter of the later Lord Chancellor Westbury, Emma Bethell, by whom he had an English family. He later refused to participate in the British expedition against *aṣe* ↗Tewodros II, on the grounds that he had Ethiopian friends (Cumming 1977: 161). His Ethiopian son John Parkyns (also known as Ǧəhon), being regarded as a foreigner, was detained at ↗Mäqdäla, but subsequently released with other foreign captives. The inclusion of his name among the list of those released by the British expedition was the first public knowledge in Britain of P.'s Ethiopian family. Later, *fitawrari* Ǧəhon, then resident in ʿAdwa, became an officer (*bašša*) in the services of the Təgrayan governor *ras* Mängäša; after 1896 he settled in the Italian colony of ↗Eritrea and became a *məsläne* in ↗Säraye. He had numerous descendants, many of whom played a role in Ethiopian politics (Smidt in preparation).

Richard Pankhurst

Parliament

Representative political institutions have no antecedents in pre-modern imperial Ethiopian governance. The country's P. (Amh. ምክር፡ ቤት, *məkər bet*) have all therefore derived from the desire of successive rulers to put in place institutions derived from favoured external models. A P. was first introduced by *aṣe* Ḫaylä Śəllase I under the Constitution of 1931 (↗Constitutions; ↗Crown Council). This had two legislative chambers, the Chamber of Deputies whose members were chosen by provincial notables under the aegis of provincial governors, and the Senate whose members were directly appointed by the Emperor. The two chambers had equal powers, but were required only to discuss legislation rather than approve it. Following the Italian occupation, P. was reconvened in November 1942, with five deputies from each of the twelve provinces. Five Eritrean deputies were added under the ↗Ethiopian Eritrean Federation of 1952. There were about 30 senators, drawn largely from the nobility. Although the executive could override any changes to draft legislation, a number of instances are recorded in which P. amended laws presented to it.

Both the powers and the composition of P. were significantly changed under the Revised Constitution of 1955. Though members of the Senate were still appointed by the emperor, deputies were elected by popular suffrage, and elections were held at four-year intervals from 1957 until the ↗Revolution of 1974. Since there were no political parties, candidates stood for election on the basis of their local connections. This led to a high proportion of local notables securing election, especially in the northern provinces, and to a high turnover at elections, since deputies tended to move to Addis Abäba, and lose contact with their local roots. Especially from the 1965 elections onwards, deputies became increasingly critical of the government, and in addition to amending or sometimes rejecting government proposals, took advantage of their power to summon ministers for questioning. Under the 1955 Constitution, moreover, P. was required to approve legislation, though this requirement could be circumvented by provisions enabling the emperor to legislate by decree when P. was not sitting, subject to subsequent confirmation by parliament. Decrees were widely used, even in cases where there was no plausible case for urgency. The Senate was used as a place of quasi-retirement for noblemen and senior officials without a current position, and was sometimes derisively referred to as the "garage", where such notables could be parked when not in use. On occasion, however, it also provided a forum for criticising, amending or even rejecting government proposals.

P. was abolished at the ↗Revolution in 1974, and Ethiopia remained without legislative or representative institutions until the establishment of the People's Democratic Republic of Ethiopia in September 1987, under which supreme state power was formally vested in the ብሔራዊ፡ ሸንጎ (*bəḥerawi šängo*, 'National Council [Assembly]'), the Ethiopian equivalent of the Supreme Soviet of the Soviet Union (↗Russia). This was a single chamber, single party P., with 835 members who had to be nominated by the Workers' Party of Ethiopia or other approved organizations.

The Ethiopian Parliament in the 1950s, with the Crown-Prince Asfa Wäsän Ḫaylä Śəllase (left balcony, first from right); from Ursin 1958:98

Though members were drawn proportionately from different areas of the country, and were generally selected from indigenous peoples, the process was entirely stage-managed. Leading party figures and some other notables including religious leaders were also chosen, but the *šängo* itself was a rubber-stamp body, and disappeared with the regime that created it less than four years after its formation.

Following its seizure of power in May 1991, the Ethiopian Peoples' Revolutionary Democratic Front (EPRDF) established a "Peaceful and Democratic Transitional Conference of Ethiopia" to oversee the creation of a new system of government. This formed a Council of Representatives from its own members to serve as an unelected transitional P., and a Constitutional Assembly was elected in 1994. The constitution of the Federal Democratic Republic of Ethiopia (FDRE), established in 1995, provided for a bicameral P., in which the House of People's Representatives was elected from single-member constituencies distributed according to population on a country-wide basis, while the House of the Federation contained representatives chosen by the legislatures of the individual regional states. Since the constitution placed supreme power in the House of People's Representatives, and the prime minister was chosen by and responsible to it, P. lay, formally at least, at the heart of the new constitutional order.

Since the formation of the FDRE, elections to the House of People's Representatives have been held at five-year intervals, in 1995, 2000, and 2005. These have been the first elections in Ethiopian history in which candidates from rival parties have been able to compete for election. The first two of these elections were very heavily dominated by the ruling EPRDF and its affiliated parties. While the first elections held on 7 May 1995 were almost entirely monopolised by the EPRDF, those held on 14 May 2000 were contested by a large number of opposition parties, many of which were however small and locally based. Parties belonging to the EPRDF won 481 (or 88 %) of the 547 seats, while affiliated parties took a further 18 seats, leaving only 28 in the hands of independents or opposition parties; the remainder were in the Somali region, where the election was postponed for security reasons.

The third elections, on 15 May 2005, were contested by two major opposition groupings, the Coalition for Unity and Democracy (CUD) and the Union of Ethiopian Democratic Forces (UEDF), in addition to the government parties and other opposition groups. The CUD won every seat in Addis Abäba and a significant number elsewhere, and the UEDF also won seats especially in parts of Oromia and the Southern Region. The announcement of results was then aborted by the federal government, and official results were released indicating that the EPRDF had retained a majority. There were subsequent controversies over contested elections, whether opposition members would take their seats, and the manipulation of parliamentary procedures by the government majority. There is little available published information on the working of P. under the FDRE, and the extent to which it exercises its power to amend or reject legislation, or to hold the executive branch of the federal government to account.

Pastoralism

The terms P. and pastoralist (from Lat., 'herdsman') refer to the economic activity of keeping herds of graminivorous animals which have been domesticated since the so-called Neolithic revolution starting about 10,000 years ago. In north-east Africa, cattle, sheep, goats and ↗camels (s. also ↗Animals, domestic) were of particular importance. To a considerable extent they are kept by sedentary peasants – just like ↗horses, donkeys, ↗mules and poultry – or by agro-pastoralists, whose livelihood is based on ↗agriculture and livestock-breeding as almost equally important pillars. With ca. 30 million head of cattle Ethiopia possesses the seventh highest livestock population in the world, and with ca. 6 million in Somalia and ca. 1 million in Ethiopia and Eritrea the Horn of Africa occupied a world-wide leading position in the number of camels. These statistics of the mid-1980s do, however, not differentiate between animals kept by sedentary peasants or nomadic pastoralists. The categories of pastoralists according to their mobility and their cultural status are often fluid (s. below).

Particularly in relatively arid lowland areas of north-east Africa the keeping of animals in mobile herds is a major pillar of economy. Nomadic P. as a way of life can generally be defined as movement of the residential social group in the course of regular socio-economic and political activities geared to livestock-keeping. Nomads move from one area of natural pastures to another taking all their people and their mobile homes with them.

Different categories of nomadic pastoralists can be differentiated according to the extent of mobility and to the dominant types of animals they keep. "Full" nomads exclusively depend on their livestock and do not practise any kind of cultivation. They get their grain supply, vegetable food and other necessary goods by selling or exchanging the surplus of their animal production. Representatives of this category are parts of the ↗Boorana Oromo, the ↗Somali and ↗ᶜAfar. Semi-nomads usually possess permanent settlements where they cultivate crops and where most of the population lives for several months of the year. They seasonally move in so-called cycles of transhumance to dry-season and wet-season pastures. Ethnic groups of south-western Ethiopia, such as ↗Suri, ↗Mursi, Bodi (↗Meᵓen), ↗Ṣamay, as well as parts of the ↗Guǧǧi Oromo and factions of Amharic-speaking groups such as the Sallaan in Goǧǧam (personal observation in 2002) follow this pattern. The label "agro-pastoralists" refers to people whose economy is based on the two pillars agriculture and livestock-breeding, but the animals herds do not necessarily need to be mobile over larger distances. The largest proportion of livestock in the Ethiopian highlands is kept in such semi-sedentary conditions.

Another means of classification of nomadic P. is offered by the type of animal which is predominant in its economic importance and in the value concepts of the respective groups. In this field, mainly due to ecological conditions, two major categories can be identified: cattle pastoralists and camel pastoralists. Cattle need pasture consisting of grass and daily watering, so that mobile herds cannot usually be kept to any significant extent in areas with less than ca. 400 mm of annual rainfall. Prototypes of nomadic or semi-nomadic cattle pastoralists are the Boorana and the Nilotic-speaking groups in the lowlands bordering the Sudan in south-western Ethiopia. Typical camel nomads are parts of the Saho, the ᶜAfar, the Somali and ↗Gabbra. Both categories, cattle nomads as well as camel nomads, additionally keep sheep and goats in integrated or separate herds. These animals which reproduce quickly, are economically important for market exchange and meat consumption, but generally do not figure as a core element in the cultural representations and values of nomadic pastoralists.

In Ethiopian history there has always been a deep-rooted antagonism between sedentary peasants of the highlands and mobile pastoralists of the lowlands. Camel nomads such as the Somali tried to get access from their arid environment to ecologically more hospitable zones in the interior and inevitably clashed with sedentary peasants defending their territories. The huge expansion of the Oromo in the 16th and 17th cent. towards the central and northern parts of the Ethiopian highlands was obviously carried out by groups assured of a high degree of mobility, as is characteristic for (semi-)nomadic cattle pastoralists. Anthropological researchers in the 20th cent. observed a tendency among some ethnic groups of south-western Ethiopia, such as the Ṣamay, whereby a part of the population lived in highland villages, whilst another part, predominantly young people, kept herds of cattle in the lowlands. There is a continuous exchange of social relations and economic products which, however, becomes weaker over the generations, i.e., the two factions become more and more independent of each other. This observation could give rise to the hypothesis that a specialized type of pure nomadism in those areas has evolved by such processes of fission.

Despite a permanent state of latent hostility, there have always been well-established networks of trade, particularly exchange of grain and vegetable staple foods for animal products in market places along the eastern and western escarpments of the highlands (e.g., in Aləyyu Amba, Bati, Gore, etc.). However, government authorities in Ethiopia and Somalia (as nearly everywhere in the world) have always considered nomads as a troublesome element of the population and have therefore urged their permanent settlement. This has led to an increasing marginalization of mobile pastoralists, which presently do not constitute more than a small minority in Ethiopia, Eritrea and Djibouti. Somalia is an exception, because approximately half of the population are still nomads and nomadic P. continues to be deeply rooted in the socio-economic patterns and cultural traditions of the country. In order to settle disputes among mobile pastoralists concerning rights over pastures, wells, etc., which frequently result in the killing of people, special institutions were established. The *diya-* or *mag*-paying groups (Arab.: *diya*, Somali: *mag*, 'blood wealth') for compensation in cases of homicide has maintained a particular importance. Male display of courage and a sense of risk as well as elaborate concepts of honour have always played an important role in the cultural patterns of nomads (↗Meritorious complex). The pastoralists in this region have mostly adopted Islam – the Somali and ᶜAfar almost a thousand years ago – but they commonly do not observe it very rigidly and continue to perform various practices of pre-Islamic origin.

The economic activities of nomadic pastoralists are to a notable extent dictated by the ecology of their livestock, cattle and camels respectively. They have to follow a pattern of migration determined by a combination of seasonal and areal variability in the supply of pasture and water. The grazing resources are usually assigned in a regular fashion according to the geographical particularities and seasonal climatic conditions known through the experience of many generations. The nomadic movements are therefore not performed at random but follow more or less standardized cycles, to be changed only under extraordinary circumstances, such as drought, persistent conflict or political insecurity. The establishment of national boundaries at the end of the 19th cent. inevitably exerted a negative impact on nomadic-pastoral or transhumant movements. An example are the northern Somali, who were increasingly deprived of their traditional wet-season pastureland in the Haud, which became part of the Ethiopian ↗Ogaden region. The cycles of transhumance of mobile cattle keepers in savannah areas with a higher grazing capacity are usually much shorter than those of camel herdsmen.

A basic prerequisite of nomadic P. is the formation of herding units manageable by teams of herders in accordance with the households and camp units. According to general information and personal observation from different parts of Africa, the average size of animals which can be mastered by one adult person may roughly amount to 40 camels, 70 cattle or 200 sheep. The material culture of pastoralists has to be restricted to items fitting the mobile life-style and are mostly made, instead of clay, of more durable materials such as wood, metal and fibres. In most areas, e.g., among the Somali, the Gabbra and ᶜAfar, the dwelling/hut consists of a circular cupola-shaped skeleton of bent wooden branches covered with water-proof mats. Their erection and dismantling is women's work. The whole equipment is transported by camels or donkeys. Pack-oxen went out of use after the huge rinderpest epidemic (↗*Kəfu qän*) of the 1890s, which destroyed most of the cattle population and forced many groups to abandon nomadic P. in favour of agro-pastoralism or sedentary farming.

The staple food of north-east African livestock keepers consists of cereals, millet, maize and barley, which are mostly bought from farmers in exchange for animals and their products. ↗Milk and butter are important for local use, whereas blood taken from living animals, being tabooed by Islam and Christianity as an impure foodstuff, is presently consumed only by a dwindling minority of religious "traditionalists". Meat is not frequently eaten by the herdsmen, because the animals are needed for reproduction and for acquiring exchange food products. The reluctance of slaughtering animals apart from ceremonial occasions is partly rooted in concepts of the "cattle complex", implying a highly emotional or culturally valued attitude towards cattle that in many respects exceeds the sphere of economic rationality. The term and the idea of "cattle complex", although by now rather controversial, derive from the work of Melville Herskovits (1926) on the East African cattle area. Although this territory, extending on his map from the Nilotic Sudan to the Cape region, excludes the Horn of Africa, most of its peculiar ethnographic criteria are well documented there. Cattle dominate the value concepts of people and play a central role in their imaginative and social world. Individuals sometimes have their "favourite beasts" with which they are symbolically associated and preserve close "emotional" bonds throughout their lifetimes (e.g., via naming, sacrifice, and song culture). In the sociopolitical sphere cattle serve as means for paying the bride-price in order to establish kinship or affinal ties and for the blood-wealth as compensation in cases of homicide. Cattle are the most honourable gift to the ancestors and they are offered as sacrifices in all important ceremonial performances and religious rituals. Most importantly, cattle hold a position as property of the highest prestige and are esteemed as mobile capital.

Among the ↗Hamär, rites of the passage for young men are associated with cattle (e.g., the "leap across the cattle"). In parts of southern Ethiopia (e.g., among the ↗Hadiyya), if a person's herd reaches 100 or 1,000 head of cattle, "feasts of merit", by which the owner is ritually exalted in social rank and status, have been performed until the present. For the Somali and related groups, the term "camel complex" is employed in order to signify the central role of this animal in their material as well as spiritual culture.

Patrologia Orientalis

The series P.O. has its origins in the growing interest in Christian literature in Europe at the end of the 19th cent. The project was created by Abbé – later Mgr. – René Graffin (1858–1941), a professor of Syriac at the Institut Catholique de Paris. In 1894, Graffin started a *Patrologia Syriaca*, inspired by the famous Latin and Greek *Patrologiae* of Abbé Jacques-Paul Migne. However, as the project remained dormant (from 1894 to 1927 only three vols. appeared), in 1897, on the occasion of the Orientalist Congress in Paris, Graffin announced the creation of the P.O., which was to include all the Oriental Christian traditions: Arabic, Armenian, Coptic, Ethiopian, Georgian and Syriac, as well as texts in Greek, Latin and Slavonic languages. The critical editions were to be accompanied by translations, which were largely in French. Some authors, however, also translated into Latin, English and, more recently, Italian. In 1896, Graffin also founded the journal *Revue de l'Orient chrétien*.

For many years Graffin was assisted by François Nau and Max, Prince of Saxony. At the death of Mgr. Graffin the running of the P.O. was assumed by his nephew François Graffin (1905–2002). In 1992, the project relocated to the Pontificio Istituto Orientale in Rome, where it has since been under the editorship of the Jesuits René Lavenant and, more recently, Philippe Luisier, still according to the traditional editorial methodology (cp. Bausi in PICES 15).

The first vol. of the P.O. (*Livre des mystères du ciel et de la terre*, *Mäṣḥafä ↗məśṭirä sämay wämədr*) received its imprimatur on 13 July 1903. Since then about 50 vols. have appeared, each one comprising a number of fascicles. Largely a product of the Institut Catholique de Paris, the P.O. has enjoyed the collaboration of a number of professors from this institution. In the Ethiopian section, Sylvain ↗Grébaut edited the *Miracles of Jesus* (*↗Täʾammərä Iyäsus*; vol. 12), Bernard Velat the *↗Ṣomä dəggʷa* (vol. 32) and the *↗Məʿəraf* (vol. 34) and Gérard Colin completed the last of the volumes of the *↗Sənkəssar* (vols. 43–48), started by Ignazio ↗Guidi and continued by ↗Grébaut.

Gérard Colin

Paul, Apocalypse of

The A.P. is a N.T. apocryphon of the 2nd–3rd cent. A.D., documented in Greek, Latin, Coptic, Syriac, Armenian, and Old Slavonic versions. From its chapters 13–44, through an Arabic intermediate stage, the Ethiopic *Apocalypse of ↗Mary* (A.M.) was produced, though in a very abridged and differently arranged way.

The first obvious external difference is the protagonist. According to a kind of later introduction, the A.P. was contained in a writing discovered in about 450 A.D., after repeated orders by an angel, by a man living in Paul's former house. This man sent this writing to the Emperor Theodosius, who in turn sent a copy of it to Jerusalem. The subsequent narration is by Paul himself, guided and instructed in his journey (which starts from the third heaven) by his guardian angel. In the A.M. it is the Virgin who tells John, the son of Zebedee, of the journey she began from the third heaven, guided and instructed by her son Jesus Christ.

The general contents are roughly the same for both texts, beginning with a vision of the righteous souls, and of those of the sinners, accompanied by their guardian angels and brought before God by Archangel Michael; unlike in the A.P., in the A.M. the Virgin obtains from Jesus some rest for one of them. The angels who bring the damned to their condemnation are Tartaruchos and Temelouchos in the A.P. (as in the *Apocalypse of ↗Peter*), but only the latter (*Ṭəmləyakos*) in the A.M. Whilst in the A.M. everyone in heaven is sad at the moment of condemnation, in the A.P. there is general approval at the justice of God.

Differences can also be traced in the vision of Paradise, where Enoch and Elijah are encountered, and the respective protagonist sees four rivers (the first of wine, representing those who had loved strangers, pilgrims, the thirsty, the hungry and the naked; the second of honey, representing those who had loved the poor; the third of milk, representing those who had remained pure; and the fourth of oil and butter, representing the martyrs and the apostles).

In both works, the visions are accompanied by appropriate O.T. and N.T. quotations, and by the presence of patriarchs and prophets (indicated by name in the A.M.). After a vision of men (the insolent and the haughty) trying in vain to get fruit from branches of a tree, Paul/Mary comes across (in a different order in the A.P. and in the A.M.) a magnificent house (for those who have not commited adultery), and the "City of God" ("built like a rose" in the A.M.), the heavenly Jerusalem (↗Zion). When Paul/Mary asks the angel/Jesus about the meaning of "alleluia" sung by David, the A.M. stresses that this word is not valid if pronounced with an impure heart, whereas the A.P. seems more interested in its ritual implications. The vision of the punishments then follows (usually, immersion in a river of fire followed by torture): the sacrilegious, homosexuals, the incestuous, idolaters, and those who have committed bestiality (in the A.M. including Muslims as well as those who married to Muslim or Jewish women). Whilst the A.M. ends here, the A.P. proceeds with a much shorter visit to Paradise, involving meeting the Virgin Mary as well as Prophets and Patriarchs, many of whom were encountered with at an earlier stage in the A.M. The ending of the A.P. is more abrupt.

Both works feature Jesus's final partial act of mercy for the damned. In the A.P., thanks to the insistence of Michael, the angels and Paul (who until that moment had insisted that "it would have been better for men if they were not born", as in the *Apocalypse of Peter* and other pseudo-Clementine works), Jesus grants to the damned "the rest of one night", to refresh them, the day of his resurrection, forever. In the A.M., Mary asks for mercy twice: first, for those who interrupted fasting, Christ answering that he will have mercy "if they repent even for one day" (in the A.P. they can be pardoned if they repent in their last year); the second, in the final part of the work, Christ consenting a two-day respite "from Friday evening until Monday morning".

Paolo Marrassini

Paulitschke, Philipp Victor

P. (b. 25 September 1854, Czrmakowitz [formerly Austria], d. 31 December 1899, Vienna) pioneered the ethnography of the Horn of Africa. He studied philology, geography and history at Graz and Vienna. In his published Ph.D. thesis (1879) he summarized the history of the exploration of Africa from the ancient Greeks, the Arabs, and the Portuguese to the European explorers of the 19th cent. He found that several regions, e.g., the Horn of Africa towards the Nile, including the "Galla-Somaliländer", had been little studied by scholars up until then. From 1882 he was "Privatdozent" (i.e. associate professor) for geography at the University of Vienna. In the summer of 1880 he undertook his first journey, beginning his research in southern Egypt and Nubia. He had to give up his plans to go further south because the ↗Mahdist movement made travelling difficult. Therefore, he turned to North-east Africa after 1884, where he became a pioneer with his profound geographic and ethnographic studies. It was due to this second research that he was recognized as the authority of that region for many years.

Philipp Paulitschke, photo 1897; from the Bildarchiv der Österreichischen Nationalbibliothek, Wien

At ↗Zaylaᶜ P. was able to befriend Governor ↗Abū Bakr Ibrāhīm Šaḥim who supported and facilitated his journey into the hinterland. He went via Hennsa and Ǧaldessa to ↗Harär. From there he made several longer excursions mainly to various sections of the ↗Oromo.

P. collected material on geology, physical anthropology, history (e.g., of the Oromo expansion and historical documents on Harär), language, cultural features, such as agriculture, arts, poetry, social order (investigating the ↗*gadaa* system) law and religion. He also gathered information from traders of various Cushitic-speaking groups living in areas not visited by Europeans until then.

During the following years P. published many books and articles in German, Italian and other European languages. Outstanding are his two volumes of the ethnography on the ↗Somali, Danakil (↗ᶜAfar) and Oromo, his book about Harär and publications on the poetry of the Oromo.

P.'s work was a rich source for many authors in the first decades of the 20th cent and remains an important source for the cultural history of the Eastern Oromo and Harari in particular. His work is significant for the history of the period beginning with the Egyptian occupation, to the Ethiopian conquest and until the time when Mənilək II used the town as a military base for defeating the Eastern Oromo and other ethnic groups in the south-east.

After his return to the University of Vienna he shifted from geography to ethnology holding only lectures in the latter field. He was eager to establish an institute of ethnology, but died before it was constituted.

Hermann Amborn

P̣awli

P̣. (**ጳውሊ**; fl. mid-16th cent.) was a traditional scholar active during the reigns of *aṣe* ↗Gälawdewos and *aṣe* ↗Minas. In the sources, he is frequently mentioned alongside his colleague Zəkre (short for Zəkrä Maryam, hereafter Z.).

P̣. and Z. were famous teachers of Biblical interpretation and appear as such in spiritual genealogies of several prominent religious leaders (s. Cowley 1989). According to these sources, P̣. and Z. were educated by a foreign teacher, or by an Ethiopian who had studied abroad (Syria, Egypt), or studied abroad themselves (s. Cowley 1989; s. also GuiIyas 17).

According to the Chronicle of Minas, Z. was sent to announce the death of Galäwdewos at the court (Esteves Pereira 1888: 766; KrLebD 52f.). This text, although probably compiled during *aṣe* ↗Śärṣä Dəngəl's reign, indicates Z.'s proximity to the royal power.

A tradition recorded by ↗Täklä Iyäsus Waqǧira and ↗Täklä Ṣadəq Mäkʷəriya (TSTarik III, 56, 64, Täklä Iyäsus [here referred to as Täklä Śəllase] tr. in Cowley 1989: 392ff.) claims that Z. and P̣. took the side of *ətege* ↗Säblä Wängel in her quarrel with her son Minas, excommunicating the latter, who later had them imprisoned and blinded as a result. P̣. died in prison, while Z. was released and even made royal counsellor. Z. took his revenge by giving wrong advice that, according to some traditions, eventually led to Minas's death (the Chronicle, however, says that he died of an illness). Z. himself probably died during Śärṣä Dəngəl's reign.

The "short chronicles" as well as some other historical traditions depict P̣. and Z. as opponents to European missionaries (e.g., ↗Oviedo, s. Cowley 1989, n. 33). The text called, in Goǧǧam, **መጽሐፈ፡ ምሥጢር** (*Mäṣḥafä məśṭir*) and also referred to as the **ገድለ፡ ዝክሬ፡ ወጳውሊ**, (*Gädlä Zəkre wä-P̣awli*, 'The Contendings of Z. and P̣.') is attributed to P̣. and Z. It contains the history of the ↗*Qəbat* movement.

P̣. and Z. taught mainly in Goǧǧam. The Chronicle of ↗Iyasu II mentions them as priests of Mängəśtä Sämayat, a church founded by Säblä Wängel. The Goǧǧame *Mäṣḥafä məśṭir* indicates Däbrä Ṣəmmuna as their place of origin. They may have composed several ↗*mälkəʾ* (Cowley 1989: 395) as well as some of the hymnological compositions today preserved in Däbrä Ṣəmmuna.

Cowley raises the possibility of P̣. being identical with the contemporary monk ↗P̣awlos, but they are probably two different persons.

Anaïs Wion

P̣awlos

P̣. (**ጳውሎስ**; b. ca. 1510, d. ca. 1578) was a 16th-cent. Ethiopian monk known from marginalia he left in a unique manuscript with a ↗*säwasəw* (BN éth. 107 [ZotBNat no. 160]), dating to 1552/53. He should not be confused with his homonymous contemporary, the opponent of Andrés de ↗Oviedo and prominent Goǧǧame traditional scholar ↗P̣awli (but s. Cowley 1989: 395).

Some of the notes could be classified as a sort of "autobiography" (fol. 9v, also 67v, 68–74, 84v–88) since they describe events in his personal as well as political life from ca. 1531 to 1578. As such, these notes are an early example of historiographic and autobiographic writing in Ethiopia (↗Historiography).

P̣. received the monastic habit in 1531/32 in the monastery of Abba Samuʾel in Šire (↗Däbrä Abbay). After travelling around to different places, including Aksum and Däbrä Damo, he settled in the monastery of ʿAyda, in Agot (possibly Angot). Some dialectal forms suggest that P̣. was a native Təgrəñña speaker. The notes also indicate P̣.'s acquaintance with the ↗*Fisalgos*.

Among the historical events P̣. mentions is, in the first place, the war of ↗Aḥmad b. Ibrāhīm al-Ġāzī and its attendant circumstances, including, e.g., the capture of ↗Minas, the death of ↗Fiqṭor, the incursions of the Oromo, the death of ↗Gaʿəwa, the campaign of ↗Ḥamälmal against the Adalites, the landing of the Turks, etc., providing reliable dates for each event. ↗Śärṣä Dəngəl's campaigns against the ↗Betä Əsraʾel also get P̣.'s attention.

Evgenia Sokolinskaia

P̣awlos Ñoñño

P̣.Ñ. (**ጳውሎስ፡ ኞኞ**, birth name Amare; b. 20 November 1933, Qulləbi, Harärge, d. 6 June 1992, Addis Abäba) was a popular journalist and writer. He was the only son of his mother Təbälç̣alläš Andarge. His mother divorced from his father when Amare was two years old. She took him with her wherever her restless life led her. This life style hindered Amare from receiving a formal education beyond the skills of reading and writing Amharic and the fourth grade of elementary school.

At a very young age Amare assisted his single mother in earning some income. Among the several means he employed to do this was the painting of angels, saints, patriots and warriors for sale. To solve the problem of his buyers' varying preferences he added the appropriate name only when a buyer was found and his wishes ascertained.

Amare's lack of formal education was made up for by his mother, who at first read the Bible to him and later made him read it himself. It was during this period, too, that she changed his name to P̣awlos. This habit of reading the Bible appears to have turned P̣.Ñ. into the omnivorous reader he later became. As a young man P̣.Ñ. not only read but also began writing and sending articles to newspapers. These pieces of writing landed him a job at the Amharic newspaper called **ድምፅ** (*Dəmṣ*, 'Voice') of the Ethiopian Patriotic Association. He became a popular journalist, known not only for the sensational titles of some of his articles but also for the caustic content of quite a few of them. Later, he became the editor of *Dəmṣ* and his fame grew.

His first published work, **በሴቶቹ፡ አምባ** (*Bäsetočču amba*), was a collection of interviews with some of the well known women of the red light districts of Addis Abäba in the early 1960s. This was followed by a succession of short fictional works **የአራዳው፡ ታደሰ** (*Yäʾaradaw Taddäsä*), **የጌታቸው፡ ሚስቶች** (*Yägetaččäw mistočč*) and **ድብልቅልቅ** (*Dəbləqləq*), respectively. The first two are novels and the third is a collection of short stories. These and his seven other works were very popular. His fictional stories ring so true to life that they looked like thinly veiled true stories of actual people.

P̣.Ñ. produced six works of historical nature. Only three of these, entitled, **የኢትዮጵያና፡ የኢጣልያ፡ ጦርነት፥ አጤ፡ ምኒልክና፡ አጤ፡ ቴዎድሮስ** (*Yäʾityop̣yanna yäʾiṭalya ṭorənät, aṭe Mənilәkənna aṭe Tewodros*, all three in P̣awlos Ñoñño 1988) are published. Of his unpublished works, the two volumes correspondence between Mənilək II and Ethiopian dignitaries are of great historical interest.

Asfaw Damte

P̣awlos Ṣadwa

Abba P̣.Ṣ. (**ጳውሎስ፡ ጻድዋ**; b. 25 August 1921, ᶜAddi Fənniᶜ, Sägänäyti, Eritrea, d. 11 December 2003, Rome) was a Catholic prelate and scholar. He pursued his priestly studies at the Catholic Seminary of ↗Kärän and at the Italian school Ferdinando Martini in Asmära. In 1944, he was ordained priest. Thereafter, he carried out pastoral work in Asmära and worked in a mission in the ↗Gurage area. From 1949 to 1953 he pursued further studies in Asmära and in 1953 went to Italy as a doctoral student. He obtained two doctorates, in Political Science and Law, from the Catholic University of Milan.

At his return from Italy, P̣.Ṣ. became secretary to the Bishop of Asmära and later to the archbishop of Addis Abäba. In 1968, his English translation of the ↗*Fəṭḥa nägäśt* was published. The translation responded to his desire to present a sound research in English to scholars who did not know Gəᶜəz. The work, of which a new edition appeared in 2009, is still the standard for those who study Ethiopian ↗law. In 1973, P̣.Ṣ. was appointed Auxiliary bishop in the Archdiocese of Addis Abäba and shortly after he was consecrated Archbishop. In 1977 he was appointed as Metropolitan Archbishop of Addis Abäba and President of the Catholic Episcopal Conference of Ethiopia, a position he held until 1999.

Cardinal P̣awlos Ṣadwa; photo from an anonymous collection

In May 1985, P̣.Ṣ. was created the first Cardinal of the Ethiopian ↗Catholic Church. As a member of the College of Cardinals in Rome, he served in several committees dealing with administrative and judiciary matters. Moreover, he participated in the edition of the Code of Canons of the Eastern Churches for the Eastern Catholic Churches, promulgated in Rome in 1990. P̣.Ṣ. worked to defend the integrity of the Church without a hint of compromise even at the time of trials and political upheavals. Throughout his career he was a respected researcher. He died in Rome but was buried at the Catholic cemetery in Addis Abäba.

Peace Corps

On 22 September 1961, the ↗United States Congress established the P.C., a major U.S. bilateral aid programme, to promote world peace and friendship by making available to interested countries volunteers willing to serve overseas who would help the people of those countries meet their needs for trained manpower. Ethiopia was among the first countries to request such volunteers. In February 1962 Harris Woffard, Special Assistant to President John F. Kennedy for Civil Rights and the P.C., went to Ethiopia to appraise *aṣe* ↗Ḫaylä Śəllase I's proposal for from 500 to 1,000 P.C. volunteers (PCV) and to discuss details with officials of the Ministry of Education. The Emperor's request was influenced by enthusiastic support for the P.C. by *ləǧ* ↗Kaśa Wäldä Maryam, Bäräkät Habtä Śəllase, Donald E. Paradis, legal adviser to the Ethiopian Ministry of Foreign Affairs, and Bascom Storey of USAID. The Emperor's request was accepted by the P.C., and on 23 May 1962 a country agreement was signed between the Ethiopian government and the United States to provide 300 PCV to teach in the Secondary Schools of the Empire. By September, 277 PCV (known as "Ethiopia I") were at work in Ethiopia – at that time the largest P.C. group ever to come to any country at one time. Woffard served as the first Director of P.C. Ethiopia. The Emperor held a reception for the PCV at ↗Jubilee Palace where he thanked them for coming to "help drive out ignorance". During the next eleven years, more than 2,500 PCV were to serve in Ethiopia in various capacities with various ministries and agencies.

The largest numbers were in education projects. Over 1,500 PCV worked in the secondary school system where they instructed over 300,000 students. They taught nearly all the subjects offered in secondary schools, and in reality they all taught English, as native speakers of the language of instruction. The PCV worked in 80 locations, many in middle-sized towns and rural areas in addition to those in large cities. The number of PCV teachers, almost all with university degrees, brought a significant increase in the number of general secondary school instructors, frequently improved the quality of instruction, and hastened the opening of new schools in the provinces. In the first two years of the programme alone, the PCV brought a 59 % increase to the ranks of secondary school teachers. Outside of classroom, contact between PCV and students was extensive too in extra-curricular activities such as sports, school newspapers, science clubs, and hobby clubs of various types. PCV established libraries and reading rooms in their homes; assisted in local hospitals, leprosariums, and community centres; and held informal discussions in the playgrounds. A research project sponsored by the Ministry of Education found that such PCV activities activated higher academic achievement and a positive attitude change in students.

Some Ethiopians criticized PCV for being inexperienced teachers, but state representatives, like Minister of State for Education and Fine Arts Gäbrä Mäsqal Kəfläʾəgziʾ and Director General of Secondary-Special Education Zäwdä Bägrä Mädḫən fully acknowledged the volunteers' enthusiasm and willingness to work.

PCV also served on the faculty of Ḫaylä Śəllase I University (where in 1965 they were 20 % of full-time and part-time faculty), notably in the College of Business Administration, Faculty of Law, Laboratory School, the Faculty of Arts programme to improve English skills of first-year students, and University Extension. P.C. medical projects were staffed by medical doctors and other highly-trained health-care professionals, and in addition to operating several new provincial hospitals and establishing a paediatrics clinic, they worked in smallpox eradication and in the training of nurses, para-medics, and laboratory technicians. Some 250 PCV were involved in projects designed to improve Ethiopia's agricultural sector in extension work and in the resettlement of previously landless farm families.

The usual PCV assignment was for two years. Beginning in September 1964 groups of PCV were replaced each year by a new cohort through 1974 when 55 volunteers arrived as "Ethiopia XX" (the last group to serve in the country until the program was resumed in 1995). The PCV ranged in age from 20 to 73 when they arrived in Ethiopia. In September 1965 there were 590 PCV throughout the Empire, the largest number serving in the country at one time. Until 1967 volunteers were trained for service in Ethiopia at U.S. universities, including Georgetown, University of California Los Angeles, University of Utah, and Radcliffe. Later groups received training in-country and with Educational Services, Inc., and at the P.C. Training Center in the Virgin Islands. Instructors included noted Semitic language scholars, Wolf ↗Leslau, and distinguished Ethiopians: Abraham Dämoz, Asmarom Läggäsä, Taddäsä Bäyyänä, Ḫaylu Fulas, and Ḫaylä Mikaʾel Məsgana.

After coming back to the United States, the returned PCV try to promote a better understanding of Ethiopia and its people on the part of Americans. In 1991, an organization of former volunteers, "Ethiopia & Eritrea R[eturned] PCV", was organized and holds annual meetings providing education about and opportunities for service in Ethiopia and Eritrea.

Theodore M.Vestal

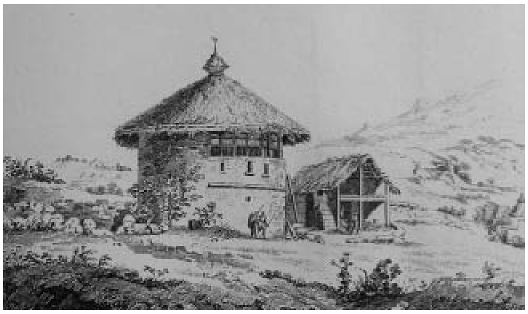
Pearce, Nathaniel

P. (alias Clark, b. 1779, Acton, Middlesex, d. 1820; Amh. **ናትናኤል፡ ፔስ**, Natnaʾel Pes), an Englishman of humble origins, resided in northern Ethiopia for almost 15 years. He was the first foreign resident, since James ↗Bruce, to write about his experiences in detail (↗United Kingdom, relations with).

P. attended a religious school in Yorkshire, after which he became a sailor. Reaching the ↗Red Sea in 1804 he defected at Mocha to embrace Islam, but, allegedly tired of that religion, he again escaped to join a British cruiser, the Panther, on which Lord ↗Annesley, Viscount Valentia, was sailing on his mission to offset French influence in Egypt by befriending Ethiopia. In 1805 Annesley dispatched his secretary-draftsman Henry ↗Salt from ↗Massawa inland to Ḥənṭalo (↗Anṭalo), then capital of Təgray, to open talks with the region's ruler *ras* ↗Wäldä Śəllase – and it was agreed that the enterprising P. should accompany the party.

Salt duly won the chief's friendship, so it was decided that on Salt's departure P. should stay behind to help the ruler and serve British interests. At first greatly respected P. later lost influence, but learnt ↗Təgrəñña and ↗Amharic and supported the ruler in his diplomatic correspondence with Great Britain (RubActa I, 6f., 17), P. married Tərungo, with the baptismal name Ǝssetä Kidan, daughter of *sīdī* Paulos, a wealthy Greek at ↗ʿAdwa (ibid. 11, 16). P. produced an English–Təgrəñña–Amharic vocabulary (preserved in the British Library), and also made exploration journeys inland; he visited Amba Hay in the ↗Səmen mountains.

P.'s continued presence in Ethiopia (where he had the opportunity of inspecting from close, and often recording, the antiquities of the country, among them a Greek inscription, RIÉ no. 274) proved helpful to Salt when he re-visited Təgray in 1809, after which it was decided that P. – with another Englishman, William ↗Coffin – should again be left behind. P. remained in the country



House of Nathaniel Pearce in Č̣äläqot, Təgray; etching from SalTrav, Atlas, pl. 16

until 1819 when he left to visit Salt, then British consul in Cairo. Dressed in an Ethiopian sheepskin he created a sensation in the Egyptian capital.

He then wrote a perceptive account of Ethiopian customs for the Bombay Literary Society, and attempted some Biblical translations, but died shortly afterwards. He left his two-volume memoirs for Salt to publish, but the latter died in 1827. P.'s *Life and Adventures*, which included Coffin's account of an expedition to ↗Gondär (Pearce 1831, vol. 1, 194–269) was eventually edited by Halls. It included stories of *däǧǧazmač* ↗Säbagadis and *abunä* ↗Qerəllos, and information on ^{c}Adwa and ↗Aksum, smallpox, ↗locusts, ↗famine and funerals, ↗taxation and soldiers' exactions (for P.'s correspondence and other documents s. Fiaccadori 2003).

Richard Pankhurst – Red.

Peasantry

The definition and classification of rural folk in Ethiopia as "P.", or as "farmers", or as "serfs" has long been a point of contention between social scientists and historians. Those debates relate partially to the various types of states and social relations that have existed in various places and at various times over the Ethiopian historical landscape. Most often, that debate has focused on the status of rural producers in the central highlands who practised annual cereal cropping and livestock rearing at the base of a social system that included political and ecclesiastical elites that sustained themselves by collecting ↗tribute from those who farmed.

Farmers on the Ethiopian highlands historically fit two major criteria for status as "P.". The first is the classic definition of P. as farmers who produce for their own subsistence and also as tributary – in cash or in kind – to an overarching state or non-cultivating elite class. The second rubric under which Ethiopia's highland cultivators qualified as P. was in that they were part of a "great tradition" in which societal symbols of legitimacy were held by a class of literati who preserved and interpreted commonly held beliefs about the society's origins and the sources of political and religious authority. This condition thus characterized both those farmers who lived under the Christian kingdom of ↗Aksum in ancient times, but also the socio-political systems in Gondär, Təgray, Šäwa, as well as the Islamic states such as ↗Ifat and others in the south-east, and Oromo states of the west and south-west in the late 18th and early 19th cent. In this regard, it would be reasonable to argue that the adoption of ox-plough ↗agriculture among societies in the Ethiopian region meant that farmers necessarily became P. as a result of that change in farming technology. Political leaders in many areas of the south-west, such as ↗Geeraa, ↗Limmu-Ǝnnarya, ↗Käfa, encouraged the adoption of ox-plough cereal agriculture as a means of accumulating storable wealth in the form of granaries and other goods payable to the state in the form of tribute. The terms for P. in Amharic administrative documents and other languages reflected the status of rural cultivators as payers of tribute and/or taxes, ↗*gäbbar*, or in the expression አርሼ፡ በላሁ (*arəšše bällahu*, 'I ploughed and I ate you [fem. sg.]').

The process of state formation over the course of Ethiopian history, it could be argued, was also a process of peasantization. The expansion of state authority over rural areas and rural production took place not only as part and parcel of the expansion of the Solomonic state from its core in the northern highlands, but also in areas of the south, west and east where state authority and its ability to tax rural production expanded over time. The expansion of political cultures associated with both Christianity and Islam to zones on their economic margins necessarily also spread the status of rural producers as peasants.

There is, however, an important distinction to be made between the category of P. in the Ethiopian historical context and that ascribed to P. in the sense of farmers under European ↗feudalism. In the European case, the people who occupied and tilled the land and who also paid tribute to their feudal lords did not have rights over the land they tilled. Feudal lords controlled that land as their fiefdom. In the case of late medieval Veneto (northern Italy), for example, landlords issued specific orders that dictated how the land was to be managed and what crops planted. In the Ethiopian case, however, the imperial and regional elite did not control the production process directly but they extracted resources and labour from rural producers on the basis of the property institution of ↗*gʷəlt*. Local farmers (P.) were obliged to provide tribute in kind (grain, ↗honey, livestock) and labour or military service to the *gʷəlt* holder, but the Ethiopian P. household determined what crops to plant where. The concept of *gʷəlt* thus comprised a bundle of rights that could be granted by the emperor to regional lords or local officials.

What was perhaps most important about the Ethiopian peasant's distinctive relationship to land was the "moral economy" it implied. Ethiopian peasants held a strong sense of entitlement to their rights of cultivation. They were obliged to provide tribute and labour to their *gʷəlt*-holder, either a regional lord, a church/monastery, or the emperor himself, but they retained rights over management of the soil and they also expected their children to inherit their claims under the ambilineal property concept of ↗*rəst*. Moreover, their sense of entitlement also allowed them to respond to competing claims of legitimacy when there was a conflict over claims to imperial authority. This was the case during the 17th cent. when *aṣe* ↗Susənyos declared his conversion to Roman ↗Catholicism and resistance by regional lords and their P. support forced his abdication.

The concept of the P. in Ethiopia has evolved substantially over the course of the 20th cent. The expansion of the central government's control over the national ↗economy has expanded at the same time as a national commercial economy has emerged. *Aṣe* ↗Mənilək II's establishment of a political economy focused on a modernizing capital eventually created *madbet* lands, a halo of districts surrounding the new capital city whose production fed a growing urban population. In other areas ↗coffee export began to transform farm economies, even as the extraction of commodities and ↗food remained one dominated by elites. Southern farmers' transition from the status of *gäbbar* ('tribute payer') to tenant (rent payer) and the commercialization of land began in the 1920s and became the dominant trend through the 1950s. The monetarization of the rural economy in the late 1950s and into the 1960s transformed many rural producers into commercial farmers, albeit on a small scale. In areas with large commercial schemes, such as the Awaš Valley, the Rift Valley, and the Setit-Ḥumära region, farmers were drawn away from subsistence agriculture to wage-based agricultural labour. In other areas where smallholder farms still dominated the agricultural landscape, such as the central highlands of Amhara, Təgray, and much of Oromiyyaa, farmers paid land tax and increasingly engaged with local markets for grains, pulses, and oil seeds in addition to their own subsistence production.

The increasing role of the market and the formalization of state taxes in the late-20th cent. have transformed Ethiopia's rural cultivators from peasants of the classic definition to smallholder farmers. In areas like Ada, Bečo, Goǧǧam, and areas with access to road networks small farms are best described as small commercial enterprises rather than as peasant farms. Their relation to the state is mediated by formal tax structures rather than relations with a social and political elite class to whom they owe loyalty and tribute payments. That Ethiopian agriculture is now a complex mix of commercial oriented smallholder farms and marginal farms with livelihoods highly vulnerable to drought and weakly linked to market forces indicates the difficulty of what lies ahead for national food security. The term P., however, is no longer an accurate descriptor of farmer status.

James C. McCann

Pecoul, Georges

P. (b. 14 September 1883, Paris, d. 14 July 1934, Addis Abäba), French doctor of philosophy and theology, first visited Ethiopia in 1925 with the missionary ↗Jarosseau. Together with a group of prominent Ethiopians, including ↗Ayyälä Gäbre, *däǧǧazmač* ↗Ǝmməru Ḫaylä Śəllase, and others, P. helped initiate a project for a French-oriented university in Addis Abäba. *Ras* Täfäri Mak^{w}ännən (later *aṣe* ↗Ḫaylä Śəllase I), to whom P. was presented, welcomed the project and ordered that a committee be formed, to study its implementation.

After a brief period spent in France, resuming his philosophy classes at the Institut Catholique, Paris, P. returned to Ethiopia in 1930, this time with his wife and children, under the auspices of the Amitiés Françaises à l'Étranger. He continued his activities with apparently the first proposal for an Ethiopian university, which, however, did not materialize.

In Addis Abäba P. organized public lectures on philosophical topics and held classes in philosophy which were attended, among others, by *ras* Ǝmməru, *blattengeta* ↗Śahlä Ṣädalu, and Ayyälä Gäbre. In 1932 Emperor Ḫaylä Śəllase appointed P. advisor to the Minister of Education, *blattengeta* Śahlä Ṣädalu. P. established the Ministry archives, and a library which contained several hundred printed books and manuscripts in Gə^{c}əz and Amharic, as well as about 1,000 volumes in foreign languages, mainly French, English, German and Russian. He was also responsible for creating a small museum. Its archaeological exhibits were set up in collaboration with Father ↗Azaïs.

P. died at the age of 51, and was buried in the Gulläle cemetery. His family settled in Djibouti.

Penal Codes ↗Criminal codes

Penance

P. (Gə^{c}əz: **ንስሐ**, *nəssəḥa*) is one of the seven sacraments of the ↗Ethiopian Orthodox (Täwaḥədo) Church (EOTC). Its scriptural basis is formed by Mt 16:19, 18:18, Jn 20:21-23 and Jas 5:16. P. is likened to a second ↗Baptism (the fundamental sacrament of forgiveness) in the tears of repentance, a return to the newness of life which God gave at Baptism (Patriarchate of EOTC 1996:43f.).

The historical beginnings of the sacrament of P. are witnessed in Acts 2:38, Heb 6:4–6, Rev 21:8, 22:15 and ↗Hermas's *Shepherd*. In order to deal with the reconciliation of persons involved in a major sin (cp. Rev 22:15) despite their baptism, a one-chance P. developed in the 2nd–3rd cent. throughout Christendom, gradually becoming more organized and acquiring an ecclesiastical status at the end of the 4th cent. By that time, the duration of P. was defined; the "penitents" were required to stay in the back of the church building during ↗Eucharist and to leave before the communion rites (s. *Mäṣḥafä qəddase*, Anaphora of the Apostles §§66–70, 94ff.) until the bishop publicly absolved sinners on a few occasions in the year (Harden 1920:22). From the 6th cent. on, this discipline gave way to private P.

The ↗*Fətḥa nägäśt* (ch. 51) conveys the sense of the disputes which took place in Egypt between the priest Marqos b. Qanbar and his bishop Michael of Damietta, the former teaching that the confessor is a spiritual father and that frequent confession and communion are necessary (Zanetti 1983; Burmester 1936). Because non-sacramental unions, though legitimate in society, are incompatible with the demands of Christian life, P. is often only required when people want to marry sacramentally (↗Matrimony) or are about to die; otherwise, their sins would shine before all at the Second Coming (*Śər^{c}atä betä krəstiyan*, cp., e.g., Griaule 1932:4, 13 [text]). However, the practice is increasing in Addis Abäba at least and is more and more recommended (Habtä Maryam Wärqənäh 1961:115–18), along with that of the Eucharist. People regularly ask for the blessing of their ↗*näfs abbat* with the short absolution (**ይፍቱኝ**, *yəftuñ*, 'Absolve me', the standard answer being **እግዚአብሔር፡ ይፍታ**, *əgziʾabəḥer yəfta*, 'May God absolve you'), especially if a particular event such as having eaten unlawful foods so demands. This does not preclude full P. – including the regularization of one's matrimonial situation if needed – before approaching the sacraments.

The modern procedure is as follows. First, the penitent (Gə^{c}əz **ተነሳሒ**, *tänässaḥi*, Amh. **የንስሐ፡ ልጅ**, *yänəssəḥa ləǧ*) discusses the matter with his/her *näfs abbat* (also called **ነሳሒ**, *nässaḥi*), who gives him/her an appointment and in the meantime prays and fasts for the sinner. On the day agreed, the two meet in a discreet location, usually in the compound of the church, for the three main stages of the sacrament:

1) The confession (**ኑዛዜ**, *nuzaze*).

After an introduction consisting of the sign of the cross and the recitation of the *Our Father* and the *Bäsälamä qəddus Gäbrəʾel*, the confessor addresses the penitent with "My child, it is said in the Gospel 'you who swallow a camel and strain out a gnat'" (Mt 23:24), thereby inviting the person to give a full account of his/her sins. The person, therefore, gives a detailed confession. The priest asks questions, advises, teaches and, finally, imposes the penitence.

2) The penitence (ቀኖና, *qännona*).

The penitent accomplishes the imposed penitence. This may be prostrations, a ↗pilgrimage, ↗alms-giving, ↗fasting (unless it is already a fasting day), a donation of money (divided into three equal parts as alms, donation to the church, and donation to the confessor). The indications of the ↗*Anqäṣä nəssəḥa* (AN) can hardly be applied today, but its exhortations are mostly relevant. The *qännona* is likened to a medicine chosen to assist the penitent in his/her problem and be healed.

3) The absolution (cp. also ↗*Fətḥat*).

When the *qännona* has been accomplished, penitent and priest make a new appointment and talk over issues involved in the sins as well as in the *qännona*. They may then pray the Prayer of Thanksgiving of St. Basil (s. *Mäṣḥafä qəddase* ch. 3, §§31–39) and Ps 51(50) which the penitent may repeat after the priest if he/she is not able to say it alone. Finally, both stand up and turn towards the church, and the priest gives the absolution, saying the first part of the ↗*Fətḥat zäwäld* (*Mäṣḥafä qəddase* ch. 3, §§54–65), then a "prayer of blessing" (*Ṣälotä burake*, ↗Prayers), different from that of the Missal, sometimes adding the *Fətḥat zäʾab* (*Mäṣḥafä qəddase*, *Anaphora of the Apostles*, §§71–88), replacing the general "your servants and handmaids" of the Missal by naming the specific "servant" by the baptismal ↗name of the person. At the end, the priest pronounces the usual dismissal absolution (*Qalä nuzaze*, or *Qalä Səret*) and *Ǝgziʾabəḥer yəfta*, and the penitent kisses the priest's hand-↗cross.

As is common in the Eastern Churches, the formula of the absolution is deprecative, i.e. it is a prayer to God, asking him to forgive the sinner (in the Latin Church it has become indicative or declarative, the priest saying "I forgive you your sins").

P. retains many ancient features: e.g., the penitents must stay outside the church building or even compound until they are reconciled through P.; the stages of P. are distinct: the absolution is given some time after the *qännona* has been fulfilled; the penitence remains difficult; frequent confession has never been known; P. is associated with spiritual direction.

The minister of P. can only be the *näfs abbat* of the person concerned, normally a presbyter appointed to the parish to which both himself and his penitent belong. Any presbyter may absolve by the fact of his ↗ordination (Griaule 1932: 15 [text]), unlike in the Roman or Greek Churches. The sacrament is characteristic in that it involves two persons, the penitent and his spiritual father, who interprets the law (↗Law and Judiciary: Canon law) and gives orientation to the individual in the private forum while the church scholars (cp. ↗*Liq*) deal with legal matters in the public one.

All Christians are expected to confess their sins, including monks (e.g., AN ed. 1986: 18), although some persons think that monks are unable to receive this sacrament since their profession assimilates them to those who have died.

Other forms of P. are:

a) the *Qedär*, or "Baptism of Penance", correponds to the *Qidra* ('Jar') of the Coptic Church (cp. *Mäṣḥafä* ↗*qedär*);
b) the Eucharistic liturgy (↗*Qəddase*) includes several items which refer to P.: the *Absolution of the Son* (*Fətḥat zäwäld*), which is the ancient access to the sanctuary, is used as sacramental absolution of penitents as well as the *Absolution of St. Basil* (*Fətḥat zäʾab*). The *Inclination* (*Mäṣḥafä qəddase*, Anaphora of the Apostles §§66–70) and the *Prayer over the Penitent* (ibid. §§94ff.) originate in the public P. of the ancient Church. The "confession over the censer" is unknown despite the Coptic text (*Mäṣḥafä qəddase*, ch. 3, §§126–30).
c) after the Eucharistic Liturgy of Palm Sunday, a general absolution is given to those present who may die during Holy Week, as according to the ↗*Gəbrä ḥəmamat* no other Church actions but those commemorating the events of the Passion of Jesus Christ are permitted at that time. Priests may absolve again after the service of Easter (↗*Fasika*) or from the end of the service of Good Friday.
d) in the context of the ancient Church, the ↗*Senodos* witnesses to a rite of reconciliation of a penitent who offended a minister through an "anointing of the forgiveness of sins" (BauSen 302 §57).

Periplus of the Erythreaen Sea

The Greek P. (Περίπλους τῆς Ἐρυθρᾶς θαλάσσης, *Períplous tês Erythrâs thalássēs*) is an anonymous seafaring and trading guide to the southern Arabian peninsula, North-east Africa and ↗India, in keeping with the Greek and Roman definition of the “Erythrean Sea” – a larger body of water, inclusive both of the ↗Red Sea and of the Persian Gulf and the Indian ↗Ocean.

The text, not always clear, has been variously dated between the 1st and 3rd cent. A.D., but only the most widely accepted chronology towards the mid of the 1st cent. matches the whole historical evidence yielded therein. The P. is transmitted in an early 10th-cent. minuscule ms. alone: Heidelberg, UB, cod. Pal. Gr. 398, fols. 40v–54v, copied into the 14th/15th-cent. London, B.L. Add. 19,391, fols. 9r–12r.

In spite of several shortcomings and problems of its narrative and lexicon, such a travel writer’s document has been of invaluable use esp. to historians and archaeologists working on the Red Sea area. It is an apparently firsthand description of the latter’s harbours and the trade of their hinterland, as well as the prevailing political situation, by a Greek of ↗Egypt – a merchant or a businessman, possibly a shipmaster, not a man of letters – who was familiar with that area. His guide, a coastal gazetteer written in the (Egyptian) *koiné* of the time, is almost unique in providing accurate insights into what was then known of those parts of the world. It offers dramatic details on the conditions – e.g., the winds (monsoons) – that make ↗trade routes viable and on the goods imported and exported and the relevant bias of local rulers.

The “western” section of the P., devoted to the ↗Horn of Africa (§§ 1–16), has no identifiable tribe names: the inhabitants of the zones between the coast of the Red Sea and the Nile Valley are conventionally styled as *Ichthyóphagoi*, ‘Fish-eaters’, *Bárbaroi*, ‘Barbarians’, *Agrióphagoi*, ‘Wild animal-eaters’, *Moschóphagoi*, ‘Calf-[or: Plant-]eaters’. The P. covers in fact the territories stretching from *Myòs Hórmos* (today’s Quṣayr [al-Qadīm] or, rather, Abū Ša^{c}r) and *Bereníkē* of the Trog(l)odites (Sikkat Bandar), near “the land of the *Bárbaroi*”, down to *Aualítēs* (modern Zayla^{c}) and *Opṓnē* (Ra^{ɔ}s Ḥāfūn), in the “other *Barbaría*” (northern Somaliland), and then to *Menouthías* (Zanzibar or Pemba) and *Rhápta*, “the last mart of *Azania*” (on the estuary of the Pangani River), and the limit of the author’s own knowledge – whence ivory, tortoise-shell and coconut were exported.

After *Ptolemáis* of the Huntings, along the coastal region known as *Trog*(*l*)*odytikḗ* (‘[that] of the Trog[l]odites’), the *empórion nómimon* or ‘port of trade’ (lit. ‘mar[ke]t [town] subject to customary agreement, convention’) of *Áduli* (↗Adulis) is mentioned, “from which to *Kolóē* [↗Qoḥayto], an inland city and the first ivory market, it is a journey of three days; and from this, another five days to the metropolis itself, which is called the Aksumite [*tòn Axōmítēn*]”, this being the first ever reference to Aksum – as the capital of an inland state vs. its “port of trade” – in a historical source. To there all the ivory is brought from beyond the Nile through the district named *Kyḗneion* [↗Q^{w}aḥayn?], and thence to Adulis. Here, it is not safe for foreign vessels to anchor in places directly accessible to the *Bárbaroi* from the Ethiopian mainland opposite the *Alalaíou* (↗Dahlak) islands. A local chief, not necessarily a king of Aksum (rather, of Adulis), named *Zōskálēs* (↗Zoskales), ruling “from the *Moschophágoi* [dwelling before Ptolemaïs] to the other *Barbaría*”, is effectively portrayed as “a miserly man, but of good character, with some acquaintance with Greek literacy".

Equally interesting is the description of the "eastern" itinerary (§§17–35), from *Leukḗ Kṓmē* (al-Wağḥ?), on the Arabian coast in front of *Bereníkē*, to such marts and harbours as *Mouza* (Mawšiğ), inside the straits and to the north of the island of *Dídōros* (Perim/Barīm), with *Okḗlis* (Šayḫ Saᶜīd) on the opposite mainland; then *Eudáimōn Arabía* ('Adan), *Kánē* (Ḥiṣn al-Ġurab) and *Móscha* (Ḫawr Rawrī), a loading point for the Sachalitic ↗incense from ↗Ḥaḍramawt – the realm of *Eleázos* (*Ilᶜazz) – that lies beyond *Sýagros* (Ra's Fartak) and the nearby island of *Dioskorídēs* (↗Suquṭrā). Two inland cities are also mentioned: *Sáuē* (Sawwā, to the south of Ṭaᶜīzz), residence of the "governor" *Chólaibos* (*Kulayb), and *Saphár* (Ẓafār), "metropolis, in which *Charibaḗl* [*Karibaᵓil (Watar Yuḥaᵓim II?)] seats as legitimate king" of both Ḥimyarites and Sabeans. Interestingly, no further harbours or mooring places are indicated until *Apólogos* (al-Ubulla), near *Chárax Spasínou* (the ancient port of Baṣra), and then *Om(m)ána* (Čāh Bahār?), "after sailing by the mouth of the Persian Gulf", where "much diving for pearl oysters" is recorded. There, the route eventually crosses to the Asian continent, i.e. to ↗Iran and India (§§36–37).

Gianfranco Fiaccadori

Perruchon, Jules François Célestin

P. (b. 19 May 1853, Poitiers, d. 23 February 1907, Paris) was a French philologist of ↗Gəᶜəz. He discovered the pleasure of scholarship in his thirties whilst working as secretary for the archaeologist and philologist Monsignore Xavier Barbier de Montault. He then learnt Semitic languages under Jules Paul Deramey at the Sorbonne, Paris, and then studied Gəᶜəz under the direction of Joseph ↗Halévy at the École Pratique des Hautes Études (EPHE) at the Sorbonne.

In 1888, P.'s first academic work was the edition and translation of *Les chroniques de Zarᵓa Yâᶜeqôb et de Baᵓeda Mâryâm, rois d'Éthiopie de 1434 à 1478* (PerrZarY, published in 1893) for which he acquired his diploma at the EPHE. Over a period of 20 years, he published and translated a great number of Gəᶜəz texts into French: the *Vita* of King ↗Lalibäla with a long introduction; the "Short Chronicles" and several short historical texts published in the *Revue sémitique*, whose scientific editor was Halévy. P. completed his career with the edition of the *Mäṣḥäfä ↗məsṭirä sämay wämədr*. Because of partial blindness, he could not proof-read this last publication and entrusted Ignazio ↗Guidi with this task.

P. was a member of the Société Asiatique. He never assumed any academic position and earned his living as a postmaster.

Anaïs Wion

Persia ↗Iran

Person, Urbain-Marie

P. (b. 4 February 1906, Lanarvily, Bretagne, France, d. 9 February 1994, Angers) was a Catholic missionary and bishop. In 1929, he joined the Order of the ↗Capuchins and, in 1932, was ordained priest. In 1950, after 15 years of missionary work in India, he was assigned to Ethiopia.

On 20 May 1951, P. reached Ethiopia, and in May 1952, he was appointed apostolic administrator of the whole Latin Rite territory, i.e. the Apostolic Vicariates of ↗Harär and ↗Ǧimma, and the Apostolic Prefectures of Hossaᶜəna and Nägälli. In July 1955, he was nominated bishop titular of Cyme and Vicar Apostolic of Harär. In 1958, with the consent of the archbishop of Addis Abäba, he chose to reside in Nazret (↗Adaamaa) rather than in Harär, apparently to serve his vast Vicariate from a more central location. During this time he also attended several sessions of the IInd Vatican Council (1962–65).

P. oversaw the extensive reshaping of most of the Catholic ecclesiastical jurisdictions in Southern Ethiopia. In 1957/58 Dutch ↗Lazarists arrived in Wälläga and Mgr. ↗Janssen was nominated Apostolic administrator of ↗Ǧimma. In 1965 Comboni missionaries began to work in Sidamo and in 1972 Mgr. ↗Gasparini became the first Apostolic administrator of Awasa. In 1972, the Capuchin Mgr. Domenico Marinozzi was appointed Apostolic administrator of Soddo-Hossaᶜəna (↗Kämbata and Wälaytta) and in 1980 the Prefecture of Mäqi (↗Dänkäl), where the ↗Missionari della Consolata Order were active since 1970, was created. During this time, leprosaria in Harär, Bisidimo, Gambo and Adallo were also established.

Having a sound knowledge of Amharic, P. compiled a French–English–Amharic vocabulary, a breviary (printed twice), a small catechism, three volumes with homilies for the Sundays of the three liturgical cycles, a Latin Missal and booklets with lives of saints. However, due to the poor quality of the support for his texts most of his production has since perished. A highly gifted orator, with a good sense of humor, P. also had a skeptical attitude towards the Gəᶜəz Rite. He relinquished his post of Apostolic Vicar of Harär in 1982 but stayed on in Adaamaa until 1993, when he returned to France for health reasons.

Tedros Abraha

Peter, Apocalypse of

The A.P. (not to be confused with the homonymous Coptic work from Nag Hammadi, cp. CANT no. 324) is a title given already in antiquity to an apocryphal Greek text (CANT no. 317). Largerly lost in its original Greek (only about a quarter being left), it is preserved in its entirety only in Ethiopic. It is known from two mss. (Paris, BN Abb. 51, 15th–16th cent., from ↗Daga Ǝsṭifanos, and Ṭānāsee 35, 18th cent., from ↗Kəbran Gäbrəʾel). These manuscripts contain an eschatological dossier with the treatise entitled **ዳግም፡ ምጽአቱ፡ ለክርስቶስ፡ ወትንሣኤ፡ ምውታን** (*Dagəm məṣʾatu läkrəstos wätänśaʾe məwətan*, 'The Second Coming of Christ and Resurrection of the Dead'), whose first part has been identified as the Ethiopic version of the A.P. proper. Another theological treatise, written in the same hand, is subsumed under the same title. A separate treatise **በእንተ፡ ኰነኔ፡ ኃጥአን** (*Bäʾəntä kʷənnäne ḫaṭəʾan*, 'On the Judgement of Sinners') concludes the dossier.

Grébaut's 1910 edition of the two treatises (the first one following upon the second) is poor: he did not identify the A.P., and classified the dossier as "pseudo-Clementine", because the second treatise, as well as the second part of the first, following upon the original A.P., are in the form of a teaching of Peter to his disciple Clement. James (1911) identified the first part of the first treatise as the A.P. on the basis of four Patristic quotations, of a Greek fragment found in 1892 in Panonopolis/Akhmim, and of another Greek fragment he discovered in the ↗Bodleian Library (another Greek fragment was identified in 1929 in the Rainer Collection in Wien).

Linguistic analysis reveals Arabic as the immediate *Vorlage* for the Ethiopic versions of both treaties. The A.P. is one of the first documents to describe damnation after death, and so is of paramount importance for early Christian ↗eschatology, and for the history of early Christianity in general. Due to Grébaut's faulty translation, and the fact that nearly all who have studied it were not Ethiopicists, the text has not received sufficient attention (with the exception of Duensing [1913], whose philological notes were unfortunately eliminated from the handbooks which have adopted his translation; and a new translation by Marrassini in EtRicci).

The A.P. proper is a dialogue between the Apostles (above all Peter, the first-person narrator) and Jesus, on the Mount of Olives. They ask him about the signs of his coming in the last days. After warning them against false messiahs, Jesus describes the phenomena accompanying his second coming. The longest part of the A.P. is devoted to the description of various sins and the corresponding punishments due to occur at that time, performed with the help of the angels Ezraʾel, Uraʾel and Ṭəmlakos. To the righteous, baptism and salvation are promised. Afterwards Jesus invites Peter to go to his destiny in Rome. The Apostles ask Jesus to show them some of these righteous men; two of them, Moses and Elijah, appear, shining and beautiful, and afterwards many of the others, in a magnificent garden. After some more passages in glory of God, the Apostles leave the sacred mountain. The A.P. proper ends here.

In the continuation, Peter speaks to his disciple Clement, saying that God has created everything in his glory, even the demons, who previously were angels. The central argument here is salvation after the last judgment (the "second death" in Peter's words): after the punishments following the "first" one all the sinners will be saved, if they believed in Christ; but all this (in Jesus's opinion to Peter, and in Peter's opinion to Clement) must not be divulged, except to the "wise men", because people, knowing that in the end they will be pardoned, might sin even more.

The second treatise (*Bäʾəntä kʷənnäne ḫaṭəʾan*) is also a dialogue between Peter and Clement (Peter referring what has been said to him by Jesus), stressing, through Biblical examples and a continuous glorification of God, that punishments are conceived for final repentance (like those inflicted to children), not for destroying men, who, according to the Bible, are similar to God.

Paolo Marrassini

Petraeus, Theodor

Theodor(us) P. (Petrejus, Petersen; b. ca. 1630, Flensburg, d. 21 December 1672, Copenhagen), was a German-Danish orientalist from Flensburg, son of Peter Dirksen, a citizen of Flensburg.

After visiting the old Latin-School in Flensburg, P. studied at the universities of Leipzig and Wittenberg from 1645, and then in 1647 at Jena University, focusing on oriental languages. In 1650 he became Master of Arts at the University of Leiden in Holland. At this time P. was a colleague and friend of Johann Georg Nissel(ius), with whom he founded a publishing house. From 1654 they both published Gəʿəz ↗Bible (editions) texts and translated them into Latin.

On the recommendation of Stephan Klotz, general superintendent of Frederic III, king of Denmark and Norway, between 1655 and 1659 P. travelled to the Orient. In February 1656 he arrived in Rome, and then went via Greece, Syria, Palestine, where he visited ↗Jerusalem, to Egypt, and stayed in Cairo for two years. His studies focused on many oriental languages such as Arabic, Gəʿəz, Coptic, Persian and Armenian. From this journey he brought back to Europe a large number of original manuscripts in these languages.

On 23 March 1660 P. graduated again from the University of Leiden ("humanitatis ergo"). In the same year he edited the Gəʿəz version of Jonas. There folowed a number of editions and translations of oriental manuscripts until the death of Johann Nissel in 1661. In 1662 P. is assumed to have visited London and stayed there a while, but in his notebooks with translations of Coptic texts he only named Leiden and Amsterdam. In 1664 P. graduated yet again from the University of Leiden ("honoris ergo"). In the following year he moved to Amsterdam, because of the Armenian community there. P. was taught Armenian by the priest "Dn. Garabied Warhabied", with whom he published an Armenian bible in 1666-67. In 1669 P. moved to Copenhagen, where he continued to work on oriental languages until his death.

In the years 1677–79 his Dutch widow Clara Petraeus née von Bülow (Belou) sold all his oriental manuscripts (29 notebooks and 30 printed books) to the Churfürstliche Bibliothek zu Cölln an der Spree. These manuscripts were purchased by Paul Kray, an accredited middleman in Hamburg, but were later transferred to Berlin.

Ṗeṭros

Abunä Ṗ. (**ጴጥሮስ**; d. 1570?) must have arrived in Ethiopia ca. 1551 (204 of the "Era of the Martyrs", s. CRAxum 68; Conti Rossini 1918:7) as the metropolitan (↗*Ṗappas*) to succeed *abunä* ↗Yosab. However, according to a Portuguese report, Ṗ. came when *abunä* Yosab was still alive (BecRASO X, 23ff.; MHAlex II, 61); Ṗ. then became his coadjutor (cp. ↗*Eppisqoppos*), assuming at least some of the metropolitan's responsibilities and becoming metropolitan after Yosab's death (at an unknown date).

Styled in the Chronicle as *liqä pappasat* (lit. 'patriarch'), probably mistakenly or for stylistic reasons, Ṗ. was the high cleric who consecrated the church of ↗Tädbabä Maryam in the 12th year of *aṣe* ↗Gälawdewos's reign, i.e. in ca. 1552 (though the years given in the text result in slightly different dates, s. ConzGal 52ff.). Later, *abunä* Ṗ. celebrated the ↗matrimony of *aṣe* ↗Minas (KrLebD 52; Esteves Pereira 1888:26).

Apart from the annals, *abunä* Ṗ. appears only in one land charter of 1557 issued by Minas to the monastery of May Bärazyo (CRAxum no. 52). The date of Ṗ.'s death is unknown; however, reference is sometimes made to the Chronicle of *aṣe* ↗Śärṣ̌ä Dəngəl which mentions that Yosab died on the 7th year of the former's reign (i.e. 1570). This is supposed to be a mistake or confusion, and *abunä* Ṗ., not Yosab, might be really intended in the text (TedEthPrel II, 1018f.; for the contrary view, s. MHAlex II, 63).

Abunä Ṗ. must have been active during the first years of Śärṣ̌ä Dəngəl's reign. Despite the scarcity of information concerning Ṗ., one has to assume that he had his – probably not insubstantial – role in the gradual recovering of the state during the post-*ǧihād* decades, and in the consolidation of the Ethiopian Orthodox Church. Being a contemporary of *əčč̣age* ↗ᶜƎnbaqom, he may have been behind the unique Arabic translation of the Vita of *abunä* ↗Täklä Haymanot, prepared for the Alexandrian Patriarch Gabriel VII (1525–69), who had consecrated Ṗ. metropolitan (cp. Nosnitzyn 2000).

Denis Nosnitsin

Ṗeṭros

Abunä Ṗ. (**ጴጥሮስ**, or P. III; d. 10 March 1607) was the 93rd or 94th Coptic Metropolitan (↗*Ṗappas*) of Ethiopia.

Ṗ. was the successor of *abunä* ↗Krəstodolu and must have arrived in Ethiopia during the reign of *aṣe* ↗Śärṣ̌ä Dəngəl in ca. 1590. When Śärṣ̌ä Dəngəl died in 1597, a conspiracy resulted in the enthronement of his seven-year-old son ↗Yaᶜəqob, against the Emperor's will, who had planned his nephew ↗Zädəngəl as his heir.

When several years later Yaᶜəqob started manifesting an independent spirit, Ṗ. excommunicated him; in 1604 Yaᶜəqob was deposed and confined to ↗Ǝnnarya, and Zädəngəl came to power.

When Zädəngəl started showing Catholic leanings, Ṗ. excommunicated him as well. Shortly thereafter Zädəngəl was deposed and killed.

During the subsequent succession struggle between *aṣe* ↗Yaᶜəqob and ↗Susənyos, Ṗ. was on the former's side. He accompanied Yaᶜəqob in his campaign in 1605, staying at the camp at ↗Č̣äč̣äho. There, on 23 April 1606, Ṗ. was wounded in battle. He was killed alongside his patron in Susənyos's victorious attack at Gʷäl (Gol) on 10 March 1607, by soldiers who allegedly mistook him for an Ottoman.

Susənyos later accused Ṗ. of having had an adulterous relationship with the wife of a Melchite, but there is no proofs for this allegation.

Ṗ. was succeeded by *abunä* ↗Səmᶜon.

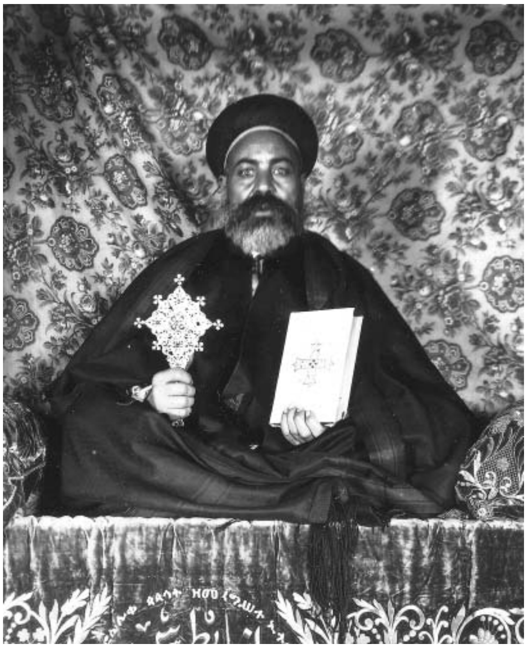
Evgenia Sokolinskaia

Peṭros

Abunä P̣. (ጴጥሮስ; d. 20 October 1917, Ǝtissa Däbrä Ṣəllaləš, Bulga) was a metropolitan (↗*P̣ap̣pas*) of the ↗Ethiopian Orthodox (Täwaḥədo) Church; he appears as P̣. VII in the traditional lists (s. Ḫəruy Wäldä Śəllase 1928/29: 96; Märsəᶜe Ḫazän 1964/64: 128) and P̣. IV in the historically reconstructed lists (MHAlex I, 45, II, 4).

Because of hostilities between Ethiopia and Egypt, ↗Yoḥannəs IV could not ask for a replacement for *abunä* Atnatewos for four years after the latter had died in 1876. In January 1881, Yoḥannəs sent 12,000 Maria Theresa thalers to Cyril V, the patriarch in Egypt, followed in June by a delegation of leading ecclesiastics with rich gifts for the patriarch and for the ruler of Egypt (ZewYohan 108f.), with the request for four bishops. On 29 October, P̣. was chosen as metropolitan, and together with three bishops, ↗Luqas, ↗Marqos and ↗Matewos, arrived in ↗ᶜAdwa (BTafY 151ff.). Marqos soon died, and Luqas and Matewos accompanied ↗Mənilək II to Šäwa in 1883 after the latter had defeated *ras* ↗Täklä Haymanot of Goǧǧam at the battle of ↗Ǝmbabo.

P̣. set up his residence at ↗ᶜAddi Abun, but accompanied the royal court in its moves. He was in ↗Mätämma during the battle of 9 March 1889 and beside Yoḥannəs at his deathbed when the Emperor bequeathed his throne to *ras* ↗Mängäša. P̣. thus supported Mängäša against Yoḥannəs's other nephews (HerTar 186–89). When Mənilək was crowned by Matewos on 3 November 1889, P̣. was in Däbrä Tabor. On 28 January 1890 he expressed his loyalty to the new Emperor in Yäǧǧu. On his return from a campaign in Təgray (GueCopMen 284), Mənilək sent Luqas to Goǧǧam and fetched P̣. to Addis Abäba where he was to carry out his functions alongside Matewos (Caulk 2002: 253). Matewos, however, desired a higher status, which was endorsed in 1891. The country was divided between the two metropolitans, P̣. receiving Təgray, Lasta and Wag, as well as Eritrea, and Matewos the rest. P̣. had to accept this (Caulk 2002: 253) and to wait until the political problem of Təgray was settled. He returned to ᶜAddi Abun in 1903 (GueCopMen 305; Martini 1943: 309).



The metropolitan *abunä* Peṭros in the early 20th cent.; photo courtesy of the Peter the Great Museum of Anthropology and Ethnography of the Russian Academy of Sciences, St. Petersburg (no. 349-114)

Because of his jurisdiction over Eritrean churches, the Italians gave him their attention. On 27 April 1906, ↗Martini made a detour to call on him on his way to Addis Abäba. His diary records the negative impression P̣. produced (Martini 1943: 311f.), in contrast to positive view he gained of Matewos (s. Prouty 1986: 287).

In 1914, P̣. was brought to ↗Däse to live as the bishop at the court of *nəguś* ↗Mikaʾel Ali, his jurisdiction now including Wällo. P̣. crowned Mikaʾel on 31 May 1914. When the latter marched to Šäwa in October 1916 (after the ↗Coup d'état 1916 and the deposition of his son *ləǧ* ↗Iyasu), P̣. accompanied him with the *tabot* of St. ↗Mary. He was with the *nəguś* during the Battle of Sägäle, calling on the Wällo soldiers to fight valiantly. When the battle was lost, according to one unconfirmed tradition, Mikaʾel sent P̣. to negotiate the terms of submission (Gobäze Ṭaffätä 1996). When he surrendered together with the *nəguś*, P̣. was treated very well by the victors under *ras* Täfäri Mäkʷännən (future *aṣe* ↗Ḫaylä Śəllase I), being transferred immediately to the care of *əččäge* ↗Wäldä Giyorgis. In Addis Abäba, he was handed over to *abunä* Matewos in whose palace he lived for some time. Finally, he was sent to the monastery of ↗Ǝtissa Däbrä

Ṣəlaleš, while fully maintaining his status as a bishop.

Shiferaw Bekele

Ṗeṭros

Abunä Ṗ. (**ጴጥሮስ**; b. 1882, Fəčče, Šäwa, d. 30 July 1936, Addis Abäba) was one of the first four Ethiopians who were officially ordained as bishops in 1928. He became a ↗martyr of ↗Resistance against the Italian occupation (1936–41). Born as Ḫaylä Maryam to a family of farmers, Ṗ. received traditional ↗education at the monastery of ↗Däbrä Libanos where he took the monastic vow in 1916.

Ṗ. lived in monasteries in Wašära (↗Goǧǧam), ↗Gondär and ↗Boru Meda. He started his teaching career at the monastery of Məskabä Qəddusan in Sayənt, ↗Wällo and later he moved to Däbrä Mänkərat monastery in Wälaytta, authorized by the church as the teacher in charge. In 1924 he was assigned as the main instructor at Däbrä Maryam monastery on an island in Lake Zʷay. In 1927 he was assigned as ↗*mämhər* of Mänbärä Ləᶜul Marqos church in the compound of ↗Gännätä Ləᶜul where he became the father confessor of *däǧǧazmač* Täfäri (later *aṣe* ↗Ḫaylä Śəllase I). His knowledge, devotion and intimacy with the Imperial family led him to be one of the first four Ethiopian clerics chosen to be ordained as bishop in 1928. Ordained at St. Mark Monastery in Alexandria with the title ጳጳስ፡ ዘምሥራቀ፡ ኢትዮጵያ፡ ተላዌ፡ አሠሩ፡ ለአቡነ፡ ኢየሱስ፡ ሞአ (*Ṗaṗṗas zäməśraqä ityoṗya tälawe aśäru läʾabunä Iyäsus Moʾa*, 'Bishop of Eastern Ethiopia and follower in the footsteps of *abunä* Iyäsus Moʾa'), Ṗ. was appointed over the district of ↗Mänz and in the province of Wällo. His episcopal head office was in ↗Däse.

When Italy invaded Ethiopia in 1935, Ṗ. like most of the high ranking church officials of his time joined *aṣe* Ḫaylä Śəllase I in his defense march to ↗May Č̣äw. When the emperor left the country, Ṗ. decided to remain with the patriots. Based in his monastery, at Däbrä Libanos, Ṗ. continued to encourage the patriots to fight for the independence of their country. On 28 July 1936 Ṗ. took part in the plotting to attack the fascist army in Addis Abäba from the four corners of the capital. He himself joined the resistance fighters of ↗Säläle from the northern side. In spite of the fierce fighting which caused great losses in the enemy's camp, the Sälale patriots led by *däǧǧazmač* ↗Abärra Kaśa (s. EAE vol. 5) and other groups had to retreat, but Ṗ. was captured by the Italians. On 30 July 1936 he was publicly executed by eight Italian Carabinieri in the centre of Addis Abäba. After the Liberation Ṗ. was officially sanctified by the church as a martyr.

As a reminder of Ṗ.'s courage of standing against the Italian opression two statues of him were erected in his memory, one in Addis Abäba (s. ill.) and one in ↗Fəčče. Since he is an officially canonized martyr a ↗*tabot* was consecrated in his name and a

Statue of *abunä* Ṗeṭros of Wällo, churchyard of the Gännätä Ṣəge Giyorgis cathedral, Addis Abäba; photo 2004, courtesy of Wolbert Smidt church was built. Ṗ. also became the subject of at least two theatre plays. He is venerated on 22 *Ḥamle*.

Ṗeṭros

Abunä Ṗ. (**ጴጥሮስ**, birth name Mäḥari Tərfe; b. 12 August 1908, Däbrä Elyas, Goǧǧam, d. 6 July 1968, Jerusalem) was an Archbishop of ↗Səmen and the ↗Bägemdər Diocese of the ↗Ethiopian Orthodox (Täwaḥədo) Church.

Born to *mämhər* Tərfe and *wäyzäro* Ṭəhut, Mäḥari received traditional ↗education (including ↗*zema bet*, ↗*qəne bet* and part of the commentary) at the monastery of ↗Däbrä [Gännät] Elyas under *märigeta* Śahlu and *mämhər* Gäbrä Śəllase. On completion, he was appointed ↗*aggafari* and chief of documentation. His ↗*qəne* teacher also made him the head student.

Mäḥari Tərfe later went to Addis Abäba where he joined the ↗*mäṣḥaf bet* of *aläqa* Ḫəruy at Mäkanä Śəllase Church. Mäḥari started teaching N.T. commentary at the same parish and the Holy Trinity School (cp. ↗Holy Trinity Theological College).

As part of *aṣe* ↗Ḫaylä Śəllase I's policy of church reform and modernization, Mäḥari Tərfe was one of the traditional scholars who in 1935 [1942/43 A.D.] took the English language course at the ↗Gännätä Ləᶜul palace. In 1943 [1950/51 A.D.] he was sent to Cairo to learn Arabic. After three years, on his return he became the head of Bäᵓata Maryam Monastery (Mausoleum of *aṣe* ↗Mənilək II) in Addis Abäba, with the title *liqä liqawənt*. While in office, he authored and published, with the help of an imperial grant, a number of books (e.g., 1953/54, 1955/56, 1958/59). For this and other contributions, he received different awards from the Emperor.

Mäḥari Tərfe built a house for the *liqä liqawənt* in the compound of the Kidanä Məḥrät church adjacent to the palace (↗*Gəbbi*). After the ↗Revolution, the house was confiscated by the *Därg* and still used as the residence of the head of state. Mäḥari Tərfe was also appointed member of the Senate. On 24 July 1960, he was ordained Bishop (↗*Ṗappas*) of Səmen and Bägemdər and assumed the name Ṗ.

Due to health problems, Ṗ. was sent to ↗Jerusalem for treatment but died there. He was buried at the Ethiopian Monastery of Täklä Haymanot in Jerusalem.

Mersha Alehegne

Philip

P. (**ፊልጶስ**, Filəppos) is a N.T. character (Acts 8). He rose to early prominence in the Jerusalem church. After successful preaching in Samaria, he met an eunuch through divine guidance on the Gaza road and converted him to Christianity. The Greek and the Gəᶜəz B-text of the *Acts of the* ↗*Apostles* describe the eunuch as an "official of the treasury" of ↗Candace (a Nubian regent, generically identified as the queen of Ethiopia), thus "Ethiopian" was a frequent epithet of the eunuch.

In the earliest Gəᶜəz text a mistranslation presents the eunuch as the "governor of Gaza", which subsequently influenced the ↗*Kəbra nägäśt* narrative.

P. alledgedly had four unmarried daughters who were prophetesses. In later Acta, some of these details were transferred to the story of St. Philip the Apostle (cp. *Gädlä* ↗*ḥawaryat*).

Curt Niccum

Philology, research in

P. (from Gr. φιλολογία, *philología*, lit. 'love for words', then 'love for literature', more widely, 'love for culture, knowledge') has had a range of meanings corresponding to traditional fields of studies: Classical P., either as the total reconstruction of classical antiquity (according to Wolf 1807 and others) or as text-criticism and hermeneutics (according to Gottfried Hermann [1772–1848]); Romance P., altogether as the linguistics and text-criticism of Romance languages and literatures; Semitic P., either as the study of the oldest Semitic cultures or as historical and comparative Semitic linguistics; Old and New Testament P., mainly as text-critical study of the ↗Bible.

Yet, the two main focuses of P. are the study of texts in all possible senses on the one side (i.e. text-criticism and literary studies, including historical, as well as the general reconstruction of a civilization through its written culture), and the study of the language through linguistic methodology on the other (i.e. historical and comparative linguistics, including linguistic typology and linguistic palaeontology, for the analysis of a civilization and the reconstruction of its prehistory and cultural drifts: e.g., in Indo-European and Semitic studies since the 19th cent.).

The question of the relationships between P. and linguistics risks being overshadowed by the ambiguity of the definition of the former. A still tenable distinction was proposed by Wilhelm von Humboldt (1836: 202 = 1907: 173f.), according to whom the role of P., whilst not ancillary, is that of "processing" ("Bearbeitung", to be clearly distinguished from "Befund", cp. Hahn 2001: 52) the "linguistic documents" themselves, which clearly requires different skills and methods from linguistics. This "processing" is the specific feature of P. and is accomplished at the highest level by text editing, i.e. by textual criticism, whilst P. also and normally considers the whole evidence necessarily implied by textual analysis itself (not only stemmatical, or even codicological and palaeographical, but also historical, linguistic, literary, religious, institutional, social, etc.). Accordingly, with reference to the specific importance of written documents in a given scientific context or field, P. might actually pursue the same aims that are considered to be proper to such disciplines as history, linguistics, etc., depending upon the respective relevance and importance of specific sources subject to philological analysis.

In ↗Ethiopian studies, P. developed with the same degree of uncertainty in strictly defining its own field vs. linguistics and history as in other Oriental studies (no comprehensive history of Ethiopian P. has yet been written, but cp., e.g., CRStor 9–30; Kračkovskij 1955: 45–79; Hammerschmidt 1970; Marrassini 1987: 348ff., 1996: 371ff., 2008a: 268f., 272f.; for Oriental texts in general, Pfeiffer – Kropp 2007). Yet, while in the course of time some branches of Oriental P. (e.g., Indology, and to much lesser extent Islamic studies, cp. Witkam 1988) have proven more sensitive to developing a critical method akin to that brought about in Classical, New Testament, and then German and Romance studies from the Renaissance up to the 19th cent., most of the great scholars of Ethiopian studies (e.g., ↗Ludolf, ↗Dillmann, ↗Guidi, ↗Conti Rossini, ↗Littmann, with the sole exception of ↗Cerulli) had no proper editorial consciousness; they did edit texts, but usually with little effort towards theoretically defining their own P. This drawback was less pronounced in the field of Biblical studies, where the editions by Ludolf, Dillmann and even Robert Henry Charles respected the standard of coeval editions of classical texts and were methodologically far more advanced than those by some of their successors (cp. Marrassini 1999: 240f.).

Since the second half of the 19th cent. editorial reconstructive approaches (such as those currently under the name of Karl Lachmann [1793–1851], yet slowly developed over the centuries in the field of N.T. and Classical Studies, cp. Timpanaro 2006, and brought to completion by the Romanist Gaston Paris [1839–1903], cp. Fiesoli 2000) and the critical reaction to them (such as that by Joseph Bédier [1864–1938]) evolved and confronted each other. All this time, Ethiopianists neither took any explicit part in the discussion (theoretically or practically), nor examined in detail the peculiarities of Ethiopian textual tradition under a properly philological profile. For a century, "Ethiopian P." tacitly implied the study of written Ethiopian sources (with the due prominence of ↗Gəᶜəz as the essential tool for any serious approach to Ethiopian studies, cp. Conti Rossini 1937: 98f.), usually integrated with linguistic, archaeological and historical evidence, as well as oral sources, vaguely in keeping with the Wolfian tradition of Classical P. (as still maintained, e.g., by Lusini 2005), but with the addition of strong positivistic elements, also out of a colonialist attitude. Moreover, no clear distinction between P. and linguistics was applied (although with no ambiguity in "linguistics"), and comparative linguistics was systematically included under P. Conti Rossini (1914: 1ff.), e.g., dedicated his work to ↗Reinisch as the "founder of Hamito-Ethiopic philology", even opposing "philological documents" (i.e. oral sources and the evidence of historical linguistics) to "texts containing traditions or historical legends". In his panorama of philological researches, Conti Rossini (1937: 98) considered both linguistic and properly speaking text-critical studies; he repeatedly assumed P. and history as "keywords" of Ethiopian studies (this becoming in the course of time the scientific programme of the ↗*Rassegna di Studi Etiopici*), P. meaning here, again, both linguistics and textual studies (Conti Rossini 1944–45: 3ff.). Still in the early 1950s, "text-critical P." was used in a rather derogatory sense as opposed to "history" (cp., e.g., Monneret de Villard 1950: 514).

This disregard for P. as text-criticism resulted in Ethiopian studies in the easier practice of the so-called "base manuscript method", with all its variants (cp. Draguet 1977; the same happened in the philological studies of the Christian Orient in general; for exceptions cp. Bausi 2008: 23, n. 14). This "method" has been by large the most frequently applied in purported "critical editions" (including the series ↗*Corpus Scriptorum Christianorum Orientalium* and ↗*Patrologia Orientalis*), with no preliminary investigation into its adequacy for the average characteristics of text transmission in Ethiopia, which does not normally appear to exhibit the relevant peculiarities (free textual variations, fluid tradition, extreme linguistic variety, etc.) that might in some cases justify its application. On the contrary, both for Aksumite and post-Aksumite texts, notwithstanding occasional phenomena that can occur in every written tradition or very particular classes of texts, there is a sound basis for the application of reconstructive principles: different recensions of the same text frequently occur, but usually each of them has its own well-defined manuscript witnesses; scribes do not systematically change the received text, neither do they correct its errors, and above all, this phenomenon does not apply each time a manuscript is copied; the language of the Ethiopic texts is very stable compared to the linguistic variation seen in the tradition of Romance texts. All these features admit philological analysis on the basis of errors (shared innovations).

Starting from the 1980s, there have been the first attempts at applying the "neo-Lachmannian" reconstructive method to Ethiopian non-Biblical texts (punctuation being also considered in some recent editions): only a partial innovation, since the method has been used for over a century in other fields (cp. Marrassini 1981; 2008b). This method implies the tentative complete survey of all the direct and indirect witnesses of the text (*recensio*), the individuation of their genealogical relationship established on the basis of conjunctive errors (*Leitfehler*), the establishment of the text through the criterion of most manuscript families, and the assumption of the critical edition as a scientific hypothetical reconstruction of the original text as proposed by the editor (cp. Bausi 2006: 544ff., 2008: 24ff.). Other approaches (e.g., Kropp 1989), albeit not perfectly reconstructive, have given new, fresh attention to the history of manuscript tradition ("Textgeschichte").

Little is known of indigenous philological practice and terminology, the study of which is one of the most urgent desiderata of Ethiopian P. (for the field of Arabic studies cp. Gacek 2001). Some lexical elements emerge in the Roman New Testament edition of 1548 (↗Bible Gəᶜəz editions; ↗Täsfa Ṣəyon), where the manuscript exemplar and its copy are called *ab* ('father') and *wäld* ('son'), respectively (fol. 157; cp. Ludolf 1691: 297, no. xxvii, 1): a terminology with no parallel in the Humanist tradition (cp. Rizzo 1984). In turn, Dillmann seems to translate the Gəᶜəz term *ab* as 'archetype', i.e. in proper Lachmannian terminology (cp. DillmLex 754f., 1022 s.v. *ᶜasab*). The same concepts are also expressed in Gəᶜəz by *śərw*, 'exemplar', and *ᶜəlwät*, 'copy' (cp. ibid. 242, 954).

No proper philological activity (unless the term P. is very extensively applied) seems to have taken place in Ethiopia in pre-modern times or in traditional contexts. Revisions, rewriting, retranslating, conflation and contamination are attested (not only for the Bible, but also for patristic and hagiographic texts), but such procedures (of which in some cases we can guess the ideological, practical and linguistic motivations) are not to be considered P. but rather testify to the general attitude of scribes towards their texts. On the other hand, even extensive collations (necessarily implying a closer look at texts, besides pure writing, translating and copying) were not primarily intended to revise and correct the texts, but simply to collect variants: the same happens in the ↗*andəmta* commentaries, where different interpretations, as well as various readings (implied by the interpretation itself), are recorded and amassed. If philological activity was practised in Ethiopia, it was only (with the exception of the Bible and a few other cases) within the frame of traditional hermeneutics (↗Bible commentary traditions; cp. Bausi in preparation).

Phonograms, collections of

P. (phonographic sound recordings) were first produced with an Edison-Phonograph in the late 19th cent. Probably among the first P. recordings in Africa were two message from *aṣe* ↗Mənilək II and his wife *ətəgə* ↗Taytu Bəṭul in 1899. The year before, Queen Victoria II had sent a personal recording to the Emperors, as well as wax cylinders and a P. for them to respond. The cyclinders form the Emperors, recorded with the help of Alfred ↗Ilg, are preserved in the Royal Library at Windsor Castle (Abraham Demoz 1969: 251).

The Berlin Phonogramm-Archiv, founded in 1900, holds several collections of wax cylinders recorded in Ethiopia in the first decades of the 20th cent. These invaluable recordings represent the earliest recordings of Ethiopian music which deserve safeguarding and preservation. The first collection stems from Felix ↗Rosen, brother of the German imperial envoy Friedrich Rosen. Rosen recorded songs of ↗Amhara, ↗ᶜIssa, ↗Somali and ↗Təgrəñña ethnic groups on 45 wax cylinders in 1905. Erich Kaschke (1873–1910), a member of the ↗Deutsche Aksum-Expedition, made phonographic recordings of Amhara and Təgrəñña music in 1906; all are, in addition, documented in writing in the original language. The German Legationsrat Fritz Weiss recorded

Max Grühl and his team recording music with a phonograph during the Käfa expedition (1925–26); photo from Grühl, 1935 pl. 31

35 cylinders during his stay in Ethiopia 1921 to 1924, and Max ↗Grühl completed seven cylinders in 1926 during the German Nile–Lake Rudolf–Käfa-Expedition. Information about these recordings is supplied in the accompanying documentation and correspondence.

The P. of Berlin focus on music. They provide a survey of traditional songs, public performances, musical instruments and short examples of texts. Today the collections belong to the Department of Ethnomusicology in the Ethnographical Museum and National Museum in Berlin, and are part of the early cylinder recordings inscribed in the UNESCO list "Memory of the World" in 1999.

Other P. collections are found in Sweden and Austria. A collection recorded by the Swedish missionary Gustaf Richard ↗Sundström comprises 30 cylinders from about 1912. The Vienna Phonogrammarchiv holds phonograms of Gə^{c}əz, recorded in 1912 in Cairo and Jerusalem by R.A. Péter and G. Klameth.

Susanne Ziegler

Photography, history of

Since its beginnings P. has contributed considerably to scientific research; ↗archaeology documented its findings in P. already from the late 19th cent. (e.g., DAE I–IV), and ethnographical research heavily relied on P. and still does (e.g., VSAe I–III). In recent years, historical photos have been used to trace environmental change (e.g., Nyssen et al. 2009). Especially since the 1980s photographic collections concerning Ethiopia and Eritrea have been used by researchers as historical documents and sources (Triulzi 1988; 1995).

Photographs can be traced in public and private collections in Ethiopia or abroad, especially in Italy, the United Kingdom, France, Germany, the United States, Switzerland, but also in other countries. The photographers had very different backgrounds – amateurs or professionals, missionaries, craftsmen, colonialists, scientists, businessmen, Europeans, Indians, Ethiopians and others. Photographers of the Horn had various interests and cultures that led to a very diverse production.

Photos of Ethiopia can today be found in private collections, ↗museums, ↗libraries, and P. agencies. They are conserved as originals (mostly on paper but also dry plates, stereoscopic glass slides, etc.), as printed photos from books, or kept in electronic data bases. One of the most important collections belongs to the ↗Institute of Ethiopian Studies in Addis Abäba. The Istituto Italiano per l'Africa e l'Oriente in Rome and the University "l'Orien-

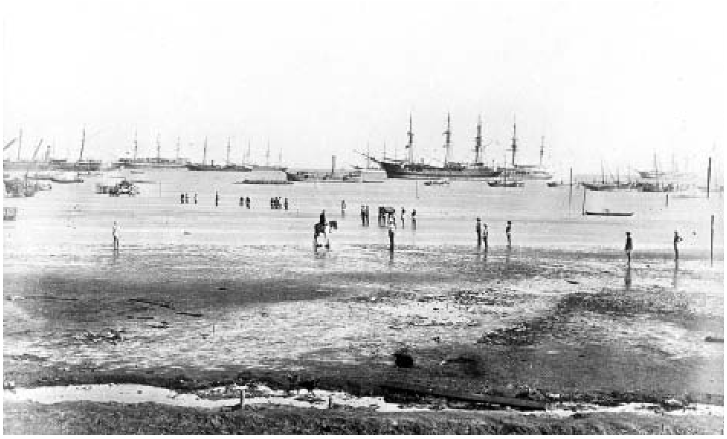

Fig. 1: Detail from a panorama photo showing the Napier expedition's fleet at Zula bay; photo 1867/68, Agfa Fotorama, Wallraf-Richartz-Museum, Köln

tale" in Naples possess a great number of pictures of Eritrea and Ethiopia (Palma 1996; 2005). The Völkerkundemuseum of Zurich University keeps the photographic collection of Alfred ↗Ilg of some 1,000 silver bromide gelatine dry plates and stereoscopic glass slides (Biasio 2004). In France there are numerous public and private collections, e.g., in the ↗Bibliothèque nationale (Hirsch – Perret 1995). In Germany, an important collection of ethnographic photos is kept by the Frobenius-Institut in Frankfurt/Main. The Kunstkamera of the Peter the Great Museum of Anthropology and Ethnography of the Russian Academy of Sciences, St. Petersburg, preserves 19th- to early 20th-cent. photos of Russian travellers. In Canada, the electronic database DEEDS conserves thousands of photographs of Ethiopian cultural sites for scholarly use.

P. was first used in Ethiopia in 1859 by Henry ↗Stern, a Protestant missionary, who took pictures of people and places. Most photos seem to have disappeared but are known from the engravings he published in 1862. The British expedition of 1867–68 next made an extensive use of the camera (cp. fig. 1). Seven professional photographers attached to the troops took pictures of military interest, but also of Ethiopian personalities (e.g., the son of ↗Tewodros II, ↗ᶜAlämayyähu), of settlements and landscapes (some of them were published in Pankhurst – Gérard 1996: 19ff.; s. also Gräber 1999). Following the advances in photographic technique, the number of amateur photographers increased in the last quarter of the 19th cent. Explorers, craftsmen, businessmen and missionaries visiting the coastal regions (↗Eritrea; ↗Djibouti) and ↗Šäwa, ↗Ogaden, ↗Käfa, ↗Ǧimma, ↗Somali, ↗Təgray etc. produced photographs, some for use in travel literature, thanks to the advance of ↗printing technology. E.g., the impressive photographs of the Italian Secondo Bertolani from the early 20th cent. were – and still are – published in many books both in Ethiopia and abroad (GueCopMen).

The young Eritrean colony witnessed the first photographic studios. The photographers Luigi Naretti, Giovanni and Francesco Nicotra or Ledru Mauro from Messina established themselves in ↗Massawa from 1885. Up to 1897 they mostly photographed military topics, following the colonial expansion of Eritrea. Sometimes authorized by the Ministry of War to follow the Italian troops inside the country, some photographers provided information about the colonial conquest, such as Luigi Fiorillo (Goglia 1989: 17). The military commanders were eager to promote propaganda about the success of their operations, or used photography to identify brigands (Palma 2005: 42). The first photographic production was therefore devoted to Italian achieve-

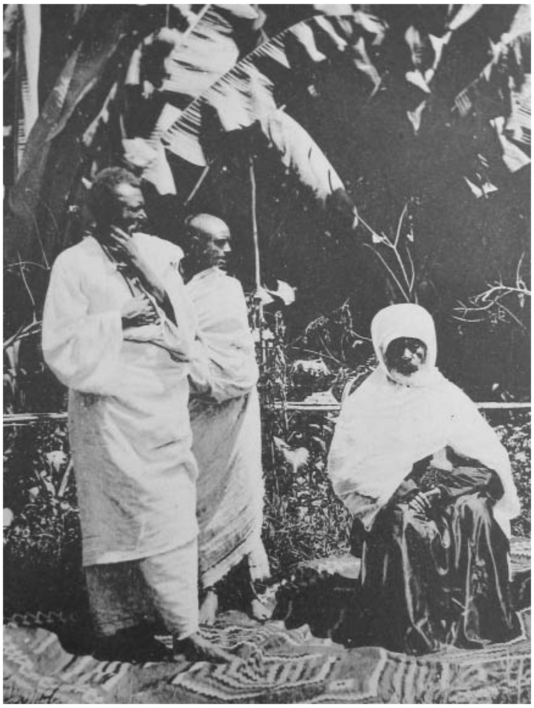

Fig. 2: A photo of the *əččäge* Tewoflos by Naretti, ca. 1880s; from GueCopMen 144

ments, views of Massawa, native troops but also to arrested persons, trials or to chiefs who allied themselves with the Italians (Palma 2005: 46). The most important photographer of this period was Luigi Naretti (cp. fig. 2). He photographed such personalities as *ras* ↗Mängäša Yoḥannəs in Mäqälä (GueCopMen 1, 352), and also the palace of the ruler ↗Yoḥannəs IV, built by his cousin Giacomo ↗Naretti (Palma 2002). Like the other photographers, Naretti published his pictures as postcards for sale in the colony, or sold them to the growing Italian illustrated ↗press. P. then contributed to the construction of a greater consensus among the still very much divided public in favour of colonialism (Palma 2005: 40). After the turn of the 20th cent., new photographers arrived in Eritrea in a more peaceful context and photographed the local population, daily life and the city rather than officials. Considerable expansion of P. took place in ↗Asmära during the conquest of Ethiopia in 1936.

In Ethiopia, the first studio was opened in Addis Abäba in 1905 by Bedros Boyadjian. During a visit together with the archbishop of the Armenia Church of Jerusalem, he was asked by *aṣe* ↗Mənilək II to stay in Ethiopia. The establishment of the Armenian Levon Yazidjian from the ↗Ottoman Empire followed in 1909, then that of the Indian G. Mody. P. expanded significantly in the 1920s, with the opening of several studios by foreigners, mainly along Ras Mäkʷännən Avenue (Pankhurst – Gérard 1996: 36). Some professionals also practised provisionally in the country, especially during national events such as the ↗coronation of ↗Ḫaylä Śəllase I in 1930, for instance the German Josef Steinlehner. Several photographers also began offering cheap "minute photographs" in the market area (Pankhurst – Gérard 1996: 36), but P. remained a luxury product before the Italian invasion.

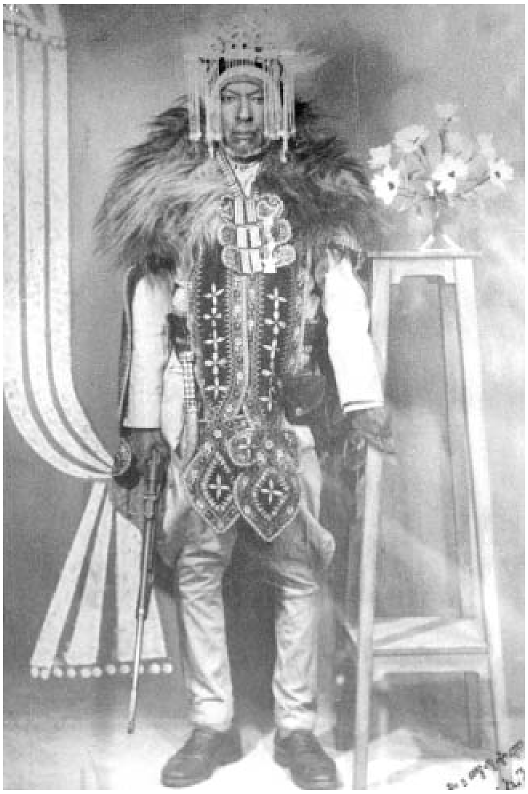

Fig. 3: *Fitawrari* "Wazazu Atefek" (Wäzäzu [?] Aṭäfk), postcard printed in Ethiopia; photo 1930s, unknown photographer, from the collection of the IES (W no. 149)

From the beginning, P. played a role in the political life of the Horn. Yoḥannəs IV was the first ruler to have been portrayed by a camera, both alone and with his son ↗Arᵓaya in the 1880s. Mənilək II and his successors then made consequent political use of the new medium, and their portraits are countless. In the beginning, Mənilək II used the skills of amateur photographers from the 1880s such as Alfred Ilg or of Secondo Bertolani, an employee of the Italian legation. After 1905 Bedros Boyadjian and his successors Haïgaz and Tony Boyadjian became the official photographers of the court for more than half a century. Photos of Mənilək II, ↗Zäwditu, and Täfäri (later *aṣe* Ḫaylä Śəllase I) also led to such by-products as postcards, coins, medals (↗Orders and decorations) and ↗stamps. They also led to a change of style in royal portraits in church ↗paintings (Sohier 2007; e.g., *nəguś* ↗Mikaᵓel Ali with an imperial crown in a miniature in a ms. of Däbrä Hayq Əsṭifanos, after a photo, s. Smidt 2008). The creation and use of these pictures were part of the sovereigns' answer to the deep political and geographical transformation of these times and to the defence of their independence from colonial conquest. The use of P. formed part of a wider symbolic policy that included other means such as texts and ceremonies (Sohier 2007). P. was also used as evidence during political or judicial problems, including for the purpose of political defamation: for example, a modified photograph of *ləǧ* ↗Iyasu in Muslim dress, produced by Levon Yazedjian, contributed to his fall in September 1916 (Berhanou Abebe 2003; however, a photo

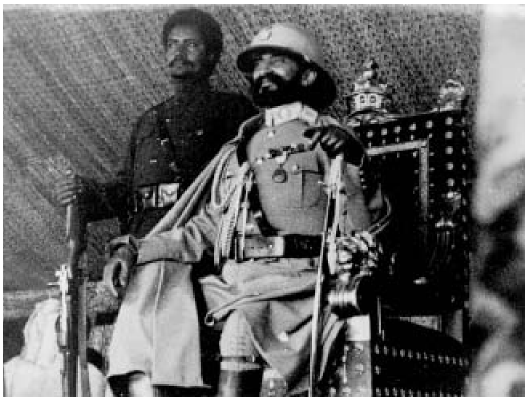

Fig. 4: Ḫaylä Śəllase's mobilization during the Italian conquest, photo 1935/36, unknown photographer, 1935–36; from the collection of the IES (S1, no. 12)

portrait of *nəguś* Mikaʾel, said to be a falsification [s. Berhanou Abebe 2003] was in fact a real photo, s. Smidt 2008). Numerous modifications were also done for purposes of layout and clarity.

Beginning with the death of *ras* ↗ Mäkʷännən in 1906, it also became customary to display a photographic effigy of the deceased during the funeral procession, whenever such a portrait was available (Pankhurst – Gérard 1996:30).

P. and its by-products were also widely used by the Italian government to legitimize the colonial conquest of Ethiopia in 1936. The Istituto LUCE was established in Asmära and transferred to Addis Abäba after the conquest. 7,000 negatives had by then been reproduced, and were distributed in 350,000 copies, 60,000 metres of film were shot and 18 documentaries produced (Goglia 1989: 34f.). P. was the tool of carefully produced propaganda and contributed to the popularity of the conquest in Italy. Erotic pictures of Ethiopian women were also designed to appeal to Mussolini's soldiers, but were withdrawn after the establishment of a policy of racial discrimination in ↗ Africa Orientale Italiana (↗ Sexuality). Alongside the official photographic production, many Italian soldiers also used their own cameras to record their adventures (e.g., Steinacher 2006). Photos of massacres were also taken, and then published after the war as evidence of the violence used by the fascist troops (Kali-Nyah 1946). But the main part of Italian photographic production during the occupation was dedicated to their huge construction works.

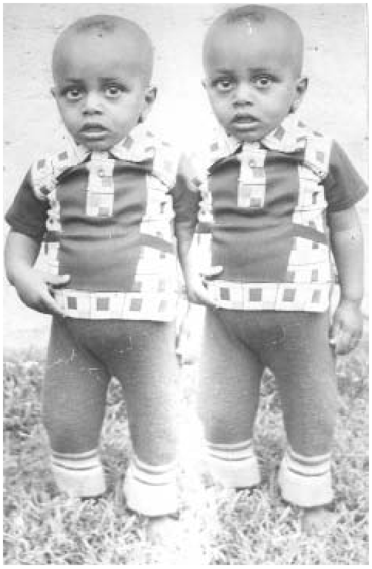

Fig. 5: Photographed on commission: Studio "Photo Matéwos", Mätähara, 1977; private collection

At the same time, the followers of Ḫaylä Śəllase also used P. to support their struggle. The Austrian Arnold Weinhold took pictures of Ethiopian ↗ resistance fighters (Pankhurst – Gérard 1998: 144), whilst British photographers documented the troops of the King of Kings and his return to Ethiopia. These images were reproduced in different mediums (books, church paintings) by the Ethiopian royalty after 1941 to justify its behaviour during the war (cp. fig. 4). Later, a defamatory photographic campaign was, in turn, used against Ḫaylä Śəllase by his adversaries during the ↗ Revolution of 1974 (Perret 1995); the distribution of photos and film material of the Wällo ↗ famine was of crucial importance for the change in public opinion towards the ruler both locally as well as internationally. Pictures of Ḫaylä Śəllase then disappeared from the public arena until 1991.

Progressive change marked photographic production in the second half of the 20th cent. Until the 1930s, only one Ethiopian photographer acquired some importance, but after the war Ethiopia's professional and amateur photographers increased. The Ministry of Information sent students abroad to study photograph-reportage; the court employed Ethiopian photographers, such as Yoḥannəs Ḫaylä (Pankhurst – Gérard 1998: 134) or later Šimälləs Dästa. Italians and Armenians opened popular photo studios (cp. fig. 3) in the capital, such as "Photalité" near the National Theatre or "Photo Jiro", but there were also Ethiopian studios, such as "Photo Berhan" or "Photo Speedy" (Pankhurst – Gérard 1998: 145). The numbers of studios increased dramatically in all the regional capitals of the country during the last quarter of the 20th cent., whilst the cost of P. became affordable to many. P. accompanied the life of urban Ethiopians (especially important for infancy, graduation ceremonies, weddings, and burials). Ethiopian photographers developed their own style from imported techniques. The retouching and colouring of photos is an Ethiopian speciality, derived from techniques introduced by Armenian photographers (Hersan 1998); the technique of duplicated or doubled portraits was used in Ethiopia and Eritrea – as in West Africa – from the 1970s (cp. fig. 5). The Ethiopian tourist information office issued postcards and made extensive use of P. to attract tourists (one photo from a 1960s touristic brochure later even served as a model for the one *Bərr* note showing a shepherd boy).

Not all inhabitants of the Horn have access to or show any interest in P. In the south of Ethiopia, e.g., the ↗Ñaŋatom still had no interest, they showed moreover some suspicion towards the camera in the 1970s (Tornay 1991). Some Muslims today refuse to be photographed, even if most did not in the past (such as in ↗Somalia). For other groups of the ↗Omo region, the photographic activities of tourists or other professionals in search of exoticism and supporters of primitivism myths are nowadays a source of income for the photographed (Tornay 2009).

Already in the 1930s and 1950s, but to a much higher degree from the 1990s, photo books attracted the interest of the public in Ethiopia and formed the image of Ethiopia in the West. Originally, photo books focused more on the Christian highlands, with some interest in Muslim areas in eastern Ethiopia (such as ↗Harär); in recent years a great number of high-quality art-print books have focused on southern populations, regarded as "exotic" witnesses of the richness of human culture, while many photo publications also uncovered the great iconographic heritage of the highlands. Due to a rising interest in historical P., there are a number of new books documenting the Ethiopia of the past through historical photo collections (e.g., Pankhurst – Gérard 1996; Biasio 2004; Steinacher 2006; Fasil Giorghis – Gérard 2007; Smidt 2009).

Physiologos ↗Fisalgos

Piaggia, Carlo

P. (b. 4 January 1827, Badia Cantignano, Lucca, Italy, d. 17 January 1882, Karkodje, Sinnār) was an Italian traveller and explorer. After the sudden loss of his family in 1849, he travelled to Tunis in 1851 and from there to Cairo and Alexandria, where he lived for some years. In 1856 he went to Khartoum and in May 1857 to Gondokoro, on the White Nile, where he carried out ornithological research.

In the early 1860s, P. went up to the border of Niam Niam country with Orazio ↗Antinori. Towards 1872, he was living in Massawa and in October that year he participated in the expedition to the ↗Buri Peninsula led by the botanist Johann Maria Hildebrandt (1847–81). In August 1873, at the invitation of the French consul at Massawa de Sarzec, he accompanied him and the natural scientist Achille ↗Raffray to meet *aṣe* ↗Yoḥannəs IV. He settled for two years in ↗Däbrä Tabor, during which time he collected information on local trade and circumnavigated Lake ↗Ṭana. In 1875, he accompanied Romolo Gessi during the latter's exploration of Lake Albert. In 1876, he went to Cairo and the next year returned to Italy. Suffering from health problems, including malaria, he died during a visit to the Sudan.

During his travels, P. assembled a collection of African weapons and domestic tools that are today kept at the Ethnographic Museum in Florence. In his writings P. provided vivid and rare descriptions of African geography and ethnography, local customs, languages, flora and fauna, especially in the Azande and Sudanese areas.

Pierre-Alype

Pierre Marie François Jules Alype, known as "P.-A." (b. 1886, d. 1956) was a French governor of French Somaliland (↗Djibouti).

P.A. originated from La Réunion, and his colonial career ran from 1908 to 1938. He was first Commis aux Affaires Indigènes in Afrique Orientale Française (1908), a member of the higher Council of the Colonies, then governor of French Somaliland (1937–38) and finally a governor of Guadeloupe (1938). He was a freemason (↗freemasonry, s. EAE vol. 5), and as writer-in-chief of the *Presse coloniale*, he also embarked upon an administrative career. He was detached to the Ministry for Foreign Affairs (1933–37) and was prefect of Bordeaux between 1940 and 1942, and then condemned to death for contumacy by the Court of Justice of Bordeaux. After escaping, he returned to France only in 1946 and was discharged by the military tribunal of Paris in 1955.

In the ministries P.A. at first worked in the office of the Under-Secretary of State for art schools (1914–16), and then for the Colonies (1916–17). P.-A. always cultivated an interest in Ethiopia. In 1922 he directed a French official economic mission aimed at providing the means for development of the agricultural and mining resources of Ethiopia. He founded the Syndicat France-Abyssinie for the study and development of Ethiopia, in order to take over half of the business of the Bank of Abyssinia (↗Banking), thus increasing the French share. The purpose of this was to make use of all concessions which were be considered useful to exploit, to fund banks, credit institutions, industrial, commercial or mining houses. With his friend and colleague ↗Lagarde he placed a commemorative plaque on Lagarde's house in ↗Obock in 1938. P.-A. wrote many articles and books in defence of Ethiopia's liberty and independence, in particular at the time of its appeal to the ↗League of Nations and during the Italian invasion.

Lukian Prijac

Pietromarchi, Luca

Count P. (pen-name Luca dei Sabelli; b. 8 March 1895, Rome, d. 1978, Rome) was a diplomat and writer.

In 1915 P. was sent as second lieutenant to Eritrea where from 1916 to 1919 he held the office of deputy of the Commissariato of Barca. In 1920, back in Italy, P. graduated in Law from the University of Rome. From 1923 to 1930 he worked for the secretariat of the League of Nations. In 1932 he entered the cabinet of the Foreign Minister Galeazzo Ciano and began a long service in Italian diplomacy, with only one interruption due to the fall of Fascist regime.

Luca Pietromarchi; photo courtesy of the author

In 1943, in co-operation with General Giuseppe Castellano, P. negotiated the armistice with the Allied Powers and put an end to the alliance with Germany. As a result, ↗Mussolini removed him from office, and P. had to go into hiding.

In 1947 P. moved to Brasil as a reporter for the *Osservatore Romano*. He soon recommenced his diplomatic career, serving as the ambassador to Turkey from 1950 to 1958, and to the USSR from 1958 to 1961.

In his monumental work on Abyssinia, which is fairly well-researched but which betrays the hand of an author who was not a professional historian, P. recalls the decades of peace and prosperity ensured by the centralized power and openly eulogizes the Empire founded by the Italians. Describing the formative process or Ethiopia, the author emphasizes the role of Christianity versus Islam.

In 1996 his son Antonello donated P.'s private archive, comprising ca. 5,000 private letters, documents and photographs from 1915 to 1977, to the Fondazione Luigi Einaudi, Turin.

Pilgrimages

Christian pilgrimages

General

P. is defined as a journey undertaken for religious purposes to a holy site. P. in Ethiopia has not yet been the subject of systematic study (cp. survey article by Pankhurst [in PICES 12, vol. 2, 933–53]). Only a few of the major P. (the residence of the ↗*Abbaa mudaa*; ↗Lalibäla; ↗Šayḫ Ḥusayn; ↗Däbrä Libanos; ↗Nägaš) have been properly described, and even these have not been the subject of exhaustive analysis. The specific rituals performed at P. and the catchment areas from which they draw participants have not been adequately documented. Finally, the vast theoretical literature regarding P. (e.g., Turner 1974; Eade – Sallnow 1991) has not been rigorously applied to Ethiopian cases.

Pankhurst (in PICES 12, vol. 2, 935) suggests that P. are limited to visits to sacred places which take place at a specified time and in a group context. However, such limitations are not accepted by many scholars of religion. While both ↗Islam and ↗Judaism have set times for their annual P.'s, this is much less the case with regard to ↗Christianity. Rather, it may be useful to distinguish between P. performed only on particular dates and those undertaken by individuals. Among Orthodox Christians among the most important P. sites which are associated with particular dates are ↗Aksum (21 *Ḫədar*), Lalibäla (Christmas, the birth of Lalibäla, 29 *Taḫśaś*, and the Feast of Lalibäla, 12 *Säne*), Gəšän Maryam (21 *Mäskäräm*, s. ↗Amba Gəšän), ↗Qulləbi Gäbrəᵓel (15 *Ḥamle*), Mount ↗Zəqʷala (↗Gäbrä Mänfäs Qəddus, 5 *Ṭəqəmt*). The tomb of *abunä* ↗Täklä Haymanot at Däbrä Libanos of Šäwa is visited by great numbers of pilgrims, especially on three of the Saint's annual feasts 12 *Gənbot*, the day of the translation of his relics, 24 *Taḫśaś* (his birthday) and 24 *Näḥase* (the day of his death.) To these must be added the Muslim ↗*ḥaǧǧ* and the annual ↗*Səgd* festival among the ↗Betä Ǝsraᵓel. Nevertheless, there are numerous examples of Christian P. and those of other believers which are more individual in character. While both forms of practice deserve the designation of P., their social functions clearly differ.

While some scholars have emphasized the integrative role of P. and focused on its liminal aspects and the formation of special non-hierarchical communal bonds (*communitas*, Turner 1974), others have chosen to emphasize the contested aspects of P. (Eade – Sallnow 1991) emphasizing the differing experiences of different participants.

Although P. are not undertaken primarily for economic reasons, the giving of ↗alms, exchange of goods and establishment of markets play a significant role in the P. experience. The provision of goods and services to pilgrims is often a major economic boon to the residents of the

Pilgrims at the monastery of Däbrä Libanos of Šäwa; photo 2002, courtesy of Alula Pankhurst

region which hosts a P. site. At Christian P. religious images, crosses and other religious items are sold. ↗Alms are given to the poor, and charity is dispersed to ↗hermits and preachers who frequent such events. ↗Gifts are also often given to the churches or monasteries. In addition to their tales of wonders and miracles, pilgrims often take water, soil or ash from the censers back with them to their homes and churches.

Multi-religiosity

P. sites often reveal several layers of symbolism recalling different stages in their historical development. P. sites often transcend the limits of one particular religious tradition. Thus, pre-Christian and pre-Muslim P. sites were often transformed into sites of veneration by the monotheistic religions. Hagiographic sources and oral traditions provide charter legends for such transformations. In some cases, the P. site becomes the exclusive focus on the new faith, but often multi-meanings result and devotees arrive from several faiths (e.g., ↗Faraqasa; ↗Momina [s. EAE, vol. 5]).

The centre of the cult of Gäbrä Mänfäs Qəddus is at Zəqʷala. Both Oromo traditionalist P. and Amhara Christian P. take place in close proximity of each other. The former attend a ceremony in the forest, while the Christians visit the monastery. However, some followers of Oromo religion also let their children be baptized, receive blessings from priests, take home holy water (↗*Ṣäbäl*) etc. Although monks and churchmen disapprove of such folk-religious practices, Christians visit stones and bow and kiss them.

Christian and Betä Ǝsraʾel pilgrimage

For Ethiopian Orthodox Christians the highest form of P. is the journey to ↗Jerusalem on Easter. Ethiopian pilgrims to Jerusalem are mentioned in the 4th cent. letters of St. Paula and St. Eustochium, although the reference may be to Africans in general and not to Aksumite Christians. This arduous journey which in the past took several months was often accompanied by a P. to the most important Coptic monasteries and holy sites in ↗Egypt such as the monastery of Muharraq (in Ethiopia known as Däbrä Qʷəsqʷam) near Asyut (Chaillot 2002: 142). Contact with the Copts, Ethiopian monks in Jerusalem and clerics of other churches in the Holy Land were an important vehicle of cultural and religious exchange for the relatively isolated Ethiopian Church. Although many such journeys were taken on individual initiative in the past, today an association in Ethiopia (the Jerusalem Memorial Association) organizes P. to the Holy Land. The P. to Jerusalem was for Christians an archetypal P., and shorter journeys to ↗Maryam Ṣəyon in Aksum and Lalibäla were modelled on this ultimate religious journey.

An important P. site until its destruction by the armies of ↗Aḥmad b. Ibrāhīm al-Ġāzī in 1531 was ↗Däbrä Kol in Eritrea, south-west of Mändäfära, which is also known as Ǝnda ↗Buruk Amlak in honor of the Saint whose tomb is on the site. The site has a spring, which probably predates the Saint, but is said to have miraculously begun to flow when he was murdered by rebels. ↗Däbra Nägʷädgʷad in Dähaya rose to prominence during the reign of *aṣe* Zärʾa Yaᶜəqob, who had the remains of his father *aṣe* Dawit II transferred there and buried his mother and several church leaders at the site. He himself was also buried there.

↗Däbrä Bəśrat located in Morät holds the grave of *abunä* ↗Zena Marqos. Pilgrims flocked to his grave, often sleeping there in the hopes of receiving a vision of the saint in their dreams. P. to the site were very popular particularly on 3 *Taḫśaś*, which marked his death and on the 3rd of every month.

Most Betä Ǝsraʾel holy places are associated with the life or death of a holy man or monk.

In some cases these were monasteries; in others sites of great feats of resistance against the Christian kingdom. Although P. to such sites was more common on holidays such as the new moon, visits were by no means limited to special days. A notable exception to this pattern is *Səgd*, which took place on the 29th day of the 8th month. Although different Betä Ǝsraʾel communities had traditional locations where they celebrated this festival, such sites were not themselves holy places with deep traditions of their own. Although *Səgd* could not take place on a site contaminated by graves or animal corpses, the hilltop was not itself of special significance. Rather, the P. ritual granted sanctity to the site. Some traditions connect *Səgd* with P. to Jerusalem and others say it commemorates Ezra's proclamation against the foreign wives (Ezra 10:10–12). Yet, others associate it with Mount Sinai and the proclamation of the Decalogue.

Pilgrimage in traditional religion

As in the monotheistic religions, P. features some traditional ↗religions; the old ↗Oromo religion may be an example here. The most important P. for followers of the Oromo religion is that to the ↗*abbaa muudaa.* This takes place every eight years as part of the ↗*gaada* cycle. The ethnographic reports gathered over more than 150 years do not provide a uniform picture, but do enable us to summarize the most important features of the P. (cf. Knutson 1967). Descriptions of this P. offer striking evidence of the kinds of behaviour associated with the "liminal" period in many P. Thus, participants do not cut their hair or nails during their journey. Some traditions say they dress as women and bear no weapons even if they must pass through enemy territory; others that their head is shaved or cut to look like that of a small boy. Women do not participate, but the wives of those on P. do not oil their hair or eat bread prepared by others. Some traditions say they sleep on the ground, not in a bed. The pilgrims (known as a *ğila*) have immunity from robbers.

A crucial part of the P. is the ceremony when the pilgrims reach the P. site. During this ceremony they are anointed and given myrrh which they take home with them. When they return home, they plant a ↗sycamore tree and are forbidden to have any connection with war or weapons. They are "retired" from the *gaada* system (↗Gadaamooğği).

Steven Kaplan

Islamic pilgrimages

From a general point of view P. in ↗Islam may be classified under two distinct categories: *ḥağğ* (the P. performed by the faithful to ↗Mecca and its nearby sacred area) and *ziyāra* (the P. to the shrine of Prophet ↗Muḥammad in Medina and to the shrines of holy men).

Ḥağğ is one of the five pillars of Islam and it must be carried out at least once in a lifetime by the faithful who possess the economic means to do so without putting their families in distress. It must take place during a fixed time (in the twelfth and last month of the lunar Islamic calendar *ḏū l-ḥiğğa*) and it is strictly regulated by highly formalized and very detailed rules that guarantee its legal validity. It must be differentiated from the simpler *ʿumra* which is limited to the city of Mecca and has no precise period of performance (↗*Ramaḍān* is preferred but not compulsory). The rituals and ceremonies of *ḥağğ* mostly have pre-Islamic forerunners. They are reinterpreted by Islam which claims to have restored them to their original shape and meaning first established by the praxis of Prophet Ibrāhīm (Abraham).

Data about the participation of Ethiopian Muslims in the *ḥağğ* in pre-modern times are very scanty. It is certain that pilgrims coming from the Horn did take part in the *ḥağğ* and

Muslims pilgrims on the way to the site of Yaᵓa in Beni Šangul; freeze image from the 2006 movie "Pilgrimage to Yaᵓa: Feasting the consumers of the sacred" by Yasuo Matsunami

stayed in Mecca looking for religious education and spiritual enrichment: al-↗Maqrīzī's *Ilmām* is partially based on information that the author probably had from Ethiopians whom he met in Mecca in 839 H. [1435/36 A.D.] (MaqIlmam 2f.; MaqIlmam^{2} 2). Pilgrims from West Africa to Mecca passed through Northern Ethiopia and Eritrea and some of them settled there on the way back from Arabia (↗Fellata; ↗Hausa). It seems, however, that the number of Ethiopian pilgrims was always limited until modern times (TrIslam 153, 229). In Ethiopian Arabic sources, one may find names of a few outstanding personages mentioned together with the honorific title *ḥāǧǧ* (e.g., *al-ḥāǧǧ* Afayzarū, WagFath 60f., passim). In more recent times, information on Ethiopian pilgrims has become more conspicuous. Some data hint at the participation of Hararis in the *ḥaǧǧ* at the end of the 19th cent. In 1874 Harari pilgrims in Mecca are said to have invited the Egyptians to protect the town from the Oromo menace (Erlich 2007:21). In two Arabic documents from Harär (the first about the battle of Č̣ällänqo, the second about the negotiations after the fall of the town in January 1887), some prominent representatives of the Muslim community are mentioned with the title *al-ḥāǧǧ* (CerIslam 387–90). In colonial times, within the frame of a policy that tended to favour Islam in their colonies, the Italian authorities strongly supported Eritrean and Ethiopian Muslims to perform the P. to Mecca. In 1917, Italy purchased hostels in Mecca, Medina and Jeddah to host pilgrims from Italian colonies (Miran 2005:201). While in 1933 eleven Ethiopians went to Mecca, they numbered 29 in 1934–35 and seven in 1936 (s. Erlich 2007:73). The Italians managed to enhance these figures drastically: in 1937, the colonial administration directly organized P. to Mecca (ibid. 69) for 1,779 pilgrims from ↗Africa Orientale Italiana; in 1938 their number was 1,110 and in 1939 it was 696. The Italian administration covered all the expenses of the sea trip and provided an equipped ship. Inhabitants of Somalia, Harärge and "Galla-Sidama" sailed from Mogadishu while people coming from Eritrea, Amhara and Šäwa embarked in Massawa. Some (275 in 1937; 230 in 1938 and 265 in 1939) managed to have their *ḥaǧǧ* fully paid by the Italian government (*Annali dell'Africa Italiana* 1940:711ff.; TrIslam 229). Pilgrims supported by the colonial administration were instrumental to Italian propaganda during the *ḥaǧǧ* in the frame of the anti-British and anti-French politics of Fascist Italy in the Muslim world (Erlich 2007:74). In 1945, the number of Ethiopian pilgrims sank back to only 57 adults and 5 children (ibid.).

No exact data are available on Ethiopian participation in the *ḥaǧǧ* in the following years. A *ḥaǧǧ* committee existed in the country and for a period it was directed by *al-ḥāǧǧ* Yūsuf ᶜAbdarraḥmān (ibid. 102). It was renewed in 1974 by the *Därg* regime and in that same year some 3,000 pilgrims left for the *ḥaǧǧ* thanks to the help of the new regime which asked them to inform their brethren in Mecca about the changes going on in Ethiopia (Hussein Ahmed in PICES 12, vol. 1, 784; Erlich 2007:136). The *ḥaǧǧ* and *ᶜumra* committee was then accused of corruption and its organizational and logistical activity was put under the direct control of the Ministry of Interior (Hussein Ahmed in PICES 12, vol. 1, 790). The number of people allowed to travel to Mecca was fixed to a maximum of 2,000 (in 1978 only 120 people went to Mecca). After the fall of the *Därg*, pilgrims from Ethiopia eventually acquired a good opportunity to go on the *ḥaǧǧ* but bureaucratic problems concerning the issue of passports and visas as well as the unwillingness of the Saudi authorities to allow people to stay in the country once the *ḥaǧǧ* is over caused several protest demonstrations in Addis Abäba (Hussein Ahmed in PICES 12, vol. 1, 794f.).

The pilgrim returning from *ḥaǧǧ* is always warmly and respectfully welcomed by his neighbourhood or village (Gibb 1996:257). The title *ḥāǧǧ* gives him high religious prestige and a socially recognized revered position.

For the instruction of the faithful, booklets explaining the correct way to carry out one's *ḥaǧǧ* have been written in local languages. In Amharic, *al-ḥāǧǧ* Kämal Ḥaǧǧ wrote *Yämäkka mädina guzo məsṭir* ('The Inner Meaning of the Journey to Mecca and Medina', Addis Abäba 1960 A.M. [1967 A.D.]) and more recently Muḥammad Wale *Yäḥaǧǧənna ᶜumra guzo śənä śərᶜat* ('The Rituals of the *Ḥaǧǧ* and *ᶜUmra* Journey', 1412 H. [1991 A.D.]); in Təgrəñña, Ǧamāl Ibrāhīm Ṣāliḥ published in Riyadh *Ḥaǧǧ ᶜumran zəyaran ab təḥti ṣəlal kitabən sunnan* ('*Ḥaǧǧ*, *ᶜUmra* and *Ziyāra* According to the Book and the Sunna').

The P. to sacred places, shrines of holy men, commonly called *ziyāra* (Arab., 'visit'), has a questioned theological and legal status. To look for the intercession of saints and to ask for the bestowal of some divine grace in their name have been condemned by many scholars, in particular those belonging to the *ḥanbalī* legal school who believe *ziyāra* to be, in contrast to the prophetic *Sunna* and a manifestation of anthropolatry menacing the monotheism Islam. Moreover, some of the ceremonies held during these P. have been considered immoral and indecent. Linked as it is with the cult of the saints (↗*Walī*), *ziyāra* is seen as suspect by many theologians who fear the spread of *bidᶜa* ('harmful innovation') among the "ignorant" masses. Nevertheless, *ziyāras* are widespread everywhere in the Islamic world and are one of the most impressive manifestations of the religious life of both Sunni and Shiite Muslims (s., e.g., Meri in EI^2).

In Ethiopia as elsewhere in the Muslim world, *ziyāra* can be performed any day of the year at an individual or family level (e.g., before a marriage or after a birth, Gibb 1996: 258–61). Collective organized P. are mostly carried out on the anniversary of the death of the *walī* (sometimes called *ḥawlīya*) or on other important Islamic occasions (esp. ↗*Mawlid* and *ᶜĀšūrāʾ*). In ↗Harär a specific calendar of successive group visits to local saints is set up for different occasions (Foucher in PICES 11). Sometimes, the *ziyāra* is directed not to an actual shrine but to a cenotaph (generally called *maqām* or sometimes *galma*) or to a sacred place where a rock, a tree or another natural element is believed to represent the memory and the beneficent influential power or *baraka* of a holy man (ibid. 1994: 74f.).

In Ethiopia, every Muslim community in the country has its own cherished *ziyāras*. In ↗Wällo, the shrines of ↗Muḥammad Šāfī (d. 1806–07) in Ǧäma Nəguś, of *al-ḥāǧǧ* Bušrā (d. 1863) in Gäta, of Ǧamāladdīn in Anna (d. 1882) together with others are the main sacred places where *ziyāras* take place (HusIslam 83–91). In ↗Gurage ↗Qaṭbäre (*šayḫ* ᶜĪsā), ↗Abrät (*šayḫ* Budallā Bušrā, s. EAE vol. 5) and ↗Wäläne (*šayḫ* ᶜUmar) are the most visited shrines. In western Ethiopia it is ↗Yaʾa. In Harär, the town of the saints (*madīnat al-awliyāʾ*), among the huge number of shrines (WagFath; Foucher 1988), those of *šayḫ* ↗Abādir ᶜUmar ar-Riḍāʾ, *amīr* ↗Nūr b. Muǧāhid, *āy* ↗ᶜĀbida, ↗ᶜAlī Ḥamdūn, ᶜAbdalqādir al-Ǧīlānī and ↗Umma Koda are the destinations of the most crowded and frequent P.

Some Ethiopian *ziyāras* have a country-wide appeal: for instance, *šayḫ* ↗Ḥusayn of Bale whose festivals twice a year cause the gathering of several thousands of pilgrims in Anāǧina (i.e. ↗Šayḫ Ḥusayn) and the grave of Aṣḥama b. Abǧar in ↗Nägaš (Təgray) to which foreign faithful are also said to flock.

A basic common rituality can be detected in most of the collective Ethiopian *ziyāras*. ↗Syncretism has been often pointed out as the main characteristic of these practices even if a sincere Islamic dimension of the rituals can almost never be denied. The chant of religious hymns (written or orally transmitted, in Arabic or in local languages) praising God and honoring the Prophet or the visited saint is perhaps the most evident feature of P. to a shrine. The chant is usually accompanied by drum beating and dancing (↗*Ḏikr*). Both sexes often freely mix during the performances. ↗Incense burning, ↗coffee drinking, ↗*č̣at* chewing, ↗sacrifices of animals and valuable goods are also part of the ceremonies that may last several days. ↗Prayers and supplications are repeatedly uttered to obtain the *baraka* of the saint or of the Prophet and their intercession before God (Hasselblatt 1974; HusIslam 84–88).

On an individual level, a person who falls in distress may be pushed to visit a holy man to find a solution to his problem. Supplications are read or simply intoned to make the *baraka* of the visited holy man. The mystical power of the saint should guarantee a miracle (Arab. *karāma*) which, from a theologically orthodox point of view, is performed by God through the saint. Prayers are often joined by vows and in this case pieces of cloth are frequently bound to the shrine as a token of the engagement of the faithful with the saint: they are untied when the vow is fulfilled (Foucher 1994: 75f.). The role of P. to the shrines of the Muslim saints has been crucial in the spread of Islam in many Ethiopian regions (cp. Braukämper 2004).

As in other cultural areas, some Ethiopian *ziyāras* have a more or less evident cross-religious aspect as both Muslims and Christians together participate at the same ceremonies; conversely, some recent Christian P. sites are visited also by Muslims (e.g., Maryam Daᶜrit of ↗Kärän, ↗Qulləbi Gäbrəʾel, ↗Faraqasa; ↗Momina [s. EAE vol. 5]).

Alessandro Gori

Pirzio Biroli, Alessandro

P.B. (b. 23 July 1877, Bologna, d. 20 May 1962, Rome) was a high ranking officer in the Italian Army and Governor of Amhara in ↗Africa Orientale Italiana. Born to a noble family, P.B. first became famous for winning a silver medal as a sabre fencer at the 1908 Olympic Games in London. He started his military career in 1918 becoming Commanding Officer of a Bersaglieri Regiment. His colonial experience began in 1936 when, as General Officer, he commanded the Corpo d'Armata Eritreo and participated in the ↗Italian War of 1935–36. P.B.'s Corps maintained a prominent role in the northern front of the campaign, defeating the Ethiopian Army in the Battle of ↗May Č̣äw (31 March 1936) and victoriously entering Däse a few days later.

In 1936 P.B. became Governor of Amhara, an Italian administrative unit which included Šäwa, Goǧǧam and Gondär. He had to face fierce resistance from Ethiopian patriots and adopted repressive policies. After an unprecedented wave of insurgency in the colony, Marshal Rodolfo ↗Graziani accused P.B. of incompetence claiming that his atrocities were responsible for the unrest. Allegedly, P.B. cruelly executed a number of Ethiopian notables having them drowned in Lake Ṭana. P.B. was also accused of *madamismo*, and the Governorship of Amhara was accordingly nicknamed "governo allegro", the rumours of P.B.'s relationships with local women reaching as far as Rome. Another accusation was that of nepotism: indeed the Italian Minister for the Colonies, Alessandro ↗Lessona, had appointed two of his first cousins, P.B and Vincenzo De Feo, as Governors of Amhara and Eritrea, fuelling an age long dispute between himself and Graziani. In December 1937 P.B. was replaced by General Ottavio Mezzetti.

P.B. was later assigned to Eastern Europe as General of the 9th Italian Army which successfully occupied Montenegro: here P.B. remained as Governor from 1941 to the end of Italian rule in 1943.

In 1947 the Ethiopian Government chose ten prominent Italian colonial officers, among them P.B., to be indicted at the UN War Crimes Commission. After protracted discussions the Commission decided to accept the charges. However, in 1948 the Ethiopian government decided to focus its limited resources on Badoglio and Graziani, abandoning attempts to prosecute P.B. and the others.

Matteo Salvadore

Piva, Abele

P. (b. 23 March 1869, Montova, d. 1953) was an Italian military officer and archaeologist.

P. took part in the ↗Italian war 1895–96. He was injured at the battle of ↗ᶜAdwa, whilst fighting in General Dabormida’s brigade and subsequently returned to Italy. On recovery, P. returned to Eritrea, being assigned to a military unit of the Regio Corpo di Truppe Coloniali in the Kärän region. During 1905–06 he conducted archaeological excavations at ↗Aratu. He also recorded sites in the surrounding region, among them monolithic ↗stelae at Mamruk on the Däbrä Qəddus plateau and other ruins on the slopes of the Forum hill. P. published studies on ancient Eritrea and on its population.

P. continued to pursue a military career eventually achieving the rank of brigadier general. As such he commanded the Alpine troops from 1923 to 1934.

Andrea Manzo

Plagues ↗Diseases

Plant, Ruth Isabella

P. (née Churchill, b. 1912, d. 17 April 1988) was a British architect who studied the architecture of ↗Təgray. The daughter of Sydney Churchill and of Stella Churchill, she was trained at the British Architectural Association. She first married a fellow architect, Donald Craik; after his death she married William Plant.

Visiting Ethiopia as a tourist in the mid-1960s, P. developed a passionate interest in the ↗rock-hewn churches of Təgray. Making the Abraha Castle Hotel in ↗Mäq̱älä her base, she carried out numerous expeditions, inspecting, photographing, and making detailed architectural sketches of 141 churches, mostly rock-hewn, but also some with stone, in ↗Ǝndärta, ↗Kələttä Awləᶜalo (s. EAE vol. 5), ↗Tämben, and ᶜAgamä, as well as the ↗Aksum and ↗ᶜAdwa area, and other parts of Təgray. She wrote up all her findings and speculations in numerous publications, the most definitive of which was her *Architecture of the Tigre* (1985; largely a reedition of Plant 1970). In 1972 P. was awarded a M. Litt. for a thesis on the same subject.

Though mainly involved in her own research P. also served as architect and surveyor for the British Institute in Eastern Africa’s first dig at Aksum in 1973 (Chittick 1974:162, 205). The Ethiopian civil war prevented her from continuing her work in Təgray. P.’s photographs are preserved in the Library of the Society of Antiquaries in London.

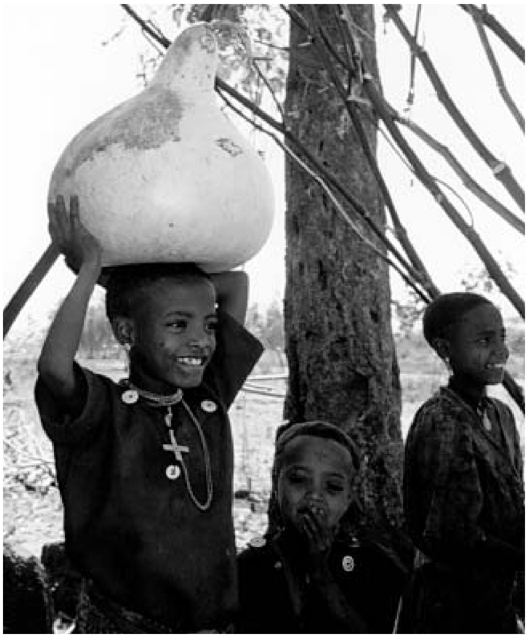
Richard Pankhurst

Plants

Cultivated plants

Ethiopia is a country renowned for its rich genetic resources of cultivated P. Since antiquity new crops have been adopted from either wild species or external sources. In the long process of experimenting, innovating, domesticating and introducing useful P., a wide range of P. taxa was selected. This process has produced a collection of ancient crop varieties referred to as farmers’ varieties or landrace varieties.

Some of the crops that were introduced to the Ethiopian environment extremely early (5,000–



Girl carrying a pumpkin; photo 2000, courtesy of Jürgen Beil

7,000 years ago), have diversified considerably so that the country is known to be a secondary centre of diversification or gene accumulation. Other cultivated P. have been introduced during the last 100 years or so. The process of introduction of new P. still continues as can be seen in the recent proliferation of the avocado pear (*Persea americana*) and casmir (*Casimiroa edulis*).

Ethiopia is in fact known as a Vavilovian center of origin and diversity of crop P. This diversity in cultivated P. is largely ascribed to the differences in biophysical as well as socio-cultural factors. The highly dissected highlands and ravines act as barriers to the spread of particular crops. Topographical isolation, the diversity in agro-ecological conditions and the unique sets of agricultural and socio-cultural systems in various parts of the country – a diversity which has persisted for a long time with little or no change – are usually held responsible for the many varieties of cultivated P.

A considerable amount of the cultivated P. germplasm has left the country by various routes during historical times. Ethiopia has considerably contributed to the world pool of cultivated P. and genetic resources of cultivated P. In this regard an important gift from Ethiopia to the rest of the world is ↗coffee. Important germplasm contributed by Ethiopia also includes disease resistant lines of barley and wheat as well as high protein and high lysine lines of cereals including barley and ↗sorghum (s. Harlan 1975). Ethiopia has domesticated a large number of species of crops including ↗*ṭef*, ↗*ənsät*, ↗*anč̣oote*, "Oromo (or "Wälayta) ↗potatoes", ↗*nug*, ↗*dagussa* etc.

Crops harnessed from the natural environment have been put under cultivation and integrated with those that reached the country through various routes. One category of P. introduced into Ethiopia is those that have either been domesticated or diversified after their initial arrival in the country (e.g., *Sorghum bicolor, Hordeum vulgare*). Many cultivated crops introduced from the Americas, Asia and other parts of the world in the earliest period of agricultural expansion have become culturally tied to Ethiopian customs to the extent that they appear to have always been part of the Ethiopian cultural heritage. Among such crops are hot pepper (↗*Bärbäre*) and chilies, ↗maize, ↗garlic, onion (*Allium cepa*) and potatoes. The integration of crops from different parts of the world is also well reflected in the meals regularly served at home (↗Food). Among 19th-cent. introductions we find the ↗eucalyptus tree which was introduced from Australia.

Common cultivated P. in Ethiopia include wheat, maize, sorghum, barley, yam, potatoes, coffee, faba bean, field pea, lentil, chickpea, haricot beans, banana, orange, lime, lima beans, groundnut, sesame, finger millet, pearl millet, safflower, sunflower, mango, papaya, grape, custard apple, peach, tree tomato, linseed, ↗*č̣at*, ↗*gešo*, taro, sugarcane, pumpkin, bottle gourd and many others.

The rich agricultural history of the country is well reflected not only in the high number of species of cultivated P. but also in the diversity of horticultural complexes. ↗Cereals, pulses (**ጥራጥሬ**, *ṭəraṭəre*), ↗oil seeds (**የቅባት፡ እህል**, *yäqəbat əhəl*), root and tuber crops (s. "Potato"), vegetables, ↗fruits, stimulants (**አነቃቂ**, *annäqaqi*), industrial crops, ↗spices and herbs, aromatics or fragrance (**ሺቶ**, *šito*), forage crops (**የእንስሳት፡ መኖ**, *yäʾənsəsat männo*), medicinal P. (**ፈዋሽ፡ እጽዋት**, *fäwwaš əṣəwat*, s. also ↗Medicine) and forest ↗trees (**የደን፡ እጽዋት**, *yädän əṣəwat*, s. also ↗Forests) are cultivated in the country.

The intensity of cultivation of a given crop or use category generally varies according to agroecology and cultural familiarity. The latter notwithstanding, people usually take up new P. if they see them to be successful in neighbouring societies.

Taking conventional cultivated P., cultivated trees and shrubs as well as ornamental P. and hedge species into account, the number of P. cultivated in Ethiopia is quite considerable. Conventional crops alone – either indigenous or introduced – are considered to number ca. 150 species.

Some of the crops are staples, others are for industrial or commercial use and still others have minor roles. The variety of crop categories is a characteristic feature of the farming system and of dietary habits. Oils and spices are always important no matter what the staple food is since they improve its taste, texture as well as its appearance. Within the cultivated landscape, the different crops fit specific spatial locations.

What makes Ethiopia even more interesting from the viewpoint of modern biodiversity is that the same P. species are nurtured in both the agricultural and natural ecosystems (e.g. coffee) and that some crops are harvested from the natural forests where they naturally grow, e.g., Ethiopian cardamom (**ኮረሪማ**, *korrärima*), green pepper (**ቃርያ**, *qarəya*).

However, the biodiversity of cultivated P. has recently faced serious problems; these are connected with the erosion of the genetic resources. Due to the introduction of some high yielding modern crop cultivars (e.g. wheat) that have very narrow genetic base, the indigenous farmers' varieties are being gradually replaced; which is expected to worsen as genetically modified plants proliferate and aggressively get diffused throughout the world and would not be an exception. Conservation of farmers' varieties under *in-situ* (on-farm) and *ex-situ* (genebanks) conditions is imperative. Hence, the real challenge for Ethiopia and the world is to be able to maintain the diversity in cultivated P. through complementary *ex-situ* and *in-situ* conservation strategies.

Zemede Asfaw

Wild plants

P. form a kingdom of organisms characterized by photosynthesis; they are primary producers of carbo-hydrates and other organic components necessary for all other life on earth. Here, only flowering P., gymnosperms and pteridophytes are examined. Wild P. are defined as all species not cultivated by man: either indigenous species which evolved locally or those which arrived by natural dispersal, formerly cultivated and naturalized species or weeds. According to the *Flora of Ethiopia and Eritrea* (1989–2008) the number of wild P. in these countries is established at: 226 families (flowering P. 187; gymnosperms 3, pteridophytes 36), 1480 genera (flowering P. 1401, gymnosperms 3, pteridophytes 76) and 5510 species (flowering P. 5315, gymnosperms 5, pteridophytes 190). Several large P. families are economically important: grasses (Poaceae; 620 species), legumes (Fabaceae-Papilionoideae, ca. 500 species) and the sunflower family (Asteraceae, ca. 450 species). Other P. families with over hundred species are: the Acanthus family (Acanthaceae), spurges (Euphorbiaceae), sedges (Cyperaceae), milkweeds (Ascepiadaceae), orchids (Orchidaceae), labiates (Lamiaceae), the mallow family (Malvaceae), bindweeds (Convolvulaceae), figworts (Scrophulariaceae) and the coffee family (Rubiaceae).

Compared with other tropical African countries, Ethiopia and Eritrea are fairly rich in wild P. species and richer than other areas at the same latitude. In tropical Africa, Cameroon and Gabon have the highest species richness (4,000–5,000/10,000 km^2). The average richness in Ethiopia is 1,500–2,000/10,000 km^2. This contrasts with lower richness in countries west of Ethiopia: 500–1,000/10,000 km^2 in the Sudanian zone and 200–500/10,000 km^2 in the Sahel zone. The higher richness in Ethiopia and Eritrea is due to a more varied climate, topography and geology than in the Sudan and the Sahel. In Ethiopia and Eritrea the species richness is not evenly distributed: the highest richness (3,000–4,000/10,000 km^2) is found in the former Sidamo, Šäwa and Käfa regions; however, the Eritrean coastal zone has a richness of only ca. 2,000/10,000 km^2 and ^{c}Afar

A flowering stand of one of the two Ethiopian endemic giant lobelia species (*Lobelia achrochila*) at 2,700 m A.S.L. near Goba in Bale; the narrow leaves in the foreground belong to another Ethiopian endemic high altitude species, a Red Hot Poker (*Kniphofia foliosa*); photo 2005, courtesy of the author

only ca. 400/10,000 km². Variation in richness is again correlated with variation in altitude, rainfall and geology.

Some European and Asian P. genera have their natural southern limit in Ethiopia; well known examples are rose (*Rosa*) and saxifrage (*Saxifraga*). There is great similarity between the flora of the highlands of Ethiopia and Eritrea and the highlands of East Africa, with smaller components of genera or species that occur also in Europe or Asia and genera or species not found wild anywhere else (endemic), e.g. the genus *Hypagophytum* (orpine family, Crassulaceae) is only found in the Səmen and mountains of Təgray. The wild flora of Ethiopia and Eritrea is transitional, with some elements shared with Europe, Asia, tropical Africa and the East African mountains. The percentage of endemic species (18 %) is high compared with most tropical African countries, but lower than for Somalia, Angola the Congo Democratic Republic and Tanzania. However, because of the similarity between the vegetation on both sides of the border between Ethiopia and Somalia the areas of even narrowly distributed species may be divided by the border. 17 % of the species in Ethiopia and Eritrea are endemic or have a limited extension into Somalia. The flora of Somalia has over 25 % unique plant species, and the proportion of endemic species increases towards the tip of the Horn of Africa. Endemic species in Ethiopia restricted to areas of high altitude are, e.g., species in the genera Lady's mantles (*Alchemilla*), clover (*Trifolium*), giant thistles (*Echinops*, *Cirsium*) and the Ethiopian giant lobelia (*Lobelia rhynchopetalum, L. achrochilus*); these highland endemics are usually widespread in areas of suitable altitude, while endemic species in the lowlands are normally rather restricted in distribution. Narrowly distributed endemic species are most frequent in the Ogaden and in the lowlands of the old Sidamo and Bale regions.

The rich flora of wild P. and the high percentage of endemic species in Ethiopia and Eritrea made the wild flora a valuable natural resource in the pre-Aksumite and Aksumite periods and sustained the high diversity of agricultural practices among many ethnic groups in later periods.

Platt, Thomas Pell

P. (b. 1798, London, d. 31 October 1852, Dulwich Hill, Surrey) was a British Biblical scholar, important for ↗Ethiopian studies as a Gəʿəz ↗Bible editor.

P. was educated at Trinity College, Cambridge, taking his master's degree in 1823. There he became involved in the ↗British and Foreign Bible Society (BFBS). He was the society's librarian in London from 1823 to 1831 and its honorary Governor from 1825. He was also one of the first members of the Royal Asiatic Society, serving for many years on its Oriental translation committee.

At BFBS P. started working on Ethiopian Biblical texts. In 1823 he published a catalogue of Ethiopian Biblical ↗manuscripts in the possession of the BFBS and the Royal library of Paris.

P. is mainly known for having produced an edition of the Gospel in Gəʿəz (1826), followed by the complete N.T. (1830). He wanted the text of the edition to conform as closely as possible both with the Ethiopian manuscripts he took as the *Vorlage* and the Bible as known to him. The result was an eclectic text, errors resulting from a lack of critical choice of manuscripts and occasional adaptation of the Gəʿəz version to the Greek text current at that time. This edition should only be used with caution for text-critical purposes. Slightly revised by ↗Praetorius in 1899, it has been reprinted frequently in the 20th cent.

P. was also involved in the preparation of editions of Gospel in Amharic (1824) and Syriac (1829). He also edited the Ethiopic ↗*Didəsqəlya.*

Rochus Zuurmond

Plazikowsky-Brauner, Herma

P. (b. 15 September 1888, Brno/Brünn, Moravia, d. September 1967, Frankfurt am Main) was a prolific researcher in Cushitic and Ethio-Semitic languages. She was probably the first woman who engaged herself in extensive linguistic field work in Ethiopia.

P. was the daughter of an officer of the Austrian Army. After she had finished her studies in Oriental philology, she continued to study Amharic, Gəʿəz (and probably also Oromo) under Eugen ↗Mittwoch at the Department of Oriental Languages in Berlin between 1909 and 1912.

In Berlin P. met her future husband, a qualified miner who had to change his profession due to rheumatic disease. After he tried working as a sculptor and a journalist he went to Ethiopia in 1906 and established a bee-keeping farm near Lake Zʷay but returned to Germany to learn Amharic in 1909. In 1913 P. and her husband went to Ethiopia where they were granted a plot of land near ↗Asälla, where they cultivated coffee. Later, they established a mill in Addis Abäba in the Italian residence area near Arada. During the time of British control in Ethiopia after 1941, P. and her husband were expelled from the country and had to return to Germany. Until her death, P. worked on contract as research and teaching assistant at the Department of Oriental Studies at the Johann Wolfgang Goethe University, Frankfurt am Main.

During P.'s stay in Ethiopia (and during later field stays) P. undertook extensive linguistic and ethno-historical field research on a variety of Ethiopian languages and peoples (cf., e.g., Plazikowsky-Brauner 1957a, b). Inspite of the fact that a considerable amount of her data and analyses were lost during the war, she produced a number of pioneering descriptions of Highland East Cushitic languages (↗Allaaba, ↗Hadiyya [especially ↗Libido]), provided new hypotheses on the classification of Cushitic language and discussed linguistic data regarding Cushitic languages in detail (cf. Unseth 1990: 75f.). She was also involved in comparative Cushitic and Ethiosemitic studies.

Ronny Meyer

Pliny the Elder

P. (Gaius Plinius Secundus, better known as P. the Elder, b. 23 A.D., Novum Comum [today Como], d. 24 August 79 A.D., Stabiae) was a Roman historian and naturalist: a commander of the fleet at Misenum, he died while observing from close quarters the famed eruption of Vesuvius (Naples) that destroyed Herculaneum, Pompeii and Stabiae.

All of P.'s writings are lost, apart from the *Naturalis historia* ('Natural history'), a 37-book Latin encyclopedia into which he collected much of the contemporary knowledge – animal, vegetable and mineral. He was interested not only in science, but also in technology applied to the whole realm of nature (e.g., gold mining, water supply, etc.).

P.'s work, already planned under Emperor Nero, was nearly completed in 77 A.D., under Emperor Titus, to whom it is dedicated. Covering almost the entire field of ancient scholarship, and avowedly relying on the best classical authorities, it was used for reference over the subsequent centuries, well beyond the Middle Ages and the Renaissance, esp. for medicine, plants and related products, agriculture, architecture, sculpture, painting, geology and mineralogy, but also history, geography and ethnography. The enormous cultural and intellectual influence of P.'s imposing compilation, written in a rather peculiar and difficult language, is attested to by the wealth of its copies and printed editions, the former including lavishly illustrated manuscripts that secured the widest circulation and guaranteed the prestige of the text.

Several books of the *Naturalis historia* are devoted to the description of remote countries and peoples, and are based more or less directly on a variety of sources – quite often Greek. Special attention is paid by P. to the ↗Red Sea area with its Indian Ocean extension and the long distance trade from ↗Arabia, Nubia (s. EAE vol. 5; ↗Meroë) and Ethiopia (↗Aithiopía) to ↗India.

Thus, for instance, P. informs that Emperor Nero "was actually contemplating an attack on Ethiopia", i.e. Meroë, and details the caravan routes between there and Syene (Aswān; *Nat. hist.* VI, 29 [35] = 181 and 183–86, with an interesting reference to ↗Candace). Definitely aware of South Arabian piracy in the Red Sea, he also describes the route between Coptos (Qifṭ) and Berenice of the Trogodytes (today Sikkat Bandar: ibid. VI, 23 [26] = 101f.; s. De Romanis 1996: 203–09), while in the "Azanian Sea" he mentions the *oppidum Sacae*, 'town of Saca' (cp. the tribal name *Asachae*, on which Conti Rossini 1922: 271–78 and CRSt 63, 109), the *insula Daphnidis*, 'island of Daphne', i.e. Difne(i)n (↗Dahlak), and the *oppidum Aduliton*, 'town of of the Adulites' (with a remarkable Greek ending of the ethnicon), i.e. ↗Adulis, "two days' sail from Ptolemais [of the Huntings]". P. then reports a legend according to which Adulis was "founded from slaves from Egypt who had run away from their masters" (*Nat. hist.* VI, 29 [34] = 172f.) – "a clearly Greek" *folk etymology* of the toponym, interpreted as 'Freemen('s town)', i.e. privative *a-* + *doûloi*, 'slaves'.

Adulis is introduced here as "the most important trading centre [*emporion*] of the Trogodytes [lit., 'Cave-dwellers'], also those of Meroë" (as the passage should be correctly understood), the Meroits having access to its facilities via the mountain ↗Rora region (Fiaccadori 2004: 124f., 137). The goods brought there were all animal (or human) products of this part of Africa: "↗ivory, rhinoceros horn, ↗hippopotamus hides, tortoise shells, apes and ↗slaves". In the age of P., Adulis was indeed a "port of trade" through which Aksum's international relations passed. Yet, the inland kingdom with its eponym metropolis seems to have been unknown to P. and his source. For this section of his text, yielding the earliest account of Ethiopian ↗trade, P. depends upon the lost *Arabiká*, i.e. a Greek treatise on Arabia, by the learned king of Numidia and later of Mauritania Juba II (52/50–23 B.C.), drawing in turn on earlier Hellenistic materials – whence the above etymology of the toponym. By then, however, the Aksumite polity was still to emerge into prominence (cp. ↗*Monumentum Adulitanum*).

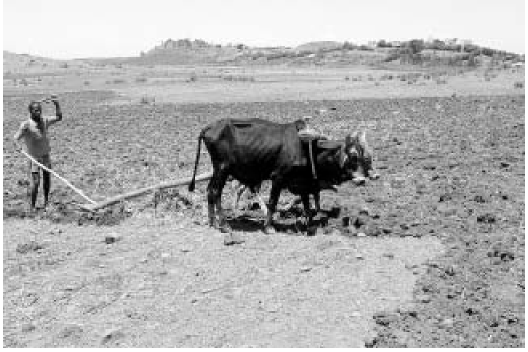
Gianfranco Fiaccadori

Plough

The keystone technology of Ethiopia's highland agricultural system (↗Agriculture) historically has been the ox-P. (Amh. **ማረሻ**, *maräša*, 'instrument to plough'). This single-tine scratch P., also called **አርድ** (*ard*), stands at the centre of the agricultural system because of its technological simplicity and its efficiency in the use of human labour. The Ethiopian P. consists of eight basic parts, all available locally: the 'beam' (**ሞፈር**, *mofär*), the 'ploughshare' (*maräša*), the 'sheath' (**ወገል**, *wägäll*), the 'stilt' (**እርፍ**, *ərf*), two wooden ears (**ድግር**, *dəgər*) inserted into the ploughshare's sheath, a yoke (**ቀንበር**, *qänbär*), and a leather strap (**ማንገቻ**, *mangäča*) that adjusts the ploughing depth. The P. parts when worn out are replaceable and adjustable to specific needs of a field or task; the plough is light enough (10–20 kg) to be carried long distances from field plot to field plot, and back to the homestead.

While some of its parts differ from region to region, over the course of its history the P.'s basic design has not changed. Farmers adjust the angle of the pull to the desired ploughing depth by varying the ploughshare and ear length, adjusting the angle between the share and beam, or putting downward pressure on the handle during ploughing. The *maräša* design allows it to break the soil's surface at a shallow angle that pushes clods of earth to the side on a first pass and then breaks them up on repeated passes. The number of passes required depends on the type of soil, prior field use, and the crop to be sown. ↗*Ṭeff* requires five passes; horsebeans require only one. A final pass provides seed cover and a single pass in mid-season breaks up weeds between crop rows.



Use of the single-tine scratch oxen-plough, Dämbəya, Bägemdər; photo 2004, courtesy of Itsushi Kawase

For all practical purposes it may be more accurate to consider the Ethiopian P. an autochthonous technology, since there are few, if any records of the importation of the P. from other regions (Yemen or the Nile Valley) or across the northern highlands. The P. and its basic design appear in cave paintings at ↗Amba Foqäda (Eritrea), dated ca. 500–1,000 B.C. Most Oromo groups of the north and central highlands seem to have adopted the P. directly rather than accepting it after an intermediate hand-hoe stage. In other cases, as with the kingdom of ↗Käfa, the adoption of the P. took place in the 17th cent. when the Käfa royal court made a conscious shift from root crops to grains for purposes of taxation. Overall, the P., and the use of oxen as the primary traction animal, appears to have followed closely the adoption of annual cereal cropping as a farm strategy in regions throughout Ethiopia, Eritrea, and on the Hargeisa plateau in Somaliland.

The P.'s persistence across time and space has continued through the 20th and even 21st cent. In areas such as Ada, Goǧǧam, Western Šäwa, and the Rift Valley which have achieved the most advanced stages of commercial agricultural development, the P. still dominates farm cultivation. Tractor rental schemes that began in the 1960s have consistently failed to supplant the ox-P. as the primary means of cultivation, especially for *ṭeff*. Even in the cultivation of high yield hybrid ↗maize in the first decade of the 20th cent., the overwhelming choice of farmers across Ethiopia has been the ox-P. over mechanization. Mechanized state farms or private estates that use tractors for fallow ploughing often still use the ox-P. for later cultivation stages and have difficulty competing with ox-P. farmers on small farms.

MCCANN, *People of the Plow: an Agricultural History of Ethiopia, 1800–1900*, Madison, WI 1995; FREDERICK C. SIMOONS, *Northwest Ethiopia: Peoples and Economy,* Madison, WI 1960.

James C. McCann

Plowden, Walter Chichele

P. (b. 3 August 1820, d. 13 March 1860) was a British traveller to northern Ethiopia, a sometime British Consul, and a committed supporter of *aṣe* ↗Tewodros II. The son of Trevor Chichele Plowden, a British civil servant in Bengal, India, attended a private school in Hampstead, London, before travelling to India to join the Calcutta firm of Carr, Tagore and Co., but after four years became bored and sailed for Britain. On reaching Suez, however, he met the British adventurer John ↗Bell, and decided at the age of 23 to enter Ethiopia.

After spending over three years in Amhara country, then ruled by *ras* ↗Ali Alula, P. conceived the idea of acting as the latter's emissary to Britain. Ali agreed, and P. duly set off, with an Ethiopian envoy *aläqa* Dästa (who later abandoned the journey). P. meanwhile reached Massawa in October 1846 whereupon he appealed to the British Foreign Office for funds to continue his journey to London, which he reached in August 1847. He then urged the advantages for Britain of trade with Ethiopia, and that Britain should sign a commercial treaty with the country. This was an opportune time for P. as the British were considering appointing a consul at Massawa. P., apparently a suitable candidate, was appointed in January 1848 as British consul for "Abyssinia" – which avoided recognition or rejection of the ↗Ottoman Empire's claim to the port.

On returning to Ethiopia, P., with Bell's help, persuaded Ali to sign a Treaty of Friendship and Commerce with Britain, on 2 November 1849. The ruler, however, doubted that English merchants would come "in ten years" (RubActa I, 178–89; RubInd 130).

P. later gave fulsome support to *däǧǧazmač* Kaśa Ḫaylu (later *aṣe* ↗Tewodros) and in a letter to the Foreign Office on 25 June 1855 he praised him as an energetic person (House of Commons, 148–49). However, this had little impact on the Foreign Office, which favoured an alliance with Egypt over friendship with Ethiopia. Planning to visit Britain, P. was killed en route by rebels led by *garäd* Kənfu outside Gondär, where P. was buried. During his consulship (October 1846-February 1860) he had dispatched many detailed reports to London. His memoirs were published posthumously by his brother Trevor Plowden as *Travels in Abyssinia*.

Poland, relations with

The first mentions of P.'s official interest in Ethiopia date back to the reign of king Jan III Sobieski (1674–96), who tried to win ↗Iyasu I for the anti-Turkish coalition of Christian states; the Ethiopian Emperor, however, did not let the Polish envoys enter Ethiopia. Diplomatic relations actually started in the 1930s. At the coronation of ↗Ḫaylä Śəllase I, P. was officially represented by a Polish *chargé d'affairs* residing in Cairo; the Ethiopian envoy residing in Paris subsequently visited P. The first treaty of friendship was signed by the two countries in 1934.

After the Italian occupation, diplomatic relations were only re-established in 1947, when the Polish envoy to Cairo was accredited to Addis Abäba. The Ethiopian ambassador to the Soviet Union residing in Moscow was additionally in charge of P. starting from 1962. In September 1964, Ḫaylä Śəllase paid an official visit to P., where he was awarded the *Grand Cross of the Order of the Rebirth of Poland*. In 1965, an agreement on cultural and scientific-technical cooperation was signed between P. and Ethiopia. In 1969, over 100 Ethiopians began their studies in P. In the late 1960s relations deteriorated, mainly due to the differences concerning the ↗Israel issue and the Six-Day war of 1967.

A revival started with P.'s greater opening to the west in the 1970s, and the 1974 Revolution brought about a breakthrough in bilateral relations. In 1978, Mängəśtu Ḫaylä Maryam visited P.; the return visit of a Polish delegation took place in 1979. During the ↗famine of 1985–87, P. provided four shifts of pilots working on three helicopters which transported food to the most inaccessible parts of the Ethiopian highlands. In 1992, operations of P.'s embassy in Addis Abäba were suspended and its competences taken over by the representation in Sanᶜāᵓ, Yemen. The embassy was reopened in 2005. The functions of an Ethiopian representation to P. are performed by the Ethiopian embassy in ↗Germany.

Individual Poles who, by their presence in Ethiopia during or after World War II, contributed to shaping Polish–Ethiopian relations at different levels included diplomats, civil servants, financial advisors, numerous experts and specialists, academics (mainly lawyers) and others. The most prominent ones include: Stanisław Chojnacki, Jerzy Krzeczunowicz, Witold Grabowski, Wacław Korabiewicz and Barbara Goshu.

Polish academics provided a significant contribution to ↗Ethiopian studies. Probably the first scholar of importance in this context was the linguist and philologist ↗Wajnberg. The geographer Ludomir Ślepowron Sawicki (1884–1928), professor of the Jagiellonian University in Cracow, authored *Studya nad Abisynią* (1913), which included geographic, anthropological and ethnographic descriptions of Ethiopia. At Warsaw University, Ethiopian studies were institutionalized in 1950 by ↗Strelcyn within the Department of Semitic Studies. Strelcyn was also the first Polish éthiopisant to conduct field research in Ethiopia, and the Gəᶜəz manuscripts he brought back to P. formed the first collection of its type in the country. His successor, Joanna Mantel-Niećko, created the Department of African Languages and Cultures of the Institute of Oriental Studies, where a curriculum in Ethiopian studies continues to be offered. From 1985 to 1990, an Agreement of Academic Cooperation enabled academic and student exchange between the Universities of Warsaw and ↗Addis Ababa University.

Katarzyna Hryćko

Police

Traditionally communities in Ethiopia preferred to resolve litigation by ↗customary law. Crime investigation relied heavily on public inquests (**አውጫጭኝ**, *awč̣ač̣əññ*), divination under drugs (↗*leba šay*), thief-catchers and the sequestration of communities (↗*Afärsata*). A civil P. never formed part of traditional society as rulers used their armies and armed retainers (↗Army) in law enforcement at all levels of the Ethiopian Empire.

Police officers in the 1920s in Addis Abäba; from the photo archives of the Lazarist Mission, Paris

In the late 17th cent. *aṣe* ↗Iyasu I established the *lewa* (**ሌዋ**) and the first separate armed force with P. functions. Its duties were to keep public order in the towns and on the roads. During the ↗*Zämänä mäsafənt* this force fell in disuse. Little is known about policing in areas independent of central power in Ethiopia until the end of the 19th cent. In the city state of ↗Harär, the ↗*amīr* had the *dawrīya* (Ar. 'patrol'), an urban night watch. Also in the Oromo state of ↗Ǧimma, its ruler, ↗Abbaa Ǧifaar II, had an urban guard for his capital composed of Amhara mercenaries.

A real separation between military and P. functions began at the end of the 19th cent. After the conquest of Harär in 1887, its governor *ras* ↗Mäkʷännən Wäldä Mikaᵓel was the first to separate military and P. functions. He re-established the *dawrīya* as an urban guard with P. functions and sent some of its members to the ↗Ottoman Empire for training.

After ↗Addis Abäba was officially made the capital of Ethiopia in 1892, ↗Mənilək II asked *ras* Mäkʷännən to send him some members of the Harär *dawrīya* to reinforce the minuscule urban guard (**የከተማ፡ ዘበኛ**, *yäkätäma zäbäñña*) of Addis Abäba. The primary duties of this guard were to protect the lives and property of foreign nationals and to enforce a curfew. The guard, unlike soldiers of that day, wore uniforms, was armed with rifles and received salaries in cash and kind. In 1907 the new Ministry of Interior was given overall authority over the urban guards, which was later assumed by the ↗*käntiba*. In addition to its headquarters several P. posts (ዘብጥያ, *zäbṭəyya*) were established in the city. In 1912, *aläqa* Gäbru Sankaye, who had been a commander of the Harär *dawrīya* and had later served with the Italian colonial army in Tripolis, was appointed commander of the Addis Abäba urban guard. He established a special emergency P. force nicknamed *tiribuli* as many of its members had served with the Italian colonial army in Tripolis. In 1916, the *tiribuli* fought on the side of *ras* Täfäri Mäkʷännən (later *aṣe* ↗Ḫaylä Śəllase I) at the battle of ↗Sägäle.

During the regency of *ras* Täfäri and in his first years as Emperor, the urban guards were gradually transformed into a regular P. force with paramilitary features as part of his modernization program. Ethiopians, who had served in the Italian colonial army or the Kenyan Kings' African Rifles, and foreign instructors were employed to train recruits. Addis Abäba was divided into ten districts each having a P. station manned by two to three hundred policemen; between 30 and 40 sentry boxes were posted in every district. In 1925 the force was divided into a uniformed and a detective branch. A central records office kept photographs, physical descriptions and records of modus operandi of known criminals. About a year after *ras* Täfäri was crowned *nəguś* in 1928, the size of the force was raised to 2,600.

In 1930, the Addis Abäba P. force was officially named የአራዳ፡ ዘበኛ (*yäʾarada zäbäñña*) and divided into nine main departments. Despite the detailed regulations, in practice most of these offices functioned at best only at a rudimentary level. *Balambaras* ↗Abbäbä Arägay was the chief of P. in the capital. By 1935 P. forces accountable to the provincial governors operated in Harär, Ǧimma, Däse, Dərre Dawa, Bale, and Däbrä Marqos. In some northern provinces a special armed force, the የቤልዬ፡ ዳኛ (*yäbeləye dañña*), had the duty of pursuing criminals across provincial boundaries. On rare occasions P. detachments were also sent to the provinces to fight bandits (↗*Šəfta*).

About seven months before the Italian invasion in autumn 1935, a special P. detachment, the *gendarmerie,* was created to deal with any major threat to public order. It was composed of 600 men selected from the *yäʾarada zäbäñña*. Its commander was a Belgian officer, his deputy a captain from the ↗Imperial Bodyguard. Ethiopians, who had received P. training in ↗Switzerland, served as sub-inspectors. Most of the *yäʾarada zäbäñña* and *gendarmerie* participated in the battles against the Italian invader (↗Resistance).

When the Italians occupied Addis Abäba, they disbanded the *yäʾarada zäbäñña* and Italian Carabinieri, the army P. and the Black Shirt fascist militia exercised P. functions. In 1937, they created the paramilitary *Corpo di Polizia Coloniale*, later renamed *Polizia dell'Africa Italiana* (PAI), which acted as the sole P. force for its colonies. Originally conceived as a purely Italian force, it soon recruited native volunteers; in 1940 the native members, who were only used in local policing and territorial defence, numbered 7,000.

In January 1941, when the British army entered Addis Abäba, it placed the remaining *Carabinieri* and the PAI under British officers to maintain public order but by April, due to their abusive behaviour, the Italian P. had all been dismissed. To replace them, the British then first recruited Ethiopian Greeks in Addis Abäba and some other towns to form the *zäbäñña* force, who due to their thievery were also soon disbanded. Then the Occupied Enemy Territories Administration (OETA) recruited about 1,000 Ethiopians on a voluntary basis; these men had previously served in the PAI, the *yäʾarada zäbäñña* and the resistance and formed a new uniformed P. force led by British officers.

With Proclamation no. 6/1942 the OETA P. was transformed into the Imperial Ethiopian P. Due to the lack of qualified P. officers British officers headed the new force. By 5 April 1944, P. forces existed in Addis Abäba, Harär, Dərre Dawa, Däse, Ǧimma and Nagallee Borana, but Addis Abäba and some towns also had their own urban guards. The security of the other areas was in the hands of the newly established provincial territorial army (*näč̣č̣ läbaš*). After proper registration the strength of the P. force was 2,376, of which 117 were officers and 2,259 non-commissioned officers and privates.

The three-month training for all members of the regular P. was given in Addis Abäba and later extended to six months. In November 1945 training courses for corporals and sergeants were introduced and in 1946 the Aba Dina P. Academy was established in Addis Abäba. Later, it was transferred to Sendafa, a town 35 kms to the east of Addis Abäba. It answered directly to the Ministry of Interior, was staffed by Swedish instructors, and gave its cadets a two-year course. In 1951, the college was transferred to the authority of the P. and by 1956 Ethiopian instructors had fully replaced the Swedes. By 1957, 275 graduates had joined the P. as commanding officers and worked side by side with commissioned officers promoted from the ranks.

In June 1948 the *näčč läbaš* with a total strength of 18,810, including 611 officers, was merged with the regular P. This expansion allowed the creation of P. forces in all twelve provinces of the Empire. Provinces were divided into P. districts and the latter into stations. 16 British P. officers were brought in to lead and train the greatly expanded P. forces. At that time Ethiopians were assigned for the first time as P. commanders in the provinces.

Regulations passed in the period 1941–48 established regular uniforms, badges, rank signs and ID-numbers and regulated all aspects of P. work. From 1942 to 1954 the Imperial P. had five British Commanders. In 1945, Major ↗Mäkʷännən Dännäqä was appointed as the first Ethiopian Deputy P. Commander and in 1954 Colonel Ṣəgge Dibu as the first Ethiopian P. Commander.

In February 1953, a 500-man strong special mobile P. force, **ፈጥኖ፡ ደራሽ፡ ፖሊስ** (*fäṭno däraš polis*), was established with its headquarters in Qolfe in Addis Abäba. It was soon expanded to 1,258 men. In 1956 the remaining independent urban P. forces were merged with the Imperial P. P. commander Ṣəgge Dibu was one of the leaders of the ↗Coup d'état of 1960 (s. EAE vol. 2, 1081–82) and committed suicide after the coup failed. After the coup the modernization of the P. was stepped up. It was separated from the Ministry of Interior and placed under a P. Commission directly responsible to the Emperor. After the formal conversion of ↗Eritrea into an Ethiopian province (December 1962), the Eritrean P., which had been established by the British after 1941 and had retained a large degree of autonomy under the federal arrangement, was fully integrated into the Imperial P.

Since the early 1960's the P. developed more and more into a paramilitary force employed to combat insurgencies in various parts of Ethiopia, and particularly the Eritrean armed independence movement. Training and equipment were provided by ↗Israel, ↗Germany and the ↗United States of America. In 1962 the *fäṭno däraš polis* was revitalized. In 1965 a special commando P. force was created. By 1974 the Imperial P. Force numbered approximately 28,000 in all branches.

When, in February 1974, the Ethiopian Revolution started, many of the rank and file and junior officers of the P. force, then headed by Lieutenant Yəlma Šibeši, participated. The *Därg* (↗Provisional Military Administrative Council) included 18 men from the P. force, among them eight officers, the most senior being Major Däbälä Dinsa and Captain ʿAlämayyähu Ḫayle. The new revolutionary regime stressed that the mission of the P. was essentially political. It soon began to involve the army directly in P. functions and to curtail the authority of the P.; the latter was identified with the old regime, accused of supporting the "rightist opposition" and, in Eritrea, of being sympathetic to the "secessionists". After Mängəśtu Ḫaylä Maryam had taken full control of the *Därg* in 1977, the regime established the P. commando units as the 8th Army Division and reorganized the severely depleted National P. Since the army continued to play a prominent role in criminal investigation and in maintaining public order, local law enforcement was shifted to Revolutionary Squads. The paramilitary Mobile Emergency P. Force was augmented to 9,000 with special units for counterinsurgency operations. As a result of the havoc wrought by the turmoil of the Ethiopian Revolution and the subsequent reorganization of the P. force, the overall strength of the P. declined to 17,000 in 1982.

When in May 1991 the Ethiopian People's Revolutionary Democratic Front (EPRDF) came to power, it dissolved all armed forces of the defunct regime including the P. Starting in August 1991 it began to rebuild a new P. force. Proclamation No. 8/1992 established a new federal P. and new regional P. forces as well as new local security militias. Since late 1994 more than 8,000 demobilized fighters of the EPRDF, most of them from Təgray and a few hundred from organizations allied with the EPRDF were transferred to the regional P. forces and the central P. By the end of 1996, the aggregated total of the regional and federal P. was close to 50,000, more than double the number of the P. at the end of *Därg* rule.

The changes introduced after 1992 increased both P. presence on the ground and its efficiency. In a major break with past practices, women were recruited in large numbers to all P. forces and branches.

Günter Schröder

Political system ↗Government

Pollera, Alberto

P. (b. 3 December 1873, Lucca, d. 5 August 1939, Asmära [but in ErDizBio 8 December and 1 August, respectively]) was an Italian colonial officer and amateur anthropologist.

P.'s parents were Corrado P. and Angelica Gherarducci. In 1893, P. graduated from the Military Academy of Modena with the rank of lieutenant. After brief service in Brescia, in December 1894 he was appointed to the third African infantry battalion at Massawa, Colonia Eritrea. Apart from short breaks, he spent the rest of his life on the African continent.

Soon P. was transferred from military to civil offices. From 1903 to 1908 he headed the Residenza Gasc–Setit. In 1909 he became the commissary of ↗Säraye. From 1916 he was a commercial agent, first at ↗Däse, and then, from 1918, at ↗^{c}Adwa.

He retired in 1928 but stayed in Eritrea with his family. In 1930 he was called back into service, and until 1932 was the Italian Consul in Gondär. P. was also responsible for the Research and Propaganda Office of the government of the ↗Africa Orientale Italiana.

P. showed a vivid interest in the local peoples he had to work with and they became the object of his cultural and academic interests. The results of his observations and studies found their way into his ethnographic and historiographic publications.

Among his first ethnographic works of importance is the monograph dedicated to the "Barya" (↗Nara) and the ↗Kunama (1913). The book was written following direct contact with the peoples to whom P. wished to impart the "civilizing" aspects of the colonial regime. His reconstruction of the course of the battle of ↗^{c}Adwa (1928) is P.'s most prominent contribution to historical ↗research, considered a classical work of military historiography on Italian ↗Colonialism. P.'s voluminous study of the peoples of Eritrea (PollEr), reflecting over 40 years of study, was published in 1935, commissioned by the Minister of the Colonies Emilio de ↗Bono.

P. lived first with Wənäš Arʾaya Habte and then with Kidan Mənilək, whom he married. From the two unions, P. had six children. After the third child, Giorgio, was killed in a military operation among the Oromo of the ↗Sidamo province, P. changed his attitude. Whilst still believing in colonial Fascist politics, he called for more respect for mixed-race children, and tried to attract attention to the gravity of the error the Fascist regime was making by its racial politics. However, well aware of his own personal situation, not regular according to the laws of 1909 and 1914, he manifested his disagreement discreetly. He remained a convinced follower of ↗Mussolini until the end.

P.'s brother Ludovico (b. 4 June 1870, Lucca, d. 21 January 1953, Lucca; he used the entire surname Pollera Orsucci) also stayed in Eritrea from 1895 to 1928. His career brought him from the Resident of ↗Aqordät, to the regional Commissary of ↗Barka, to head of the Direction for Civil and Political Affairs (1918–20) and to Vice Secretary General of the government of the Colonia Eritrea (1920–21; he remained in the secretariat until 1928). Since 1928 to 1935 he was attached to the Italian legation in the League of Nations in Geneva as expert on colonial questions.

Antonio Romiti

Polotsky, Hans Jakob

P. (b. 13 September 1905, Zurich, d. 10 August 1991, Jerusalem) was an eminent linguist, with his main contributions in Egyptology and Semitic studies.

Born in Switzerland to Jewish parents, P. spent the first two years of his life at the Crimean home of his parents in Akmesčit (Simferopol). The family then came to Karlsruhe in 1907 and to Berlin in 1911. There P. received his schooling up to "Gymnasium" level at the Graue Kloster Gymnasium.

In 1924 P. enrolled in Egyptology in Berlin under Kurt Sethe. In 1926 he moved to Göttingen, where he studied Semitic languages under Mark Lidzbarski, and was also taught by the N.T. and Septuagint scholar Alfred Rahlfs as well as by the Egyptologist Hermann Kees. In 1929 he obtained a doctorate for his dissertation in Egyptology, *Zu den Inschriften der 11. Dynastie*. His activities at the Septuagint Project (1926–30) directed by Rahlfs was probably the reason for his life-long scholarly occupation with Coptic.

Back in Berlin from 1930, P. worked on the Manichaean manuscripts in Coptic (esp. on the translation of the *Kephalaia*, the edition of which was later continued by Alexander Böhlig). One outcome was his well-known article "Manichäismus" in Pauly – Wissowa's *Realencyclopädie* (1935).

In 1933 P. accepted an invitation to the Hebrew University, where he taught as "instructor in Egyptology" and, from 1951, as professor of Egyptology and Semitic Studies (up to 1982/83). Here, he continued his Coptic studies and, in particular, his researches on such modern Semitic languages of Ethiopia as Amharic, Təgrəñña and Gurage (Muḫər, Ǝža, Čaha); he also worked on Neo-Aramaic dialects.

P.'s greatest achievements were his studies of Classical Egyptian. His treatment of Egyptian syntax is seen by Egyptologists as the "standard theory". P. was guest professor for Egyptology in 1952 in Chicago (Oriental Institute), 1959/60 in Providence, Rhode Island (Brown University) and 1967/68 in Copenhagen. In Israel he trained a number of students, creating an entire generation of scholars in Egyptian as well as Semitic studies (amongst them the eminent scholars of Ethiopian studies Robert ↗Hetzron, Shlomo ↗Raz, Edward Ullendorff, Gideon Goldenberg and Olga Kapeliuk).

Although P.'s scholarly production is not too voluminous (for bibliography s. *^{c}Iyyunim be-^{c}iqqvot mif^{c}alo šel Poloṣqi* … 1988), it is extremely concentrated, of rare structural clarity and full of ideas – well beyond the scope of traditional specific studies. He was awarded the Rothschild Prize in 1962, the Israeli Prize for the Humanities in 1966 and the Harvey Prize in 1982.

Poncet, Charles-Jacques

P. (b. 1655, Chaumont, d. 1706, Esfahan) was a French physician who travelled to Rome, Malta, Istanbul, Egypt and eventually to Ethiopia during the reign of *aṣe* ↗Iyasu I. His account of his stay is the major European source on Gondärine Ethiopia for the period between the expulsion of the ↗Jesuits and the arrival of ↗Bruce.

P. arrived in Egypt in 1687. In Cairo, P. enjoyed a good reputation for his healing skills. At that time, Iyasu sent a Muslim emissary, *al-hāǧǧ* ᶜAlī, to find a doctor to treat himself and one of his sons for a skin disease (possibly ↗leprosy, cp. BruNile 466). Charles de Maillet, the French consul in Cairo, hoped that the mission could help to establish contacts with Ethiopia and encouraged P. to go there. P. left Cairo to ↗Gondär in May 1698 in the company of a Jesuit, Charles François-Xavier de Brèvedent, and the brother of the then metropolitan *abunä* ↗Marqos IV.

The expedition entered Ethiopia via ↗Sinnār where they spent three months as guests of king Badī l-Aḥmar (1692–1716). They arrived at Barča in Bägemdər on 23 June. De Brèvedent died there and P., also very sick, continued to Gondär, where he arrived on 11 July. He spent nine months there, treating the ruler and his son successfully. However, he was forced to meet the ruler only in secret to avoid rumours about a renewal of the Catholic presence in Ethiopia. Finally, he returned via Aksum.

P. aspired to establish diplomatic relations between ↗France and Ethiopia, even asking Iyasu to send an ambassador to Louis XIV. On the way back, an Armenian of Alep, nephew of *ḫoğa* ↗Murad, ↗Murad b. Madlum, joined P. with letters from Iyasu to King Louis XIV, kept today at the Bibliothèque nationale de France (ZotBNat no. 162). The journey was difficult and the presents to the French King were lost during the expedition. They finally reached France where the king received them, but without any further consequences. Their attempt to return to Ethiopia in 1702 also remained unsuccessful.

P.'s account of his time in Ethiopia (1704) provides a detailed description of Sinnār, of Gondär and its area including Lake Ṭana, devoting much space to his personal impression of Iyasu. Describing Aksum, he mentions the church of ↗Aksum Ṣəyon but not the Ark of the Covenant.

I. Introduction

Ethiopia, with 77,400,000 inhabitants has become the second most populated state in Sub-Saharan Africa (Pison 2005). Within the 1935-borders (identical with the borders since 1991) and in a 1.106 million km² national territory, estimations have differed from 5.5 million inhabitants (Maurette 1938) to 7 million inhabitants for ↗Africa Orientale Italiana (5.8 million inhabitants in Ethiopia) and 12 or 13 million inhabitants in 1946 (Perham 1948: 265f.). According to the 1970 census, Ethiopia (including Eritrea) had 25 million inhabitants. In 1984 the number increased to 42 million inhabitants and in 1994 (without Eritrea) to 53.5 million inhabitants. If one adds 4.7 million Eritreans (Pison 2005) the total number of inhabitants has tripled in 35 years.

In the 19th cent., 8.6 million inhabitants may have lived in a smaller territory of only 630,000 km² (Reclus 1885: 195). However, census takers lacked equipment and could not visit troubled regions.

For seven centuries Ethiopia has registered in its archives that the highlands were regularly affected by food shortages when they were much less populated than in the 20th cent. (↗Famine). Ethiopia suffered from many casualties during Mənilək's reign when a severe famine occurred, caused by *rinderpest* brought by the mules of the Italian troops which killed most of the cattle (↗*Kəfu qän*). Increasingly serious famines kept recurring in 1958–59, in 1973–74 and in 1984–85 which proved that P. had increased faster than ↗food production.

For a long time ↗urbanization stagnated due to a lack of agricultural surplus (Alula Abaté 1985) as well as a sufficient ↗road and rail network (↗Railways). At the end of the 19th cent., only ↗Gondär,

↗Däbrä Tabor, ↗ᶜAdwa, ↗Aksum, ↗ᶜAddigrat, ↗ᶜAbbi ᶜAddi, ↗Ankobär, ↗Aləyyu Amba, Ləčče and ↗Awsa exceeded 2,000 inhabitants; ↗Harär reached 20,000 inhabitants (Reclus 1885:265, 287, 329). The total P. of the "towns" was less than 100,000 inhabitants.

Urbanization spread after the foundation of the ↗*kätäma*, during the reign of Mənilək, and the construction of railways. In the 1970s city dwellers made up 9 % of the total P. (MesfGeogr), 11 % in 1984, 13.6 % in 1994 and 16 % in 2005. In a vain attempt to fight smuggling, Mängəśtu's regime (↗Provisional Military Administrative Council) failed to stop peasants leaving the countryside: in 20 years urban P. increased by 50 % while that of ↗Addis Abäba quadrupled (GasEth; Gascon 2006). Because the figure of city dwellers has grown faster than the whole P., Ethiopia fits the common demographic pattern of the other African states.

At present 80 % of Ethiopians live above 1,800–2,000 m A.S.L. on 30 % of the national territory. They avoid the hot ↗*qʷälla,* affected by ↗malaria and trypanosomiasis. In 35 years demographic pressure has worsened: in 1970 P. density in the highlands exceeded 50 h/km², twice the national density, and in 2005, 200 h/km², three times the Ethiopian density. In about 1850 Härar already reached 60 inhabitants/km², Šäwa 37, the ↗Oromo Gibe States 22 and "Abyssinia" (↗Təgray, ↗Amhara, ↗Goǧǧam) 10, while the average density was 14 in "Greater Ethiopia" (Reclus 1885:195). According to travel reports, there is some confirmation of high densities in the mountains and plateaux where coffee and *ənsät* growers had settled: to the east the Harär and ↗Č̣ärč̣är regions and to the west a diagonal stretched from ↗Gurage as far as ↗Wälaytta and ↗Gideᶜo. The Ethiopian P. could be grouped into three centres: "Abyssinia" and ↗Šäwa 40 %, the Oromo States 40 % and Harär 14 % (Reclus 1885:195).

In the first atlases we can see that P. was settled mainly in the highlands. Higher densities were lined up in nuclei from Təgray (Aksum, ᶜAdwa), to ↗Wällo (↗Däse), to Goǧǧam, to Šäwa (Addis Abäba) as far as the large nucleus joining ↗Kämbata, Wälaytta and ↗Sidamo. To the East one can see the Harär region and to the West the Bädälle, Agaro, ↗Ǧimma, ↗Arǧo and Naqamtee *awraǧǧa* (MesfAtlas; Gascon 1994). History and politics were the major factors in this population distribution: Təgray and Harär were the hearts of former states and Goǧǧam and Wällo were powerful provinces. Gondär which for a long time was the capital has, however, never been a demographic centre. South of Addis Abäba appeared a dense and large region where *ənsät* was "a peopling plant" (Gascon 1994).

At present, the highest population density is to be observed in the peripheries of the capital (CSA 1998, 1999, 2004).

The six most important *kəlləl* (96 % of the Ethiopian population) according to CSA 1998, 2004 are

Oromiyaa	35 %
Amhara	25 %
Southern Nations, Nationalities and Peoples' Regional State	20 %
Təgray	6 %
Somali	6 %
Addis Abäba	4 %

The Southern Nations, Nationalities and Peoples' Regional State including the Gurage, ↗Hadiyya, ↗Kambaata and ↗Sidaama rural zones host more than 256 inhabitants/km². This is exceeded by the Gideᵓo zone with 512 inhabitants/km² and by the cities of Harär and Addis Abäba. The capital is surrounded by a cluster of zones, which are either part of Amhara or Oromiyya, accommodating between 128 to 256 inhabitants/km². In this group the zones of Šäwa, Ǧimma, North Omo, Goǧǧam, South Gondär and South Wällo are found (CSA 2004). The Təgray *kəlləl* (especially the East zone) and the North Gondär, ↗Arsi, Harär, ↗Wälläga and Illubabor zones although located on the plateaux have a lower average density than in the highlands (CSA 2004). This recent evolution interrupts the age-old history of the Ethiopian P. with sedentary agriculturists settled on the highlands and nomadic pastoralists of the lowlands gathered around their wells.

Until the Italian occupation the demographic nuclei of northern Ethiopia (the old Christian core) of eastern Ethiopia (Muslim Harär), and of southern Ethiopia (the mountains and plateaux of the cultivating *ənsät* peoples) remained independent from Addis Abäba. Only the southern nucleus has been strengthened by the increasing influence of the capital, whereas the northern and eastern nuclei seem to have weakened.

More than a century after the foundation of Addis Abäba in 1887 the demographic centre of gravity has met the political centre of Ethiopia. When the authorities of Oromiyaa adopted ↗Finfinee-Addis Abäba as their capital, they sought to take advantage of the city's expansion.

In 2025, it is expected Ethiopia will have to feed 118 million inhabitants (Pison 2005). Ethiopia must face rapid urbanization which will increase the influence of the capital at the expense of the historical centres of power.

II. Migrations before 1400 s. EAE vol. 5

III. Migrations from the 15th to the 19th century

Between the 15th and the 19th cent. occurred most of the spatial expansion that forms the present ethnic composition of north-eastern Africa. During this period two major directions of migratory movements can be determined: (1) the inhabitants of the northern plateau expanded towards the southern highlands, a movement which was counteracted from the 16th cent. onwards by the ↗Oromo migrations, and (2) people from the arid zones of the Somali peninsula tried to force their way westwards in order to gain access to more hospitable inland habitats.

The two migratory drifts occasionally coincided in the lake region of the Rift Valley. For their movements people preferred ways through areas of medium altitude, e.g., particularly along the highland escarpments, whereas malaria-stricken lowland regions were avoided or passed as quickly as possible. However, these areas frequently became a refuge for groups threatened by powerful neighbours. Slave raiding, mainly practised by highland populations along the western escarpment, proved to be a noticeable pull factor towards these geo-medically unsuitable territories up to the early 20th cent. (↗Gumuz, ↗Berta, ↗Mao, ↗Komo, ↗Mağaŋgir, ↗Gimira, etc.). In general, the slave trade from north-eastern Africa, particularly in the western peripheries but to a considerable extent also in Oromo and ↗Gurage areas, reached international dimensions (↗Slavery). It resulted in a continuous forced migration towards the Arabic-speaking areas of the Near East, the ↗Ottoman empire and as far as the Indian sub-continent (e.g., the so-called Habshi and Siddi represent minorities in ↗India, which were established there over the centuries originally as domestic slaves and mercenaries; s. Ababu Minda Yimene 2004).

In the 15th cent. the Ethiopian emperors, particularly *aṣe* ↗Zärᵓa Yaᶜəqob, continued the southward expansion of the Christian state which ↗ᶜAmdä Ṣəyon I had initiated. Military settlers from the northern Ethiopian plateau (↗*Č̣äwa*) were placed as far south as the ↗Gamo, ↗Käfa and ↗Bale highlands to secure political control. This early migration is still reflected today in numerous names of sub-groups, particularly among the ruling strata, which recall their northern roots, e.g., ↗Amaaro, Tagaro, Hinnaro (↗Ǝnnarya), the royal clan "Tigre" of the ↗Wälaytta, the "Amhara" clans of the ↗Kambaata. It is also evidenced by certain titles of Ḥabäša origin such as *lagoo* (*ləğoo*) among the ↗Anfillo.

After the Muslims of the Horn had established the powerful confederation of ↗Zaylaᶜ in the 14th cent., the ↗Somali and ↗ᶜAfar started expanding from their country of origin in the coastal plains of the Gulf of Aden and the Indian Ocean. As pastoral nomads, traders and adventurers they began infiltrating the territories of the ↗Harär plateau and today's eastern Arsiland and acted as agents of Muslim expansion.

With regard to spatial mobility, the 16th cent. was one of the most turbulent phases in the history of north-eastern Africa. In 1529 *imām* ↗Aḥmad b. Ibrahīm al-Ġāzī (“Grañ”), the leader of the mighty Muslim sultanate of ↗ᶜAdal, spearheaded his ↗*ǧihād* against the Christian empire. Because ᶜAdal was a multi-ethnic political federation, people of different origin, Somali, ᶜAfar, ↗Harari and Hadiyya-Sidaama (s. BrHad), joined *imām* Aḥmad “Grañ” in his westward campaigns. Although the conquest of highland Ethiopia as the major aim of the *ǧihādists* failed, the changes in the ethnic composition of the Horn proved to be far-reaching.

The colonies of Christian settlers in most regions south of ↗Šäwa – with some exceptions, e.g., in Kambaata and ↗Käfa – had largely been annihilated. As participants of the military offensives of Aḥmad Grañ’s successor ↗Nūr b. Muǧāhid (r. 1551–69) Semitic-speaking people, the so-called Adäre (↗Səlṭi, ↗Wəlbaräg etc., cp. ↗Harari), from the Č̣ärč̣är region moved to the eastern part of Gurageland. In the course of the turbulences of the *ǧihād* the ancestors of the present ↗Sidaama also left their homeland in the Harär plateau and the Bale highlands. After having passed a number of different stages in south-eastern Ethiopia they became established in their present location west of the ↗Ganaale headwaters between ca. 1560 and 1600 (BrHad 153–60). Other Harär groups established themselves among the ᶜAfar and Somali (Haralla, ↗Harla, i.e. ‘Harari’).

Because the long war had resulted in a considerable weakening of both opponents, Christian Ethiopia as well as the Muslim ᶜAdal federation, the Oromo were able to enter the historical arena as a powerful new agent. The hotly debated question of their country of origin will not be resumed in detail here. If we accept the view that the “homeland” of the Oromo was situated between the upper ↗Ganaale and the upper ↗Dawa (cf. BrHad, ch. 3.4.2), their movements occurred in two opposite directions, to the north and north-east into Ethiopia and, to a lesser extent, to the south into Kenya.

The extremely far-flung expansion of the Oromo obviously started in the 1530s, simultaneously with the early years of the ᶜAdal *ǧihād*. At first, they seem to have penetrated Bale, where the Christian position had collapsed as a consequence of the Muslim invasion. During the second half of the 16th cent. they crossed the ↗Wabi Šäbälle and subsequently occupied territories they collectively labelled Didaᵓa (presumably the former Christian province of ↗Däwaro). Written and oral sources speak of two major columns of Oromo migrations northward, the one of the ↗Boorana in the west and the other of the ↗Baarentuu in the east. The Boorana can be identified as the ancestors of the present ↗Mäč̣č̣a and Tuulama. They presumably advanced along the eastern escarpment of the ↗Rift Valley, crossed the upper ↗Awaš and subsequently occupied parts of Šäwa, Ǝnnarya, ↗Wällägga and Goǧǧam. The Baarentuu moved to the north-east and, according to their historical traditions, split into two major branches at Odaa Rooba in Bale around 1540. The ancestors of the Arsi crossed the upper Wabi Šäbälle in western Didaᵓa where they encountered an autochthonous population of partly islamized ↗Hadiyya.

The former inhabitants were either assimilated – two thirds of the ↗Arsi-Oromo are descendants of “Hadiyya clans” – or expelled to areas west of the Rift Valley. Other groups of Baarentuu descent, e.g., ↗Rayya, Azäbo and Ašangä (Ḫašəngä), continued their northward move and occupied parts of today’s Wällo and Təgray in a process which was apparently not concluded before the 17th/18th cent. Some Baarentuu groups crossed the Wabi Šäbälle in eastern Bale and then most probably pursued a route up the tributary Erär. With astonishing speed they seem to have advanced towards the region of Harär which was reached in the 1570s. The walled city resisted their conquest. Oromo raids eventually threatened ↗Awsa, the capital of the ᶜAfar sultanate, and territories in northern Somaliland as far as Hargeisa. From the 18th cent. onwards, however, the steady advance of the Somali forced the Oromo to retreat from areas in the eastern part of the Harär plateau and Bale.

As already indicated, the expansion of the Oromo was accompanied by a far-reaching ethno-linguistic assimilation of autochthonous populations in the conquered territories, especially of Cushitic-speaking Hadiyya-Sidaama, Semitic-speaking ↗Harari and ↗Gurage and Omotic-speaking groups in the region of the upper Omo (↗Gibe). The Christian empire of the Gondär period in the 17th and 18th cent., after having suffered from considerable territorial losses, was finally able to stop the migratory expansion of the Oromo in northern Ethiopia.

Although movements of ethnic groups and tribal segments, mostly caused by warlike clashes, have remained a common phenomenon in the history of north-eastern Africa, long-distance migrations of this type at the climax of the Oromo expansion can hardly be documented from the 18th cent. onwards. Demographic pressure increasingly induced people of the densely populated highlands to extend their settlement areas to the agriculturally less favourable lowlands and also droughts, epidemics such as the late 19th cent. *rinderpest* (e.g., s. ↗*Kəfu qän*) and subsequent ↗famines occasionally caused short-distance migrations, e.g., ca. 1890 in the lowlands of the Rift Valley.

The inland push of the Somali, mainly Dir in the area of the Harär plateau and ↗Darood in the Ogaden proceeded and obviously increased during the second half of the 19th cent.; e.g., the originally ᶜAfar-dominated ↗Zaylaᶜ became part of Somali territory. But this migration generally occurred in the form of an unspectacular infiltration.

The immigration of Arabs and Turks during the Egyptian occupation of territories on the Eritrean coast (↗Massawa; ↗Ottoman empire) and in Harärge was culturally important to some extent, but demographically it remained insignificant. ↗Beğa-speaking groups such as sections of the ↗Beni ᶜAmər occasionally crossed the borders from the Sudan to Eritrea and Ethiopia. In any event, pastoral nomads largely ignored the national boundaries which were demarcated in north-eastern Africa during the 19th cent. As a new ethnic element the ↗Rašāᵓida Arabs crossed the Red Sea to Eritrea (and to the Eastern Region of the Sudan) from the middle of the 19th cent. onwards.

As a particular type of migration, pilgrimage should be mentioned. When on the *ḥağğ* to Mecca people from various parts of Africa passed through the north-eastern part of the continent in order to reach the port of Massawa from where they crossed the Red Sea to the Arabian peninsula. Occasionally, some of the pilgrims, usually referred to by the West African names of ↗Tukrīr or ↗Fellata, stayed on as minorities in Ethiopia and Eritrea, and sometimes subsequently assimilated (s., e.g., Johannissiany n.d.). Starting from the era of Mənilək II, Arabs from Yemen tried to find a living as petty traders in Ethiopia (ZerÉth). Still in the 1950s – most ↗Yemenis had meanwhile left the country – the terms *Arab suq* or *Arab bayt* for small shops were widespread in rural areas. Imperial economic policy also attracted numerous foreign merchants and craftsmen, mainly ↗Armenians and ↗Greeks. The colonial occupation of ↗Eritrea by Italy in 1882 quickly resulted in an influx of Europeans for military, administrative and economic purposes.

The expansion of Šäwa and subsequently of the Ethiopian empire during the second half of the 19th cent. led to considerable shifts of population as a result of slave raiding, mainly along the western escarpment of the Ethiopian highlands (e.g., Gumuz, Gimira, etc.), and thanks to forced ↗resettlement instigated by rulers of provinces. It also resulted in a (new) southward movement of Ḥabaša people (↗Amhara, ↗Təgrəñña-speakers) and ↗Tuulama-Oromo, to the annexed provinces, as military and administrative personnel and to some extent also rural settlers and merchants. These people, usually labelled ↗*näfṭäñña* (‘gunmen’), constituted the leading stratum of the population in the *dar agär*, the conquered territories which comprised more than two thirds of the Ethiopian state. Many of them acted as ↗*mälkäñña* (land-owners) controlling the local inhabitants who had largely been reduced to the status of “serfs of the state” (↗*Gäbbar*).

When administrative personal of high position were transferred to other provinces they frequently forced parts of the local population to join them in their new destinations. For example, a British traveller (Darley 1935: 131) observed in 1923 the caravan of an Ethiopian governor near Ǧimma which he estimated at 12,000 men and women to be used as servants, porters, etc. Displacements of such a kind involving a considerable amount of people, e.g., between Käfa and Yərga ᶜAläm in Sidamo, are reported by oral tradition to have occurred until 1935. The human losses during these processes of deportation seem to have been enormous (BrHad 312).

Reliable statistics for ↗*näfṭäñña* in the different parts of Ethiopia are not available, but their number most probably amounted to some hundred thousand people by the end of the 19th cent. (Many of their descendants left southern Ethiopia for Addis Abäba and the northern parts of the country after the fall of the *Därg* [↗Provisional Military Administrative Council] regime in 1991.)

A process of rural-urban migration started with the establishment of Addis Abäba as the new capital of the empire in 1889 and the foundation of new ↗*kätäma* as centres of administration in the provinces.

IV. Migrations in the south-west

The Ethiopian south-west, a multi-ethnic but traditionally sparsely populated region, knew significant migratory patterns that were visible until the present era. With the growing impact of the central state, these patterns were either "regulated" or disturbed during the second half of the 20th cent. and beyond. The post-1991 state furthermore discouraged "irregular" migrations via its policies of territorialization of ethnic groups, and group conflicts also have added to a decline of mobility and ethnic change (↗Ethnicity).

The south-west is traditionally a frontier zone where many groups meet, with settlement areas and transhumant modes of livelihood extending well into the ↗Sudan and ↗Kenya: ethnic groups and migration always occurred in a wider regional context. As the complexity of ethnic nomenclature and movement, based on equally varied ecological setting, is great, only the basic outlines can be indicated here. Many groups were known in the past under other ethnic names and frequently intermingled (s. Schlee 1989 for the Ethiopia-Kenya zone, cf. Sobania 1991; ↗Inter-ethnic clan relations). Most of the inhabitants of this wider region were agro-pastoral peoples and hunter-gatherers. The latter, e.g., ↗Kwegu-Muguği, Manğa (↗Manğo), Šabo, ↗Mağangir, are probably the more ancient inhabitants of the region, although they were obviously preceded by other groups, as the vestiges of Stone Age cultures have been found in the lower ↗Omo valley (cf. Guillemot 1997).

The agro-pastoralist groups in the Ethiopian south-west may for a large part have their origins in southern Sudan or Kenya, as the plains suitable for cattle herding extend well into these regions. The ↗Ñaŋatom people are in close contact with the Toposa in Sudan who share the same language and culture, the ↗Baale (↗Suri) people partially live in Sudan, and Ethiopian pastoralist groups still have grazing areas across the borders. Many present-day peoples still largely retain the old forms of pastoral and hunter-gatherer livelihood, for instance the ↗Dáasanač, Ñaŋatom, ↗Mursi, Bodi (↗Meʾen) ↗Kara, Kwegu, ↗Arbore (Hoor), or Suri. Others have either lost their cattle because of disease (↗Añwaa, Baale) and adopted agriculture or craftwork and petty trade. Various groups such as Komo, Meʾen, ↗Opuuo, Olam (↗Murle), ↗Benç̌ or even the Mağaŋgir (Renʾya Sato 2002) have also come to adopt a more settled agricultural lifestyle. Other groups have disappeared: the Gomba, the Omo Murle, the Bogudo. Throughout the history of this region, extensive inter-group trading contacts are notable (cf. Sobania 1991).

Apart from epidemics, droughts or other ecological problems people moved because of group conflict, human disease (Tornay 1986 on a sleeping sickness epidemic), or local population pressure (cf. Abbink 1992; Turton 1991; Schlee in PICES 8). Colonial policies also played their part, notably of the British in Sudan and Kenya (s. Lamphear 1992). Many groups in southern Ethiopia that were brought under Ethiopian imperial rule in the late 1890s suffered seriously from raiding, the ↗*gäbbar* system, enslavement and general politico-economic exploitation (cf. Donham – James 1986), causing several groups to seek refuge elsewhere or retreat to inhospitable places. Finally, when local conflict aggravates, warfare in itself can fuel ethnic migration and group change (Turton 1991).

The people in the region under discussion speak Cushitic, Omotic and Nilo-Saharan (Surmic) languages. Much of the processes of ethno-genesis and migration are documentable from the early 19th cent. onwards, via an analysis of local oral traditions. From anthropological and ethnohistorical research in the past two decades, a detailed picture of ethnic group relations, local societies and population movements has thus emerged (s. the work of, e.g., Almagor, Fukui, Lydall, Turton, Tornay, Sobania, Schlee, Strecker and Abbink). This picture shows a story of frequent group segmentation, and of an often quite mixed composition of local "ethnic" groups, whereby sections or lineages of other groups were absorbed, as evidenced by the inclusion of Pokot and Rendille people among the Ñaŋatom (Tornay, personal communication, 2007), ↗Aari and Dizi sections among the Meʾen, and ↗Dizi, Kwegu and Meʾen people among the Suri. Some clan groups are present in various ethnic groups

(Schlee 1989; Unseth – Abbink 1998; Abbink, field notes). Also notable is the relatively recent emergence of certain ethnic formations, such as the Ñaŋatom since the 19th cent. (emerging from the Karimoǧoŋ cluster [Tornay 2001], the Mursi [Turton 1979], and the Suri since the late 18th cent. [Abbink, field notes]). Others significantly change their character in a relatively short period. For instance, the Tišana-Meʾen have become much more agriculturalist since the early 20th cent., incorporating members of local groups and inducing cultural change (Abbink 1992). Part of the Mursi have over the last 20 years settled in higher, better watered areas, de-emphasizing ↗pastoralism (Turton 1988; Turton – Turton 1984). Some groups in the southern Sudan, such as the Surmic-speaking Didinga, Tenet and Narim, claim origins in southern Ethiopia (cf. Dimmendaal 1982: 105).

On the northern fringe of the south-west recent dramatic population movements were caused by civil war in the southern Sudan and local conflict in Ethiopia: the ↗Nuer entering Ethiopia from the Sudan and the emerging displacement of the Añwaa from much of their traditional land. The Añwaa have thus seen their territory, numbers and political power decline, and this has led to rising violent confrontations and a very tense relationship until today (Dereje Feyissa 2005). In the same Gambella region, the Maǧaŋgir people have come under pressure due to the shrinking forest area and emerging competition with other groups, reducing their mobility.

In the late 20th cent., ecological and economic problems of the South-west are undiminished, but migratory patterns to alleviate resulting local systemic stress are increasingly proscribed by state authorities, which follow the predictable political ideal of settling and administratively controlling the local peoples. In the 1980s, for instance, the *Därg* government initiated villagization plans as well as population transfers of famine-stricken Northerners (↗Resettlement), thus causing a demographic dynamic impact on migration patterns. While these initially had a limited effect, they were taken up in full force by the post-1991 government, which dramatically increased the scale of these interventions. There are now large settler communities among the Meʾen, the Mursi and the Bodi (s. Meʾen), with more planned. In addition, internal population pressure among the indigenous groups, within relatively poorer environments, is growing as well. This is limiting ethnic change and interaction and is heightening "ethnic" tensions. Traditional migratory patterns thus have stopped in their tracks, but forced sedentarization of agropastoral groups and growing commercialization (land confiscation for outside companies, logging, and development of state land) will proceed, as will out-migration of young people via the educational system or new networks of regional trade.

Jon G. Abbink

V. Migrations from the late 19th century until today

The expansion of the Christian Ethiopian empire in the late 19th cent. not only led to forced population movements due to slave raiding (↗Slavery) and displacement of uprooted people, but also to labour migration of various newly conquered groups, such as the ↗Gurage-speakers, who lost much of their land, and, due to the need for imperial tribute to be paid in cash, had to gain income (Baker 1992; Worku Nida 2000). This was the start of their migration to Addis Abäba, and later to other urban areas (↗Urbanization).

In addition, craftsmen from southern groups like the Dorze came to the capital to make a living from weaving. Various imperial generals and provincial governors forced hundreds of people to come with them when they left their posts and settled in the capital. Some massive raids sometimes depopulated entire regions. One of the most notorious ones was the raid in 1913 by *ləǧ* ↗Iyasu in the ↗"Gimira" area. In the wake of the imperial conquest, there also emerged more internal migration in various regions, but this did not lead to major population movements or shifts such as are known from earlier centuries. Indeed, apart from the movement of Northerners (e.g., ↗*näfṭäñña*) to the south and local migrations and encroachments in peripheral areas (Somali-ᶜAfar, Oromo-Somali), and slow movements of pastoralist peoples in the south-west to higher, more rain-fed areas, no major processes of ethno-genesis or of large-scale assimilation or ethnic displacement were visible after the establishment of Mənilək's empire: the new imperial order in a way "froze" the borders of ethno-regional groups, and massive migratory processes declined. The growth of new urban centres, however, was fed by steady migrations from various groups and regions, leading to a new socially and ethnically mixed urban population.

Due to local droughts and ↗famines as well as localized economic development – in Addis Abäba and in areas of new cotton, sugar and coffee plantations – voluntary migration steadily increased during the 20th cent., mainly from north to south. Also, northern traders became more active in southern Ethiopia. Starting from the late 1960s, ecological degradation, especially in the central highlands, was an impetus for voluntary migration of peasants to less populated areas (Markos 2001; Lindtjørn et al. 1993). In lowland areas, the common patterns of pastoralist transhumant migration have continued until today (e.g., ↗ᶜAfar, ↗Somali, ↗Gabbra, ↗Garri, ↗Boorana, and smaller groups in the south-west).

Until the late 1970s Ethiopia had a relatively low rate of urbanization in comparison with other African countries (cf. Benti Getahun 2007), but in the *Därg* era this changed (Berhanu Tereke 1994). The rapid growth of urban settlements, primarily of Addis Abäba and the capitals of the new regional states led to congestion, substandard housing, pollution and lack of services (Andargatchew Tesfaye 1992; Solomon Gebre 1993). Reasons for migration to urban areas are the persistent crisis of rural livelihoods, land alienation, and unrelenting population growth, leading to land scarcity and poverty.

Apart from small groups from some neighbouring countries, such as Yemen and Sudan, no significant numbers of foreigners settled in Ethiopia in the 20th cent. As mentioned above, trading communities, e.g., of ↗Greeks and ↗Armenians, settled in small numbers. Refugees from Sudan, Eritrea, Somalia and Kenya, however, were numerous in times of conflict and war. The number of Sudanese refugees in the 1980s, for instance, was more than 300,000. Somalis arrived in the wake of episodes of civil war, and around 1990 there were close to one million Somali refugees in eastern Ethiopia.

The civil wars in the late 1970s and 1980s in Təgray and Eritrea led to several hundred thousand refugees (to Sudan) and internally displaced persons (in northern Ethiopia). More recently, the Ethiopian–Eritrean war of 1998–2000 displaced ca. 350,000 people, tens of thousands of whom are still not resettled. In addition, "population exchange" occurred during the war with both countries expelling assumed citizens of the enemy country: ca. 80,000 Eritreans were "sent back" to Eritrea, and ca. 70,000 Ethiopians were urged to leave under pressure if not actually forced out of Eritrea. Other conflict situations add to the involuntary migration of people, e.g., violent "ethnic clashes" between ethnic or regional groups around district or regional borders, and occasionally religious tensions. In most cases people return to their homes after mediation and the restoration of order, but sometimes there have been expulsions. In short, in terms of deaths, trauma, and loss of livelihood, the human toll of forced migration and population displacement in Ethiopia in the past century has been high.

An exceptional case of migrations was the wholesale departure of one ethno-religious group from Ethiopia, the only one so far: the ↗Betä Ǝsraʾel, claiming Jewish heritage and descent, to the state of Israel in a costly "chain migration" from ca. 1977 to 2004 (Ben-Ezer 2002; Schindler 1993). No Betä Ǝsraʾel from the main group are left in Ethiopia, except for a few splinter groups, often descending from members of the community converted to Christianity. A comparable case of a quasi-total departure of a whole group are the "Bantu" Mušunguli of ↗Somalia, a disadvantaged group, which was offered refuge in the United States of America.

A typical African problem also affecting Ethiopia is the exodus of skilled professionals, the "brain drain". Before 1974, only a few Ethiopian professionals were working outside the country, although many were trained abroad. The brain drain started in the 1970s – after the Ethiopian revolution, ushering in a totalitarian state, a long civil war, and economic stagnation – and has not abated since (Dejene Aredo – Yohannis Zelalem 1998). At the same time, a mirror trend has emerged in the last two decades: the out-migration of low-skilled workers, especially females, to neighbouring countries like Saudi Arabia, Yemen, Lebanon, Italy, the USA, and others. Young females are employed as domestic servants and child minders (Emebet Kebede 2000). This has led to the emergence of organized human trafficking and related abuse. In sum, sociopolitical instability, ecological degradation, durable poverty, exponential population growth and (trans-)border conflicts fuel persistent migration flows in Ethiopia and neighbouring countries.

Jon G. Abbink

Porro expedition

The P.e. was a commercial mission lead by Count Gian Pietro Porro (b. 20 November 1844, d. 9 April 1886), president of the *Società di esplorazione Commerciale in Africa*; the mission was originally meant to reach Harär in 1886. Porro organized the project as part of an effort to promote ↗Italy's presence in the Horn and a better understanding of the region's economic potential. While the Italian government steered clear of an official endorsement, Italy's leading pro-colonial institutions supported Porro's plans and dispatched representatives along with him. Among the members of the party who embarked on the journey were Giovanni Battista Licata, a naturalist representing the ↗*Società Africana di Napoli*, Count Carlo Cocastelli di Montiglio representing the *Società Geografica Italiana*, and Umberto Romagnoli, representing *Filonardi*, a company commercially active throughout East Africa.

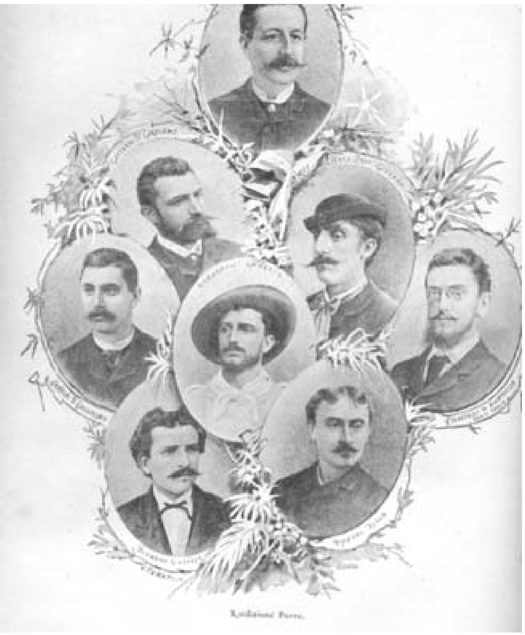
The P.e. left Naples on 26 January 1886 and reached Aden by early March at a time of great instability. ↗Egypt had just withdrawn from the region: the coastal cities were now under British control, while ↗^{c}Abdullāhi b. Muḥammad had become the *amīr* of ↗Harär and found himself at odds with the European presence in the city. At the same time the British authorities were suspicious of Porro's aims, believing the ultimate goal of the mission to be political in nature. They warned Porro about the dangers of any attempt to reach Harär, but consented to the expedition provided they reduced the amount of weapons they carried and agreed to be escorted.

Porro accepted the British conditions and sailed to ↗Zayla^{c} on 18 March. The P.e. left in the company of a British-appointed contingent of Somali and Sudanese soldiers, an Ethiopian interpreter and three servants. Besides Licata, Cocastelli and Romagnoli, Porro took with him his servant Giuseppe Blandino, Giulio De Angelis and two physicians, Gerolamo Gottardi and Guglielmo Zannini. Porro asked the other four members of the original party who had left Naples with him two months earlier to return to Italy with most of the military supplies.

On 26 March the P.e. left Zayla^{c} and by 1 April reached Somadu where it sojourned for a few days. Here the members of the expedition wrote letters to their sponsoring institutions and their families – the letters would be published in the *Esploratore* and the *Bollettino della Società Geografica Italiana* after their deaths.

By the time the party reached the outskirts of ↗Ǧildessa, on 8 April, the town was under the control of the *amīr* whose troops had disarmed a British contingent. In spite of these chaotic circumstances, Porro decided to camp in the vicinity and move forward with his expedition: Romagnoli was sent to Ǧildessa to assess the situation.

Once in the town he met with representatives of the *amīr* who agreed to escort the party to Harär. A small contingent followed Romagnoli back to the encampment and later that night met with Porro to demand that the party surrender its weapons in exchange for a safe passage. It seems that a disagreement on this issue persuaded the Harari to seek reinforcements: before dawn, about three hundred soldiers surrounded the encampment and disarmed the escort while the *amīr*'s representatives promised Porro they would have him and his fellow travellers escorted to Harär. On the following day, 9 April, the P.e. and the Harari forces headed to Harär as agreed, but after marching for a few hours all the Italian members of the expedition were executed, while the interpreter, soldiers and servants were taken prisoners.



The members of the Porro expedition (from top, counter-clockwise: Porro, Gottardi, Licata, Zannini, Romagnoli, Cocastelli di Montiglio, Blandino, Bianchi); from Robecchi-Bricchetti 1896: 88

When the news reached Italy, the societies backing the expedition demanded a direct military intervention, but to no avail: the Italian government dismissed calls for a retaliatory mission on the grounds that the P.e. had been privately organized with no government support and that any military initiative would involve a confrontation with the British forces which were in control of the area and supportive of the *amīr*.

Matteo Salvadore

Ports ↗Red Sea

Portugal, relations with

In Portuguese sources of the 15th–17th cent. *Etiópia* (↗Aithiopía) means loosely "East Africa", whereas Ethiopia proper is styled *Abássia* (↗Abyssinia) or, more often, *Terra do Preste João* (Thomaz 2002). P.'s quest for the ↗Prester John began, according to Gomes Eanes de Zurara, about 1422, when Prince Henry the Navigator, aware of the difficulties of the conquest of Morocco (which the Portuguese had commenced in 1415, occupying Ceuta), decided to follow the coast of West Africa, in search of a Christian ally. Perhaps due to confusion between the emperor of Ethiopia and the King of Mali, the realm of the former was supposed to reach the Atlantic Ocean, around the River Senegal, and that explains the inquiries made about Prester John by Portuguese sailors in the zone of Rio de Oro in 1443, in Gambia in 1455 and later in the Niger River and Congo. In 1446, Prince Henry sent two of his men to explore the Levant and the "Land of Prester John"; unfortunately, details are unknown. Information about Ethiopia was obtained by Italian agents and travellers (↗Italy) and from Ethiopian monks who visited P., such as one George in 1452 and Luqas Marqos. Through the latter, letters were sent to the Ethiopian emperor from the Portuguese king. Meanwhile, in 1487, Dom ↗João II had sent two of his men to explore the East: Pero da ↗Covilhã to India and the Indian Ocean and Afonso de Paiva to Ethiopia.

Actual relations between P. and Ethiopia were established under King Dom ↗Manoel I. For Dom Manoel, who was strongly influenced by the messianic and apocalyptic ideas of Joachim of Floris (1145–1202), and dreamed of destroying Mecca and recovering Jerusalem, the alliance with Ethiopia was vital. These ideas, however, were shared only by a narrow circle and Manoel's court was divided roughly into two parties: the "imperialists", prone to accept the King's messianism and to engage in the crusade, the main ideologue of which was the chronicler Duarte Galvão, secretary to the King; and the "liberals", who only accepted a Portuguese commercial presence in the Indian Ocean (Thomaz 1990).

The first Portuguese expedition to India, that of Vasco da Gama (1497–99), was instructed to inquire about the Prester John but could only learn that his realm was an inland country, without ports on the Indian Ocean. Initially, the first viceroy of Portuguese India, Dom Francisco de Almeida (1505–09), linked to the "liberals", did nothing to establish relations. In 1506, three messengers accompanying Tristão da Cunha disembarked at Malindi. Unable to reach Ethiopia, Afonso de ↗Albuquerque took them the following year to the coast of Somaliland, from where one of them reached the Ethiopian court. Thanks to political and religious motivations, both the Queen Regent ↗Ǝleni and *abunä* ↗Marqos were favourable to an *entente* with the Portuguese and to contact with the Roman Church. They therefore sent ↗Mateus as ambassador to Lisbon. Meanwhile, Albuquerque wrote to the King from the ↗Red Sea, laying out his strategic plan of alliance with Christian Ethiopia and the Shah of Persia against the Mamluks and the Osmanlı Turks (cf. Pato 1884: 224ff.).

However, in 1514 news of the misfortune of Albuquerque at Aden and military setbacks in Morocco foiled Dom Manoel's plans for a crusade. Duarte Galvão, then 70 years old, was still allowed to go as ambassador to the Prester John taking Mateus with him but the new governor, Lopo Soares de Albergaria – a cousin of the baron of Alvito, leader of the "liberals" – sabotaged the trip. When Duarte Galvão died at Kamaran, Lopo Soares went back to India without putting Mateus ashore on the coast of ↗Eritrea.

Meanwhile, in P. the opposition gathered around the Crown Prince, Dom João (↗João III), had virtually overthrown the King. Dom Manoel, however, recovered power in 1518 and succeeded in having sent one of his faithful servants, Diogo Lopes de Sequeira, to India as governor. In 1520 Diogo Lopes led an expedition into the Red Sea, disembarked Mateus in Eritrea, met with the ↗*baḥər nägaš* and dispatched an embassy led by Dom Rodrigo de ↗Lima (cf. also Francisco ↗Alvares) to the court of ↗Ləbnä Dəngəl. Dom Manuel, searching for support to his imperial projects, appealed to the country by printing the letter he received with these news (*Carta das Novas* …; Cortesão-Thomas 1938).

With the succession of Dom João III all ideas of a crusade were immediately abandoned. Probably, the extant copies of the *Carta das Novas* were destroyed, of which only one, kept in London, survived until today. Meanwhile, Diogo Lopes de Sequeira and Duarte Pacheco Pereira offered their services to the Spanish ambassador to pursue the quest for Prester John on behalf of

Part of the northern wall of the Jesuit-Portuguese fortress at Fəremona, ca. 1625; photo 2006, courtesy of Andreu Martínez d'Alòs-Moner

Emperor Charles V. However, when Rodrigo de Lima came back from Ethiopia in 1527, accompanied by ↗Ṣägga Zäʾab, little interest was paid to them.

A turning point occurred with the crisis provoked in Ethiopia by ↗Aḥmad b. Ibrāhīm al-Ġāzī's wars. In 1535, Ləbnä Dəngəl sent the physician João ↗Bermudez to Rome, looking for help and promising to submit to the Pope in return. Partly due to Bermudez's intervention, the Governor of India Dom Estevão da ↗Gama conducted the fourth and last large Portuguese expedition into the Red Sea in 1541. As a result of this expedition 400 Portuguese soldiers, under the command of Christovão da ↗Gama went to Ethiopia to support *aṣe* ↗Gälawdewos in his struggle against Aḥmad.

Meanwhile, the cultural and political atmosphere was also undergoing deep changes. In 1536 the Inquisition was introduced into P. and, from the following year, the treatise written by Ṣägga Zäʾab (Góis 1540) was forbidden from P. Ethiopia thus began to be regarded as a dangerous example both for reformers and for Portuguese New Christians (cf. Henry 1898: 47). As a consequence, in the early 1540s, João III, Pope Paul III and ↗Ignatius de Loyola began to plan a mission to Ethiopia to be managed by the ↗Jesuits. The idea of crusade gave way to overseas missionary plans.

After the second siege of Diu in 1546, a sort of gentlemen's agreement between the Portuguese and the Ottomans remained in force. Dom João and his successors (Catherine of Habsburg, cardinal Dom Henrique and King Sebastião) practically ignored Red Sea politics.

Until the end of the 16th cent. the old crusade plans still met with episodic revivals. Philip II of Spain (after 1580 also Philip I of P.) entertained ideas of reviving the alliance with Ethiopia against the Ottoman Empire (cf. Lane 1966: 34). However, his projects met with tenacious opposition from the Portuguese authorities at ↗Goa – where supplies and forces were scant – and hence remained fruitless. The restoration of the Jesuit mission by Pedro ↗Páez in 1603 initiated the last chapter of Luso–Ethiopian relations.

Luís Filipe Thomaz

Luso–Ethiopians

From the mid-16th cent. to the beginning of the reign of *aṣe* ↗ Yoḥannəs I, a community of Portuguese origin, known locally as *Burtukan* or ↗*Färänǧ*, lived in Ethiopia. Their origin goes back to the expedition of Christovão da ↗Gama in 1541–43 (cf. ConzGal, ch. 12). After the defeat of ↗Aḥmad b. Ibrāhīm al-Ġāzī ("Grañ"), about 150 Portuguese soldiers settled in Ethiopia and entered into the service of *aṣe* ↗Gälawdewos (Bermudez 1875, ch. 44). The Portuguese, who owned a considerable number of ↗firearms (matchlocks, arquebuses, light canons), were granted land and formed an elite unit led by a captain appointed by Gälawdewos. Some of its leaders, such as Ayres ↗Dias and Gaspar de Sousa (Gälawdewos), Francisco Jacome (↗Minas) and António de Goes (↗Śärṣä Dəngəl), were reported to be among the respective emperors' closest men (BecRASO X, 122; Bermudez 1875, ch. 44, 53; Couto 1782).

By 1544, the Portuguese troops had freed ↗Däbrä Ṣəyon from the Muslims and in 1544 the Christian armies were also able to retake ↗Däwaro, probably also with Portuguese participation, for Gälawdewos then settled a number of them in Däwaro and Amhara, "as a garrison to guard the frontier" (Bermudez 1875, ch. 37, 43, 47). Subsequently, some of them settled in ↗Gafat and ↗Goǧǧam and, probably after being driven back from Däwaro, another group of around 50 men went back to India (ibid. ch. 48). In India, two of the veterans informed the chronicler Diogo do ↗Couto about the Ethiopian campaigns (cf. Couto 1777).

Ca. 1555, the Portuguese fought in ↗Bale against the Oromo and, in March 1559, 18 of them died during the campaign against the Muslim ↗*mäläsay* led by ↗Nūr b. Muǧāhid, in which Gälawdewos eventually also perished (BecRASO X, 151). About the same time, a few Portuguese had also settled in ↗Massawa (ibid. 106). By then, the number of *Burtukan* was reported to be 1,200 (Couto 1782).

When the ↗Jesuits arrived in 1557, the Ethio-Portuguese became a main asset in the mission structure. They provided the foreign priests with intelligence and protection, and, in exchange, received instruction for their children and a means to maintain their Portuguese identity. Accordingly, most of them transmited their Portuguese names to their children, kept the Catholic faith and were ruled according to Portuguese laws. However, some of them did circumcize their children (BecRASO X; XI, 443).

The association between the *Burtukan* and the Jesuits was enhanced during the second Jesuit mission (1603–32). In 1608, this group was said to number 2,000 people and 20 years later 3,000 (BecRASO XI, 142; XII, 228). They were scattered in different areas in the highlands, with the main clusters in ↗Fəremona, Goǧǧam (probably near ↗Qʷälläla), Agäw, ↗Gorgora and ↗Ṭaqussa and smaller groups in ↗Amba Śänayti, Amba Gurrele and Amhara province (BecRASO VII, 42; XII, 471). From this community there emerged a number of valuable associates of the missionaries, such as João ↗Gabriel, his son Basilio, Alexandre Jacobo, Bernardo ↗Nogueira and António de ↗Andrade. Moreover, Portuguese children formed the bulk of students at the schools in Fəremona, Gorgora and Qʷälläla.

With the demise of the mission, a few of the Ethio-Portuguese left with some of the Jesuits for India. Those engaged in the army of ↗Fasilädäs seem to have joined the Orthodox faith, but a large number who had remained Catholic lived under the threat of persecution (cf. BecRASO XIII, 265). In the late 1630s and 1640s, four Luso-Ethiopian Catholic priests served the clandestine Catholic groups. However, shortly after being elected, *aṣe* ↗Yoḥannəs I forced the Ethio-Portuguese who still professed Catholicism into exile (GuiIohan 6–11 [tr.]). The Portuguese chose to go to ↗Sinnār, which lay not far from ↗Qʷara, a place of forced exile for several local Catholics. With this episode the community ceased to exist and its traces in Sinnār were lost (cf. DonMurad 94).

Thereafter the history of the *Burtukan* became a source of interest in Ethiopia and Europe. *Ətege* ↗Bərhan Mogäsa and some groups in Təgray and in the south claimed to have Portuguese descent (cf. BruNile vol. 2, 611; CecZeila 157).

Portuguese influence on Ethiopian architecture

Portuguese building influence in Ethiopia is still a matter of debate and comprehensive surveys are still missing (s., however, Anfray in PICES 8). But design and structural evidence indicate that Portuguese design forms may have had considerable influence on Gondärine style architecture (↗Gondär). The 140 year-long presence of the Portuguese must have allowed such abilities to be passed on and that these skills did not remain solely in the hands of Portuguese nationals.

Portuguese architectural styles can be recognized along a line stretching south from Massawa to ↗ᶜAdwa, across the Täkkäze River to ↗Däbarq and ↗Gondär, and around the eastern side of Lake ↗Ṭana. Evidence of this influence can be found in the styles of monumental buildings, especially those connected with the ↗Jesuits (↗Fəremona, the castle compound in Gondär, ↗Dänqäz, ↗Gorgora, ↗Yəbaba, Gəmb Giyorgis, ↗Märṭulä Maryam, Abagasse near Giš Abbay, ↗Qʷälläla) but also in smaller structures and dwellings, which appear to have escaped close scrutiny, such as in the old quarter (market area) of Gondär, at ↗Əmfraz, ↗Däbrä Tabor and ↗Baḥər Dar. In addition, they can be traced in Goǧǧam, and even further to the south-east in the Rift Valley area of Däbrä Sina and Šäwa Robit. These are the very areas where the Portuguese were present and active between 1493 and 1634.

Many examples forms and motifs commonly used in Portugal – particularly from those regions noted for extensive overseas recruitment – are found time and again in highland structures. Apart from the tell-tale stonework itself, these would include arches, vaulting, cupolas, window and door lintels, hinge and lock systems, cisterns, rendering and frieze work, even an interior toilet at Dänqäz. The durability and structural superiority of these methods ensured their survival well beyond the period of expulsion. Widespread Indian/Gujarati design forms contemporary with the Portuguese presence (but only superficially disguising predominantly Portuguese underpinnings) are logically explained by the fact that workers employed by the Portuguese entered Ethiopia via their ↗Goa headquarters, transporting to the Ethiopian Highlands both useful motifs and specialized artisans. Aspects that are yet to be further studied include how these forms were carried into the Highlands and how, during five generations of settlement and inter-marriage, key methodologies were taught to others – both family members and local builders.

Possession cults

P.c. in Ethiopia and neighbouring countries are widespread, forming an essential and highly influential part of life. They occur both in the countryside and among town and city populations. The basic anthropological definition of a P.c. is that of a phenomenon of religious culture whereby people, who for a variety of social and psychological reasons are afflicted by psychological disturbance, distress or anxiety seen as caused by curative or malevolent spiritual agents invading, displacing and taking possession of their personality and impacting on their overall health, visit spirit mediums for treatment. A P.c. centres around a successful spirit medium who controls the ↗spirit(s) [s. also ↗Demons]. A restoration to a state of "normal" or manageable health can only be achieved by a treatment of appeasing or exorcising the spirit present in the imagination or mind of the person by a ritual expert. There is no doubt a pan-human propensity towards transcendental, dramatic, emotionally-charged self-expression in communal form, and this element can be recognized in Ethiopian P.c. as well. Theoretical explanations of (spirit) P.c. have reflected a concern with its psycho-social therapeutic functions (Giel et al. 1966; Pelizzari 1997), deprivation (Shack 1971), the expression of internalized gender inequalities, esp. growing restrictions on women's lives, indirect socio-political protest against conquest or hegemonism of outsiders, and with claims to social power or supernatural ability b y deprived or low-status ethnic, religious or social groups.

The ethnographic variety of P.c. in Ethiopia–Eritrea is remarkable. Similar basic socio-psychological patterns are recognizable in various forms: a dramatic personal appeal to community attention, usually via trance, with the aim to "restore" the personality in its own right and in the wider community by an appeal to spirits or spiritual forces that reveal themselves in the minds of the afflicted. The diversity and empirical variation in forms of P.c. do not allow us to speak of a fully unitary phenomenon. Common is that all depart from a belief in the existence or presence of powerful supernatural spiritual forces in human life (cf. Lewis 1984: 425). Possession can also be seen in a cognitive sense, as a claim to local knowledge, relevant in the social setting of the persons concerned. They also allow for manipulative behaviour.

The spirit mediums, the shaman-like ritual experts that call on and communicate with a spirit to assist or treat clients, are possessed by one or more spirits, and through having achieved a measure of control over them use them for "therapeutic" or explanatory purposes on behalf of the afflicted clients. These can be of a specific local nature or of a more general malevolent origin. Both in the Ethiopian Christian and Muslim traditions, the activity of these spirits is recognized, and many names of spirit varieties are known (generic ones like, e.g., *ganen, tigrita/tigritiya, wərzəlya, seṭana*, etc.). As to the spirit mediums, there are stories of people who refused to "accept" the custody of the spirit (often in the family via mother or father) but after some dramatic events/accidents were forced to abandon their previous life and become a practitioner (cf. Data Dea 2003: 163). P.c. and possession phenomena are found in virtually all population groups in Ethiopia and Eritrea, although some smaller agro-pastoralist groups like the ↗Mursi, ↗Hamär and ↗Suri do not know them. But P.c. are "contagious": they travel and are imported into other ethno-cultural traditions.

The practitioners range from **ባለ፡ ውቃቢ** (*balä wəqabi*) or **ዎፋ** (*wofa*; in Amharic-speaking areas), *Islam qalləčča* and exorcists (cp. Trimingham 1942: 259; Pelizzari 1992), traditional-religious ↗*qalləčča*, *zar* mediums (*baläzar*), and sometimes to **ጠንቋይ** (*ṭänqʷay*, 'sorcerer'). Among Amhara-speaking people the P.c. centres around the *balä wəqabi* (cf. Aspen 2001), the **ውቃቢ** (*wəqabi* being a person's or lineage's guardian spirit). The most "famous" variety of P.c. is probably the *zar* cult of northern Ethiopia (cp., e.g., Leiris 1958; Morton 1977; 1989; Hecht 1996; Palmisano 2002).

In the course of time, more or less successful cults around certain powerful spirit mediums have emerged, e.g., the ↗*garamanǧo* cult in southwestern Ethiopia (Käfa, Benç̌ and neighbouring areas, cf. Gezahegn Petros 1994; Orent 1969) and other forms (e.g., in Sidaama, s. Brøgger 1986). A network of shrines or "spirit houses" covers a wide area. People across this region pay allegiance to this cult, which forms a kind of pan-ethnic moral economy of retribution, punishment, reward and therapy. One adheres to the spirit both in a pragmatic way, making vows and expecting "rewards", and for curative purposes. In all cases, a payment or gift is made. In many parts of Muslim Ethiopia, Islamic ritual experts treat spirit possession and deal with the ↗*ǧinn*, spirits acknowledged in the Qurʾān. P.c. take on various cultural forms among the ↗ʿAfar (*ǧenile*), Somali (*sar*), or Oromo Muslims (*ayyaana*), in part reflecting their pre-Islamic heritage.

Usually a P.c. exists in conjunction with adherence to one of the monotheistic belief systems. Although P.c. activity is "forbidden" or discouraged by the religious authorities, few obvious contradictions are perceived by ordinary people. The Church and Muslim authorities remain ambivalent toward possession phenomena. The examples of the late "spirit exorcist" and priest *abba* Wäldä Tənsaʾe Gəzaw in Wälisoo and of the Muslim healer–exorcist *šayḫ* Sayda in Nagallee are cases in point. Several Ethiopian emperors are, however, known to have issued edicts against P.c., notably the *zar* cult: for instance, in 1878 *aṣe* Yoḥannəs IV outlawed the *zar gurri* (*zar* dance sessions). Under the *Därg* regime, which declared P.c. and traditional ↗medicine as "backward" or "harmful culture" to be abolished. In the post-1991 era this policy, though in less harsh terms, was continued (cf. Data Dea 2005). The misfortunes befalling people after the persecution of the spirits and their mediums were interpreted as punishment, and upheld the belief.

In conditions of modernization, belief in spirit possession did not necessarily decline, as the further spread of P.c. in Ethiopia in the past decades has shown. While modern urbanites may express scepticism, large sections of the population do not live without a pragmatic belief in the presence of spirits and in the need for treatment by experts. The belief system shows cognitive "closure", whereby failures of treatment do not necessarily lead to the refutation or giving up of the belief but to a new search for causes of distress.

If P.c. were already widely dispersed in Northeast Africa in previous centuries (cf. Doresse 1980), they are also maintained, or rather reinvented, in certain contemporary Ethiopian ↗diaspora communities, such as the ↗Betä

Ǝsraʾel in Israel (s. Edelstein 2002; Witztum et al. 1997), perhaps reflecting the uneasiness of adaptation or "integration" in a new host society as well as their continued quest for cultural continuity and communal solidarity.

Zar

The *zar* (**ዛር**) P.c. is one of the best known and most widely spread forms of spirit possession found not only throughout the Horn of Africa, but also in Egypt, Iran, Saudi Arabia, Oman, Yemen, and most recently Israel. Although the *zar* cult is not a unitary phenomenon, rituals and beliefs vary from place to place, there is substantial evidence that we are dealing with a single phenomenon, which originated in Ethiopia and spread throughout the Middle East.

A spirit possession scene with Mälkam Ayyähu (centre) [s. EAE vol. 3, 699], the possessed person in front is performing the *gurri*; from Mercier 2003: 13

A person, usually a woman, joins the *zar* cult when she is chosen by a *zar* spirit as a medium. This usually begins with the onset of an illness, which is diagnosed by a **ባለዛር** (*baläzar*), a *zar* master. In the course of being possessed the initiate performs rapid movements called **ጉሪ** (*gurri*), which help indicate the nature of the *zar*. The *zar* medium then performs a traditional praise song (↗*Fukkära*) in which he (or she) reveals his name and his demands. Unlike many forms of spirit possession, the *zar* is not exorcised, but rather a long-term relationship is cultivated. Once a member has been successfully initiated into the cult, she participates in group meetings (**ወዳጃ**, *wädaǧa*) during which she is possessed. On these occasions she assumes the character, dress, and behaviour of her *zar* spirit. *Zar* possession receives special attention at the end of the rainy season on either the ↗New Year and ↗*Mäsqäl* and at the end of ↗Lent. On New Year's day or eve, a sheep or fowl is offered as a ↗sacrifice (**ደንቃራ**, *dänqara*) at a crossroads and the animal is left for the *zar* to consume. In some cases, an entire banquet is prepared for the *zar*.

The *zar* demand ↗gifts from their devotees (or their families) including jewellery, clothes, perfume, food and sacrifices. ↗Tobacco, ↗*ç̌at*, and ↗coffee all figure prominently in the *zar* ritual. The latter of these is referred to as "the blood of the *zar*", and some scholars believe that "the modern coffee ceremony has unmistakable antecedents in *zar* and other spirit rituals" (Pankhurst in PICES 3, 526f.).

Several traditions exist concerning the origin of the *zar* themselves. According to one of the most popular traditions, God visited Eve and asked to count her children. Fearing an accusation of lust, she hid 15 of the most beautiful. As punishment, God made these children invisible forever. Another tradition traces the *zar* to the time of King ↗Kaleb. He is said to have divided his kingdom among his children, one reigning during the day and the others at night. The *zar* are the descendants of these nocturnal sons. Still another version claims that *zar* are the offspring of ↗*ǧinn* and other ↗spirits who migrated to Ethiopia from Muslim lands.

Although the first ethnographic testimonies regarding the *zar* date to the 19th cent., there is textual evidence (e.g., a 16th-cent magic scroll, s. Natvig 1987: 677) that the belief in these spirits is considerably older. Obviously, spirit P.c. predate the specific articulation of the *zar*. Moreover, the belief in *zar* spirits appears to predate the *zar* cult rituals witnessed in comparatively recent times. Most scholars believe that the cult has its origins in Ethiopia in the spread of Christianity and the demotion of Cushitic high-gods to the status of malevolent spirits. This is, in part, supported by the existence of such terms as *ǧar* (Agäw), *daro* (Boro, Gonga), and *yaro* (Käfa), all of which are terms for divinities, especially sky gods. Natvig (1987: 686) suggests that "the cult's origin is to be sought in the culture-contact situation and the changing […] conditions experienced by the Oromo in Southern Abyssinia, particularly perhaps in Šäwa". Mercier (1983–84) dates the origins between 1550 and 1750. This appears preferable to attempts to trace the etymology to Arabic or Persian and hence the origin of the phenomenon to the Middle East. Nevertheless, it must be admitted that both coffee and *č̣at* would appear to have entered the *zar* cult through Muslim sources and Arabic words are common even among Ethiopian devotees.

This confusion regarding its origins is, at least in part, due to the *zar* cult's ability to cross both confessional and geographical borders. Although the monotheistic religions, ↗Christianity, ↗Islam and ↗Judaism all officially condemn the belief in *zar* and their cult, in practice it is tolerated and members of all three religions participate, sometimes forming groups with cross confessional boundaries. It has, moreover, spread throughout the Horn of Africa and the Middle East. In part at least, the diffusion of the *zar* throughout this region would appear to be related to the slave trade, and particularly the presence of female Ethiopian slave devotees of the *zar* throughout the Middle East and Indian Ocean regions. In more recent years, *zar* has reached Israel where it has been the subject of considerable discussion and academic attention (Edelstein 2001).

While scholars are in general agreement that women are particularly prominent in the *zar* cult, there is no consensus as to why this is the case. Some suggest a bio-medical explanation noting the initial onset of *zar* possession, if not the cultural articulation of the cult, may be related to symptoms of malnutrition and particularly calcium-deficiency (Kehoe – Giletti 1981; but cp. Raybeck – Shoobe – Grauberger 1989). They support this argument by looking at the dietary patterns of poor Ethiopians, and particularly women and children. In this perspective, the feasting and feeding of the *zar* is not merely metaphorical, but also a response to the physiological needs of their devotees. Others tend to stress the psychological factors such as stress, anxiety and highly structured inequality in social relations. Messing (1958: 395ff.) compares the *zar* cult to group therapy and suggests that the afflicted person, whether a woman or a man benefits from participation in the cult by raising his/her status and receiving attention. Young (1975: 567–84) emphasizes the role of disease (**ቈረኛ**, *qʷäräñña*) and cathartic healing in the *zar* cult. Other scholars following Lewis (1966), view the *zar* as an example of a deprivation cult, religion of the oppressed in which weak members of society who can not legitimately demand better treatment, allow their *zar* to extort gifts and better treatment on their behalf.

Although the *zar* spirits are malevolent they are not wholly evil. Indeed, as we would expect given their descent from Eve, they have many human characteristics. They are, for example, organized as a society, which resembles that of imperial Ethiopia with hierarchies (masters, servants, slaves), specialized roles (warriors, saints) and ethnicities and religions. They frequent areas around rivers and ponds, deserts and wilderness. Thus these places are to be avoided, especially by women. They are most likely to strike at midday, sunset or in the hours after midnight.

Perhaps the most interesting aspect of the *zar* cult is its cultural elaboration. A special terminology is used to describe the phenomenon of possession. The person possessed by a *zar* is called the '*zar*'s horse' (የዛር፡ ፈረስ, *yäzar färäs*) and the *zar* is said to ride the devotee. ↗Leiris (1958) who was the first western scholar to seriously study the *zar* placed a special emphasis on the theatrical aspects of the cult. Customs, music and dance all are prominent, and devotees can be said to perform roles which they learn as they become a *zar* medium. Closely tied to this are the music, particularly song and dance in both initiating and displaying the *zar* spirit's presence. Leslau (1949) has also noted the development of a special argot among *zar* initiates.

Steven Kaplan

Post-Aksumite culture

P.A.c. is the term conventionally used in ↗archaeology to refer to the material evidence from the culture-historical period of the development and expansion of the Christian kingdom during ca. 8th/9th–13th/14th cent. A.D. The P.A.c. period corresponds to the Middle Age in Ethiopian history, and covers the time span from the decline of the kingdom of ↗Aksum to the early ↗Solomonic dynasty period.

This period was characterized by a progressive southward shift in the core of the kingdom from northern ↗Təgray to ↗Wällo and later ↗Šäwa. Late 9th-cent. Arab sources describe the kingdom as occupying a large territory, but the capital was located at ↗Ku^{c}bar, a so far unidentified locality that might have been in ↗Wag. According to Ethiopian tradition, Aksum was destroyed in the 10th cent. by southern invaders led by queen ↗Ǝsato. In the 12th–13th cent., under the ↗Zagʷe dynasty, the core of the kingdom was at ↗Lalibäla in ↗Lasta (Wällo). Eventually, in the late 13th cent., it moved to ↗Mänz (Šäwa).

The P.A.c. archaeological evidence is scarce as no site has so far been extensively excavated. A few settlements were recorded in ↗Ḥamasen (Eritrea) and in the region between ↗Yəḥa and Aksum (Təgray). At this time Aksum was a large village surrounded by scattered hamlets and small villages, less than 1 to 3 ha in size, on the top and along the slopes of surrounding hills. The rulers were no more resident at Aksum, and the cathedral of ↗Aksum Ṣəyon was the focus of religious and political ideology. It is possible, however, that ↗coronations were held there, as we can infer from the thrones for the king and the bishop in the cathedral precinct, and two other thrones for the king and the governor on the top of the steps approaching the church.

Some evidence of a possible royal camp (↗*Kätäma*) dating to the early Solomonic dynasty was recorded at Məshalä Maryam (Mänz) and consisted of ca. 40 quadrangular, circular and elliptic structures built of stone.

Rural ↗houses were circular or rectangular huts, sometime with two rooms. A large rural house was discovered at Säglamen, to the southwest of Aksum, suggesting that some farmers were more affluent than others. The rectangular building, ca. 12 m x 8 m, was divided into separate rooms forming a main residential house and two long rectangular rooms to the north.

No large size or monumental tomb from P.A.c. has been recorded so far. A P.A.c. (or later) cemetery was excavated at ↗Betä Giyorgis, and consisted of small rectangular ↗graves dug inside and outside the remains of a church.

The subsistence economy relied on ox-plough agriculture with cultivation of free-threshing wheat, barley, *ṭef*, indeterminate *Eragrostis*, finger millet, lentil and linseed (s. ↗Plants, cultivated). Cattle and sheep/goats were the main livestock. In particular, the occurrence of large ↗pottery trays in P.A.c. assemblages suggests that *ənǧära* made with *ṭef* became a significant component of the diet at this time. A large reservoir at May Šum (Aksum), most likely dating to the 15th cent., is the only evidence of P.A.c. water management.

Very few Islamic imported materials from the Middle East were found in rural assemblages of P.A.c. Exotic objects had a very limited circulation among the people but were accumulated in the royal court and treasuries of churches.

The ceramics include a distinctive fine dark-grey or grey ware, decorated with incised lines or painted or moulded crosses. Main forms were rounded or carinated, closed bowls, with an inflected short rim, round cups with no decoration; dishes and trays with a short open rim; small dishes, often with horizontal grips applied below the rim; jars with a wide, high neck, and sometimes modelled decoration. Lithic tools were still used and included flakes and less frequently scrapers. An iron slag from a P.A.c. stratum at ᶜOna Nägäśt (Betä Giyorgis) points to the local manufacture of this metal in the late 1st – early 2nd millennia A.D.

Constructed and ↗rock-hewn churches are the most impressive and best known monumental evidence of P.A.c.

The remains of a few constructed 9th/10th–15th/16th-cent. ↗church buildings have been found in Eritrea, Təgray and Lasta: at Asmära (↗Ǝnda Maryam), Dära, Aramo, Bäraknaha, Ham (↗Däbrä Libanos), ↗Gʷənagʷəna, ↗Gundä Gunde, ↗Däbrä Damo, ↗Zarema, Yəḥa, Betä Giyorgis, ↗Ǝmäkina Lədätä Maryam and Mädḫane ᶜAläm, ↗Yəmrəḥannä Krəstos, Ǧämmädu, Argobo Č̣erqos. Most have a basilica plan with a small vestibule, three aisles and a sanctuary with a rectangular apse. A triumphal arch was built at the entry of the sanctuary and the apse was always covered with a dome built with a wood frame. The central aisle is usually higher than the side ones, and is delimited with wood pillars sustaining arches. A freeze with square metops decorated with "monkey-heads" often occurs between the architraves of the aisles and the ceiling. The ceiling was sometimes decorated with geometric, floral and animal motifs, comparable to the late Coptic, Syrian and Byzantine ones.

Rock-hewn churches occur in many localities from Eritrea to ↗Bale and ↗Käfa. The earliest were located in ↗Gärᶜalta and Lasta. The most impressive group is that of Lalibäla, dating to the Zagʷe period. There are four main types altogether: 1) hypogeal churches, completely cut into the rock face, 2) semi-monolithic, with the front part cut out of the rock and the interior excavated into the rock, 3) monolithic, carved in a single block rock and reproducing all external and internal structural elements of a church, and 4) semi-rock-hewn churches, with the outside constructed in masonry and the inside cut in the rock face. Most have difficult access. Only a few (↗Dəgum, ↗Ḥawzen, ↗Bärakit, ↗Ṣəraᶜ Abrəḥa wä-Aṣbəḥa, and ↗Wəq̱ro Č̣erqos) in Təgray were cut into small rocky outcrops on the open plain and form a specific category of "valley churches". Most rock-hewn churches reproduce a basilica church; they consist of an entrance with two side-rooms, a vestibule, hall with three aisles, and a sanctuary with a rectangular or rounded apse set between two side-rooms. The reproduced constructed elements include square or cross-shaped pillars and "monkey-head" doors and windows characteristic of Aksumite ↗architecture.

The dating of most P.A.c. churches is uncertain. Traditional sources ascribe their foundation to kings and saints, who lived from the 6th to 15th cent., particularly the Zagʷe kings. Architecturally, the churches with evident Aksumite features might be dated to the 6th–8th cent. A.D., those with Aksumite elements reduced to simple decorative features, to the 12th–13th cent., and those lacking such elements to the 14th–15th/16th cent.

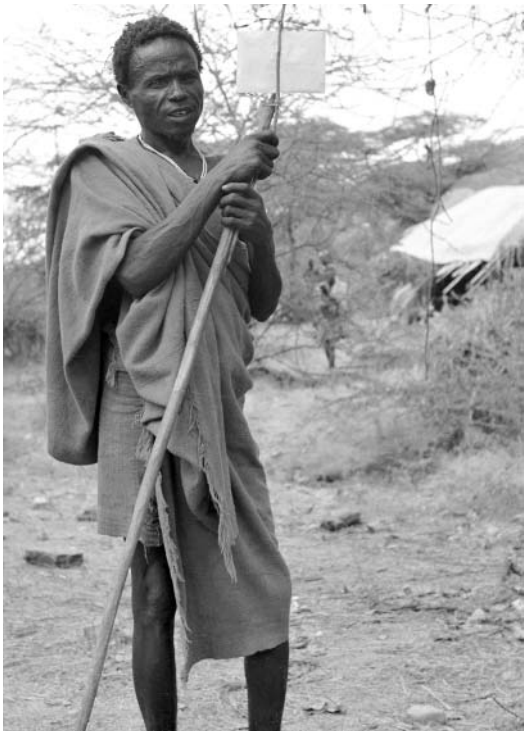
Postal system

The first organized P.s. in Ethiopia was the Ethiopian Field Force Army Postal Service that the government of Bombay established for the Anglo-Indian troops of the ↗Napier expedition. The Field Force Postal Service was initiated in October 1867, in ↗Zula, where the British established their coastal station. As the army moved towards ↗Mäqdäla, ca. 600 km away, post offices were established at Kumayle, ↗Sänᶜafe, ↗ᶜAddigrat, Ḥənṭalo (↗Anṭalo) and at each Brigade. After their success, the troops left Zula in June 1868 and the postal service was again closed and had no effects on the later Ethiopian P.s.

Before 1880, feudal lords and missionaries in Ethiopia sent mail by messengers (Amh. መልእክተኛ, *mälʾəktäñña*) to each other and abroad, such as to ↗Egypt and European countries, usually through ↗Massawa, and, at the beginning of colonization, to ↗Obock, ↗Tağūra, or ↗Djibouti. From ↗Zaylaᶜ merchants forwarded the mail and received mail destined for Šäwa. These messengers carried the mail in a cleft stick. They were still active in the 1930s and, occasionally, also later (s. ill.), delivering mail from the interior of Ethiopia to Addis Abäba. The cleft stick with a letter became the symbol of the Ethiopian Posts.

After Massawa was granted to Egypt in 1865, an Egyptian post office was opened in November 1867 that forwarded mail via boats sailing three times monthly to Suez. It is related that mail from ↗Bianchi's expedition (1883–84) was sent through the Massawa post office.

The Italian ↗Rubattino Shipping Company purchased ↗ᶜAsäb in 1870 and an Italian post office was established in 1883 (↗Colonia di Assab). After Italy occupied Massawa, an Italian post office was opened there on 22 February 1885. These post offices were merged into Eritrea's P.s. after ↗Eritrea was proclaimed an Italian colony in 1890. The Eritrean P.s. included diplomatic mail couriers that serviced Italy's Commercial Agencies in Ethiopia. Between 1908 to 1932 mail was forwarded from ↗Gondär and ↗Däse.



A messenger from the Ṣamakko with the traditional cleft stick and letter; photo 1950–52 by Elisabeth Pauli, courtesy of the Frobenius Institut, Frankfurt am Main (23–Pa 048–10)

The Ethiopian Posts were founded by Alfred ↗Ilg, who arrived in Ethiopia in 1879 and became one of Mənilək's (later *aṣe* ↗Mənilək II) advisers. His mail and that of other foreigners in ↗Ǝnṭoṭṭo was initially carried by caravans and private couriers to Zaylaᶜ and Obock on the Somali Coast where merchants forwarded and received mail.

Armand Savouré, a French arms dealer, organized the first "shared cost" couriers in July 1886 from Ǝnṭoṭṭo to Obock, where the French colonial administration had established a post office in September 1884. In 1888 these couriers evolved into an "official" mail service, which was part of the French diplomatic mail couriers between Ǝnṭoṭṭo and ↗Harär. It was organized by the Capuchin Monseigneur Taurin de ↗Cahagne with the approval of Obock's Governor ↗Lagarde who strove to expand France's interests in Ethiopia.

On 25 May 1892, the "official" mail service became the "French Special Posts", managed by the Catholic mission in Harär, but directed by Djibouti's administration even though it was not part of its P.s. and operated outside the Universal Postal Union. Mail was now franked with ↗stamps from Obock and later Djibouti. The stamps could be purchased in Harär as of 1897 and later in Addis Abäba until 1908.

Mənilək II instructed Leon ↗Chefneux in 1892 to obtain material for a telegraph line between Addis Abäba and Harär. Its construction began in 1897 and became the nucleus of the Ethiopian Posts, Telegraphs and Telephones (↗Telecommunications). On 10 February 1893 Mənilək commissioned Chefneux to have coins and stamps produced. The stamps were printed in France in 1894, and used in Harär for the first time on 29 January 1895 and in Ǝnṭoṭṭo in May 1895, where Casimir ↗Mondon-Vidailhet, a special delegate of the French government, became post master.

Construction of telegraph and ↗railway lines from Djibouti to Harär began in 1897 after Ilg and Chefneux had agreed to pay for the telegraph line between Harär and Addis Abäba with Mənilək supplying labour and 6,000 poles. Ilg organized the Ethiopian Posts and Telegraphs, privately owned by Chefneux and Ilg when the French Special Posts reduced its service to forwarding private mail between Djibouti and Harär only in December 1898. The first provisional Ethiopian mail courier left Addis Abäba for Harär's telephone office on 12 May 1899, which became the Ethiopian post office in Harär. It received the Ethiopian stamps and postal material the French had used at the mission since 1895 on 22 August 1899. Ilg recruited three Swiss postal clerks in 1899 to manage the Ethiopian Posts. One died and was replaced by Jean-Adolphe Michel, a Swiss, who arrived in 1900. Henri Mühle was "Chef du Service" from 1900 into 1903, followed by Michel as Director of the Ethiopian Posts from October 1904. A British attempt to create a postal service between Addis Abäba, Harär and Zaylaᶜ in 1897 failed, as did another attempt in 1900, due to the faster French route, which utilized the railway as it approached Harär.

Mənilək expropriated the Ethiopian Posts in 1906, while the French opened a post office in ↗Dərre Dawa linked to Port Said, Egypt. Michel became Director of the Imperial Ethiopian Posts but the service declined in 1907. Mənilək asked the French to reorganize the posts in 1908 under the direction of *ləǧ* Bäyyänä Yəmär as the first Minister of the Ethiopian Posts, Telegraphs and Telephones. The French Special Posts were closed in June 1908 and Ethiopia was admitted to the Universal Postal Union on 1 November 1908. After some difficult years, the Ethiopian Posts began to expand in 1923 with post offices established around the country in the 1920s and 1930s, but numbering less than 30 by 1935. Mail to other locations was carried by messengers holding the mail in a cleft stick. Sporadic air mail service with Djibouti and domestically was initiated in 1929.

The British enclave in ↗Gambella was serviced by steamer from Khartoum as of 1910. A Sudanese post office was opened in Gambella in 1915. It was out of service during the Italian occupation, but reopened in March 1941 and existed until 15 October 1956. The Ethiopian Posts began service in Gambella in 1923.

When the Italians occupied Addis Abäba in May 1935, the Ethiopian Posts ceased operations. Italy's Posta Militare had already operated in Ethiopia in 1895-96 and again during the invasion in 1936 when Ethiopia became part of ↗Africa Orientale Italiana and a civil postal service replaced the Posta Militare. Numerous post offices were established across Ethiopia and air mail service to Europe was initiated (cp. Guida 175 et passim).

The British, Indian and South African forces that liberated Ethiopia operated with army post offices. The northern front was served by the Indian Field Post Office serving the 34th Indian State Forces Brigade, while the southern front was served by the East African Army Post and the Army Posts of South Africa. After the entry of the British in Addis Abäba, the P.s. was temporarily in the hands of the British Postal Advisory Department until the Ethiopian P.s. was reorganized under South African direction and opened on 23 March 1942. However, the British Military Mission operated its own mail service in 1943–51.

The United States Army Post Office initiated mail services in June 1942 in ↗Asmära, and then at its airbase in ↗Guraᶜ, where Allied planes were serviced for battles in North Africa, and in Massawa, where the United States Navy assisted the British in clearing Massawa's port from ships sunk by the Italians. The United States Army Post Office operated independently of the Ethiopian Posts at ↗Qaññäw station and in Addis Abäba until 1974 and 1977, respectively.

After the Ethiopian Posts reopened on 23 March 1942, air mail service was resumed and internal air mail service followed the start of ↗Ethiopian Airlines. The Ethiopian Posts expanded into Eritrea on 11 September 1952 when Eritrea was federated with Ethiopia. Prior to the ↗Ethiopian–Eritrean Federation, the British were responsible for the P.s. in Eritrea.

Cuban forces operated a postal service for their troops stationed in Ethiopia in 1977–89. The ↗Eritrean People's Liberation Front issued stamps in 1978, which were operational in liberated areas of Eritrea and in ↗Kärän. Some values were available in Asmära in 1992–93 but this ceased at independence. Stamps for local use, issued in 1991, became valid for international mail on 13 September 1993.

Potato(es)

P. (Amh. **ድንች**, *dənnəč*, Tgn. **ድንሽ**, *dənnəš*, Orom. *dinničča*, *ǧammee*, 'sweet P.') and other tuber roots are widely cultivated in Ethiopa. The Amharic word *dənnəč* has two meanings: (1) in a generic sense it refers to the tuberous underground (root) structures of some plants; (2) mainly, however, it is used to refer to white P., sweet P. and "Oromo P.", three sorts of tuber roots, which belong to different species.

White P. (*Solanum tuberosum*), originating in South America, was introduced into Ethiopia comparatively late. However, it quickly entered into Ethiopian culture. Today, it features significantly in cultivation sites, at market places and as part of various dishes.

Sweet P. (*Ipomoea batatas*), or **ስኳር፡ ድንች** (*səkk^{w}ar dənnəč*), is a wide-spread root crop which grows as a vine. The tuber can be harvested over a long period of time. It is particularly good for coping with drought. The tuber is rich in starch and sugar. With its carbohydrates and vitamin A it has a high nutritional value. The tubers are cooked to soften the edible part before peeling and eating. In south-western Ethiopia the leaves are sometimes cooked as vegetables. The vines are used as fodder particularly during the dry season.

"Oromo P." (*Coleus edulis*, **ኦሮሞ፡ ድንች**, *oromo dənnəč*) is an indigenous tuber crop widely cultivated in south-western Ethiopia, between ca. 1,600 and 3,000 m A.S.L.). It is believed to have been brought under cultivation in Ethiopia where its wild relatives grow as weeds in crop fields and grazing areas. In the 16th cent. Almeida observed the cultivation of "Oromo P.", which he called "uxixes and daniches" (BeckHuntAlm 46). It can be eaten boiled or baked in the embers. It is rich in carbohydrate and phosphorus.

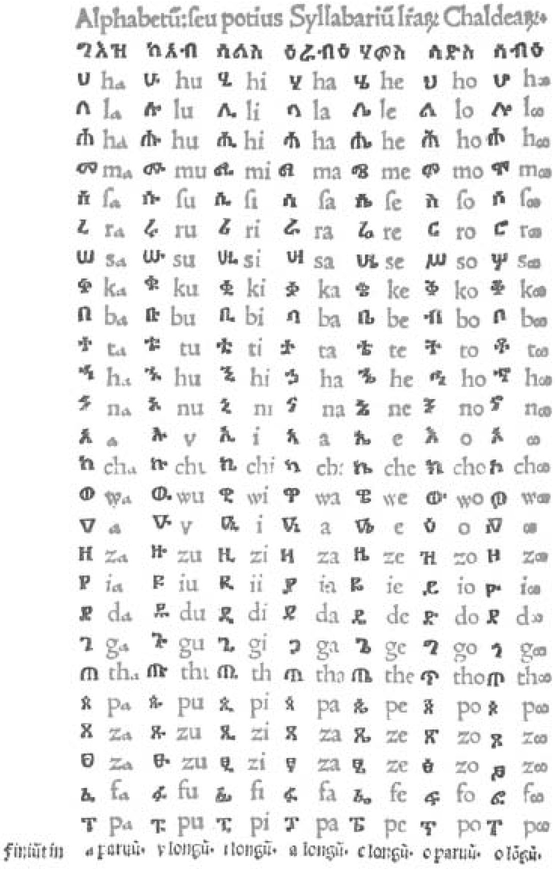
Zemede Asfaw

Potken, Johannes

P. (b. ca. 1470, Schwerte, d. ca. 1524, Cologne) was the first ever to publish printed books in Ethiopic ↗script (↗Incunabula).

A German provost from Cologne, P. became papal secretary and apostolic protonotary in 1496. In Rome he learned printing (Lüthi 1930: 13). As an official of the Roman Curia, he had the opportunity of meeting Ethiopian monks living at ↗Santo Stefano dei Mori in ca. 1511. On listening to their liturgy, he was able to understand a few holy names, thanks to his knowledge of Hebrew. He began then to learn Gəʿəz from the learned monk *abba* Tomas Wäldä Samuʾel, i.e. spiritual son (of the monastery) of ↗Samuʾel of Gädamä Wali (↗Wäldəbba) – who later, in Venice, became one of the informants of Alessandro ↗Zorzi. P. believed Gəʿəz to be the ancient Chaldaic language, and defended this view in his publications (von den Brincken 1969: 104).



Alphabetũ: ſeu potius Syllabariũ lraꝝ Chaldeaꝝ.

finiũt in a paruũ. v longũ. i longũ. a longũ. e longũ. o paruũ. o lõgũ.

A page with the Gəᶜəz ("Chaldean") syllabarium from Potken's *Psalterium*; from Wijnman 1960: XVI

Basing on a manuscript P. had borrowed from the Vatican Library (Vat. Aeth. 20, not the purported Florence Laur. plut. I.25, s. Fiaccadori 2003: 249 n. 18), in 1513 he published the Ethiopic ↗Psalter, for which he used types specifically cut by Marcel Silber (alias Frank). It was the first Ethiopian book to appear in print. Beside the Psalms of David, it contained the Song of Songs and some O.T. and N.T. hymns. On the last folios there is a commented Ethiopian syllabarium, a brief grammatical sketch and a guide to pronunciation (Lüthi 1930: 13ff.; von den Brincken 1969: 91ff.).

P. corresponded with numerous European humanists informing them, more or less correctly, about the countless peoples of "India" (s. ↗"India" as name of Ethiopia), all ruled by the king in "Achsum" (↗Aksum), who was then "Dawit" (↗Ləbnä Dəngəl), following "Noad" (↗Naᶜod) and "Schendri" (↗Ǝskender; s. von den Brincken 1969: 105).

Back in Cologne, in 1518 P. printed a quadrilingual Psalter – in Hebrew, Greek, "Chaldaic" and Latin. Similarly, four further pages published by him (in 1522?) contain the *Song of Songs*, the *Our Father*, the *Hail Mary* and the *Nicene Creed*, as well as short introductions to the Greek, Hebrew and especially "Chaldaic" languages (Wijnman 1960: XV; von den Brincken 1969: 107ff.).

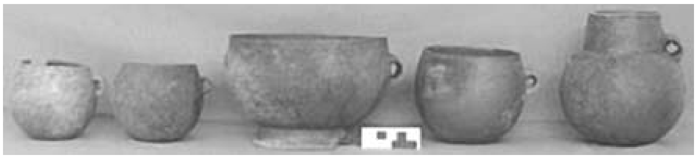
Pottery

Pottery in archaeology

P. still has a fundamental role in the every day life of Ethiopian farmers. Traditional vessels are progressively being displaced by modern containers of aluminium and plastic, but still P. has a great functional and economic value. The presence of many elements of tradition in P. manufacture demonstrates the existence of a strong conservatism, but marked by elements of change and innovation: all P. is hand-made, and only women are engaged in P. production. Usually modern P. with a "functional" purpose is not decorated. The decorated vessels, such as storage jars and vessels for water and beer, are often kept in the public spaces of houses, where guests are received and



Proto-Aksumite pottery; photo courtesy of the author

social interaction takes place, strongly suggesting that P. is a medium for religious symbolism. The cross is the most frequent and significant decoration on the ceramics of Christian communities.

The earliest evidence of P. in Ethiopia has been recorded in Tǝgray and is tentatively dated to the 3rd–2nd millennia B.C. The decoration is in the range of variation found in the Late Stone Age/Pastoral Neolithic of East Africa and Eastern Sudan and is unrelated to Pre-Aksumite, Aksumite, and Post-Aksumite P. traditions. Ceramics dating to the late 2nd–early 1st millennia BC have also been collected in the ↗ᶜOna near Asmära, and represent a distinct tradition from the late prehistoric one in Tǝgray. They formed an important component of the Pre-Aksumite (Ethio-Sabean) ceramics of the 1st millennium BC. Black-topped ware, typical of the late prehistoric and early historical cultures of the Nile Valley and Eastern Sudan was another important component of Pre-Aksumite P. The Aksumite ceramics, at least in the region of Aksum, had a local origin related to the late prehistoric P. traditions of the Western Lowlands. A pattern of vertical corrugations covering the whole surface of globular small bowls, big necked bowls, and small open bowls was the distinctive decoration in pre-Christian times at Aksum. The contemporary ceramics in the Akkälä Guzay were different in shape and decoration, and suggest an origin in local P. traditions. In Christian times the same ceramics were made in both regions, and the cross progressively became the dominant decorative pattern. In medieval (Post-Aksumite) times a gray ware replaced the Aksumite one and continued to be manufactured by the Christian farmers up to the present. Decoration consists mainly of incised lines on the shoulder of globular, necked bowls, and painted or moulded crosses on the external surface of bowls.

Evidence of different P. traditions, dating to the early to mid-2nd millennium A.D., have been also found in the regions of ↗Harär and ↗Šäwa. The former is characterized by large bowls and jars with a high foot. The latter consists mainly of trays, jars with a long neck, and bowls decorated with incised, impressed and molded patterns.

Pottery and potters

In Ethiopia, P. is a widely practised artisanal occupation. Until recently, however, traditional attitudes to P. restricted this occupation to certain social groups. In many cases these groups were considered as people of low repute (cp. ↗Marginalized people, s. EAE vol. 5) and intermarriage of potters with members of non-artisanal groups was not socially permitted. In different regions of the country, they are known by different indigenous nomenclatures such as, e.g., *šäkla säri* (Amhara), *kayla* (Gondär), ↗*fuga* (among the Hadiyya, Gurage and Kambaata), *mana* (Käfa), *oto mana* (Sidaama), *hawuda* (Hadiyya, Kambaata), *hadiččo* (Sidaama), *qallu* (Wäliso), *ogda* (Konso), and *č̣inaša* (Wälaytta).

In scholarly discourse the origin of groups of potters in Ethiopia was mainly discussed in terms of ↗ethnicity, "caste" or "class". Some scholars suggested that potter groups represent autochthonous or remnant ethnic groups that were submerged by more powerful immigrants. Others maintained that they were "lower caste" or outcaste groups as indicated by endogamy, restrictions on commensality, hierarchical grading, concepts of ritual pollution, traditional occupation and ascribed status. However, unlike the Indian caste system, in Ethiopia there is an absence of a religiously sanctioned hierarchy of occupational groupings. Still other scholars hold that groups of potters and craft workers, in general, are results of internal differentiation and occupational specialization within a given population due to division of labour driven by economic factors. All these theories have in common that they neglect the emic view of the potters (cp. Amborn 1990).

The livelihood of potters has been affected by changes in access to resources as well as changes in the supply and demand for raw materials,

Dullay woman brewing local beer in clay pots; photo courtesy of Hermann Amborn

namely clay. Other factors that have infected potters are the monetarization and globalization of the economy, improved transportation and communication, competition from imported industrial products. This has led to their involvement in other forms of livelihood, such as agriculture and trade, and to migration to urban centres. Thus potters have suffered from a lack of recognition as well as support for the development of a "cottage industry".

The raw material for P. production is clay that is brought from near or far to the working ground on the family's compound. The clay is prepared in a small pit in the ground by mixing it with water. A flat stone is used to work the clay. Most potters employ only their bare hands but some also use a kind of a horizontal potter's wheel and a spatula and scoop. Once the pots are formed, they are burnished and decorated before being fired. As stoves are rarely used, a fire is built around the finished pots; a process which requires much fuel. After firing, pots are coated or decorated with a layer of plant gum to make them shiny and attractive and to protect them against cracking. Items for cooking or containers for liquid are fired, while those for holding grain are simply dried in the sun. The colour assumed by these objects depends on the method of firing. On a good day, potters can make three to five medium-size pots. Some potters believe that the P. is affected when the firing process is observed by people who are considered to have the evil eye (↗*Buda*). That is perhaps why firing is done in seclusion.

P. making skills are passed down from parents to children. Red, black and white types of clay are mixed mostly by women assisted by their daughters who are in turn trained to produce their own objects such as cups (**ሲኒ**, *sini*), bowls (**ጐድጓዳ፡ ሳኅን**, *gʷədgʷadda saḫən*), dishes (**ሳኅን**, *saḫən*), pitchers (**ማንቆርቆርያ**,*manqorqorəya*), pots and jars (**ጋን**, *gan*) of various size, as well as ↗incense burners (**ማዕጠንት**, *maᶜəṭänt*). Gradually, they also learn to make circular ↗*əngära*-baking plates (**ምጣድ**, *məṭad*), coffee pots (**ጀበና**, *gäbäna*) and roof tops (**ጉልላት**, *gulləlat*).

Potters carry their products to nearby weekly markets or sell them to individual households. In some cases P. is also produced on order. Some potters cannot sell their earthen ware in the market because they are despised by other groups. Instead they sell them through intermediaries who benefit in the transaction and cut the already meagre profits of the potters.

P. products are generally in greater demand than products of other craft workers, perhaps because clay products have a lower price and break more easily, and thus need to be replaced more often. Demand for products varies throughout the year. Annual holidays like ↗*Mäsqäl* and ↗*Fasika* may require new utensils. P. prices thus increase in such times. During the dry season, big pots, plates as well as pans and pots for brewing beer are in high demand for ↗feasts, ↗weddings and other social activities. Yet, despite the high demand, the profit potters make per item is minimal. During the rainy season, demand is low because many people cannot afford to buy pots. Moreover, production is low during this time because, in wet weather, clay products do not dry easily and the material is heavy to carry.

Some potters have organized themselves into extended trade networks. Traditional P. is now facing competition from P., glass, plastic and metal products imported from abroad, esp. from China. These alternative products have practical advantages, in that they are light, strong and durable. On the other hand, traditional artefacts, such as cooking tripods, rooftops, and jars for brewing, liquor distilling and water carrying are not easily replaceable by these industrial alternatives. In some places, local pots are preferred over aluminium pots because they are cheaper and more appropriate to the customary way of life. Some pots last for such a long time that the market for them may decrease and potters, finding it difficult to make a living may leave the area in search of new markets. The need to find new sources of clay may also be a reason for migration.

As members of a specialized group, potters play significant socio-cultural roles, e.g., at life cycle events as mid-wives, circumcisers, initiators and grave diggers. They are also ritually involved with human reproduction, having roles in child ↗birth, and in fertility and ↗initiation ceremonies.

Due to their special status potters usually lived in a separate neighbourhood. They thus constituted an symbolically isolated and largely stigmatized group. But among some communities they lived interspersed with non-potters. Marginalization in many societies manifested itself in restrictions on exchanges, social interaction and consumption of food and beverage. Again intermarriage, segregation at burials and weddings, submissive ↗greetings, their exclusion from membership in public associations such as ↗*əddər* and ↗*əqqub*, and beliefs about potters' supernatural powers meant that their contact with other social groups was restricted. Those who excelled in P. making in terms of durability, texture, style and pattern had a better income but all the same were suspected of magical skill rather than held in respect for their industry. People feared potters because of their ritual power linked with the earth and related spirits and they were stigmatized because they were believed to incur fatal afflictions. However, the spatial segregation and cultural stigmatization of potters resulted in a stong group identity.

Some potters consider mixing crafts with farming to be an economic success, while youngsters coming from potter families tend to abandon P. and become fulltime farmers due to the stigma associated with the occupation. Potters who abandon P. are marginalized less than practising potters. Today, despite the ostracism and contemptuous shown towards potters, there is no official marginalization in economic and political terms. Thus, the former state of affairs is changing due to the influence of religion and urbanization. Although many potters simply accept their low status as "the way things are", some of the more financially successful have the confidence to challenge the social order and to demand equality. Following Hallpike (1968: 487) and Todd (1977: 396), it is only through further study that discrimination against craftsmen in the country can be appraised.

Abbebe Kifleyesus

Praetorius, Franz

P. (b. 22 December 1847, Berlin, d. 21 January 1927, Breslau) was an eminent German Orientalist and Semitist.

P. studied Oriental languages between 1865–67 under Emil Rödiger, Friedrich Heinrich Dieterici and Julius Heinrich Petermann, with a further year under Heinrich Leberecht Fleischer in Leipzig, after which he returned to Berlin. In 1870 he was awarded a doctorate in Halle for his thesis on the *Fabula de Regina Sabaea apud Aethiopes* (↗Makədda).

Having passed the "Habilitation" examination in Berlin, P. advanced to "Privatdozent" (i.e. unsalaried university lecturer). In 1880, he was offered an extraordinary professorship in Breslau and finally, in 1893, a full professorship in Halle, where ↗Littmann was one of his students. In 1909 P. returned to Breslau as the successor of Siegmund Fraenkel. After his retirement, P. remained in Breslau until his death.

P. is considered the most important linguist in 19th-cent. ↗Ethiopian studies. His major achieve-

Franz Praetorius; photo from the collection of the author

ments are the ground-breaking grammars of the three great living languages of Ethiopia and Eritrea: ↗Təgrəñña (1871); ↗Amharic (1879), and ↗Oromiffaa (1893). P. accomplished these works simply by analyzing the notes and reports of explorers and a few available ↗Bible texts, without ever having worked with a native speaker. Nevertheless, he was able to gain an astonishingly good insight into these languages. Despite the lack of a precise transcription system, his etymological and diachronic thoughts are by no means invalidated by modern research. P.'s Oromo grammar is so far the only linguistic analysis of a Cushitic language that sets all grammatical phenomena in the context of related Cushitic as well as Semitic languages.

P. was the first to look more closely at the relationship between Cushitic and Semitic languages in the Horn of Africa with regard to etymology and grammatical structures. The comparative remarks in his grammars and the articles he wrote on that matter have laid the foundations of what is now called "areal linguistics", a field which has steadily gained greater prominence since P.'s work.

Apart from his doctoral thesis, the results of P.'s Gə^{c}əz studies are a concise grammar published simultaneously in Latin and German (1886) and a text edition (*Mäṣḥafä ↗ṭomar,* 1869).

After his acceptance of the professorship in Halle, P. produced no further major works on languages of Ethiopia, but rather focused on Semitic inscriptions (including those in ↗Epigraphic South Arabian) and problems of Ethiopian lexicography. The last decades of his life were dedicated to aspects of Hebrew grammar and textual transmission, esp. to prosody and metrical features.

Prayer

Christian prayer

P. (Gə^{c}əz, Amh., Tgn. **ጸሎት**, *ṣälot*) is an essential part of Christian life as it is the act of the believer's communication with God to worship Him, to praise and thank Him (for His love, Ps 135) as well as to ask Him for help in daily needs, forgiveness of sins, protection from evil and temptation (cp. Mt 6:9–13, *Our Father*), deliverance in illness (Jas 5:13–14) or death (Jn 11:41–44). It ought to be perpetual in principle (cp. Lk 18:1, 21:36; Eph 6:18; Col 4:2), or at least frequent, according to the example which Jesus gave (Mt 14:23; Mk 1:35). It can also be addressed to the ↗saints, as a sign of veneration, and a request for their intercession. P. can be individual, collective or liturgical. It can range from a few words or sentences to a lengthy text.

P. in the practice of the ↗Ethiopian Orthodox (Täwaḥədo) Church (EOTC) follows the general Christian practice (cp. ↗*Fətḥa nägäśt*, ch. 14 [Paulos Tzadua 1968:88]). A perfect P. is "pure", representing the immediate communion with the love of God; in reality, however, it is often mediated by formulae. These can be of Biblical

Adherents of the Christian Orthodox faith praying at the outer fence of a church compound, ᶜAddigrat; photo 2004, courtesy of Wolbert Smidt

origin (e.g., *Our Father* or *Hail Mary*, cf. Lk 1:28, 42), of ecclesiastical composition (e.g., *Nicene Creed*, actually a collection of fragments from the Scriptures), or form parts of liturgical services (based on Biblical texts, esp. psalms).

Some P. used in the liturgy of the EOTC date back to antiquity, such as the *Kidan zänägh* from the ↗*Testamentum Domini*. Other liturgical or paraliturgical P. find their origin in various literary works filled with scriptural scenes and images (e.g., ↗*Arganonä Maryam*). As in other Oriental Christian traditions, most liturgical P. in Ethiopia find their origin in an extended meditation on the text of the ↗Bible, however under the supervision of the Church – seen as the assembly of the baptized under the guidance of the Holy Spirit – because prayer formulæ are seen as the mirror of dogma (according to the old Latin saying *Lex orandi est lex credendi*: the way you pray tells what you believe). That is why the Church corrects doctrinal P., and sometimes eliminates forms of P. that have become subject to theological dispute. On the other hand, for the same reason, liturgical texts and P. can serve as a "catechism" to memorize the basic principles of the faith.

In private devotion, P. may come to be disconnected from the Scriptures resulting in "vain repetitions" (Mt 6:7); and if there is a superstition involved, they can devolve into protective P. (e.g., the fully traditional P. of exorcism, originally from the Bible – Mk 1:21-28; Lk 10:17–19; Acts 19:11–20 – developed into an independent genre of protective literature; cp. ↗Magic literature).

Following the stipulations of the *Fətḥa nägäśt*, the official texts of the EOTC require P. seven times a day (*Fətḥa nägäśt*, ch. 14, Paulos Tzadua 1968:90, based on Ps 118:164), performed in a particular position: dressed, standing facing east, with the arms raised, beginning and ending with the sign of the cross (made with crossed fingers), humbly and quietly, with great attention. At certain times one is also required to kneel or bow, except during certain liturgical seasons (50 days after Easter, Sundays and holidays, or after receiving communion). One is also expected to pray at meals, esp. if taken as a family. The texts are collected in the (printed) ↗Psalter: Ps (divided into seven sections, one for each day of the week), Canticles, the Song of Songs, and common prayers (*ṣälot zäzäwätər*), which include *Our Father*, *Hail Mary* (Eth. version), *Nicene Creed*, *Kyrie eleison*, as well as ↗*Wəddase Maryam* and other hymns to St. ↗Mary, ↗*sälam*, ↗*mälkəʾ* and P. to various saints, along with the **ጸሎት፡ ዘሰኔ፡ ጎልጎታ** (*Ṣälot zäsäne Golgota*, 'Prayer of [St. Mary on 21] *Säne*, [on the mount of] Golgotha') and other devotional offices on the passion of the Saviour (s. Chaillot 2002:140; Aymro Wondmagegnehu – Motovu 1970:86–89).

P. can also be expressed in brief formulae, often repeated; this P. is called *monologistos*. An Ethiopian example of this is the formula **እግዚኦ፡ መሐረነ፡ ክርስቶስ**, *Ǝgziʾo mäḥarännä Krəstos* ('Christ O Lord, have mercy upon us'), frequently repeated during the Eucharistic liturgy (↗*Qəddase*). Repetition of such formulae developed into something equivalent to western rosaries, called in Amh. **መድገሚያ**, *mädgämiya* (from *däggämä*, 'repeat'), or Gəᶜəz **መቍጸርት**, *mäqʷəṣärt* (Amh. *mäqʷəṣärya*, *mäqʷəṭärya*, from *qʷäṣṣärä/qʷäṭṭärä*, 'count'), which is mandatory for monks.

Ethiopian rosaries usually include 41 beads (or 64, after the age of St. Mary, or 33, after the age of Christ). A thread or something else marks where to start and reach the cross for the prayers to be repeated 12 or 7 times. It consists in repeating (1, or 3, or 7 times a day):

(a) *Our Father* + (Ethiopian) *Hail Mary*, 12 or 7 times;
(b) *Sälam läki* + *Magnificat* (Lk 1:46–55), 7 times;
(c) *Ǝgziʾo mäḥaränna Krəstos*, 41 times;
(d) *Bäʾəntä Maryam mäḥaränna Krəstos* (‘For the sake of Mary, have mercy on us, O Christ’), 41 times;
(e) *Kyrie eleison*, 41 times;
(f) *Elohe* (Mk 15:34; Ps 21:2a), 41 times;
(g) (optional) “Remember us, O Lord, in Your kingdom” (after Lk 23:42), 41 times;
(h) invocation to a saint, 41 times;
(i) invocation to an angel.

A prostration ideally accompanies each P. during ↗fasting periods.

The old difference between “cathedral” (or parish) and monastic liturgy has faded away: only the Hours (↗*Säᶜatat*) have remained of the monastic service. In monasteries, the Hours are served daily; in churches, they should be at least performed in the evening of fasting days. All other services belong to the “cathedral” liturgy, being the liturgical P. of the Christian community. They are celebrated in church, led by the clergy (priests, deacons, *däbtäras*) with the participation of the faithful. They take various forms: daily P. led by a priest, ↗*Maḫlet*, ↗Eucharist, sacraments and celebrations (e.g., ↗baptism, ↗matrimony, ↗funeral), particular ↗feasts (↗*Mäsqäl*, ↗*Ṭəmqät*), etc.

1. Daily celebrations include:

the Prayer of ↗incense (*Ṣälotä ᶜəṭan*) followed by the *Kidan zänägh* (which always includes the three *Kidan* of the midnight, of morning, and of the evening); ↗litanies for the particular day of the week; the supplications (*mästäbqʷəᶜ*), including the *zäyənäggəś*; on some days the Mystagogy (↗*Təmhərtä ḫəbuʾat*); as well as the Marian P. ↗*Anqäṣä bərhan* and ↗*Wəddase Maryam*).

These P. are memorized by heart and are recited or sung; they appear in P. books, notably the Psalter and the ↗*Məᶜəraf* (VelMe II, 170–217, 279–96 [tr.]).

2. The Divine Office is highly developed, and is of largely Ethiopian creation. It is composed of many parts, with celebrations for different days and times of day. It includes:

↗Hymns in the *Məᶜəraf*; ↗*qəne*, and readings (taken from *Mäṣḥafä* ↗*gəṣṣawe*, ↗*Sənkəssar*, ↗*Täʾammərä Maryam*, ↗*Täʾammərä Iyäsus*, ↗*Gädl*). On Saturdays, or on the eve of a feast, the ↗*Wazema* is celebrated, as well as, at sunrise, the ↗*Mäwäddəs*, the ↗*Səbḥatä nägh* and possibly ↗*Kəśtätä aryam*. On ordinary days, only *Səbḥatä nägh*, or, more often, only the *Ṣälotä ᶜəṭan* (↗Incense) and, to conclude, *Kidan zänägh*. On ten days in a year, the ↗*Məḥəlla* is celebrated. Most of these P. are based on Ps and other scriptural verses (cf. HabUff 66f.; VelMe II, 52ff. and index, 663–68).

A good part is sung, sometimes interspersed with parts recited. Considering the length of the respective offices, usually only a part of each is performed, in accordance with local customs.

3. The Eucharistic liturgy is celebrated (if the necessary five ministers are available) at least every Sunday and on ↗feast days (including the [monthly] festival of the local ↗*tabot*). On the days of fasting, it begins after noon. The Mass is usually well attended. The faithful may know by heart lengthy excerpts from such P. as *Śərᶜatä qəddase* (= the first part of Mass and of any service, like sacraments, blessings, etc.) and ↗Anaphoras, and actively participate in the celebration by responding to the priest and to the deacon and singing the appropriate parts. The texts of the Mass and the sacraments come mostly from the Coptic tradition, but with alterations and additions. Apart from the above mentioned sources, the Mass includes moveable parts from ↗*Haymanotä abäw*, ↗*Zəmmare*, etc.

During the Mass, the faithful may recite other P. to themselves: their physical and moral presence is more important than material attention to what is sung or read.

4. The celebration of sacraments involves a limited circle of persons (family members and friends). Liturgical P. form a particularly important part of the funeral and marriage rituals. Celebrations of general church feasts, e.g., *Ṭəmqät,* on the contrary, attract large crowds and are accompanied by a festive atmosphere. The joy of the feast, which starts in P., finds its expression in body movements, including liturgical dance. Similarly, in penitential services as well as on sorrowful occasions, the sadness starts from the P. and takes over the whole person. Indeed, P. is meant not only for the mind but for the whole person; that is why the body shares also in the P. with the eyes (mural paintings and icons, bright vestments of the clergy), with the smell of incense, the chants and the liturgical dance. Liturgical P. is a common celebration of the life one receives as a gift from God, and offers back to Him: in this sense, it is the participation of all baptized Christians (Rom 12:1; 1 Pt

2:9; Rev 1:6) in Christ's eternal priesthood (Heb 7:24–28, 9:11–15).

P. literature, frequent in manuscripts, is today very common in printed form (↗Täsfa Gäbrä Śəllase), showing that for Ethiopian Christians P. has been an everyday reality for centuries, and is still for many of them, in church services as well as at home.

Islamic prayer

Islamic religious practice recognizes different kinds of P. First, ↗Islam is characterized by the obligatory five daily canonical P. (*ṣalāt* < Syr. *ṣ^{e}lōtā*; Jeffery 1938:198f.), one of the five "pillars of Islam". *Ṣalāt* must satisfy some preliminary conditions (*šurūṭ*), the most notable of which is perhaps ritual purity (*ṭahāra*; of the body, of the clothes and of the place). It must take place in a legally codified frame without which it becomes invalid (*bāṭil*): the legal requirements include, e.g., orientation towards ↗Mecca (*qibla*) and the variable number (two to four) of prostrations (*rak^{c}a*). Congregational P. (led by an ↗*imām*) is recommended but not compulsory except for the noon (*ẓuhr*) prayer on Fridays (*ṣalāt al-ǧum^{c}a*). The latter must be carried out in a *ǧāmi^{c}* ↗mosque; it is preceded by a double sermon (*ḫuṭba*) delivered from a pulpit (*minbar*). Other mandatory canonical P. in Islam are those of the two ↗feasts (*ṣalāt al-^{c}īdayn*), on the occasion of *^{c}Īd al-aḍḥā* and *^{c}Īd al-fiṭr*. Supererogatory but still canonical P. (*nawāfil*) are also very widespread in Islamic tradition: especially meritorious are the nightly P. during ↗*Ramaḍān* (*ṣalāt al-tarāwīḥ*). In certain precarious situations other kinds of *ṣalāt-s* can be performed: *ṣalāt al-istisqā$^{\supset}$* (to ask for rain), *ṣalāt al-kusūf* (on the occasion of an eclipse), *ṣalāt al-ḫawf* (to cast away fears), *ṣalāt al-musāfir* (on travel). Finally, another canonical P. is the *ṣalāt al-ǧanāza* or *^{c}alā al-mayyit*, for a dead person. A peculiar type of *ṣalāt* is the one said for the Prophet ↗Muḥammad (*ṣalāt ^{c}alā n-nabī*, *taṣliya*) which commonly ends the five daily prayers (*aṣ-ṣalāt al-ibrāhīmīya*) and is recited in different and often very elaborated textual forms on every important religious and sometimes secular occasion, almost obsessively during the ritual gatherings of the ↗Islamic brotherhoods (Meier 2002).

The *du^{c}ā$^{\supset}$*, another type of P., is a personal (both individual and collective) invocation to God to request something. Different kinds of *du^{c}ā$^{\supset}$*-s are recited to ask for protection from evil influences, for good health, healing of a disease, help in distress, victory in battle, and support in any difficult situation. *Du^{c}ā$^{\supset}$*-s are also recited to solemnize almost any occasion (e.g., at the end of the reading of the entire ↗Qur$^{\supset}$ān, at the end of the feast of ↗*Mawlid,* etc.; at the beginning of the ↗New Year, at the new moon, esp. during *Ramaḍān,* etc.; before eating, drinking, entering a mosque, etc.; after sleeping, sneezing, yawning, coming out of one's home, etc.). *Du^{c}ā$^{\supset}$*-s against someone are also licit (e.g., against the enemy before battle). Theoretically, *du^{c}ā*s are not canonical and are often similar to magical P. (↗Magic literature, Islamic). Nevertheless, *du^{c}ā*s have undergone a certain degree of standardization; handbooks containing collections of *du^{c}ā$^{\supset}$*-s show the correct ways to recite them (*adab ad-du^{c}ā$^{\supset}$*).

Some other forms of Islamic P. are directly linked to the mystical brotherhoods. The following should be mentioned: ↗*ḏikr*, *wird* (pl. *awrād*), the ritual collection of P., invocations, ejaculatory prayers and blessings used in the spiritual life and rituality of the Sufi. Every *ṭarīqa* has its own *wird*, authored by the founder of the group or by some of its most outstanding masters. Sometimes, the collections are also referred to as *ḥizb* (pl. *aḥzāb*), the latter term more precisely referring to a mystical P. written by a ↗holy man.

In Ethiopia, all kinds of P. are well known by Muslims. ↗Arabic loanwords are currently used to name Islamic P.: in Amh. the forms *sälata* and also *solat* (KaneDic 454) are attested; in Tgn. also *salat* beside *sälat* in contemporary writings; in Orom. *salaata* and *du$^{\supset}$aa* may be found; Har. *sälat* (Leslau 1963:139; Abdurahman Mähammäd

Muslims praying during the ᶜĪd al-Fiṭr, Asmära; photo 2007, courtesy of Jonathan Miran

Qorram 1991/92:54) also with the meaning ‘midday’, to be distinguished from *sälawat* [formally the Arab. pl. of *ṣalāt*] meaning ‘intercessory prayers’ (Leslau 1963:140; Abdurahman Mäḥammäd Qorram 1991/92:54); *duwaʾ* (Leslau 1963:60; Abdurahman Mäḥammäd Qorram 1984:176; s. Leslau 1990:330, 367 for further details).

The verb used by Muslims for the performance of the canonical P. is the one indicating prostration, perhaps the most characteristic gesture of Islamic P. (Amh. *solat säggädä*, Tgn. *salat sägädä*, Orom. *salataa sagaduu*).

Historically, Ethiopia is directly connected with the very origin of Islamic P., as the first *muʾaḏḏin* was ↗Bilāl al-Ḥabašī. Al-↗ᶜUmarī (UmMasSezg 18; UmMasGaud 3) mentions the performance of the *ṣalāt al-ǧumᶜa* with *ḫuṭba* in *ǧāmiᶜ* and the existence of smaller mosques for ordinary communal prayers in the seven Islamic sultanates of Abyssinia. During the military campaign of *imām* ↗Aḥmad b. Ibrāhīm al-Ġāzī, P. seems to have played a crucial role in the life of the troops: the times of the daily compulsory prayers mark the march of the Islamic army (BassHist I, 43, 111, 121f., 124 = II, 97, 187, 198f., 201); the *muǧāhidūn* and their *imām* recite *duᶜāʾ*-s which are promptly answered by God (BassHist I, 41, 59 = II, 95, 122); within his own entourage, *imām* Aḥmad had a personal *muʾaḏḏin*, a certain *kabīr* Nūr (BassHist I, 109 = II, 184).

According to some scholars, the process of evolution from a pre-Islamic form of devotion to an Islam-flavoured mystical P. can be observed in the so-called *wadaǧa* performed by some Oromo groups (TrIslam 198, 207, 258, 262, 274).

The actual devotion of the Ethiopian Muslim faithful to Islamic canonical P. is difficult to ascertain. Some data pointing to a partial but traditional disaffection of at least some Muslim communities to canonical P. (↗Ǧäbärtī, ↗ᶜAfar, ↗Somali and rural people in general) must be taken seriously but cautiously (TrIslam 153, 176, 215, 227f., 270). The performance of the canonical P. certainly represents one of the strongest marks of the conscious and public adhesion of the individual to the Islamic religion (ibid. 163) as well as one of the most evident practical proofs of one’s Islamic belief (ibid. 226).

Sometimes, *ṣalāt*, its performance and its paraphernalia (e.g, gourds used to carry water for ablutions; small carpets for prostration etc.) attracted the attention of non-Muslims not only evoking their curiosity, but also becoming object of mockery (DonEnbAnq 94; Marrassini 1981: LXXVII; DonHaySirat 135; CerEt II, 192).

The *ṣalāt al-ǧumᶜa* is probably the most important periodical sacred gathering of a local Muslim community: in Harär, *ǧuma salat* is preceded by a collective session of Qurʾān recitation led by elders (Leslau 1965:207–12). In the ↗*Fatḥ madīnat Harar*, ↗Abādir ᶜUmar ar-Riḍāʾ is chosen to act as the *imām* of the collective P. and is thus given leadership over fellow saints (WagFath 45f.).

The complicated rules of Islamic canonical P. have always needed a clear explanation. Arabic Islamic ↗manuscripts in Ethiopia often contain legal texts showing, among other things, the right way to perform one’s P. (e.g., ms. Pavia 5 fols. 70r–71v; s. Traini 1973). Moreover, for the sake of the common faithful, the rules of Islamic P. are also clarified in local idiom. The Harari *Kitāb al-↗farāʾiḍ* has a section on *ṣalāt* (CerStud I, 337f.), while recently printed handbooks explain how to correctly perform *ṣalāt* in local Ethiopian languages (e.g., Amh. *Yäsolat mämmariya*; Tgn. Saləḥ Säᶜid 2003; Orom. *Barnoota salaataa*; Səlṭe *Yäsälat šärṭ qərᶜat*; Har. Mäḥammäd Yunus Sälman 1991:21–48). Collections of *duᶜā*-s, *ḫizb*-s and *wird*-s more or less directly connected with the activities of Islamic brotherhoods are also very widespread among Muslims in Ethiopia both in manuscript form (e.g., Pavia 5 fols. 60v–70r) and in print, in Arabic and in local languages (e.g., Saᶜīd b. ᶜAlī b. Wahf al-Qaḥṭānī, 2001/02 A.D., 2004 A.D., n.d.). *Ṣalāt ᶜalā n-nabī* is a much cherished literary genre in which many Ethiopian Muslim authors excelled both in Arabic as well as in local languages (e.g., the famous Harari ↗Hāšim b. ᶜAbdalᶜazīz).

Alessandro Gori

Pre-Aksumite culture

P.A.c. is a conventional term referring to the material evidence of the complex polity that formed, with indisputable South Arabian features, in the mid-1st millennium B.C. in northern Ethiopia (mostly Təgray) and Eritrea – from the region of ↗Aksum to ↗Akkälä Guzay. The P.A.c. seems to have occupied a narrow transect from the edge of the plateau in Akkälä Guzay to the Täkkäze river in Təgray, and perhaps further to the west in Šire, with a few marginal sites along the eastern edge of the plateau near Mäqälä. Archaeological and epigraphic evidence consistently suggests that at the very beginning the core of the state was located in the region of ↗Yəḥa and Aksum, where the earliest royal ↗inscriptions were discovered. The main sites are Yəḥa, ↗Ḥawəlti and ↗Mälazo in Təgray, and ↗Mäṭära, ↗ᶜAddi Kramatən and ↗Käskäse in central Eritrea.

The P.A.c. can be dated to ca. 800/700–400 B.C. on the basis of four radiometric dates at the so-called Domestic Site at Aksum. Radiometric dates from Betä Giyorgis (Aksum) also demonstrate that a new polity (↗Proto-Aksumite culture) emerged in northern Təgray in the 4th cent. B.C. suggesting that the P.A.c. was declining at that time. The possible record of the foundation of a temple at Yəḥa in royal inscriptions (RIE 33, but s. Robin – de Maigret 1998: 737ff.) dated palaeographically to ca. 700 B.C., and the similarity of the so-called “Great Temple” at Yəḥa to the temple at Barāqiš (Yemen, ca. 700–500 B.C.) seem to support a 7th-cent. B.C. chronology for the rise of the state.

Characteristic features

The settlement pattern was characterized by towns, villages, hamlets, and ceremonial centres. A town with two monumental temples was located at Yəḥa. Another town and possibly a ceremonial centre were located at Mäṭära and Käskäse, respectively.

The subsistence economy relied on cultivation of hulled barley, emmer, linseed, pea, and maybe oat, ↗*ṭef*, *nug*, and lentils. Livestock consisted of cattle and to lesser extent sheep/goats. A figurine of two yoked oxen from Ḥawəlti demonstrates the use of the ↗plough at that time. Man-made features for water management (↗Irrigation) may have been built near Yəḥa, but no clear evidence has been hitherto found. Main crafts were metalworking and ↗stone carving for statues and votive altars, which were made for royal/elite use. Monumental inscriptions point to the existence of literate specialists.

Royal inscriptions in ↗Epigraphic South Arabian record the name of the polity (↗DᶜMT) and four kings (WᶜRN ḤYWT, RDᵓM, RBḤ, LMN). The kings used the titles *mlk* and *mkrb*, the latter possibly suggesting a federative tribal polity with a paramount king, such as the Sabaean one. The earliest three kings associated with queens in their rule. The inscriptions record two major divisions of the population, into "Reds" and "Blacks". Some inscribed votive altars from the Aksum–Yəḥa region yield the names of skilled artisans from Saba (Yemen) – possibly a small minority in the society, but also regarded as part of the élite.

The religion was polytheistic, and such South Arabian and indigenous deities as ↗ᶜAstär, ↗HWBS, ↗Ḏat Ḥimyam, ṢDQN, ŠYḤN are recorded in the inscriptions of the P.A.c. Stone, bronze and clay figures of bulls, maybe representing the Sabaean god ↗Almaqah, and sphinxes in an Egyptian/Meroitic style suggest that the bull and the ↗lion had a central role in the P.A.c. pantheon. The cult temples were the focal feature of the society.

Administrative devices included zoomorphic, oval, rectangular, and circular bronze seals, and rectangular, ellipsoid and lozenge clay seals. The occurrence of seals in many P.A.c. sites suggests a widespread administration. Zoomorphic bronze seals, sometimes with personal names, were only found in elite tombs at Yəḥa. Geometric bronze seals also occur in South ↗Arabia, but they might have been imported from Ethiopia. The zoomorphic bronze seals are a typical feature of the P.A.c.

The remains of monumental temples are the most impressive features of the P.A.c. They include the "Great Temple" and the "Grat Bäᶜal Gäbri Palace" at Yəḥa, as well as five aligned monoliths at Käskäse. Two quadrangular shrines with a projecting entry and a small rectangular temple surrounded by an enclosure were also excavated at Ḥawəlti and Mäläzo, respectively. Two clay models of huts from Ḥawəlti suggest that rural people were living in conical and rectangular huts, at least in the region of Aksum. Elite shaft-tombs were recorded at Yəḥa and Mätära. They consisted of quadrangular or roughly circular shafts, over 2 m deep, with one or more burial chambers at the base.

The temples at Yəḥa exhibit some typical South Arabian features, such as the podium, square pillars with rectangular bases, pecked stone slabs, and architectural decorations. In particular, the "palace" at Grat Bäᶜal Gäbri was built with a technique reminiscent of the "Oval Temple" at Mārib (Yemen). The shrines at Ḥawəlti and the small temple at Mälazo, on the contrary, are similar to Meroitic temples. The (ca. 5 m-high) monoliths at Käskäse, despite an apparent similarity to the pillars in South Arabian ↗architecture, most likely are an alignment of megalithic ↗stelae and can be ascribed to a local tradition, as they are roughly quadrangular in cross-section with a hole at the rounded top.

Three statues from Ḥawəlti and ↗ᶜAddi Gälämo and a so-called "throne" from Ḥawəlti are the main evidence of a sophisticated art in the P.A.c. The statues represent sitting ladies with long robes, decorated in one case (ᶜAddi Gälämo) with a possibly vegetal motif. The "throne", carved in one stone block, consisted of a quadrangular seat with bull's legs and a baldachin decorated with a male and perhaps a female standing figure carved on both sides and an ibex frieze along the edge. A few stone sphinxes (a recumbent lion with a male human head) from ᶜAddi Kramatən, ↗Fəqya, and Dəbdəb (Eritrea), and some clay fragments of a similar sphinx from Ḥawəlti are further evidence of figurative art in this period.

This syncretistic art was exposed to different Achaemenian, Greek and Meroitic, as well as South Arabian, influences. The human figures on a "throne" are carved with an Achaemenian technique, and the curly hair on a statue from Ḥawəlti reminds one of the Kushites on the Apadana at Persepolis (5th cent. B.C). A Greek influence is suggested by the "smile" on the face of a statue from Ḥawəlti, reminiscent of the Archaic Greek statues from the first half of the 6th cent. B.C. The two statues from Ḥawəlti are comparable to Greek funerary statues from Asia Minor, dating to the late 7th/early 6th cent. B.C. The posture of the statues from Ḥawəlti is also comparable to that of sculptures and funerary bas-reliefs from northern Syria, from the first half of the 1st millennium B.C. A Nubian influence can be recognized in a pectoral with a counterweight on the back similar to Egyptian, Napatan and Meroitic ornaments on the statues from Ḥawəlti, and possibly a female (?) figure holding a long stick similar to the representation of Meroitic queens on the so-called "throne" from Ḥawəlti. The "throne" was probably a *naos* reflecting an Egyptian/Meroitic rather than South Arabian tradition. The sculptures of sphinxes can also be related to Egyptian/Meroitic prototypes, as the Greek/South Arabian ones represent a standing winged lion with a female face;

the ibex frieze and bull's legs on the "throne" are typical South Arabian decorative motifs.

This evidence may suggest (indirect?) contacts with the Levant, Persia and Nubia. Contacts with the Nubian kingdom of ↗Kush are also supported by a few Nubian objects from Yəḥa, Mäṭära and Ḥawəlti. They include an alabaster vessel similar to Nubian specimens of the 8th–7th cent. B.C. from Yəḥa; two Meroitic amulets from Ḥawəlti similar to specimens of the 6th–5th and 2nd cent. B.C. from the South Cemetery at ↗Meroë; some beakers from Yəḥa and Ḥawəlti comparable to bronze, silver and pottery beakers of the 7th and late 5th/mid-3rd centuries BC from the West Cemetery at Meroë; and a carnelian amulet of Meroitic type from Mäṭära.

Small stone votive altars have been found at Yəḥa, Mälazo, Fəqya, Mäṭära and ᶜAddi Kramatən, and include cylindrical altars with a conical foot, cubic altars with a trapezoidal foot, simple offering slabs on a stepped trapezoidal base, offering tables with a rectangular basin and a spout in the shape of a lion's head. At Fəqya, in particular, an altar with a rectangular basin and two projecting sphinxes on the front side was recorded. The cylindrical and cubic altars are South Arabian in style, and some specimens could have been imported from Yemen. The offering tables with a lion-head spout can be compared to Egyptian and Meroitic prototypes, but have been also found at Mārib. The altars with a simple offering slab may be compared to Meroitic specimens.

↗Pottery includes red-orange, black-topped, red, black, and brown ware with a great variety of vessels, such as basins and bowls with rounded bottoms, bowls with a ring-foot, flasks with a high narrow neck, jars with a short neck, jars with an S-profile, jars with a vertical elliptic handle, vessels with a tulip profile, vessels with a pomegranate profile, amphorae, ↗incense burners. Decorations include engraved wavy bands, moulded ribs and chains, and geometric (triangles, rhombi) rim-bands, and sometimes engraved zoomorphic (ibex) motifs. Most of the ceramics can be ascribed to indigenous (African) traditions, particularly red-orange ware, black-topped ware, and black polished ware. Only a few vessels are comparable to South Arabian specimens (bowls with a ring-foot; amphorae), and some of them, such as the so-called amphorae and an incense burner from Yəḥa could have been imported from Yemen.

The red-orange ware was typical of the region between Yəḥa and Aksum. Most likely, this ware derived from a local fabric, which already occurs in Stratum IIb (mid-3rd millennium B.C.) at ↗Gobədra. Some typical pre-Aksumite decorations (rectangular, triangular and round punctuations) may also belong to the same local tradition, as they are visible on the early pottery at Gobədra. The black topped ware was originally a typical ware of the ᶜAgäme and Akkälä Guzay, and occurs in a great quantity in the lower strata at Mäṭära. This ware may be related to a very long tradition, which originated in Upper Egypt in predynastic times (4th millennium B.C.), and spread to Nubia and the Ethio-Sudanese lowlands in the 4th–3rd millennia B.C. and to Eritrea in the 2nd millennium B.C. The ceramics from the Middle Pre-Aksumite Phase exhibit many similarities to those of the ↗ᶜOna culture in Ḥamasen.

The pre-Aksumite lithic industry included obsidian microlithic retouched flakes and crescents, and large discoid scrapers, which derive from the prehistoric industries of the Horn of Africa.

Periodization

The P.A.c. period was divided into two phases by Anfray, "Ethio-Sabaean", characterized by a South Arabian influence and "Intermediate", characterized by the emergence of local cultural traditions. On the basis of the stratigraphic sequence at Yəḥa and Mäṭära, Fattovich suggested three phases: (1) Early Pre-Aksumite Phase, the formation of the polity, (2) Middle Pre-Aksumite Phase, the consolidation, and (3) Late Pre-Aksumite Phase, the decline.

1) Evidence of this phase has been recorded in the lower strata at Mäṭära and Yəḥa. The P.A.c. area was initially divided into two regions with distinct traditions in pottery style, (a) between Yəḥa and Aksum (traditional Təgray), with the dominant red-orange ware, and (b) ᶜAgäme/Akkälä Guzay, with prevailing black-topped and black polished ware. Both regions were probably included in a network of contacts with Yemen, as south Arabian vessels were collected at Yəḥa and Mäṭära. Potsherds similar to those of the Yəḥa–Aksum region were also found in sites at Šurab al-Gaš, near Kassala, suggesting contacts between the highlands and the lowlands in the early 1st millennium B.C. Most likely, ↗iron was worked in Təgray at this time, as iron slag was found at Gobədra in a stratum radiocarbon dated to the 9th cent. B.C.
2) The northern region later apparently incorporated the southern one, as the same ceramics with the dominant northern component occurs in all sites. A large ceremonial centre was located at Yəḥa. Small temples were

also built at the edge of the plateau overlooking the valleys sloping down to the lowlands, and may have been used as border markers. The occurrence of large temples, sophisticated art, elaborate craft of stone-carving (altars and offering tables), and bronze seals, together with the use of writing and a clearly cut site hierarchy point to the consolidation of the state at this time. A royal cemetery was possibly located at Yəḥa, where in shaft-tombs rich grave goods (imported objects, bronze and iron tools and weapons, bronze seals bearing in one case the name of a king) were found.

3) In the last phase, the two regions were again separated. The red-orange ware re-appeared at Yəḥa, while the northern ceramics disappeared in the Yəḥa–Aksum region. The pre-Aksumite state apparently collapsed in the southern region, as towns, including Yəḥa, sharply decreased in size and monumental buildings were abandoned. The evidence of fire destruction of two buildings at Yəḥa might point to warfare as a cause of the collapse. The landscape was characterized by small rural settlements, with a nucleated population around Aksum. Small shrines were located at Ḥawəlti and Mälazo, most likely serving rural people. The continuity in occupation at Mäṭära may suggest that an urban society survived in central Eritrea.

Origins of the pre-Aksumite state

Epigraphic and monumental evidence of an indisputable South Arabian influence in pre-Aksumite times suggested the hypothesis of a migration and/or colonization from Yemen in the early 1st millennium B.C. as the main factor of state formation. Rock-inscriptions in ↗Qoḥayto and a few pre-Aksumite inscriptions from the region of Aksum document the presence of single individuals (or small groups) from Arabia in the northern highlands in the early 1st millennium B.C. and, resp., of Sabaean skilled artisans in the mid-1st millennium B.C. Whilst these persons helped introduce some South Arabian cultural elements into Eritrea and Təgray, their actual role in the formation of the pre-Aksumite state is unknown.

Archaeological and epigraphic evidence point to a distinction between the elite who used South Arabian (mainly Sabaean) symbols of power (monumental architecture, inscriptions and art) and ordinary people maintaining their local traditions, as most of the ceramics are local and suggest an indigenous origin of the population.

The Sabaean title *mkrb* (*mukarrib*) suggests that the pre-Aksumite state was organized on the Sabaean model, but the possible role of the queens may reflect a local rather than a South Arabian tradition, suggesting that the kingdom of D^{c}MT arose from an indigenous polity.

The available evidence, thus, indicates that the P.A.c. emerged from the convergence of two main proto-historical local traditions to one culture: a southern (Təgrayan) tradition and a northern (mainly Eritrean) tradition. The South Arabian influence was a superficial – though impressive – component affecting only the upper strata of the population.

In keeping with the same evidence, an early state initially seems to have arose in the Yəḥa–Aksum region, out of contacts between the local population and the South Arabians, and was later incorporated into a northern polity. In the 4th cent., the pre-Aksumite state collapsed in the southern region, maybe because of conflicts, and a new polity emerged at Aksum.

Press

Press in Ethiopia

P. in Ethiopia started soon upon the introduction of ↗printing by the missionaries in the late 19th cent., which was a remarkable sign of the country’s modernization.

Ethiopia’s first “polygraphed” publication was produced since 1890 by ↗Lazarists in ↗Harär, then the realm of the progressive *ras* ↗Mäkwännən Wäldä Mikaʾel. Entitled the *Bulletin de la Léprosie de Harar*, it was edited by Father Marie-Bernard, who purchased a small printing press and some Amharic type in 1905. The periodical, then re-named *Le ↗Semeur d’Ethiopie*, was largely devoted to religious matters, and was written in French with an occasional article or news item in Amharic. In 1908 Father Marie-Bernard travelled to Paris, and purchased improved equipment, after which the press’s headquarters was transferred to ↗Dərre Dawa. *Le Semeur* continued until 1914 when its editor was called up for military service in World War I, but the Ethiopian workers continued to do jobbing-business (ZerÉth 268f.; Pankhurst 2003: 236–58).

Ca. 1900, *blatta* ↗Gäbrä Ǝgziʾabəḥer Gilä Maryam (s. EAE vol. 5) from Ḥamasen in Eritrea, who had been imprisoned by the Italians at their penal establishment at Nokra, began producing an embryonic handwritten Amharic publication, or series of letters. Devoted mainly to satire and patriotic poetry, it had a circulation of only 50 copies, but is said to have continued for about a decade (Roberts 1944: 187; Eadie 1926: 193–202; Pankhurst 1962: 260ff.; Bahru Zewde 2002: 65f.).

Another interesting development was the publication in ↗Djibouti between 1899 and 1911 of the weekly newspaper *Djibouti, Journal Franco–Ethiopien*. Copies of this paper were transported by rail to Dərre Dawa, after which they were translated into Amharic and transmitted to Mənilək by phone or telegraph (Pankhurst 2003: 231ff.).

The first real Amharic newspaper, ↗*Aʾəmməro*, a name allegedly chosen by Mənilək II himself, was founded ca. 1901 by a Greek, Andreas E. Kavvadias. A weekly publication, it was at first written by hand, with a circulation of only 24 copies, but the subsequent purchase of a copying machine enabled this to rise to 200. Publication was suspended in 1903, but was resumed in 1906, this time printed at the Ethiopian Printing Press, and went on until 1916 when it was suspended in the period of confusion connected with the overthrow of *ləǧ* ↗Iyasu (Mérab 1922: 128; 1929: 349; ZerÉth 269; Ayalew Wolde Giorgis 1962; Pankhurst 1955: 523f.; Aadland – Fackler 2003: 299).

Since 1913 Léopold Polart used the new press established by Alexis Desvages to produce Ethiopia’s first foreign language paper: the twice-weekly *Le ↗Courrier d’Éthiopie*. The same press also later printed **የጦር፡ ወሬ** (*Yäṭor Wäre*, ‘War News’), edited by the Italian Legation in 1916–18, as well as ↗Ḫəruy Wäldä Śəllase’s short-lived literary publication **ጎሃ፡ ጽባሕ** (*Goha Ṣəbaḥ*, ‘Dawn’), in 1917 (ZerÉth 269f.).

The establishment of the ↗Bərhanənna Sälam Printing Press in 1923 and the weekly government-owned newspaper ↗*Bərhanənna Sälam* in 1925 represented a great leap forward. In the same year, Kavvadias resumed the publication of *Aʾəmməro* at the Ethiopian Government Press, and in 1926 the weekly *L’Éthiopie Commerciale* was launched at Hermes Press.

The developments in printing facilitated the establishment of further periodicals, including *Il Notiziario*, run by the local branch of the Italian Fascist Party; **ከሣቴ፡ ብርሃን** (*Käśate Bərhan*, ‘Propagator of the Light’), a cultural monthly; and **አጥቢያ፡ ኮከብ** (*Aṭbiya Kokäb*, ‘Parish Star’), edited since 1928 by Kavvadias, and printed by the Goha Ṣəbah Press (ZerÉth 270f.). One other publication of this period, ↗*Correspondance d’Éthiopie*, or *Abessinien-Korrespondenz*, was published between 1926 and 1933 by Dr. Erich ↗Weinzinger, an Austrian lawyer, but was printed outside the country (Pankhurst in StudAeth 203–19). Since 1935, ↗*Nägarit gazeṭa* has been the organ publishing governmental proclamations.

During the early period of Emperor ↗Ḫaylä Śəllase I’s rule, the P. (esp. *Bərhanənna Sälam*) became a forum of the nascent Ethiopian intelligentsia. Despite the small number of readers, its members expressed ideas about the reforms and the future of the country, enjoying a by far greater measure of freedom than in the second half of the Emperor’s reign.

The Italian occupation was followed, as was to be expected, by the inauguration of a number of new periodical publications (↗Africa Orientale Italiana). These included the daily *Il Giornale di Addis Abeba*, subsequently renamed more importantly *Il Corriere dell'Impero* and accompanied by its Arabic version, *Barīd al-Imbīrāṭūrīya*, an Amharic periodical **የሮማ፡ ብርሃን** (*Yäroma Bərhan*, 'Light of Rome'), as well as official *Bollettini* for each of the Italian Governorates of the Empire. Asmära likewise had its *Corriere Eritreo*, later renamed *Corriere dell'Impero*. During the occupation a resident Armenian, Johannes ↗Semerjibashian, is reputed to have produced a series of clandestine mimiographed texts, entitled ↗*ᶜAmdä bərhan zäᵓityopya*, which were issued secretly in opposition to the Fascist regime (Pankhurst 2009). Two anti-Fascist newspapers devoted to Ethiopian affairs were meanwhile produced outsde the country: ↗*New Times and Ethiopian News*, edited by Sylvia ↗Pankhurst, in Britain, (which had several Amharic supplements) and *The* ↗ *Voice of Ethiopia*, by ↗Mälaku ᶜAmanuᵓel Bäyyän, in the United States.

The Liberation also brought about major changes. During his campaign, *aṣe* Ḫaylä Śəllase I made use of a field newspaper called ↗*Banderaččən*, which was printed in ↗Khartoum, and ran for 28 issues, which were dropped by the British Royal Air Force, by air, coming to an end with the Emperor's return to Addis Abäba (Steer 1942: 90–102, 124–36, 164–76, 248–53). The paper's name was then appropriated by a weekly newspaper printed in the Ethiopian capital, but was later renamed *Sändäq ᶜAlamaččən* and supplied with an Arabic version. In 1941 the British used local P. facilities to produce a short-lived English weekly newspaper, *The Ethiopia Star.*

The development of the P. is particularly linked to its practise in long-standing government papers such as ↗*Addis Zämän* and *The* ↗*Ethiopian Herald*, which grew out of *The Ethiopia Star*, both from the early 1940s. Apart from Amharic, ↗Təgrəñña was the only Ethiopian respectively Eritrean language used in newspapers. In 1942, *Al-ᶜAlam* ('Flag'), the only Arabic weekly published by the Ministry of Information, was launched as a supplement to *Sändäq ᶜAlamaččən*, gaining independent status by 1954 (Hussein Ahmed in PICES 11). English-language P. included, in addition to above mentioned, the periodicals based abroad, such as *Nouvelles d'Addis* (France) and ↗*Ethiopia Observer* (UK).

Beginning in the 1940s, the Patriarchate of the ↗Ethiopian Orthodox (Täwaḥədo) Church started publishing such periodicals as *Mäṣḥetä Ityopya*, *Täklä Haymanot*, and *Zena Betä Krəstian* (s. ↗Tənsaᵓe Zägubaᵓe Printing Press).

During Ḫaylä Śəllase I's rule, writing was strictly controlled and pre-censored in the Ministry of Information. Within limits, private initiative was possible and could contribute to the development of the P. (e.g., very decisively by the "father of Ethiopian journalism" ↗Wäldä Giyorgis Wäldä Yoḥannəs). Controversial publications, however, such as the student newspaper **ትግል** (*Təgəl,* 'Struggle'), were harshly repressed, especially during the last years of the Emperor's rule. A noteable student publication was *News and Views*, published by students of the University College of Addis Abäba (later ↗Addis Ababa University) since 1951.

Some other newspapers which appeared during the rule of Ḫaylä Śəllase were:

↗*Yäzareyətu Ityopya* (1945–74); *L'Éthiopie d'aujourd'hui* (1954–74); *Yäᵓityopya dəmṣ* ('The Voice of Ethiopia'; 1949–74); ↗*Mänän* (1945–74); *Ethiopian Mirror* (1954–74); *Addis Abäba* (1945–?); *Progresse économique* (1949–?); *Wätadärənna ᶜAlamaw* ('The Soldier and his Target'; 1950); *Addis Soir* (1958–?).

In spite of the political limitations, both the readership and the circulation of P. grew significantly in the 1950s-60s; the newspapers informed their readers of both home and foreign events, published commercial advertisements and entertainment and education materials. The Ethiopian P. of that period influenced significantly the development of the Amharic language.

During the months preceding the ↗Revolution and the first years of military rule (↗Provisional Military Administrative Council) there was an outbreak of free expression in both government and clandestine papers, but it did not last. Periodicals such as, e.g., **ዴሞክራሲያ** (*Demokrasiya*, 'Democracy') and **የሰፊው፡ ሕዝብ፡ ድምጽ** (*Yäsäffiw ḥəzb dəmṣ*, lit. 'The Voice of the Broad Masses') were declared counterrevolutionary. A major change was the onset of P. in national ethnic languages, e.g., the Oromo ↗*Bariisaa*. Other newspapers of the period included:

Polisənna ərməǧǧäw ('Police and its Progress', published by the ↗Police Commission); *Śärto addär* ('The Worker', of the Ethiopian Workers' Party); *Taṭäq* (of the Ministry of Defence); *Goḥ* ('The Dawn'); *Ṣädäy* ('The Spring').

The 1992 "Freedom of the Press" proclamation was a landmark in the development of newspapers. Pre-print censorship was abolished. Yet, in spite of the outspoken policy on ethnic equality, government-supported papers were only published (by Ethiopian Press Agency) in Amharic (*Addis Zämän*, circulation of 19,000 copies, daily), English (*Ethiopian Herald*, 10,000 copies, daily), Oromiffa (*Bariisaa*, 3,000 copies, weekly), Təgrəñña and Arabic (*Al-ᶜAlam*, 2,500 copies, weekly). From 1992 to 1997, close to 300 private newspapers and magazines had been registered. The short-lived *Bilal* (1993-95) should be particularly mentioned as the first Islamic periodical in the post-1991 Ethiopia (Hussein Ahmed 1998; Gori 2005).

The number was much more than the market could sustain and their number dropped drastically, to some extent because of government policy. Constitutional provisions for freedom of expression (also embedded in the 1955 and 1987 ↗Constitutions) did not prevent the use of laws governing the security of the state to stop what was perceived as "irresponsible journalism" (The *Reporters without Borders' Index on Press Freedom* ranks Ethiopia as number 107 out of 139 nations).

A split between government-owned and government-supporting P. on the one side and oppositional P. on the other side manifested itself in the formation of two rival associations, the Ethiopian Journalists' Association and the Ethiopian Free Press Journalists' Association.

In 1996 the Mass Media Training Institute under the Ministry of Information was the first to start a two-year journalists-training programme in Addis Abäba, 80 % of students being recommended by the government. In 2004 ↗Addis Ababa University established a School of Journalism and Communication, in collaboration with a Norwegian school of journalism (↗Norway), aiming at M.A. and Ph.D. programs as well as short-term courses in journalism.

All these developments considered, it is important to note that, for reasons of literacy, income level and distribution deficiencies, at present the newspaper reading public is still less than 1.5 % of the population.

Randi Rønning Balsvik – Richard Pankhurst

Press in Eritrea

The history of the Eritrean P. began with the launch of a weekly administrative and commercial newspaper *L'Eritreo* on 4 November 1891 by the Tipografia e Libreria Italiana (s. also ↗Printing). On 12 June 1891, another firm began printing the ↗*Corriere Eritreo* newspaper (after fusion with *L'Eritreo* in 1893 called *L'Africa Italiana. Gazzetta di Massaua*). The *Bollettino Agricolo e Commerciale della Colonia Eritrea* was published in Asmära between 1903 and 1905 (also in 1922). The Swedish Evangelical Mission (↗Evangeliska Fosterlands-Stiftelsen) printed Eritrea's first Təgrəñña newspaper ↗*Mälʾəḵti sälam* from 1909 to 1915.

As Eritrea's Italian population expanded, there was a proliferation of locally printed Italian newspapers that covered economic, military, political, and regional affairs as well as extolling the benefits of Italian colonial rule. Those were meant to serve the needs of the Italian community, and the language was almost exclusively Italian. In June 1928 the first daily newspaper *Il Quotidiano Eritreo* was launched by the Propaganda Ministry, as a successor of the *Corriere Eritreo* (at times it had Təgrəñña and Arabic inserts). In 1935 it was replaced by the weekly *La Nuova Eritrea*, which in 1936 was renamed *Corriere dell'Impero* and finally once again *Corriere Eritreo* (supplied, from 1938, with an additional sports weekly, *Il Corriere Eritreo Sportivo*). Some other major newspapers included:

Parole Buone (1915–31); *Il Novembre* (1916–?); *L'Eritrea commerciale* (1922–?); *Annuncio Eritreo* (1922–28, by Mario Fioretti, publishing advertisements of the growing Italian industry in Eritrea), continued as *Notiziario Telegrafico Quotidiano* (1928–?); *Il Vero Amico del Popolo Etiopico* (1916–?); *Giornale Trilingue dell'Africa Orientale* (1928–35); *Mercuriali. Ufficio Eritreo dell'Economia* (1928–?); *Il Giornalino dell'Eritrea* (1934–?); *Ordine del Giorno* (1939–?); *La Voce della Boscaglia*, also containing the insert *Notizie da Casa* (1940–?); *Notiziario per le Truppe. Comando dello Scacchiere Nord* (1940–?); *Omnia. Giornale Settimanale Illustrato del quotidiano "L'Informazione"* (1941–?); *Il Lunedì dell'Eritrea* (1941–47); *L'Informazione* (1941–?); *L'Informazione del Lunedì* (1941–?); *Corriere di Asmara* (1944–?); *La Repubblica* (1946–?); and *Vie d'Oriente* (1946–?).

On 8 April 1941, the ↗British Military Administration (BMA) assumed responsibility for Eritrea pending an international decision about its political future. Among other things, the BMA immediately suspended the Fascist-controlled *Corriere Eritreo* which had been printing 8,000 copies daily. On 17 June 1941, the British Ministry of Information assumed responsibility for financing and operating the ↗*Eritrean Daily News*, which was published in English and Italian. The newspaper carried news without comment, in addition to advertising and official announcements. The *Eritrean Daily News* had a readership of between 14,000 and 17,000. The newspaper's neutrality earned the respect of many Italian readers. After Mussolini's downfall and the Italian armistice, the *Eritrean Daily News* increasingly focused on the challenges and problems facing the BMA and Eritrea. On 5 October 1947, it ceased publication. During the August 1944 to 1950 period, the British Minister of Information printed a companion newspaper called *Il Quotidiano Eritreo* that appealed to the local population, Italians, and allied military personnel in the East African region. *Il Quotidiano Eritreo* reported news-worthy items without editorial comment and carried official announcements and advertisements.

The British Ministry of Information also produced a 5,000 copy weekly Təgrəñña-language newspaper, the four-page ↗*Eritrean Weekly News* (*Nay Erətra Sämunawi Gazeṭa*; 520 issues during 1942–52). ↗Wäldä Ab Wäldä Maryam, a noted intellectual, served as the newspaper's Təgrəñña editor, Maḥmūd Irabay as the Arabic editor and Edward Ullendorff as chief editor. An article by Stephen ↗Longrigg from 3 August 1944 (signed Ḥadä Ertərawi, 'an Eritrean') entitled "Some Thoughts on the Future of Eritrea", which suggested that Eritrea's Muslim lowlanders wanted to be united with Sudan while Christian highlanders were "one with the people of northern Ethiopia", and considered a possibility of an ↗Ethiopian–Eritrean Federation, provoked a national debate involving ↗Gäbrä Mäsqäl Wäldu, President of ↗*Maḥbär fəqri hagär* and Abraha Täsämma, a moderate who helped to organize the "Eritrea for Eritreans" movement. Many Eritreans believed that Wäldä Ab Wäldä Maryam had authored the article; the growing animosity against him eventually resulted in at least six assassination attempts. The BMA's policy toward the debate and periodic demonstrations was that Eritreans should express their opinions in the newspaper to help determine Eritrea's future status. However, Ullendorff regularly censored articles and letters to the editor.

Other newspapers that appeared during the 1941–51 period included ↗*Dəhay Ertəra* (Tgn., also edited by Wäldä Ab Wäldä Maryam, 1944–46 and 1952–53), *L'Unità dell'Eritrea* (Ital., 1946–49), *Dəmṣi Ertəra* (Tgn.), *Ityopya* (Amh.), *Ḥəbrät* (Tgn.), *Voice of Eritrea – Ṣawt al-Irītrīya* (Eng. – Arab.), and *Ḥanti Ertəra* (Tgn.). The daily *Globereuter* news service of the British Ministry of Information had a readership of 12,000 Italians and 2,000 British every day. The British Broadcasting Corporation (BBC) also made its reports available throughout Eritrea.

On 2 December 1950, the ↗United Nations adopted Resolution 390 A (V) that federated

Eritrea with Ethiopia. By 1954, Eritrea's Unionist government (cp. ↗Unionist Party) had destroyed Eritrea's independent P. by closing all rival local language newspapers. In 1956, the Ethiopian authorities censored Eritrean newspapers and required Amharic instead of Təgrəñña and Arabic. However, the official *Il Quotidiano Eritreo*, *Zämän*, and *Ityopya* continued publication under government control. Four Italian newspapers survived until the early 1960s, including the Italian-funded *Giornale dell'Eritrea* and the *Veritas et Vita*, both of which continued to the 1970s. In 1963, *Ḥəbrät* (with an Arabic supplement, *al-Waḥda*) resumed publication.

Growing discontent with the Ethiopian-Eritrean Federation facilitated the emergence of anti-government rebel groups, the most important and powerful of which were the ↗Eritrean People's Liberation Front (EPLF) and the ↗Eritrean Liberation Front (ELF). The lack of a free P. in Eritrea forced these organizations to seek other avenues to publicize their grievances and outline their political and military goals. Both relied largely on pamphlets and periodicals to inform both Eritreans in Eritrea and in the ↗Diaspora as well as foreign governments about recent events and about its political and economic goals, and requests for financial support.

The most important post-1974 pre-independence publications included:
Adulis (EPLF, London, 1984–91); *Eritrea in Relief* (Khartoum, 1985–?); *Eritrea in Struggle* (EPLF, New York, 1976–?); *Eritrean Information* (EPLF, Rome, 1979–88); *Eritrean Newsletter* (ELF, Beirut, 1977–91); *The Eritrean Review* (ELF, Beirut, 1982–?); *Eritrean Revolution* (Eritreans for Liberation in Europe, London, 1976–?); *The Eritrean Revolution* (ELF, Beirut, 1975–78?); *Informational Bulletin* (Eritrean Relief Association, Khartoum, 1988–?); *The Eritrean Review – Popular Liberation Front* (ELF, 1982–?); *Events* (EPLF, 1986–91); *Liberation* (EPLF, 1981–?); *Resistance* (Khartoum, 1978–81?); *Return* (EPLF, 1989?); *Research and Information Centre on Eritrea Bulletin* (Nottingham, UK, 1989–92); *Vanguard* (EPLF, 1973–?); and *Voice of Eritrean Women* (EPLF, New York, 1983–91).

Thomas P. Ofcansky

Prester John

P.J. (Lat. *Pres[by]ter Iohannes*, Ital. *Prete Gianni*, *Prestogianni* and vars., Fr. *Prestre Jehan*, Port. *Preste João*) is the name of an imaginary Christian oriental priest-king, lord of (one of) the "three Indias" (↗India), who in the Middle Ages was credited with offering an alliance with the major Western powers in order to free the Holy Land from Islamic rule. His biography, emerging from a scattered body of medieval texts, was partly mingled with that of ↗Alexander the Great as featured in the fabulous *Romance of Alexander*. P.J.'s "Indian" realm, lost amidst Muslims and pagans, and full of riches and strange creatures, boasted such marvels as the Gates of Alexander and the Fountain of Youth, and stretched from the Holy Land to the Earthly Paradise. In keeping with the dream of a Christian India, which in turn led to a quest for the Christians of the Far East, it was first located in Central Asia and only later, from the 13th/14th cent. onwards, in Ethiopia, which actually lay on the trade routes to India – and was physically connected with the latter in ↗Ptolemy's view.

The earliest times: from Asia to Africa

The first reference to the P.J. is found in the chronicle of Otto of Freising who, in 1145, registers for the previous year the appearance, at the pontifical court in Viterbo, of the Syrian bishop Hugh of Jabala (the ancient Biblos, now in Lebanon), dispatched by Prince Raymond of Antioch to seek aid against the Muslims soon after ↗Edessa had fallen to them. Hugh told his audience about "Iohannes", a Nestorian Christian (↗Nestorius) and powerful monarch who descended from one of the three ↗Magi and reigned over a vast dominion, being at once "rex et sacerdos" – like his biblical models, i.e. ↗Melchizedek (Gen 14:18–21) and Christ (Mt 28:18; Jn 3:17; Heb 5:9; 1 Tim 2:5). A few years before, he had vanquished the brother kings "of the Persians and the Medes", and would have then set for ↗Jerusalem to rescue the Holy

Land, but was prevented from doing so by the swollen waters of the Tigris River (VII, 33, ed. Pertz 1867: 266).

Beyond its classicizing language, Otto's muddled story seems to echo the victory achieved in 1141 near Samarkand (Transoxiana) by the Mongol *ḫān* Yeh-lü Da-shih, founder of the Qara Ḫitay, over the Salǧūq *šāh* Sanǧar. The Latin *Iohannes* could be a reflex not so much of the title *ḫān* as of the name of the Asian king *Vizan* (*Iouzánēs* or *Ou*[*a*]*zánēs* in Greek), the protagonist of an ancient saga on St. Thomas (s. Fiaccadori 1992: 79f.; Pirenne 1992: 31–36) that was perhaps familiar to the bishop of Jabala. Indeed, he himself might have suggested the equation of Yeh-lü Da-shih – most likely, a Buddhist with Christian subjects – to the mythical Asian king fighting for Christianity. This sovereign was later identified, at times, with yet another illustrious Mongol ruler, Genghis Khan (1206–27), or an Indian monarch enemy to him, or a Tartar lord (Wang Khan Toġrul, a Nestorian Christian) killed by Genghis Khan, or an Indian ruler who had defeated the latter, or a Chinese prince whose territory reached as far as the Blue River (Yangtze), or even King George of Georgia (Giorgi IV Lashi, r. 1191–1223), known for advocating the Crusaders' plans on the Holy Land while the Mongols were threatening the borders of his kingdom (s. Cerulli 1935: 217). In the various tales from this period, the P.J. is often portrayed not as an invincible hero, but merely as one of the several antagonists of the Mongols. The uncertainty about his identity was the result both of Asia's opening to western travellers in the second half of the 13th cent., after the great Mongol conquests, and of the concomitant, albeit frustrated, desire to find there an adequate impersonation of an already widespread legend that had set an unattainable moral standard to coeval Europe.

So hazy a figure is in fact the purported author of the famous *Letter of Prester John*, copies of which are supposed to have circulated in Europe as early as 1165, the year its text is referred to in the chronicle of Alberic of Three Fountains (1234 A.D.; ed. Sheffer-Boichorst 1874: 848f.). The "original" *Letter*, in Latin (ed. Zarncke 1879: 909–24), is attested in over a hundred manuscripts; some of which, unavailable for Zarncke's edition, do not fit with the tradition he reconstructed (Gosman 1983: 3). He distinguished between the genuine text – for which he offers a rather eclectic solution – and five interpolations (A–E), datable from 1160 to 1300; previously, he had published two more versions of the Latin text (Zarncke 1877).

The *Letter* was first directed to the Greek emperor Manuel I Comnenus (1143–80), yet with a marked anti-Byzantine bias that sheds light on its compositional milieu. In the manuscript tradition, the text is attributed to Bishop Christian of Mainz (1165/67–83), who was an envoy of Emperor Barbarossa to Manuel I in 1170, and is said to have brought it back from Constantinople and even, sometimes (interpolation E, before 1270), to have translated it from Greek: the Graecisms of the *Letter* have suggested the hypothesis – though weak – of a lost Byzantine original (s. Zaganelli 1990: 189, ad 1, 1). As a plausible source of the *Roman d'Enéas*, however, the *Letter* could have been at least drafted already in 1150–60 (ibid. 35 n. 1).

According to the chronicle of Alberic, the *Letter* was later ascribed to other powerful people such as a Western emperor Frederick to be identified, in principle, with Barbarossa (1166–90), although by that name the chronicler may have better envisaged his own contemporary Frederick II (1212–60). Variants of the text were produced until the 15th cent.: one of them was directed to Pope Martin V in 1426 (Guglielminetti 1990); and another one – primarily a piece of Crusading propaganda – is anachronistically addressed to the Holy Roman Emperor Charles IV (1346/49 or 1355–78) by an Ethiopian king called "Voddomaradeg", a deformation of the name of *nəguś* ↗Wədəm Räᶜad (r. 1299–1312; cp. Ullendorff – Beckingham 1982:7f.).

The *Letter* enjoyed immense popularity, esp. in the popular poetry and literature of the Late Middle Ages (Lefevre 1944: 55–67; Rogers 1962: 91–113), and its success later continued in printed form and in the visual arts, including cartography (Ramos 1997). It is also preserved in a number of Romance, Teutonic, Slavonic and Hebrew vulgarizations and elaborations. Among these, especially important are the Hebrew ones, actually four different versions (one of them addressed to Pope Eugene IV in 1442), which betrays an origin among the Jews of northern Italy or Languedoc and bears some relationship to the narrative of ↗Eldad ha-Dani (ed. Ullendorff – Beckingham 1982: 57–151, cp. 153–59).

In its several versions, extant in more than 250 manuscripts, the *Letter* was a unique contribution to the shaping of the legend of the P.J. well beyond the Middle Ages, when he became both a virtuous and generous sovereign and an ideal model of sa-

cred kingship – a leitmotiv of the text – for the European princes,who were fighting with one another rather than with the Muslims. Therefore, it ended by typifying the first Christian political utopia: a peaceful universal empire, transcending culture and geography to encompass all humanity (Olschki 1931; cp. Bejczy 2001).

The *Letter* has been the traditional object of different scholarly disciplines, from philology to history and literary criticism, all mainly concentrating on its impact and authenticity, as well as its thematic and genetic relations with such other more or less contemporary texts dealing with Oriental figures of priestly kingship, such as the chronicle of Otto. Recently, a stimulating anthropological approach, while discarding problems of chronology, contextual origin and authorship, has instead called attention to the propaganda style and the multi-layered vision of the imaginary "Indian" kingdom that are unfolded in the text, and to the need of understanding them in terms of a Christian mythological discourse based on Biblical narrative and aimed at conveying a peculiar message. Deeply influenced by the ↗*Revelation* of John, the *Letter* would ultimately proclaim the Christ-mimetic character of the P.J. and his indestructibility and incorruptibility, but also a symbolic ambiguity that allows for inclusion of paradoxical demon elements in the definition of him and his surroundings, and reflects the symbolic dualism of medieval Christianity: that is, the relationships between Christ as "heir of the heavenly kingdom" and the Devil as "prince of this world" (Ramos 1997: 65–74).

Within so evident a cosmological and theological framework, part of the *Letter*'s essence and fascination was, however, the idea that a lost Christian kingdom still existed in the vastness of the East; and the P.J.'s legend was definitely triggered by the tales about the Asian circumstances of the so called Nestorian (or East Syrian/Persian) Church, or the evangelization of India by the apostle Thomas (as reported already in the 3rd-cent. *Acts of Thomas*), whose wonder-working tomb was at Mylapore. A visit to Rome by an obscure "Indian" patriarch claiming ties with St. Thomas is recounted for the year 1121/22 in at least three 12th-cent. narratives (Zaganelli 1990: 11 and n. 10, 38). Hence, too, the special nature of the relation between the P.J. and St. Thomas (cp. Ramos 1997: 75–84): the latter's name was subsequently applied to the former precisely as "patriarch" of the Indian Christians, i.e. the Malabar or "Southist" St. Thomas Christians, with intimate ties to the East Syrian Church (s. von den Brincken 1973: 337–49; Pirenne 1992: 22 and n. 25; Fiaccadori 2006: 56 and nn. 49–54). The *Letter* is not a forgery, i.e. a conscious deception, but rather a piece of "a recognized literary genre" (Ullendorff – Beckingham 1982: 4). Yet, the analysis of its internal content cannot be altogether detached from the quest for the "historical reality" of the P.J., to which other documents are indeed more conducive.

The P.J. in turn was the addressee of writings by princes and pontiffs: already in 1177, Pope Alexander III sent him (actually, "the King of [the] India[ns]") a celebrated missive from Venice through his own personal physician, Philip, who had previously collected information on the P.J. and his country while travelling in the East (Raineri 2005: 13–16, no. 1), and seems to have succeeded in journeying to that country, nothing else being known, though, of this mission. By his gesture, the pope was trying to make the P.J. an ally of the European princes against the Islamic advance in the Mediterranean regions. The pope's message is not necessarily a reply to the P.J.'s earlier one, but it is symptomatic that Christian of Mainz was then also in Venice, as the principal negotiator of the treaty signed there by the emperor and the pope, and received the pallium from the latter as a mark of recognition. The synchronism might be equally noted here with the reign of *nəguś* ↗Yəmrəḥannä Krəstos (fl. ca. 1164/65) who, according to his mid-15th-cent. *Acts*, was "king and priest" by actual ordination (Marrassini 1995: 31f.; cp. Pirenne 1992: 37–43). In the 12th-cent. chronicle attributed to ↗Abū Ṣāliḥ, "all the kings of Abyssinia are priests, and celebrate the liturgy within the sanctuary" (ed. Evetts 1895, fol. 105b; cp. 99a, where the same statement occurs for the thirteen kings "under the supremacy of the Great King" of Nubia, most probably confused, as usual, with Ethiopia); and a not too remote precedent to such a "dual" position might be seen in the career of *ḥaṣani* ↗Danəʾel, a ruler of ↗Aksum and possibly a monk towards the end of the 10th cent.

The collapse of the Mongol empire prompted Europeans definitely to abandon the idea that the P.J. had ever really been a Central Asian king. As travelling in those regions became dangerous without the security the "pax Mongolica" had provided, in 14th-cent. works such as *The Travels of Sir John Mandeville* (chs. XXX–XXXII and XXXIV) and the *Historia Trium Regum* by John of Hildesheim (s. Monneret de Villard 1952:186, 215f., 219), the P.J.'s domains tended to resume their fantastic aspects and be transferred back to India proper, or some other exotic location. In his *Parzival* (ca. 1200), Wolfram von Eschenbach tied the story of the P.J., the son of the Grail maiden and the Saracen knight Feirefiz, with that of the Holy Grail, of which the P.J. thus became the "guardian" (Adolf 1947; cp. ↗Makədda: The Queen of Sheba in Western culture).

If voyagers like Marco ↗Polo and the Franciscan Odorico da Pordenone (d. 1331), a missionary to China, were to deprive the P.J. of much of his otherworldly overtones, depicting him as a more realistic earthly sovereign, new data about him, both real and fantastic, had been collected before in Egypt, Syria and Palestine during the Fifth Crusade, when the translation of Christian Arabic apocalyptic texts prompted the Ethiopian location of his kingdom (Beylot 2000).

In terms of geographical ambiguity, moral character and name, significant details of the P.J.'s legend could have been then recognized in, and enhanced by, stories heard in those places: e.g., that of "King John of Syria", a passionate of the ↗Eucharist featured in the 6th-cent. Coptic and Arabic hagiography of *apa* Ieremias and *apa* Iohannēs, where the mystical king is introduced as dwelling on the far remote borders of Elam, traced to the more familiar Šuhbāʾ or Philippopolis, in central Ḥawrān (Syria), by the Arabic translator (van Esbroeck 1998: 10f.).

The Christian kings of Nubia and Ethiopia, in whose powerful countries children were allegedly baptized with fire and not water (Fiaccadori 2005: 45f. and nn. 11–12), thus became known in Europe as strenuous fighters for their faith and potential supporters of the crusade (the fact that Greek was spoken in Nubia until the late Middle Ages might account for the Graecisms of the *Letter*, made more likely thereby: ibid., 47f. and n. 19). In particular, monks of the Ethiopian community of Jerusalem passed on the information that their sovereign, waging constant war against the Muslims, was called *Žan* (in fact, a royal title derived from Gəʿəz *žanhoy*, '↗elephant'), which was gladly acknowledged by their Western interlocutors to be the original name of the P.J., with the effect of strengthening the "Ethiopian interpretation" of his legend. A direct relation can be certainly established between the knowledge of "Indian" Christians that was long since available in Jerusalem, and that returning pilgrims disseminated in the West, and the presence of the Portuguese in South India and the Ethiopian highlands in the early 16th cent.

In this connection, a more defined role of information and communication must have been played, around 1310, by the embassy of the already mentioned *nəguś* Wədəm Räʿad "to the king of Spain" (↗Italy, relations with): at Genoa, before embarking on their way back to Ethiopia, its members produced a writing on the P.J. and his land that was used in a lost work by the great cartographer Giovanni da Carignano (d. 1344), and then mentioned in the *Supplementum chronicarum* (VIII, 18) by the Augustinian Jacopo Filippo Foresti.

By that time, the "Indian" P.J. of former legends was fully equated with the emperor of Ethiopia, also on account of the usual confusion between the latter and India (↗"India" as a name of Ethiopia). In his *Mirabilia descripta* (1329), the Dominican Jourdain Catalani of Severac, the most important 14th-cent. missionary to India, clearly styles the ruler of Christian Ethiopia as the P.J. (s. ↗Dominicans), a name that stuck with him in the European usage until the late 17th cent. (e.g., in the *Historia eclesiastica* by another Dominican, Luis de ↗Urreta, 1670), when scholars such as Hiob ↗Ludolf proved there was no native connection between the Ethiopian monarch and the P.J. (↗Research, historical).

Doomed to hold a long-standing presence in western cartography (e.g., in the *Mappamondo* of ↗Fra Mauro), the P.J. is first shown on the Upper Nile in a map drawn by the Genoese Angelino Dalorto (Dulcert) at Mallorca in 1339. The great Christian kingdom of the Horn of Africa was then to attract the growing interest not only of voyagers and traders, but also of missionaries and statesmen eager to approach the no longer mythical sovereign who, in accordance with the customary image of the relationships between Ethiopia and Egypt, was believed to exert control over the ↗Nile's waters, thereby mastering the supply of Muslim ↗Egypt (cp. ↗Gihon).

Into the Age of Discovery

The African staging of P.J. and his legend stimulated both the great transoceanic exploration travels and the diplomatic relationships of the European states (first and foremost, Italy) with historical Ethiopia from the Middle Ages to the Renaissance. Then, Ethiopian subjects of the P.J. attended the Councils of Constance in 1417 and Florence in 1441 (Fiaccadori 2009: 35f.), where they had to yield, interestedly though, to the "absurd" western insistence on referring to their sovereign as P.J. (s., e.g., Biondo Flavio, *Hist.* IV, 2, 38, ed. Nogara 1927: 23; cp. Pirenne 1992: 25 n. 2). The latter's legend was since merging with the history of those relationships. Several embassies and precious gifts – as many proofs of the P.J.'s fabulous wealth – were exchanged between him and the European courts, most of the envoys from the Ethiopian side being Europeans, like the Florentine Antonio ↗Bartoli, the Neapolitan Pietro ↗Rombulo, the Imolese Gianbattista ↗Brocchi (s. EAE vol. 5) or the "Armenian" ↗Mateus – to mention only a few of those who introduced themselves and/or were formally received as ambassadors of the P.J. from the 15th to the 16th cent.

The 15th cent. in particular witnessed the apogee of the Ethiopian monarchy and, accordingly, of the myth of the P.J., more often presented now as a wise prince holding suzerainty over a variable number of vassal kings – which might mirror, with some exaggerations, the actual situation of the Ethiopian empire. The earliest message to Ethiopia from a European ruler apart from the pope dates to 1400: it is a letter sent, one year after ascending, by the king of England Henry IV to the "magnificent and powerful Prince, the king of Abyssinia, or Prester John". On visiting the Holy Land in 1392–93, before his coronation, the future Henry IV had heard there of the Ethio–Egyptian hostilities under *nəguś* Dawit II, whom he now complimented on his will to free the Holy Sepulcher from the Muslims (ed. Hingeston 1860: 419ff. = CerEt vol. 1: 201f.; cp. TadTHist 257 and n. 1). Likewise, in 1459 the duke of Milan Francesco Sforza asked by letter the P.J., whom he calls "Simon Jacopo", i.e. ↗Zärᵓa Yaᶜəqob, to send copies of lost works by the biblical King ↗Solomon for the library he was gathering at Pavia (Rozzo 1990: 251 and n. 97).

In 14th- and 15th-cent. writings (e.g., the ↗*Libro del conoscimiento*), the P.J. appears as a patriarch of Nubia and Ethiopia protected by a king named *Abdeselib*, *At Senap*, *Senab* or *Senapo*, with whom he is sometimes identified (as in Ludovico Ariosto, *Orl. Fur.*, XXXIII, 102, 1f., after retrospective Genoese sources, as he had no access to more updated Venetian documents). Those forms should be all traced to Ar. (*ᶜAbd aṣ-*) *Ṣalīb*, tr. of Eth. *Gäbrä Mäsqäl*, 'Servant of the Cross', official royal name of several Ethiopian emperors: here, notably, of ↗ᶜAmdä Ṣəyon I, whom his "glorious victories" over the Muslims made a perfect embodiment of the P.J.

In the progress of time and knowledge, the African location of P.J. became increasingly popular, as shown by a series of 15th- to 17th-cent. "Relations" on Ethiopia – deemed to be part of his dominions – that were written by travellers, merchants and diplomats for the benefit of European states (e.g., Venice, s. Fiaccadori 2009: 47f.). Yet, by the time the Ethiopian court had called upon the aid of the Portuguese, establishing diplomatic contacts with them in 1520 (↗Ǝleni, ↗Ləbnä Dəngəl), the myth of the P.J. was due to its natural dimming. In the Age of Discovery, marked by thirst for knowledge of other lands, desire for international ↗trade and missionary zeal, there was no longer room for it – and Pêro da ↗Covilhã had penetrated into Ethiopia more than a decade before Vasco da Gama's memorable voyage. Responsible for P.J.'s fading from the scene were then such works as Ludovico de ↗Varthema's *Itinerario* ('Itinerary') and, esp., Francisco ↗Alvares's *Verdadeira Informação das Terras do Preste João* ('A True Relation on the Lands of the Prester John'). The comprehensive account of his six-year stay in Ethiopia (1520–26), where he met da Covilhã, was published (possibly not for the first time) in 1540: it is "incomparably more detailed than any earlier such account that has survived" (BeckHuntAlvar 12f.), but the personal acquaintance of the author with the P.J., portrayed more often as a regular king, with his share of human issues, did contribute to deprive this figure of its mystique. Even the name *Presbyter Ioannes* was then challenged by the humanists, first by Valentim Fernandes (1502, s. Rogers 1962: 121f.) and then, more in detail, by Damião de ↗Góis: already in the lengthy title of his *Fides, religio, moresque Aethiopum sub imperio Pretiosi Ioannis (quem vulgo Presbyterum Ioannem vocant), &c.*, he declared it to be a vulgar form of *Pretiosus Ioannes*, 'Pretious John' (Góis 1540:[1] = Uhlig – Bühring 1999: 57, cp. 156 and n. 1, 164 n. 42). Possibly indebted to Alvares's text, the *Fides* includes the controversial *Legatio Magni Indorum Imperatoris Presbyteri Ioannis* (tr. by de Góis from Portuguese and first printed in 1532), with the famous "Letter of P.J." to King Manuel I of Portugal (1509), sent in fact by Queen Ǝleni (s. Fiaccadori 2004: 689 and n. 63).

What is more, shortly thereafter, when the Christian kingdom was being completely overthrown by Muslim conquerors (↗Aḥmad b. Ibrāhīm al-Ġāzī), the exploits of a band of 400 Portuguese under Christovão da ↗Gama (1541–43) turned the scale in favour of the P.J., but not of his image in the years to come. The once fabulous king, who had fired up the imaginations of generations of adventurers, became an unfortunate prince mourning over his kingdom and weaving difficult political threads with the European courts – asking for help, far from giving it. His actual realm, threatened by the Turks, was rather the theater of the rational endeavors and researches of the Portuguese, Spanish and Italian humanists and missionaries, to whom, like to Pedro ↗Páez, P.J. was but an erroneous name for the king of Ethiopia (BecRASO II, 13, 72f.).

This name, used for him in countless western documents, maps and writings, remained always unknown to Ethiopians, who were fully unaware of the legend that had prevailed for so long in Europe. When the Franciscan Remedius ↗Prutky, in 1751, told *aṣe* ↗Iyasu II that "he was entitled in Europe Prester John and begged him to pronounce upon it", the man was "astonished" and replied "that the kings of Abyssinia had never been accustomed to call themselves by this name" (Prutky 1991: 115). It is apparently the first recorded statement about the P.J.'s lore by an Ethiopian monarch, who was likely ignorant of such a title until Prutky's inquiry (ibid. n. 24).

Even though the mystique of the P.J. had long since vanished, tales about him continued to be, nonetheless, a source of inspiration up to the 20th cent. An early modern reference to him is provided in 1600 in William Shakespeare's play *Much Ado about Nothing* (II, 1) and still in 1910 the British novelist and politician John Buchan used the legend for his romance *Prester John*, to add to a South African plot about a Zulu uprising. Owing perhaps to his work, the P.J. subsequently became a popular subject in pulp fiction and comics (e.g., *Fantastic Four* and *Thor*). In his 1930 novel *War* *in Heaven*, Charles Williams made the P.J. a messianic paladin of the Holy Grail. The P.J. and his *Letter* also appear prominently in Umberto Eco's 2000 novel *Baudolino*, where the eponymous protagonist – a stepson of Barbarossa – eventually visits the P.J.'s wonderland kingdom.

Prideaux, William Francis

Lieutenant P. (b. 1844, d. 1914) was a British officer from Bombay, India, who participated in Hormuzd ↗Rassam's mission to Emperor ↗Tewodros II.

At the height of the British Government's dispute with Tewodros, P. was Third British Assistant Resident at Aden, where Rassam was Political Agent. P. was chosen, together with Henri Blanc, a French surgeon in British employ in Aden, to accompany Rassam. The three men arrived at Massawa in July 1864, but had to wait for a year for Tewodros's permission to enter his country. In August 1865 they travelled to Mätämma. They proceeded to Damot, where they were received by the Emperor. Then they sailed by ↗*tankʷa* to Qʷäraṣa where in March 1866 they witnessed Tewodros's trial of the foreign missionaries. P. and his two companions were later taken to Däbrä Tabor, and thence in July to Mäqdäla, where they were put in chains. P. reportedly protested vehemently (Blanc 1868: 195).

On Tewodros's arrival at Mäqdäla in March 1867, P. and his companions were freed. After the Ethiopian defeat at Aroge (↗Fala) on 10 April, P., dressed in full uniform, was dispatched by Tewodros on a peace mission to the nearby British camp, but the British commander Robert ↗Napier insisted on the Emperor's unconditional surrender, which was refused. Tewodros sent P. back the next day, with the Emperor's last conciliatory letter offering the British a gift of Easter livestock. This Napier reportedly accepted, but later rejected – giving rise to accusations of bad faith (s. P.'s memories in Markham 1869: 90–127).

P. was by then regarded as an expert on Ethiopia. When in 1872 the British Government received a letter from *aṣe* ↗Yoḥannəs IV announcing his accession to power, P. was entrusted with a letter and presents for Ethiopia's new ruler (RubInd 283, 296). P. took an abiding interest in Ethiopia. He described his visit to the country in *Illustrated Travels*, in 1869, and later wrote on Aksumite and Sabaean coins, and Sabaean grammar; he lectured on Ethiopia in 1913 (Lockot II, 798 [index]).

Princeton University Expedition to Abyssinia

The P.U.E.A. was undertaken by Enno ↗Littmann in October to December 1905, after he had taken part in two other expeditions of Princeton University, to Syria and Palestine in 1899/1900 and to Syria in 1904. Littmann persuaded Robert Garrett of Baltimore, a trustee of Princeton University and a patron of those expeditions, to fund his journey to Eritrea and northern Ethiopia, with three main objectives: 1) to study the modern Ethio-Semitic languages of the Colonia Eritrea – ↗Tǝgre and ↗Tǝgrǝñña; 2) to carry out archaeological research in ↗Aksum, focusing on ↗inscriptions; and 3) to collect ↗manuscripts.

Littmann started prepararing the journey in September 1905 in Rome, helped by Ignazio ↗Guidi and Carlo ↗Conti Rossini. In October he arrived at Massawa, from where he proceeded to Asmära. With a six-mule caravan, he travelled to Gäläb; here, he was received by the Swedish missionaries Gustav Rodén and Richard ↗Sundström, whose support contributed greatly to the P.U.E.A.'s success. During the two months Littmann spent there, he focused on studying Tǝgre and collecting tales, songs and other materials in this language. He was assisted by the Tǝgre-speaking member of the mission, ↗Näffaᶜ Wäd Ǝtman. George D. Cavalcanty of Jerusalem was in charge of the photographic work (some of his shots being published in the final expedition report, LitPEA). Littmann spent most of the time in Gäläb, with some short excursions to Kärän, Däbrä Sina, and the nearest surroundings. He then had the opportunity of acquiring some 130 pieces – chiefly ↗magic scrolls – for Garret's collection of near-eastern manuscripts which the owner himself gave to the Princeton University Library in 1942 (present call numbers Eth. 1–133).

During his stay in Eritrea, Littmann received the official invitation to lead the ↗Deutsche Aksum-Expedition (D.A.E.), whose aims were partly similar to those of the P.U.E.A. The administration of Princeton University agreed to limit the P.U.E.A.'s activities to the first and third of its objectives, and terminate the expedition earlier than originally planned, so that Littmann could join the D.A.E.

In December 1905, Littmann returned to Asmära, whence he moved on to two Tǝgrǝñña-speaking regions, ↗Ṣäᶜazzäga (also a station of the ↗Swedish mission, headed by Axel B. Svensson), and Bäläza, visiting here Karl Winqvist. After this Littmann went to Massawa, where on 29 December 1905 he assumed leadership of the D.A.E.

The main outcome of the P.U.E.A. was the four-volume collection (LitPEA), mostly of Tǝgre texts, songs (including those provided by Sundström and Conti Rossini) and word lists, with English and German translations. This work remains an invaluable source for the study of the Tǝgre language and oral literature, as well as for the history and culture of Tǝgre speakers.

Printing

The history of early P. of Ethiopian texts outside Ethiopia is treated under ↗Incunabula: 16th-cent. Ethiopic printed books. A detailed survey of 18th–early 19th-cent. P. in Ethiopia is provided in the article ↗Incunabula: Early prints in Ethiopia and Eritrea. An overview of the periodicals produced by different P. presses is contained in the entry ↗Press (Press in Ethiopia; Press in Eritrea); the present contribution only summarizes some data, to a great extent already contained in the above texts.

Printing in the 19th–early 20th cent. in Eritrea

Whilst attemps of P. using Ethiopic types in Europe go back into the 16th cent., it was not until the beginning of the 19th cent. that printed matter, produced by missionary institutions, started circulating in Ethiopia and Eritrea.

The first P. press in the region was only established in 1863 by an Italian Lazarist Father, Lorenzo ↗Biancheri at (Ottoman-ruled) ↗Massawa, who brought from France a small press and some Amharic type earlier made in Paris for the French scholar Antoine d'↗Abbadie. The Imprimerie Catholique produced an Amharic catechism (1864) and another in Tǝgrǝñña (1867), but discontinued shortly after.

A typographer and pressman at work, Addis Abäba, scene from the film of 1956 co-directed by Mäkʷännən Dästa; freeze-image, Asien-Afrika-Institut, University of Hamburg

The next press was established by French ↗Lazarists in 1879 at (Egyptian-controlled) ↗Kärän. The press, initially specializing in religious literature, came, together with its home town, under Ethiopian control in 1884 (↗Hewett Treaty), being thus the first properly Ethiopian P. press. In 1888 the city fell into the hands of Italians, who used the press to print military announcements in both Italian and Amharic. In 1900 the press was transferred to the Catholic Mission in ↗Asmära.

In 1885, the ↗Evangeliska Fosterlands-Stiftelsen established a P. press at ↗Ǝmkullu. This press was likewise moved to Asmära, in 1895.

Also in 1885, the Tipografia Militare di Massaua, the first secular P.-press in what was to become Colonia ↗Eritrea was established. The first commercial press in the colony, the Tipografia e Libreria Italiana (important for printing *L'Eritreo*), was founded in 1890 by A. Micheli and Company. Another commercial press, that of the ↗*Corriere Eritreo*, was set up in Massawa in 1891 (↗Press).

In 1912, the Franciscan P. press was established in Asmära.

Printing in the early 20th-cent. Ethiopia

Whilst newspapers started circulating since 1901 (↗*Aʾəmməro*), the first issues were handwritten and photocopied. Earliest printed governmental edicts go back to 1906/07, however, the technical facilities used are not known. The first known press in Ethiopia were the Imprimerie Éthiopienne in Addis Abäba (Yäʾityopya M[äḫ]atämiya, Märḥa Ṭəbäb) purchased in 1897 and properly launched in 1910, and St. Lazare P. press, established in Harär in 1905 and transferred, with improved equipment, to Dərre Dawa in 1908.

In 1906, with the P. equipment imported by *aṣe* ↗Mənilək II, the Ethiopian Printing Press **የኢትዮጵያ፡ ማተምያ፡ ቤት** (*Yäʾityopya Mattäməya Bet*) was established.

In 1913, a new P. press was established in Addis Abäba by Alexis ↗Desvages.

In 1923, the Regent Tafäri Mäkʷännən founded the P. press which bore his name, but was better known as the ↗Bərhanənna Sälam P. Press. It was managed by *ato* Gäbrä Krəstos Täklä Haymanot, a man from Aksum who had been educated by the Swedish missionaries in Asmära.

Three more P. presses were set up in 1926: the **ጎሃ፡ ጽባሕ** (*Goha Ṣəbaḥ*, 'Dawn') P. Press; the Greek-owned Hermes; and Louc, run by the Armenian H. Bagdassarian. In 1929, Léon de ↗Robillard opened his Imprimerie du Courrier d'Éthiopie. In 1931, the brothers Elias and George Djerrahian established a more modern press, the Artistic P. Press. A factory for the production of blocks was set up by another Armenian in the same year.

After the Liberation, a number of new presses appeared (e.g., Bole Printing Press, established 1964/65). In 1944, the Patriarchate of the ↗Ethiopian Orthodox (Täwaḥədo) Church established its own P. press, ↗Tənsaʾe Zägubaʾe. It was not until 1993 that the Nağāšī Printing Company (*Nägaši Islamik Asattami Dərəğğət*) was established as the first press to serve Ethiopian Muslim population.

Today, over 200 private and institutional P. presses operate in Ethiopia and Eritrea, practically every regional centre having at least one publishing company.

Richard Pankhurst

Private Cabinet

The P.C. (1959–74) of *aṣe* ↗Ḫaylä Śəllase I was launched in late 1959, probably in December. It was a clearing house for information to the Emperor for whom government activities had become very extensive. It would "assess plans submitted to the Emperor by the ministers. This […] would offset his ignorance of technical matters" (ClapHS 120). Similar to the presidential advisers of the United States, the P.C. undertook assignments, summarized and evaluated information for the Emperor (ClapHS 121).

↗Mulugeta Buli, who was appointed to the post of "Private Chief of Staff" to His Imperial Majesty on 12 March 1958 (*Nägarit Gazeṭa* 10, 29 April 1958, 68), took the initiative to propose the establishment of the P.C. He was assisted by Leon Gershkowitz, who was one of the Yugoslav experts sent by Ḫaylä Śəllase's personal friend Josip Broz Tito (↗Non-Aligned Movement) in 1954 and who worked out the technical features of the institution (ClapHS 120).

Originally, the P.C. included 14 departments which covered the entire scope of government (ClapHS 120). Some, like the Office of the Special Chief of Staff, the Special Branch for Intelligence, Economic Planning and Social Affairs and the Press and Information Department, were not new creations as they had already been established before. Some, like the Ecclesiastical Department and the Imperial Chronicles Department, had a long history behind them, being modern versions of the ancient offices of ↗*liqä kahənat* and ↗*ṣäḥafe təʾəzaz* respectively.

A point that is not easy to explain until the archives of the Ministry of Pen are opened, is the transfer of the supposed brains behind the setting up of the institution, Major General Mulugeta Buli, from the Office of Special Chief of Staff to the Ministry of National Community Development (*Nägarit Gazeṭa* 5, 30 January 1960, 24). It was on 22 December 1959 that the first major appointments were announced to fill the various offices of the P.C. The Emperor selected eleven personalities to take up the leadership of the different departments. Amanuʾel Abraham was made Chief of Political Affairs with the rank of minister, while Brigadier General Isayəyyas Gäbrä Śəllase moved into the recently vacated office of Mulugeta Buli, the all powerful Special Chief of Staff. He made two senior army officers the deputies of Isayəyyas, Lieutenant Colonel ↗Wärqənäh Gäbäyyähu and Lieutenant Colonel Sälomon Kädir. The sovereign also made the famous playwright and poet, ↗Käbbädä Mikaʾel, the Chief of the Imperial Chronicles Department in addition to his position as Head of the National Library, with the rank of assistant minister. The *Nägarit Gazeṭa* simply announced the appointment of the remaining officials as "director generals" (*Nägarit Gazeṭa* 5, 30 January 1960, 24–25). A little later, on 10 January 1960, yet another man (an ecclesiastic), *liqä mäṭani* Wärädä Qal, received the position of "director general", presumably to head the Ecclesiastical Department (*Nägarit Gazeṭa* 7, 30 March 1960, 33). ↗Wärqənäh Gäbäyyähu assumed the key position of head of the Security Branch of the Special Chief of Staff (*Addis Zämän*, 5 *Ṭərr* 1953, 52).

About a year later, the Court discovered that he was one of the ring leaders of the abortive ↗coup d'état 1960 (s. EAE vol. 2, 1081f.). This seems to have provided ammunition for the powerful ministers in the government who had been unhappy with the establishment of a parallel institution controlling access to the Emperor. Following the revolt, the significance of the P.C. seems to have diminished. Nevertheless, it continued to function until the ↗Revolution of 1974. Ḫaylä Śəllase sometimes allotted the various offices to important persons, for instance, Brigadier General Wäldä Śəllase Bäräka became the Special Chief of Staff on 1 April 1961 (*Nägarit Gazeṭa* 12, 3 May 1961, 55). Minase Ḫaylä also exercised considerable influence on the Emperor after he became the Chief of the Political Section on 23 May 1962 (*Nägarit Gazeṭa* 13, 7 May 1962, 62). A long-time occupant (1960–74) of the office of Director General of the Ecclesiastical Department was *liqä səlṭanat* Habtä Maryam Wärqənäh (later Bishop Mälkä Ṣädəq), the abbot of the St. Trinity Cathedral of Addis Abäba. All the efforts of Patriarch ↗Tewoflos to bring him to heel or to get him removed did not succeed due to the support the cleric enjoyed from the sovereign.

The P.C. was informally abolished with the demise of the monarchy. However, the only office that the *Därg* (↗Provisional Military Administration Council) formally brought to an end was the Special Chief of Staff. It announced on 17 August 1974 that the "[…] office of the Chief of Staff in the Emperor's private cabinet [is] temporarily transferred to the Ministry of Defence" (*Ethiopian Herald,* 17 August 1974). It was never heard of again.

Shiferaw Bekele

Proclus of Cyzicus ↗Haymanotä abäw

Pro-Italian Party

After the end of World War II, the future of ↗Eritrea, a former Italian colony now under ↗British Military Administration, was debated in the ↗United Nations (UN).

At the time, three factors provided support for anticipating a revival of the Italian administration:

(1) the new government in Rome aspired to UN trusteeship over Eritrea;
(2) many members of the Italian colonialists' community lived in Eritrea (13,000 veteran settlers, 11,000 locally born, 15,000 half-castes, 17,000 Eritrean wives, etc.);
(3) some 35,000 Eritreans, mostly Muslims, who had served in the Italian army, were now interested in the perpetuation of Italian administration and the Italian commitment to their jobs and pensions.

By that time, however, political bargaining had started on the domestic level after the disintegration of the ↗*Maḫbär fəqri hagär*, from which various political organizations emerged. Among them were also two Italian-oriented organizations. In spring 1947, the **ማሕበር፡ ኢጣለ-ኤርትራውያን** (*Maḫbär iṭalä-erətrawəyan* [Tgn.], 'Italo-Eritrean Association', IEA), composed of colonialists led by Guido De Rossi and Filippo Casciani, and the **ማሕበር፡ ዓሳከር፡ ኢጣልያ፡ ዝነበሩ**, (*Maḫbär ^{c}asakər Iṭalya zənäbäru* [Tgn.], 'Eritrean War Veterans Association'), presided over by ^{c}Alī Ibrāhīm, were established. On 29 September 1947, members of the two bodies – which continued to exist separately – established the **ሰልፊ፡ ሓዳስ፡ ኤርትራ፡ ሻራ፡ ኢጣልያ** (*Sälfi ḥaddas Erətra šara Iṭalya* [Tgn.], 'New Eritrea Pro-Italian Party', NEPIP). Led by ^{c}Umar Muḥammad Badurī, *blatta* Muḥammad ^{c}Abdallāh and Idrīs Ḥasan, the NEPIP claimed over 200,000 members and advocated Italian trusteeship that would lead to Eritrean independence. Their message included praise for the old Italian administration, its justice system, and the spread of education. Though most of the party's followers came from western Eritrea, the distrustful British forced the NEPIP to move its headquarters from ↗Kärän to ↗Asmära.

The influence of the NEPIP on the political process was marginal and its main goal became irrelevant following the UN's dismissal of the ↗Bevin-Sforza plan for the partition of Eritrea in May 1949. As the idea of Italian trusteeship thus finally came to an end, the NEPIP changed its name to the **ሰልፊ፡ ሓዳስ፡ ኤርትራ** (*Sälfi ḥaddas Erətra*, [Tgn.] 'New Eritrea Party', NEP). When the ↗Independence Bloc was founded the following July, the NEP joined, but scarcely helped its cause. From the very beginning, the NEPIP and then the NEP were accused by rivals from all other wings of being a cover for old Italian ambitions, of being closely associated with the colonialists' IEA, and of actually being financed by Rome. After the UN voted for federation with Ethiopia in 1950 (↗Ethiopian–Eritrean Federation), and as the Independence Bloc faded away, the role of the NEP and its cause in Eritrea's history ended.

Prophets, biblical

The prophetic Biblical books in the Ethiopic tradition share the text development peculiarities of the other ↗Old Testament books (cp. also ↗Bible: Bible Vorlage). In this respect, it should be noted that, while there is a broad scholarly consensus on the existence of a Greek Septuagint *Vorlage* for the Gə^{c}əz version (*Versio antiqua*), there is no agreement as to which LXX textual type, if any specifically, would be the actual source of the P. So, Heider (1902: 4) sees a Lucian *Vorlage* for Jer, while Schäfers (1912: 156–70) postulates a relationship with the Codex Sinaiticus, and Bachmann (1892: 8) sees the *Versio antiqua* of Jer and Is as linked to the Codex Alexandrinus. Knibb recognizes a definite agreement between Ezek and the minuscule 26 and its ally 410 (Knibb 1988: 29). Bachmann also deems the Gə^{c}əz version of the Minor P. to be somewhat related to Hesychius's Greek recension (1892: 9). Moreover, in his edition of Dan, Löfgren (1927: xlviii–l) pleads for a connection of the Gə^{c}əz versions with minuscules, esp. 130. The same type of relation is detected by Fuhs in his edition of Mic (1968: 35–38) and Hos with minuscules 26 and, resp., 26 and 239 (1971: 120ff.). Again, there is scholarly consensus on the sources of the "vulgar" as well as the "academic" recensions, but more research ought to be done on the specific recensions underlying the Gəᶜəz version of the P.

The canon of the ↗Ethiopian Orthodox (Täwaḥədo) Church as illustrated by the modern Bible editions (cp. the so-called "Emperor Bible" 1960/61) includes: the four Major P. – Isaiah, Jeremiah (with the cycle), Ezekiel and Daniel, and the twelve Minor P. – Hosea, Amos, Micah, Joel, Obadiah, Jonah, Nahum, Habakkuk, Zephaniah, Haggai, Zechariah and Malachi (↗Bible: Biblical canon). Most manuscripts date from between the 15th and the 19th cent. Older manuscripts often have their own chapter division, different from that of western Bibles (e.g., mss. Vat. Cerulli et. 29 and 55 split the text into their own *kəflat*, 'sections'), or have no chapter division within the books at all (e.g., Vat. Cerulli et. 218 and 242).

Major and Minor P. are frequently found together in the same manuscript. There are also numerous instances of the prophetic corpus appearing together, totally or partially, with the ↗Octateuch and/or with the ↗Wisdom literature (e.g., EMML 259, 1842, 1839, 2080). Separate books can also be copied in individual manuscripts.

Whilst the Minor P. are grouped together consistently in the above sequence, the order and position followed by both the Major P. and the pseudepigraphic material vary considerably. Combined with the ↗pseudepigrapha, the Major P. form such cycles as:

The "cycle" of Isaiah – Is and the *Ascension of ↗Isaiah* (e.g., EMML 1768, 3067; Bodleian Aeth. d. 13);

the "cycle" of Jeremiah – Jer (**ትንቢተ፡ ኤርምያስ**, *Tənbitä Erməyas*), followed by one or more of the following texts: the *Book of ↗Baruch*, Lam (**ሰቆቃው፡ ኤርምያስ፡ ነቢይ**, *Säqoqawä Erməyas näbiy*), the *Epistle of Jeremiah* (**አርአያ፡ መጽሐፈ፡ ኤርምያስ**, *Arʾaya mäṣḥafä Erməyas*, also known as "Baruch 6"), the *Prophecy of Jeremiah to Pashhur* (**ትንቢተ፡ ኤርምያስ፡ ለፋስኮር**, *Tənbitä Erməyas läfaskor*, also known as **ነገር፡ ዘኤርምያስ**, *Nägär zäʾerməyas*, 'Words of Jeremiah'), and the *Apocalypse of ↗Baruch* (cp. EMML 25, 65, 73, 552, 1280, 1768, 2080, 4460; Cerulli et. 28), all the aforementioned texts being canonical in Ethiopia, and therefore included in the "Emperor Bible";

the "cycle" of Daniel – Dan (**ትንቢተ፡ ዳንኤል**, *Tənbitä Danʾel*) is combined with the stories of Susanna (**ሶስና**, *Sosənna*), i.e. Dan 13 in LXX (apocryphal in the western canon), and Bel and the Dragon (**ቤል፡ ወከይሲ**, *Bel wäkäysi*), i.e. Dan 14 in LXX, whereas the text of Susanna usually comes first (e.g., EMML 819, 1481, 2112).

The apocryphal *Lives of the Prophets* also exist in Ethiopic tradition (mss. ChAbb 195; cp. Hare 1985: 379–411; Knibb 1980: 197–206, 1985: 16–41). A large corpus of commentaries on the P. (s. ↗Bible: Bible commentary tradition) is well known to Ethiopian, but little studied by western, scholars. Older commentaries in Gəᶜəz containing translations from patristic sources, as well as local Gəᶜəz compositions (↗*Tərgʷame*), are extant mainly in ms. form (Cowley 1988: 437–42). Only the commentaries to Hos (Fuhs 1971) and Mic (Fuhs 1968; García 1999) have been edited and published from a few 16th–17th-cent. mss. Amharic commentaries (↗*Andəmta*) are widely spread both in ms. and printed forms (Cowley 1988: 460ff.).

Prostitution

P. (Amh., **ሽርሙጥና**, *šərmuṭənna*) in Ethiopia should be defined as a graduated relationship of asymmetrical reciprocity involving the commoditization of ↗sexuality. Laketch Diressa (1991) delineates a typology of forms of cohabitation that gradate from formal ↗marriage in the Orthodox Church to more casual forms of relationship. In addition to the formal marriage patterns of **ቍርባን** (*qʷərban*), and **ሰማንያ** (*sämanya*) or **ባለኩል** (*baläkkul*), the latter of which are forms of civil marriage, there is a much less formal arrangement, called **ደሞዝ** (*dämoz*, lit. 'salary'). *Dämoz* involves a contract being drawn up which holds for any agreed period of time, where the man will pay the woman a fixed salary and ↗gifts for her daytime and night-time services (ibid. 6). This feudal custom is historically documented in the chronicles of the patriarchal aristocrats who regularly took their maidservants, known as **የጭን ፡ ገረድ** (*yäčən gäräd*, 'concubine', lit., 'thigh-servant/girl') especially while travelling; both for their own pleasure and for initiating their sons into sexual life (ibid.).

Two other more informal forms of heterosexual relationship commonly exist: that of the **ውሽማ** (*wəšəmma*, 'lover, adulterer', cf. the derivational field in KaneDic 1528) whom one sees openly if not married and secretly if married, and the **ቅምጥ** (*qəmmət*, lit. 'sitting woman', 'kept woman, mistress'). In both these forms the woman maintains her own residence (ibid.). Shading off into the more casual unions one finds the **ሴተኛ ፡ አዳሪ** (*setäñña adari*), translated as 'one who spends nights as a woman', as opposed to **ሚስት** (*mist*) which simply does a 'married woman' (ibid.). *Setäñña adari* does not carry the stigma that the term **ሸርሙጣ** (*šärmuṭa*, 'prostitute', from Arab. *šarmūṭa*, 'whore, rag') refers to. And further, as Laketch Diressa acknowledges and others commonly aver, the stigma that does attach to a particular prostitute is normally inversely proportional to her material wealth.

Adding to the "graying" of the boundaries is the commonly recognized occurrence of regular clients who often develop something of an emotional relationship with their women, and, as Laketch Diressa notes, will even share meals from time to time (ibid. 7). The sharing of a repast has much more significance in Ethiopian culture than in Western culture. Furthermore, a woman or a man may be involved in more than one of the above categories of relationship at any particular time, which of course is not exclusive to Ethiopian culture.

From the earliest of times migration to the towns and to the city of ↗Addis Abäba is undoubtedly the greatest antecedent of the ever-increasing rate of P. (↗Urbanization). Apart from socio-economic problems in the country-side, an important factor for the choice to become a prostitute is the quest in status and self-gain and economic improvement for one's family.

Pankhurst (1974) notes that in the Middle Ages something akin to P. existed in the royal camps, commercial centres, and in Gondär where the female minstrels and dancing girls pitched their tents on the periphery of these communities. The Portuguese traveller Francisco ↗Alvares noted in the time of *aṣe* ↗Ləbnä Dəngəl that these women were numerous and they were rich and well-dressed. An early reference to prostitutes or **ጋለሞጣ** (*galämoṭa*, 'woman of easy virtue') is to be found in the time of *aṣe* ↗Iyasu I (ibid.).

From the early periods of the 19th cent., sailors, putting into port along the coasts of the Red Sea (e.g., Massawa) and the Gulf of Aden, maintained a high demand for female company and would visit shops and kiosks where ↗ṭälla, ↗ṭäǧǧ, lemons and bread were sold in the surrounding villages, where the proprietress would also offer herself for an agreed upon fee. French travellers of the 19th cent. note that the capital city was "a town of pleasures" where courtesans, who displayed distinction and elegance, abounded, and where no shame or stigma was associated with them. These women often shunned marriage, preferring to maintain their independence outside the boundaries of patriarchal domination. By the late 19th cent. outright P. was acknowledged by the Italians and the British travelling along the

Ethiopian coasts, who learned that many of these women collected a good sum of money and then returned to their homes to marry.

The commercial trade in sex was different along the frontier of the Sudan. An Egyptian garrison encouraged the trade. The institution of slavery influenced the nature of P. here. A man would buy a female slave and then hire her out for sex and keep all of the fee for himself (Pankhurst 1974).

In the late 19th and early 20th cent. the Italian colonization of Eritrea (1890–1941) stimulated a new level of sexual commercialization since military personnel, government functionaries and colonists often came without their wives and families. Thereafter, the commoditization of sex could be found at almost every drinking house, many built with attached barrack-like "sleeping rooms" that were rented by the women. The Italian occupation of Addis Abäba in the late 1930s stimulated P. to greater heights with the Italian authorities organizing licensed brothels with medical inspections in an attempt to protect officers and officials from disease.

There has been a dramatic increase in the young female prostitute population since the ↗Tigray Peoples Liberation Front takeover in 1991. Estimates of the percentage of prostitutes who are migrants range from 90 % (Atakilt Gebre Yohannes 1994) to 95 % (Temene Geremew 1993); and among girls ages 10–18, 66.2 % were migrants, girls who came from the northern Amhara–Tǝgre regions of Ethiopia (Baardson 1993). Baker – Arneson (1992) report that between spring 1991 to December 1992 there was an estimated population increase of one million. The great proportion of these people are peasants with few if any employable skills that could be gainfully utilized in the urban context. In Temene Geremew's 1993 study fully 60 % of the girls and young women were illiterate.

One factor not to be discounted as a causal situation in Addis Abäba is the active recruitment of girls getting off the buses coming into Addis Abäba from the countryside by owners of certain bars (*yäsetočč amba*, *bordello*). Newly arrived lone migrants are solicited or picked up at or around the bus stations. Bar owners, often former prostitutes themselves, on the lookout for attractive recruits, are a very common occurrence around the Märkato (↗Addis Kätäma) area where the major bus depot is situated. New arrivals are offered a dwelling place and food, gratis at first. Later these girls will be ordered to work and pay for their food and bed and will be helped to find the cash by putting them out onto the street where they begin their work.

Ronald A. Reminick

Protestantism

Beginnings

The first person in Ethiopia to proclaim the Protestant conviction was the German Peter ↗Heyling who worked in the Gondär area in the 17th cent. At his departure his followers formed a brotherhood of devout churchmen which later became known as the "Evangelical Association". That movement which had no intention of establishing a church separate from the ↗Ethiopian Orthodox (Täwaḥədo) Church (EOTC), spread during the following two hundred years.

During the reign of the emperors ↗Tewodros II, ↗Yoḥannəs IV and ↗Mənilək II, however, members of that evangelical brotherhood were detained, tortured or their property confiscated. In Šäwa *abunä* ↗Matewos was ruthless in his efforts to stop the movement, but without success. Members of the group were later active in founding the ↗Ethiopian Evangelical Church Mekane Yesus.

During the 19th cent. Protestant Missionary Societies from Europe tried to reform the EOTC from within and to counteract the spread of Islam. The ↗Church Missionary Society commissioned Samuel ↗Gobat, Christian ↗Kugler, Carl Wilhelm ↗Isenberg, Carolus Henricus ↗Blumhardt and Johann Ludwig ↗Krapf. Later the ↗St. Chrischona-Pilgermission sent Christian Friedrich ↗Bender, Friedrich Wilhelm ↗Brandeis, Johannes Martin ↗Flad, Gottlieb ↗Kienzlen, Johannes ↗Mayer, Karl ↗Saalmüller, Theophil ↗Waldmeier and others to Ethiopia. With a few exceptions, however, they did not reach their goal, though they contributed greatly towards the study of Ethiopian languages, the publication of educational books and the translation of the ↗Bible into vernaculars. Some of the missionaries, however, were dragged into political matters, either as craftsmen of local rulers or as interpreters and advisers to colonial agents (↗Colonialism).

In 1860 the ↗London Society for Promoting Christianity amongst the Jews sent Henry ↗Stern and Stephen Bronkhorst to join Flad in his activities among the ↗Betä Ǝsraʾel. They were allowed to preach on condition that converts be baptized in the Orthodox Church. They succeeded in setting up a small, but strong evangelical community within the EOTC. The work was continued by Ethiopians like *däbtära* ↗Bərru Wəbe and *aläqa* ↗Mikaʾel Arägawi until the 1920s.

Starting in 1853 the ↗Hermannsburger Mission, inspired by reports from Krapf, tried via East Africa to reach the Oromo regions then bordering Ethiopia, but without success. The St. Chrischona-Pilgermission also started an Oromo mission, encouraged by Krapf and the former Oromo slave Pauline ↗Fathme. Johannes Mayer began work in Šäwa in 1871 and ↗Gäbrä Ǝgziʾabəḥər Dästa became an Oromo missionary in Goǧǧam and Šäwa. In 1886 Oromo missionaries in Šäwa were expelled. In the 1860s, the ↗Evangeliska Fosterlands Stiftelsen hoped to reach the Oromo states travelling through Eritrea and the Sudan. ↗Ǝmkullu became an important centre for education, Bible translation and outreach endeavours. ↗Onesimos Näsib was the first freed Oromo slave desiring baptism and indigenous evangelical pioneers took the Gospel to the Oromo, reaching Ǧimmaa in 1884 and Wälläga in 1898.

Meanwhile another religious movement had started in Ḥamasen. In 1867 Orthodox priests at Ṣäᶜazzäga (↗Wäldä Śəllase Kənfu) discovered an Amharic Bible brought earlier by Flad and Krapf's associates. While studying Scripture they and other priests became convinced that regular Bible devotions were a prerequisite of a deeper spiritual life. These Ḥamasen Bible readers and reformers declared themselves Protestant, which resulted in harassment and heavy persecution. They stuck to their conviction and later built evangelical churches.

20th century

The 20th cent. began in Ethiopia with a new geographical and political situation. Onesimos was allowed by *ləǧ* ↗Iyasu in 1916 to preach his faith. After Täfäri Mäkʷännən (↗Ḫaylä Śəllase I) was designated Heir to the Throne in 1916 he started appointing ministers open to modernization. Furthermore Evangelical Christians were employed by the Government or promoted to higher positions due to their education. Among them were *aläqa* ↗Tayyä Gäbrä Maryam, *käntiba* Gäbrä Ǝgziʾabəḥer Dästa or ↗Ḫəruy Wäldä Śəllase. Evangelical Christians moving from Italian ruled Eritrea to Ethiopia enlarged that group.

The Regent wished to provide modern ↗education and health care to as many as possible. Knowing that the government had neither sufficiently trained personnel nor the resources, European churches and missions were welcome. Occasionally, the EOTC was reluctant to give its consent. Additionally, Protestant missions were allowed to teach Biblical subjects within their institutions though religious activities outside their compounds were not permitted.

In 1919 Thomas ↗Lambie started medical work in Dambi Dolloo and thereafter was responsible for improving medical facilities in the country (↗Hospitals). After Cederqvist's death, who had taught and cured people in Addis Abäba from 1904 to 1919, the Evangeliska Fosterlands Stiftelsen sent medical staff and teachers to run a school for boys and girls in Addis Abäba and to begin medical and educational work in Wälläga. In 1921 the Swedish Mission Bible-True Friends started educational and medical work in the capital and in Harär.

Another Protestant mission that transferred fellow workers from Italian-governed Eritrea to

Ethiopia was the Seventh Day Adventist Mission. The first missionary arrived in 1921 and opened a Training School for Girls and another for boys. Medical work was started in Däse and Gimbi and the Mission took over the operation of the Empress Zäwditu Memorial Hospital in Addis Abäba.

The Hermannsburger Mission entered Addis Abäba in 1927 and began by founding the German-speaking congregation and opening the German School. An orphanage for Ethiopian children was added. Its main activities were started in ↗Aᵓira (s. EAE vol. 5), Wälläga and in Illubabor.

The ↗Sudan Interior Mission entered Ethiopia in 1928 with the goal of christianising the borderlands of Ethiopia. The pioneers journeyed to Kämbata, Wälamo and Sidamo and later worked in Addis Abäba.

The last Protestant group to enter Ethiopia before the Italian occupation was the Bible Churchmen's Missionary Society. Their aim was to work within the EOTC helping her to get back to Biblical foundations and further spiritual renewal. They tried to achieve this by producing Christian literature and opening a Bible school at ↗Fəčče.

In face of the Italian aggression the Protestant missions remained loyal to Ethiopia. Many of their medical doctors and nurses served in the Ethiopian ↗Red Cross, others organized help. During the Italian occupation (↗Africa Orientale Italiana) most of the Protestant missionaries were expelled from Ethiopia. Catholic missionaries remained and at several places tried to take over Evangelical work. Since by 1935 the number of Evangelical Christians, excluding Betä Ǝsraᵓel converts, hardly exceeded 1,000 P. seemed destined to disappear. But at this time Ethiopian Evangelicals came to the forefront. Personalities such as ↗Badəmma Yaläw, ↗Amanuᵓel Gäbrä Śəllase, and Amanuᵓel Abrəham in the capital, ↗Gidaada Solon, ↗Mammo Čorqa, ↗Dafaa Ǧammoo, Hunde Gutema and ↗Nasisee Liiban in Wälläga, Bərru Dubbale and Dästa Deyassa in Wälaytta, Šugute and Sabiro in Kämbata province, and many more became the leaders of the new churches movement, spreading in the west and south of the country. In spite of harassment and persecution many Evangelical gatherings started. In 1942 about 80 new congregations in Wälaytta, and 70 in Kambaata and Hadiyya, led by elders without formal theological training, were added to those in Eritrea, Wälläga, and Addis Abäba. In 1942, the number of Evangelicals was reported to be 20,000. By 1950 their number had grown to nearly 100,000.

Christmas celebration in a Protestant (Mekane Yesus) church in Qaališaa, Leemo-Hadiyya; photo 1999, courtesy of Dirk Bustorf

After the liberation in 1941 the evangelical churches also strove for independence and unity. In 1944 ten delegates from Addis Abäba and Wälläga met at Naqamtee and established the annual Conference of Ethiopian Evangelical Churches (CEEC). In the 3rd Conference, held in Addis Abäba in 1947, delegates from Wälaytta and Kambaata also attended, along with representatives of the "Bible-True Friends" and the "Society of the Followers of the Apostles". However, during the following meetings no agreement was reached on, e.g., a common confessional book, the question of leadership, or ordination by a bishop. In 1950 many became convinced that Protestants should organize as denominational churches and then form a Federation. The CEEC held its last meeting in 1963.

In spite of local repression by chiefs or Orthodox circles, P. expanded especially in areas declared "open" by Ḫaylä Śəllase I and national churches came into being. The first Protestant church in Ethiopia to be constituted was the Evangelical Church Bethel, which in 1947 officially separated from the United Presbyterian Church in North America. It had congregations in Wälläga, Illubabor, Käfa and Šäwa. In 1974 it joined the Mekane Yesus Church.

The Mekane Yesus was constituted in 1959. The Lutheran Church Bible-True Friends of Ethiopia followed in 1960. The Mäsärätä Krəstos Church, originally the Mennonite Mission Church, was established as a national church in several steps, finalized in 1964. In 1966 Pentecostals organized as Mulu Wängel with a policy of self-reliance and complete independence from foreign aid. The ↗Qalä Ḥəywät Church, one of the biggest Protestant denomination in Ethiopia, elected its first president in 1974. Besides the Bərhanä Wängel Baptist Church several smaller Baptist churches were formed.

During the 1950s and 1960s Protestant missions had built and financed many educational, medical and social institutions. The Lutheran Missions integrated all their institutions and personnel into the Mekane Yesus Church in 1969. The Mäsärätä Krəstos Church could not receive the Mennonite Mission's property, because it was not legally registered.

Under the ↗Provisional Military Administrative Council P. endured a troubled period. Institutions and buildings were nationalized, churches closed and pastors detained. All Pentecostal churches were closed. In 1979 the General Secretary of the Mekane Yesus Church, ↗Guddinaa Tumsaa, was kidnapped and killed. The harassment, repression and persecution of Protestants varied from time to time and from area to area. While Evangelicals in Wälaytta were heavily persecuted, those in Kämbata enjoyed relative freedom. When, in the beginning of the 1980s, most of the Mekane Yesus churches in Wälläga were closed, congregations in the capital could conduct services. Protestant leaders from all denominations were detained, severely tortured and kept in prison for years without trial.

In spite of harassment from the authorities the Protestant Churches did not stop their social and development activities and the number of Protestants grew. Health services, child care, famine relief, water projects, afforestation and other activities continued or even intensified. Moreover, the pressure put on all Protestant churches by the socialist regime led to closer contacts among themselves and to the establishment of an umbrella organization for survival. In 1976 the Evangelical Churches Fellowship of Ethiopia (ECFE) came into being. The founding churches were: Mekane Yesus, Qalä Ḥəywät, Mäśärätä Krəstos, Mulu Wängel, the Gännät Church, the Ḥəywät Bərhan Church, the Baptist Church Ǝmnät Krəstos and the Lutheran Church in Ethiopia. The Fellowship had to operate underground for quite some time but in 1988 it was registered as a legal entity and got its own secretariat. After the Federal Democratic Republic of Ethiopia had been constituted, many new churches, denominations and ministries came into being.

Numbers

In 2004 a total of 288 P. religious organizations was registered with the Interior Ministry, quite a number of them with Pentecostal or Charismatic background. ECFE's membership had increased by 2008 to 28 denominations. In addition 36 church-related organizations within Ethiopia and 18 Ethiopian evangelical churches in Diaspora are associate members of the Fellowship, which by now embraces more than 30,000 local churches.

The 1994 Census estimated the number of Protestants in Ethiopia to be 5,405,690 making 10.2 % of the total population. The 2007 Census, published in 2009, states that 18.6 % of the Ethiopian population are Protestants or 13,746,787 people. While in the north and east of the country Protestants make up less than 1 % of the population, they number 55.5 % in the Southern Nations, Nationalities, and People's Region and 70.1 % in the Gambella Region. Therefore, next to Orthodoxy and Islam, P. became the third largest religion in Ethiopia.

Johannes Launhardt

Proto-Aksumite culture

The term P.A.c. is conventionally used with reference to the material evidence of the period corresponding to the earliest phase of development of the kingdom of ↗Aksum, when a new polity, with a peculiar culture, emerged at the site in the late 1st millennium B.C., after the collapse of the ↗pre-Aksumite state. The archaeological evidence for this polity consists of some elite tombs with evidence of administrative devices and the remains of a monumental building on the top of ↗Betä Giyorgis hill to the north-west of Aksum (ca. 400–50 B.C.). Sites dating to this period have been recorded as far as ↗Ǝnda Śəllase to the west of Aksum and ↗Mändäfära in Säraye (Eritrea), ca. 40 km to the north of Aksum. Main sites are ᶜOna Nägäśt (ON) and ᶜOna Ǝnda Aboy Zagʷe (OƎ) at Betä Giyorgis.

The dating of this period to ca. 400–50 B.C. has been established on three radiometric dates and imported materials from Betä Giyorgis.

The settlement pattern in the region of Aksum was characterized by a larger settlement at ON with an elite cemetery at OƎ on the top of Betä Giyorgis and small scattered settlements in the surrounding area, with a main cluster around ON.

The subsistence economy relied on hulled barley, emmer, *Eragrostis* esp., lentil, linseed (or flax), free-threshing wheat and perhaps bread wheat, as well as domestic cattle and sheep/goats.

Social organization apparently consisted of two main strata (kings/élite and ordinary people). The funerary cult of the élite embodied Nubian elements stressing a military aspect of the elite.

A conical bronze seal was found in a late P.A. tomb. The seal is different from the pre-Aksumite ones, and may be reminiscent of Meroitic conical seals.

Imported ceramics point to contacts with Southern Arabia, Ptolemaic Egypt, and Upper Nubia. The occurrence of P.A. potsherds in late pre-Aksumite assemblages near Gulo Mäḵäda (ᶜAgäme) and Mäṭära may also suggest contacts with the northern region.

Another P.A. polity was probably located at Mädage, ca. 6 km to the south-west of Aksum, where a ↗stelae-field with rough monoliths and P.A. ceramics similar to those from Betä Giyorgis were recorded.

The foundations of a P.A. monumental building were partially excavated at ON, including four (or possibly five) long narrow rooms, without entrances or windows, ranging between ca. 7 x 1.7 m and 6 x 1.3 m in size, built with a technique reminiscent of that used in the Ethio-Sabaean "palace" of Grat Bäᶜal Gäbri at ↗Yəḥa. The rooms were most likely in the basement of the building and may have been used as stores, as suggested by similar structures discovered in South Arabia and in the Near East.

No sure P.A. temple has been so far discovered. An open air cult was probably practiced, and excavations at the site of Gobo Ǝnda Näbri on the north-eastern edge of Betä Giyorgis brought to light a concentration of ceramics around and beneath large stone slabs and boulders, particularly to the north of a large horizontal, roughly rectangular stone slab. At least three phases of ↗pottery deposition were recognized, separated by layers of small stones. The good state of preservation of the ceramics suggested that they were *in situ*. Some pots were apparently intentionally broken with stones and covered with rubble. 23 complete or almost complete vessels included elongated beakers with handles, miniature vessels, and black-topped dishes or open bowls, most likely dating to late pre-Aksumite or early P.A. times. The miniature vessels as well as the general context of deposition suggested that this site was a ceremonial area, perhaps an offering place.

The early P.A. tombs were simple pit-↗graves, ca. 2 m deep, covered by small platforms and associated with rough stelae, ca. 2–3 m high. The monoliths were pointed stones, small pillars and flat slabs, suggesting three main social segments. The platforms were massive arrangements of rough stones, about 1.0–2.5 m high, and were covered with a surface of hard yellow marl mixed with gravel. A shaft was constructed in the platform around the opening of the graves. The occurrence of large fragments and almost complete pots within the construction suggests that the platforms were progressively heightened and extended to include new tombs, covering earlier levels. In late P.A. time the tombs were elaborated pit-graves, ca. 5 m deep and richer in grave goods. The stelae were monoliths, ca. 4–5 m high, with a vertical notch at the top, suggesting one dominant social segment. The platforms were constructed in a modular way. Pit-graves were excavated very close to each other and covered with a squared stone cairn, about 2.5 x 2.5 m in size.

Eventually, the spatial arrangement of contiguous cairns generated a platform. The discovery of human remains on top of the platforms and inside the upper shaft a pit-grave may suggest the practice of human sacrifice at this time.

The ceramics are another distinctive feature of the P.A.c. They were characterized by an orange/light orange, rarely pink, paste with many mineral inclusions of quartz, mica and ground stone. Some potsherds preserve evidence of an original orange, light red slip on the exterior surface. Decorations are rare and consist of rim and/or shoulder bands with impressed notches and punctuations, and less frequently molded decorations. Main forms were undecorated globular cups with straight rims and frequently flat, vertical handles; undecorated bowls with a foot-ring, flat vertical handles and/or horizontal grips; bowls with a short, straight neck frequently with flat, vertical handles or rounded horizontal grips, and sometimes a molded decoration on the shoulder and body; circular basins with ledge rims, probably with rounded bases, and incised or impressed points on the rim top; square basins with decorations imitating architectural elements; cylindrical basins with a flat base, frequently with a short everted rim, and thick grips on the body; small model pots.

The origins of the P.A.c. are still uncertain. The occurrence of P.A. sites from Šire to Säraye suggests that this was a local culture of the western plateau in Təgray and Eritrea. The use of stelae in a mortuary context indicates an ideological break with the earlier pre-Aksumite culture and may point to some kind of cultural continuity with the late prehistoric people of Kassala in the western Eritrean–Sudanese lowlands. The ceramics too reveal a discontinuity with the earlier culture. The construction of a monumental building in a pre-Aksumite technique, however, may suggest that some symbols of the earlier state were maintained.

Provisional Military Administrative Council (P.M.A.C.)

In early 1974, following a period of growing public disappointment with the imperial government's failure to effect lasting economic and political change, the confrontation between traditional and modern political forces took a decisive turn (↗Revolution). While rising inflation, famine and student protests contributed to a severe political crisis there were several factions within the military claiming to speak for and represent the armed forces. Besides the ↗Imperial Bodyguard under the old high command, in late March, an informal inter-unit committee headed by Colonel ᶜAläm Zäwd Täsämma, a commander of an airborne brigade based in ↗Addis Abäba, was formed. Acting with the tacit approval of Prime Minister ↗Ǝndälkaččäw Mäkʷännən it came to be called the **የጦር፡ ኃሎች፡ አስተባባሪ፡ ኮሚቴ** (*Yäṭor ḫayločč astäbabari komite*; Armed Forces Coordinating Committee, AFCC).

After the arrest of a large number of disappointed airforce officers in early June, a dozen junior officers wishing to press the regime into major reforms broke away from the AFCC. Having requested every military and police unit to send three representatives to Addis Abäba to organize further action, in late June, some 120 soldiers, none above the rank of major, organized themselves into a new body called the Coordinating Committee of the Armed Forces, the Imperial Bodyguard, the Police and Territorial Army (**የጦር፡ ኃሎች፡ የክብር፡ ዘበኛ፡ የፖሊስ፡ ሠራዊትኛና፡ ብሕራዊ፡ ጦር፡ አስተባባሪ፡ ኮሚቴ**, *Yäṭor ḫayločč, yäpolis ənna yäbəḥerawi ṭor astäbabari komite*). With most of its members remaining anonymous and electing two outspoken proponents for far-reaching change, Major Mängəśtu Ḫaylä Maryam as the chairman and Major Aṭnafu Abbatä as the vice chairmanvice chairman it soon came to be commonly called the *Därg* (Amh., **ደርግ** 'committee' or 'council'; cp. **ደርገ፡ ሙሴ**, *därgä muse* 'sodality of 12–24 members' (KaneDic 1758). After assuming power the organisation omitted "Imperial bodygurd" from its name.

On 12 September 1974 the *Därg* formally deposed *aṣe* ↗Ḫaylä Śəllase I. Three days later, on 15 September, the Armed Forces Coordinating Committee transformed itself into the P.M.A.C. (Amh., **ጊዜያዊ፡ ወታደራዊ፡ አስተዳደር፡ ደርግ**, *Gizeyawi wätaderawi astädadär därg*) as the country's new ruling body (still called *Därg*). Lieutenant General ↗Aman Mikaᵓel ᶜAndom, although not a member of the *Därg*, became the de facto head of state, chairman of the Council of Ministers, minister of defence and chairman of the P.M.A.C. Disagreeing with the majority of the *Därg*'s members on three major issues – the size and function of the P.M.A.C., the Eritrean insurgency and the fate of political prisoners – Aman Mikaᵓel ᶜAndom was killed resisting arrest on 23 November 1974. The same evening two *Därg* members, who had supported him, Colonel Yəgäzu Yämanä and Captain Dämise Šifäraw, as well as 59 political prisoners were executed – among them former prime ministers ↗Aklilu Habtäwäld and Ǝndälkaččäw Mäkʷännən.

Following the "Bloody Saturday" Brigadier General ↗Täfäri Banti, a Šäwan, became chairman of the P.M.A.C. and acting head of state on 28 November, while power was retained by Major Mängəśtu, who kept his post as first vice chairman, and Major Aṭnafu as second vice chairman. After preparations for a new offensive in Eritrea had been made, on 20 December 1974 plans for radical social and economic reform led to the proclamation of Ethiopian Socialism (**ኅብረተ፡ ሰባዊነት**, *ḫəbrätä säbawinnät*), a sort of indigenous Ethiopian communalism.

On 21 December 1974 a mass literacy 'campaign' (↗*zämäča*) was launched and some 60,000 students and their teachers prepared to be sent into the countryside. In January 1975 followed the nationalization of industry, banking, insurance, large scale-trade and extra dwellings till, in March, the "Public Ownership of Rural Lands Proclamation No. 31/1975" transferred all land to the state (↗Land tenure) and plans for the proposed constitutional monarchy were officially abandoned. Newly founded Peasants and Urban Dwellers Associations completed the new political system. In August 1975, Ḫaylä Śəllase was secretly buried after having died under questionable circumstances.

Finding itself under attack from various civilian groups demanding a "people's government", in April 1976 the *Därg* at last set forth its goals in greater detail in the Program for the National Democratic Revolution (PNDR). As announced by Mängəśtu, its objectives included progress towards socialism under the leadership of workers, peasants, and the petite bourgeoisie. The *Därg*'s ultimate aim was the creation of a one-party system. To accomplish its goals, it established an intermediary organ called the Provisional Office for Mass Organization Affairs (POMOA). Designed to act as a civilian political bureau, POMOA was at first in the hands of the All-Ethiopia Socialist Movement (Amh. acronym: ↗*MÄᵓISON*), headed by Ḫaylä Fida, the *Därg*'s chief political adviser. Ḫaylä Fida, as opposed to other leftists who had formed the ↗Ethiopian People's Revolutionary Party (EPRP), had resourcefully adopted the tactic of working with the military in the expectation of directing the revolution from within.

A further clash came in July 1976 when a number of P.M.A.C. members – the most prominent Major Sisay Habtä and Major Kiros ᶜAlämayyähu – were ousted after opposing a military solution to the Eritrean question and advocating a return to civilian government. Following their execution, for the first time, a formal structure was elaborated with a congress comprising all *Därg* members, a Central Committee of 40 and a standing Committee of 17.

By late 1976, the *Därg* had undergone an internal reconfiguration as Mängəśtu's power came under growing opposition from Täfäri Banti and Aṭnafu Abbatä struggling for supremacy. The instability of this arrangement was resolved in January and February of 1977, when a major shootout at Mənilək's Palace in Addis Abäba took place between supporters of Täfäri Banti and those of Mängəśtu Ḫaylä Maryam. With the death of Täfäri Banti and his supporters in the fighting, most internal opposition within the *Därg* had been eliminated, and Mängəśtu Ḫaylä Maryam proceeded with its reorganization becoming the sole vice chairman, responsible for the People's Militia, the urban defence squads, and the modernization of the armed forces. In November 1977 Aṭnafu Abbate, Mängəśtu Ḫaylä Maryam's last rival in the *Därg* was also eliminated, leaving Mängəśtu in undisputed command.

While making variable use of a cabinet of ministers outside the *Därg*, ultimate authority rested with senior members of the P.M.A.C. While a minority of P.M.A.C. members still favoured a rapid transition to civilian rule, the *Därg* officers were themselves split by serious divisions. The

P.M.A.C. itself met in full on only a few occasions. From 1977 onwards it functioned more as a government body, via a system of committees and a hierarchical structure, and at the end of 1979 a new cabinet system was announced in which P.M.A.C. members took up some public ministerial positions for the first time.

Mängəśtu Ḫaylä Maryam's raise to power was fully backed by the Soviet Union (↗Russia, relations with) whose long-standing wish for supremacy in the Horn of Africa was closely linked to the developments in Ethiopia. Thus the establishment and development of the P.M.A.C. must never be seen without connection to the geopolitical competitions of the major powers during the period of the cold war (cp. Patman 1990).

On 12 September 1984, the government announced the formation of the Workers' Party of Ethiopia. The new constitution was promulgated on 22 February 1987, and the People's Democratic Republic of Ethiopia was proclaimed after the P.M.A.C. was formally abolished.

Prutky, Remedius

P. (baptismal name Václav, b. 1717, Kopidlno, Bohemia, d. 9 February 1770, Florence) was a Czech Franciscan missionary who visited *aṣe* ↗Iyasu II's court at ↗Gondär in 1752.

P. studied medicine at Prague University before entering the Reformed Order of the ↗Franciscans in 1735. After ten months in Rome, he was posted to Cairo, at the time when Iyasu II sent a letter inviting the Franciscan missionaries in Cairo to visit him – and expressing a desire for skilled craftsmen, in particular gunsmiths. P. and two fellow Franciscans, Martin Lang and an Arabic expert, Fr. Antony of Aleppo, were accordingly dispatched, via Massawa, to Gondär.

They arrived on 22 February 1752 and were warmly received by the monarch, who nevertheless did so discreetly, in deference to the strongly anti-Catholic stance of the metropolitan *abunä* ↗Yoḥannəs, and of the Orthodox priesthood in general. P., like ↗Bruce after him, won friends by practicing medicine. He remained in the country for 17 months, until he was expelled by the Emperor, and left, as he had come, by way of Təgray.

P. subsequently travelled widely, visiting *inter alia* al-Muḫāʾ, India, and Russia, whence he was expelled by Catherine the Great.

P.'s considerable importance for ↗Ethiopian studies lies in the fact that he visited Gondär two decades before Bruce, and wrote a detailed ↗itinerary describing the country, its physical environment, climate, minerals, wild life, agriculture, form of government, social customs, state of religion, attitude to foreign missionaries, etc. (English tr. of the Ethiopian part published in 1991) as well as a still unpublished *Vocabolarium linguae Gallicae, Arabicae et Abyssinicae.* P.'s writings are preserved in Prague University Library.

P. was also the first to have recommended an autochthonous Catholic bishop for Ethiopia (letter to ↗Vatican of 1754); subsequently, in 1788, ↗Ṭobiya Giyorgis Gäbrä Ǝgziʾabəḥer was dispatched.

Richard Pankhurst

Psalter

In Ethiopian tradition, the P., being a Christian prayer book used liturgically and for the Daily Office (Lamb 1962: 49–70) as well as for private devotions, is a volume composed of the Book of Psalms attributed to King David (Ps, called **መዝሙረ፡ ዳዊት**, *Mäzmurä Dawit*, lit. 'Psalm[s] of David', or simply *Dawit*), the Biblical Canticles (↗ *Mäḫaləyä näbiyat*), the Song of Songs (**መኃልየ፡ መኃልይ**, *Mäḫaləyä mäḫaləy*, attributed to King ↗ Solomon; s. also ↗ Wisdom books) and usually additional devotional texts, the most common of which are the ↗ *Wəddase Maryam* and the ↗ *Anqäṣä bərhan* (cp. Strelcyn 1974: 8f.). The 15 Biblical Canticles of the P. are as follows:

(1) First Song of Moses (Ex 15: 1–19); (2) Second Song of Moses (Deut 32: 1–21); (3) Third Song of Moses (Deut 32: 22–43); (4) Song of Hannah (I Kgs [I Sam] 2: 1–10); (5) Prayer of Hezekiah (Is 38: 10–20); (6) Prayer of Manasseh (apocryphal); (7) Song of Jonah (Jon 2: 3–10); (8) First Song of the Three Youths in the Furnace (Dan 3: 26–45); (9) Second Song of the Three Youths (Dan 3: 52–56); (10) Third Song of the Three Youths (Dan 3: 57–88); (11) Song of Habakkuk (Hab 3: 1–19); (12) Song of Isaiah (Is 26: 9–20); (13) Song of Our Lady Mary (Lk 1: 46–55); (14) Song of Zachariah (Lk 1: 68–79); (15) Song of Simeon (Lk 2: 29–32).

Most of the P. manuscripts, starting with the earliest known ones (14th cent.), contain the fixed set of these texts (cp. Knibb 2000: 107f.; this pattern is still followed today by numerous Ethiopian church editions).

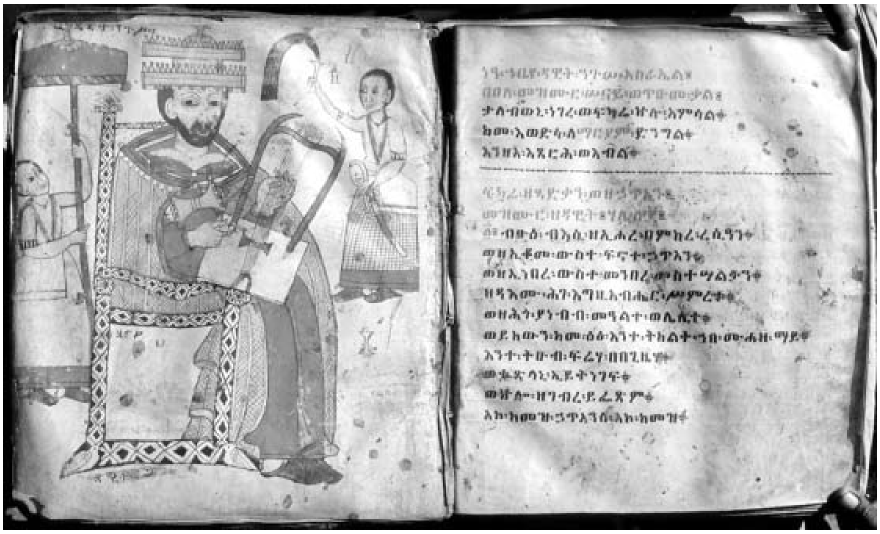
The Ps was translated from the Greek Septuagint (LXX) into Gəʿəz by the first half of the 6th cent. (↗ Bible translation); quotations from Ps appear in a few Aksumite ↗ inscriptions (RIÉ 192, 195, 270; s. Knibb 1999: 46-52), being not essentially different from the text known from the manuscripts. For the entire medieval period, the Ethiopic psalms show a remarkably fixed form of the text.

The Ethiopic Ps follows the Greek Septuagint (LXX) numbering. The difference between the numbers of psalms in the LXX and in the Hebrew Bible is due to variations in division and numbering of the individual psalms. In the Hebrew Ps, Ps 9–10 correspond to Ps 9 of the LXX; furthermore, Ps 114 and 115 of the Hebrew Ps are counted in the LXX as one Ps 113, but Ps 116 is split and corresponds to the LXX Ps 114 and 115; Ps 147 is also split and corresponds to the LXX Ps 146 and 147. The Ethiopic P. includes Ps 151, which is accepted as part of the Biblical canon only by the Eastern Orthodox Churches (although it is regarded by others as non-canonical, the Dead Sea Scrolls demonstrate that Ps 151 had actually existed originally in Hebrew, s. Flint 1997).

The texts of Ps, the Canticles, and the Song of Songs are always copied in a single column of text per page, in stichs; all other Ethiopic texts included within the P. are copied in two or three columns per page, depending upon the proportions of a page. Decoration is usually limited to the usual ↗ *ḥaräg* used to mark the incipit page of a book. The psalms themselves are divided into groups of ten; a *ḥaräg* is sometimes used to mark the first psalm (*nəguś*, lit. 'king') of each group. Author portraits may be introduced as a frontispiece miniature: David as author of Ps, Solomon as author of Song, or ↗ Moses as author of the first three Canticles.

Heads of ↗ monasteries and members of the ruling elite commissioned P. with greater varieties of additional prayer texts. *Aṣe* Mənilək II commissioned in 1895/96 a P. (ms. EMML 1414) with many additional prayers as well as the *Anaphora of Our Lady Mary* by Cyriacus of Behnesa (EMML IV, 487ff.). The book was probably used for Mənilək's private devotions.

An early example of an extensively illustrated P. commissioned by a member of the ruling elite is the 15th-cent P. of ↗ Bəlen Sägädä (Paris, BN, ms. d'Abbadie 105; s. Conti Rossini 1927; Balicka-Witakowska 1983; Heldman in PICEA 1, 5f.). With its 33 full-page miniatures, the P. presents a unique combination of figural miniatures, including an extensive Christological preface of full-page miniatures as found in *de luxe* Ethiopic ↗ Gospel books of the late 14th and 15th



Frontispiece miniature (King Dawit playing a *bägäna* [lyre]) and the beginning of Ps 1, a 17th-cent. manuscript, Ḥawzen Täklä Haymanot, Təgray; photo courtesy of the author

cent., and other miniatures, such as full-page author portraits that introduce Ps and Song and an iconic portrait of St. Mary with the Christ Child that introduces the *Anqäṣä bərhan*, as well as the depictions of the O.T. figures, Apostles and ↗saints.

Nəguś ↗Śahla Śəllase commissioned a *de luxe* illuminated P. (ms. EMML 1762) in 1839/40 which he donated to the monastery of ↗Däbrä Ḥayq Esṭifanos. In addition to the usual additional texts, this unique P. includes numerous additional ↗hymns and ↗*mälkəʾ* and is adorned with over 100 miniatures (EMML V, 209–17).

Throughout history, the P. has been one of the most frequently copied works in Ethiopia; Ps was the first text to be memorized in the course of traditional ↗education. Ps exercised great influence on the entire ↗Gəʿəz literature; extracts from Ps have been extensively used in the Liturgy (cp. ↗*Qəddase*) and different liturgical texts. It was one of a few books which were in private possession of individuals, not only in monastic and church libraries. Besides, the P. has been believed to possess apotropaic and healing qualities, and Ps have been applied in traditional ↗medicine and ↗magic (cp. Strelcyn 1981, 1985; Turaev 1917). Ps inspired Ethiopian biblical scholars to write exegetical commentaries (*Tərgʷame Dawit*; ↗Bible commentary tradition; s. Cowley 1988; Stoffregen-Pedersen 1995; cp. ↗*andəmta*).

Ps was the first of the Ethiopian ↗incunabula printed in Europe (editions of 1513 and 1518 by ↗Potken, and by ↗Ludolf in 1701, on which s. Bausi 2003:251). Despite the importance of Ps, the only monograph devoted to it remains that by ↗Dorn (1825; to which the recent concordance can be added, Devens 2001, to the only available early 20th-cent. Ps edition by Francesco da ↗Bassano). A critical edition of the Ethiopic P. is a desideratum.

Pseudepigrapha and Apocrypha

P. and A. are terms the meaning of which differs depending on the context and user. Both relate to pieces of para-Biblical literature. In Catholic tradition all books of this type are called A., whether related to O.T. or N.T., meaning literature which develops, adds new material to, and/or reinterprets the topics, usually narrative, of the ↗Bible. The Protestant canon removed the books "added" in the Greek (Septuagint, LXX) as opposed to the Hebrew canon, using the term "A." only for the "newer" books supposedly written in Greek, not in Hebrew or Aramaic. In the Catholic tradition these books are termed "deuterocanonial". Since the canon of the ↗Ethiopian Orthodox (Täwaḥədo) Church (EOTC) was based on the LXX, the notion of the "A." in this sense is not relevant for Ethiopian ↗Christianity, and such texts as 3 Ezra or Psalm 151, which belong to the LXX, are omitted here. In the Protestant tradition the O.T. A. in the Catholic sense are termed "P." (i.e., works of false attribution).

Recognition of a given text as a P. or A. has always varied depending on the contents of the canon of the Bible as accepted in a given church. In some churches and in some epochs the canon was (and still is) different from that accepted in mainstream Christianity. The ↗*Revelation of John,* e.g., was primarily not accepted in the Syriac-speaking Churches, and is still not accepted by the East Syrian ("Nestorian") Church. In other churches, including the EOTC, the canon is not clear-cut. Therefore, to establish the "canonicity" of a given book, or lack of it, one has to use other criteria than the official lists of the holy books, such as its presence in ↗manuscripts containing clearly Biblical books, accepted by the rest of Christendom, or its being read during the services.

The scope of the present entry is determined by the Western point of view. Thus some books will be enumerated as P. and A., even though they are not regarded as such by the EOTC, and are listed in the canon-specifying ↗*Senodos* and the ↗*Fətḥa nägäśt*. This is the case of the *Book of* ↗*Jubilees*, and the "other Book of Maccabees", i.e., *Yosippon* or *The History of the Jews* (↗*Zena Ayhud*). Similar cases are those of the *Senodos* and the ↗*Qälemənṭos*.

It is impossible to provide a fully exhaustive list of P. and A., since, in fact, much of Ethiopic (or any other Christian) literature in one way or another concerns Biblical matters. The list below modifies Piovanelli (1993) and Marrassini (1999). It omits homiliaries of archangels (↗*Dərsanä Gäbrəᵓel,* ↗*Dərsanä Mikaᵓel,* ↗*Dərsanä Raguᵓel,* ↗*Dərsanä Rufaᵓel,* ↗*Dərsanä Uraᵓel*), ↗magic literature, and "apocryphoids", or texts vaguely related to Biblical matters, such as those dealing with ↗Alexander the Great, ↗Sibyl, or the *Mäṣḥafä* ↗*ṭomar* (CANT 50), as well as homilies and prayers, naturally mentioning Biblical figures.

The most famous (more outside Ethiopia than in it) P. and A. are the books which once belonged to the Jewish religious literature of the Second Temple period, and which were taken over by the Christian Church. Some of them were translated into Ethiopic and have been preserved in this version ever since, whereas they disappeared from the rest of the Christian world (and earlier from Judaism). In the first place one should name here such books as *The Book of* ↗*Enoch* (CAVT 61) and *Jubilees* (CAVT 132). A similar origin has *The Ascension of* ↗*Isaiah* (CAVT 218), of which the Gəᶜəz version is, however, not unique. These three were translated into Ethiopic from Greek, in the ↗Aksumite period, as was 4 Ezra (*Apocalypse of* ↗*Ezra*; CAVT 187) and the *Book of* ↗*Baruch* (= *Paralipomena Ieremiae*; CAVT 225). To those early P. and A. also belong *The Prayer of Manasses* (among the *Canticles* [↗*Mäḥaləyä näbiyat*] in the ↗Psalter), and *The Legend* or *Life of Jeremiah* (Piovanelli 1990: 214; CAVT 213).

The largest group of the O.T. P. and A. entered the Ethiopic literary tradition in the Middle Ages and later, being translated from Arabic (whatever the original language might have been). In this group there are such texts as: the *Gädlä* ↗*Addam* (CAVT 14); *Qälemənṭos*, which includes material from the Syriac *Cave of Treasures*; further *The Testament of Adam* (CAVT 3), transmitted both in *Qälemənṭos*, and separately (e.g., ms. EMML no. 3049); the Apocryphon on ↗Melchizedek, attributed to ↗Athanasius of Alexandria; the Testaments of the Three Patriarchs (*Gädlä* ↗*Abrəham, Gädlä* ↗*Yəsḥaq, Gädlä* ↗*Yaᶜəqob*), also attributed to Athanasius of Alexandria; *The History and Testament of Joseph* (EMML no. 1939; Piovanelli 1993, n. 43); ↗*Nägärä Muse*; ↗*Motä Muse* (CAVT 142); ↗*Motä Aron*, based on a homily of ↗Jacob of Serug (CAVT 143); *The Prophecy of Jeremiah Told to Pashur* (CAVT 228);

The Narrative of Zosimos, or *The History of the Rechabites* (cf. Jer 35) (CAVT 166; Picard 1967); *The Legend of Habakkuk* (CAVT 215); *The Lives of the Prophets and the Tribes of the Origin of the Apostles* (CAVT 213, Perruchon 1897–98); *The Apocalypse of Ezra on the Kingdom of the Arabs* (Piovanelli 1993: 214), which is of Syriac origin (Witakowski 2009).

There are also original Ethiopic compositions (even if sometimes based on translated apocryphal texts), including the national epos, the ↗*Kəbrä nägäśt*, as well as such other texts as the *Apocalypse of* ↗*Baruch*, and, in later times, the Ethiopic *Book of* ↗*Maccabees* (*Ṣiruṣaydan*).

This list is far from being exhaustive, and one can add to it, e.g., the so-called *Vienna Protology* (Witakowski 2007), and the ↗*Ṭəntä haymanot*, on which the former is partly based.

Even more texts can be termed N.T. A. These are usually divided into four groups, in accordance with the four genres of the N.T.

Among the apocryphal gospels one may name the *Mäṣḥafä* ↗*lədäta lämaryam* (CANT 50), usually regarded as an infancy gospel, but also part of Marian literature; the ↗*Täᵓammərä Iyäsus* (CANT 45), an all-covering apocryphal gospel; *The Vision* (or *Homily*) *of* ↗*Theophilus of Alexandria on the Mount Qusqam* (CANT 56); a passion gospel, the *Mäṣḥafä* ↗*dorho*, one of the parts of the *Mäṣḥafä* ↗*gəbrä ḥəmamat*; *The Legend of* ↗*Abgar* (CANT 88); as well as the apocrypha on ↗Pilate (CANT 74, 75) connected to passion gospel literature. Although the *Infancy Gospel by Thomas* (CANT 57) does not seem to exist in Ethiopic as a separate text, its material is included in some manuscripts of the *Täᵓammərä Iyäsus*.

A particularly rich group of apocrypha are those concerning Virgin ↗Mary. In addition to the *Mäṣḥafä lədäta lämaryam*, one should name the *Mäṣḥafä* ↗*ᶜəräfta lämaryam* and the *Mäṣḥafä* ↗*ᶜərgäta lämaryam* as well as the ↗*Täᵓammərä Maryam* (some of the episodes).

The apocryphal Acts of the Apostles include a collection under the same title, also known as the *Gädlä* ↗*ḥawaryat*. Whereas this is a translation from Arabic, the *Acts of Mark* (Lusini in PICES 15; CANT 287, aeth. 2) were translated from Greek.

Except for *The Epistle of the Apostles*, apocryphal letters seem to be missing in Ethiopic literature. There are, however, several apocalypses: *The Apocalypse of* ↗*Peter* (CANT 317); the ↗*Fəkkare Iyäsus*; the ↗*Testamentum Domini in Galilea*, which contains *The Epistle of the Apostles* (CANT 22); *The Apocalypse of* ↗*Gorgoryos*, a ↗Betä Ǝsraᵓel text.

A fifth genre of the N.T. apocrypha is pseudapostolic literature, usually termed "church orders". These texts are always preceded by a scene in which the Apostles, and sometimes holy women, are gathered after the resurrection, often in the Upper Room, and under the command of either the Holy Spirit or Jesus who appears to them, first divide the missionary areas between themselves, and then together establish liturgical or disciplinary church canons. Some such texts are included in the ↗*Senodos* (e.g., the *30 Canons of the Apostles*); others are the ↗*Testamentum Domini* and the ↗*Didəsqəlya*, early Christian compositions originating from Syria.

Also the above list of the N.T. apocrypha can be extended, e.g., by the martyrological accounts of Apostles and other figures of the N.T., included in the ↗*Gädlä sämaᶜətat*. Here accounts of martyrdoms of Thecla, the disciple of Paul, of Stephen the Protomartyr can be found, and, separately, of the discovery of the latter's relics. Lives of the N.T. characters are also extant outside it, e.g. *Life of Centurion Cornelius*.

In addition to Christian P. and A., there is also Betä Ǝsraᵓel literature of this sort (s. EAE vol. 1, 558).

Witold Witakowski

Pseudo-Dionysius of Tel-Maḥrē

P. (d. after 775) was a monk in the Zuqnin monastery (near Amid in Mesopotamia, today Diyarbakır, Turkey) who authored a universal chronicle, also known as the *Zuqnin Chronicle*. His conventional name comes from his 18th-cent. erroneous identification with the patriarch of the Syrian Orthodox Church, Dionysius (d. 845), who also wrote a chronicle (preserved only fragmentarily). He otherwise remains anonymous.

P.'s work consists of four parts, based on: (1) the Bible and the *Chronicle* of ↗Eusebios; (2) the *Ecclesiastical history* of Socrates Scholasticus; (3) the *Ecclesiastical history* of ↗John of Ephesus, and (4) mostly own observations.

Part (3) contains material of interest for Ethiopia, and more specifically for the early 6th-cent. wars with ↗Ḥimyar. The material comes originally from the *Chronicle* of ↗John Malalas, via John of Ephesus. Moreover, it includes an abbreviated version of the *Letter* of ↗Simeon of Beth Arsham, on the persecutions of the Christians of ↗Naǧrān, probably also copied from John of Ephesus. The sequence of the lemmata on the Circum-Erythraean affairs ends with an abbreviated (as compared to what ↗Michael the Syrian has) account of the punitive expedition of the (unnamed) king of Ethiopia against the Jewish king of Ḥimyar.

Pseudo-Methodios, Apocalypse of

The A.P. (full title *Memra* [Syr. 'homily', 'treatise'] *Composed by the Blessed Mar Methodios, Bishop and Martyr, on the Succession of the Kings and on the End of Time*) was composed in Syriac in the 690s in Northern Mesopotamia, perhaps in the vicinity of Mount Singar (Ǧabal Sinǧār, today Iraq), on which the author is said to have received his revelation. The anonymous author, who used the name of Methodios (bishop of Olympus, martyred 311) most probably belonged to the Syrian Orthodox, or ↗Jacobite, Church.

The A.P. belongs to the genre of the so-called "historical" apocalypses, i.e., it contains both a *sui generis* historical and an eschatological part. The narrative of the former presents the history of mankind (chronologically based on the millennial system) beginning with the Creation, and adapted to serve the purpose of the author, whereas the eschatological part begins (ch. 11) in the seventh and last millennium with an account of the invasion of Muslim Arabs, called Children of Ishmael. They will defeat the kingdom of the Greeks (ch. 11, 1.3), whereupon tribulations will ensue for the Christians, but soon the End will come. The apocalyptic part contains some of the usual elements of the eschatological programme (such as the invasion of the peoples of Gog and Magog, or the coming of the Son of Perdition or Antichrist) but also includes new topics such as the legend of the Last Roman Emperor, who would first destroy the Ishmaelites, and then surrender his power to God. The origin of this figure is an invention of Pseudo-Methodios: the emperor is a descendant of an Ethiopian princess, Kusheth (or Kushyath), who was married to Buz, the founder of the city of Byzantion, whilest their daughter, Byzantia, would marry Armalos, king of the Romans, and their three sons would rule over the whole world divided into three respective parts (ch. 9). The Last Roman Emperor comes from this dynasty, and thus being an "Ethiopian", he fulfils the prophecy of Ps 68:31, the Syriac version (Peshitta, *Pəšīṭtā*) of which reads: "Ethiopia shall give hand (a Syriac idiomatic expression to be understood as "surrender") to God" (ch. 14, 5). The Emperor, having defeated all the enemies, will perform this act by hanging his crown on the Cross in Jerusalem, whereupon he will die.

As A.P. informs us (ch. 9,7), other "brethren" (monks) believed that the liberation of the Christians from the Muslim yoke would come from the hand of an Ethiopian king. The Syrians' eschatological expectation of salvation coming from Ethiopia, was in the imagination of the author no doubt evoked by the memory of the Ethiopian military intervention on behalf of the Christians of ↗Nağrān, martyred ca. 520 by a local king who had converted to Judaism. This, combined with the interpretation of Ps 68:31 and the legend of the Last Roman Emperor, seems to be the background of the otherwise quite fantastic pedigree attributed to him by the author of the A.P.

As the first apocalyptic text which dealt with the Muslims, the A.P. experienced enormous popularity in both the Christian Orient, the Byzantine Orthodox world and in the Latin West. Several translations into various languages testify to it: Greek (four versions known), from which those into Latin, Church Slavonic and Armenian are derived. Both the original and the translations in their turn influenced many other compositions of apocalyptic character in Syriac, Greek, Latin, as well as a series of apocalyptic writings in Arabic from Coptic Egypt (Martínez 1990; cp. ↗Samuʾel of Qalamun).

There are connections between the A.P. and the ↗*Kəbrä nägäśt* (Alexander 1973). The A.P. can be regarded as one of the sources of the *Kəbrä nägäśt* or, alternatively, the two texts have a common source (Caquot 1989–90: 61). Perhaps the A.P. is even mentioned in the *Kəbrä nägäśt* (ch. 117) as "the book of Dämatiyos of Rome", with which the words of Gregory about the kings of Ethiopia and of Rome agree (cp. ↗Rom, EAE vol. 5). According to ch. 19 it was Dəmatyos, the patriarch of Rome (= Constantinople) who found in the Church of (Hagia) Sophia a manuscript in which the kingdom of the world would be divided between the Emperor of Rome and that of Ethiopia. Moreover both texts share the same, in fact Syriac, interpretation of Ps 68:31. The latter is quoted by the *Kəbrä nägäśt* twice differently: once (ch. 113) according to the Ethiopic ↗Bible, and the other (ch. 50) according to the Syriac version (Caquot 1994: 333).

Witold Witakowski

Ptolemy

P. (Claudius Ptolemaeus, d. after 161 A.D.; Eth. **በጥሊሞስ**, *Baṭlimos*; Ar. *Baṭlamiyūs*) was an astronomer, mathematician and geographer certainly active in Alexandria, Egypt, between 127 and 147/48 A.D.

His most famous works, all surviving in the Greek original, are the *Mathematical Syntaxis* (widely known as the *Almagest*), a 13-book treatise on astronomy in which, among other things, the foundations of modern trigonometry are laid; the *Tetrabiblos*, a "4-book" manual of astrology complementary to the previous one; and the 8-book *Geography*, an abridged version of which is the small *Canon of Latitudes and Longitudes* put under his name, although the co-ordinates for certain places are not the same.

P. codified the Greek geocentric view of the universe, and rationalized the apparent motions of the planets as they were known at the time – which was to be the accepted view until Copernicus proposed a heliocentric system in 1543.

An even more outstanding contribution was given by P. to the history of geography and cartography, as he was the first to project a sphere – the Earth – onto a plane. A critical summary of earlier writers' achievements, his massive *Geography* (*Geographikḕ hyphḗgēsis*, 'Geographic Introduction') contains instructions for laying out maps by three different methods of projection, provides co-ordinates for some eight thousand places, and employs systematically, for

Latin version of Ptolemy's *Geography*, map with the Red Sea area and the Horn of Africa; London, BritLib, Harley ms. 7182, fol. 85; from Whitfield 1998: 10.

the first time, such basic concepts as latitude and longitude. Yet, given the nature of its sources (mainly travellers' itineraries, but also local sources: e.g., for India, s. McCrindle 1885: XIX–XXIII), the factual content of the work is obviously inaccurate. Notorious errors are both the excessive east-west elongation of the Mediterranean and the proposed land connection between Africa and Asia, making the Indian Ocean into a lake (s. ↗"India" as name of Ethiopia).

In the late 13th-cent. ↗Byzantine empire, the *Geography* was rediscovered and its maps reconstructed (or replotted) and attached to the new copies of the text. The 1406–09 Latin translation by Emanuel Chrysoloras and Jacopo Angeli, illustrated with splendid maps, became a best seller both in the age of luxurious manuscripts and in that of print. Thus P. remained the great authority on the subject until the time of Columbus – possibly inspired to sail west for the Indies by P.'s representation of Asia, extended much too far east.

Oriental astronomy and geography were also deeply influenced by the writings of, or those ascribed to, P., which left a lasting impact on Islamic science through Arabic renderings and adaptations of most of them: the *Geography* was translated several times in the ᶜAbbasid period (Plessner in *EI*^{2} vol. 1, 1100ff.). P. then became the chief source of such authors as al-Ḫʷārazmī (d. after 232 H. [847 A.D.]), al-Baṭṭānī (d. 317 H. [929 A.D.]) and al-↗Idrīsī, whose works Arab geography relied on until as late as the 19th cent.

P.'s *Geography*, in the form of a list of toponyms with co-ordinates and brief annotations appended, covers the entire ↗Horn of Africa, especially ↗Nubia and Ethiopia (↗Aithiopía), although with some inconsistencies. It records ↗Meroë and the confluence of *Neîlos* and *Astápous* (White and Blue Nile) which flows from the *Kolóē límnē* (Lake ↗Ṭana), and into which the *Astasbóras* (↗Atbara) merges (IV, 7, 21f. and 24; but s. CRStor 118). It knows of ↗Adulis, of the town of Dḗrē/D(e)írē (Raᵓs Siyān or Dumayra, s. ↗Dumērá), "beyond the straits", i.e. Bāb al-Mandab, and of the *Aualítēs empórion* (to the south-est of ᶜAden: in the gulf of ↗Tağūra?), given quite a southern latitude (IV, 7, 9f.; cp. Desanges 1978a: 98 and 1978b: 300, 334). It also lists the Aksumites (*Auxoumîtai*, after the more conventional *Rhyzophágoi*, 'Root eaters'), ↗Aksum (*Auxoúmē*), "where the king's residence [*basíleion*] is" (IV, 7, 29 and 25; cp. ↗*Periplus of the Erythrean Sea*), and other "cities": *Kolóē* (also a lake name: s. ↗Coloë, ↗Qoḥayto, ↗Ṭana) and the mysterious *Mastḗ*, with the *Mastîtai* (IV, 7, 24f. and 31). P.'s is indeed the first proper mention of Aksum – passed hence to the Arab geographers, starting from al-Baṭṭānī (cp. Monneret de Villard 1938: 131 and n. 1).

In Ethiopic, P. is known from explicit references to his *Almagest* (**መጽሐፈ፡ መጀስጢ**, *Mäṣḥafä mäǧəsṭi*) in the ↗*Abušakər* (chs. 8, 37 [with partial tr. of *Alm.* III, 1] and 39), as well as from two short treatises attributed to him. The first one is a fragment on cosmography, ms. BN d'Abbadie 20 (CRAbb no. 67), fols. 1r–3r (ed. Kračkovskij 1912: 129–36; cp. Conti Rossini 1943: 171f.; other mss.: Grottaferrata [Roma], Biblioteca della Badia greca, Aeth. 3 [R. 9], part II.*a*, fols. 3r–v; Berlin Staatsbiblioth. Preuss. Kulturbesitz Or. oct. 1299 [HamSixBerl no. 71], fols. 5r–8r, 9r–20r; EMML 3981, fol. 142v); the second one, a 24-ch. manual of divination (**መጽሐፈ፡ መቅድመ፡ ከሣቴ፡ ምሥጢር**, *Mäṣḥafä mäqdəmä käśate məśṭir*, 'Book of the Introduction to the Revelation of the Mystery'), BritLib Add. 16, 247 (DillmLond no. 82), fols. 67r–79r, also bearing on planets (ed. Conti Rossini 1940, with ch. 1 and contents in tr.). Like the anonymous "cosmogonical" sketch in ms. d'Abbadie 109 (CRAbb no. 238), fols. 6v–8r (ed. Kračkovskij 1912: 136–42), these treatises are not really dependent on Arabic writings (cp. GuiLet 95 and n. 1; Conti Rossini 1940: 66f.), as they can be traced to the hitherto unpublished Ethiopic version (a compendious reduction) of the Arabic chronicle of al-Makīn (↗Giyorgis Wäldä ᶜAmid), which is itself based on a variety of sources (Proverbio 2000: 543–51). Among them, the excursus on "geography" in the *Kitāb al-ᶜUnwān* ('Book of the Title') by the 10th-cent. Melkite bishop Agapius of Manbiğ (Mahbūb b. Qusṭanṭīn, ed. Vasiliev 1910: 604–27), which was once believed to have served as an immediate model for both treatises (Kračkovskij 1912: 129 n. 1, 143). As a matter of fact, the same indirect transmission might even account for such quotations from Agapius (Fəqur Wäldä Qʷäsṭänṭinos) as that in Abušakər's "Chronography" (6, 1–9, tr. Neugebauer 1988: 135–38, cp. 165).

Extensive excerpts from the *Almagest* catalogue of the stars are found in an equally short anonymous treatise, primarily astronomical: BritLib Orient. 810 (WrBriMus no. 385), fols. 8r–10r, here 10r (Neugebauer 1979: 217 and n. 10).

Punt

The Land of P. (Egyptian *Pwn.t*) is mentioned in Ancient Egyptian sources between ca. 2500 B.C. (Pharaoh Sahure; Borchardt 1913: 15ff., 19, 23) and 14 A.D. (Emperor Tiberius; Herzog 1968: 21) as a remote country, which was at times regarded as the mythological origin of ↗Egypt's gods. In the long ages of direct contact by ship and via land – documented already for the reign of Pharaoh Sahure – it was Egypt's trade partner, delivering mainly ↗incense, ↗ivory, ebony, ostrich feathers and eggs as well as ↗gold, make-up, gum, dogs, monkeys as well as leopard furs. Today, most scholars agree that this toponym designated a flourishing ancient culture in the ↗Horn of Africa, preceding the ↗DʿMT kingdom.

The name P. is of unclear etymology (Zibelius 1972). According to orthographic rules for words with *wn* 'be', the Egyptian form could be reconstructed as **P˘wān˘t*. An etymological explanation by Meinhof (1941/42: 300ff.), based on a theory that located P. in eastern Africa further south, is outdated; the suggested connection with the Swahili locative *pwani*, 'beach' (< *kupwa*, 'get dry') is impossible, as the Bantu migration to eastern Africa took place long after P. flourished. Alliot (1951: 1–7) identified the Ptolemaic Greek toponym *Ὀπώνη*, *Opōnē* (i.e. Ra's Ḥāfūn in Somalia) found also in the ↗*Periplus of the Erythraean Sea*, with P. and reconstructed a "Hamitic" toponym **opūn*, from which the Egyptian form *Pwn.t* would have been borrowed; this is based on the assumption that P. was located in northern Somalia, which has, however, been put into doubt later. It is possible, however, that the people or country of Put, mentioned in the Biblical list of peoples (Gen 10: 6), could be identified with P. (e.g., Soggin 1997: 170). A still much debated hypothesis (Zyhlarz 1958; O'Connor 1982; SerHist 25) links some toponyms of southern regions occurring in topographical lists from the time of Thutmosis III (reg. ca. 1479–1425 B.C.) with the Ethio–Eritrean region *wḏlṯt* (no. 59 <*wç̌-rw-č-t*$^{\text{determinative}}$>) with ↗Adulis, *ꜣmśw* (no. 50 <*ꜣ-m-mś-św*>) with ↗Ḥamasen, and *tkꜣr.w* (no. 10) with ↗Təgray (the latter not being listed, however, directly under P. and therefore rather meaning a region outside P.); these toponyms were read as Outoulit, Amasu and Tekaru (s. SerHist 25), which is problematic. In principle, a connection is possible due to the great conservativity of onomastics in the region (all three terms are documented since Aksumite times). The inhabitants of P. are called *ḫbśtjw* (*jw* being the nisba, pl.), which, according to a new hypothesis, corresponds to ↗Ḥabašāt (i.e. the today's ethnonym Ḥabäša of the inhabitants of the northern highlands of Ethiopia/Eritrea). The reliefs from the mortuary temple of Queen Hatshepsut (18th dynasty, reg. ca. 1479–58 B.C.) depict "a prince of P." (*wr.w n(i) Pwn.t*). It has not yet been possible to connect his name, *Pꜣ-r-h-w* (**Pal/rhu*), to any known language, although a comparion with names of Ethiosemitic origin has been proposed (Breyer in preparation). His wife is called

Ity – a name hardly connected with the ancient Ethiopian Queen's title ↗*ətege*.

The exact location of P. is also a matter of discussion. The main source for reconstructing it is the relief from Hatshepsut's temple. The reliefs show several details such as housing, landscape and animals. This view is confirmed by other texts, which describe the Land of P. as terraced and mountainous, characterized by rainfalls. The inhabitants can be classified in three groups according to their vestments and headdress (Drenkhahn 1967: 6f.). Judging from the flora and fauna depicted (giraffes, rhinoceroses, baboons, doum palm and incense trees), the land had a tropical climate (Hilzheimer 1932; Hepper 1969; Dixon 1969; Störk 1977; Lüchtrath 1988). Sea animals featuring in representations of ship expeditions to P. are typical of the Red Sea (Danelius – Steinitz 1967). The aforementioned trade items are fitting in with the African continent in general. It has thus been common to place P. in Africa to the south of Egypt (cf. Kitchen 1971: 184–207).

Ethnographic details that can be elicited from the reliefs support the African theory. The houses are shown built on poles above cattle stalls (Phillips 1996: 206f.), a construction style with parallels in eastern Africa (Herzog 1968: 67–71). Iron bracelets and anklets similar to those shown to be worn by the figures on the relief are still in use in south-eastern Sudan. Herzog (1968) suggested the identification of the princess of P. from the reliefs with a bushman woman, but her obesity was rather of pathological nature (Brunner-Traut 1957: 307–11; Brunner-Traut 1974; reconfirmed by new medical data, Schmeller – Meier-Vollrath 2007).

Recently, Meeks ((2002 and 2003: 53–80) again brought up the possibility of P.'s placement on the Arabian Peninsula, in particular Arabia Petrea, but his indications are poor: he claims that the giraffe could have been imported to Arabia from another region, and that the rhinoceros is represented with only one horn, instead of two horns typical for the African species; however, Kitchen (1999: 173–78) has already shown that similar one-horn representations are found in Kerma (s. Nubia, EAE, vol. 5), where the African and not the Asian species are definitely meant.

Archaeologists have also been trying to place P. on the map. Quiring (1947: 161ff.) suggested a connection between P. and ruins in Zimbabwe – but those ruins are too recent and date back to the 10th–15th cent. A.D. Much more convincing is the proposal of Fattovich (1991; 1993), who connected P. with the cultures of Eritrea, northern Ethiopia and south-eastern Sudan, especially with the culture of the Gaš delta (↗Gaš group). He brought into relief the steady contacts the cultures of Nubia (C Group), southern Sudan/northern Ethiopia (↗Atbara ceramics tradition: Butana, Gaš, Aqordat and Ǧabal Mokram groups), Eritrea (↗ᶜOna culture A) and southern Arabia (Tiḥama culture) had among themselves and with Egypt. Evidence offered by rock art, ceramics and trade

Depiction of Punt houses, flora and fauna in the mortuary temple of Hatshepsut, Punt Hall; photo 2002, courtesy of Karl H. Leser

objects suggests a localization of P. in the wider region around the rivers Gaš and Barka.

Contacts between Egypt and P. existed since the Old Kingdom. A pygmy is said to have been imported from P. during the reign of Djedkare Isesi (5th dynasty). Products from P. were probably traded via land route by help of Nubian mediators. During the Middle Kingdom, the trade had to be carried out by sea as it was necessary to bypass the rather strong kingdom of Kerma/↗Kuš. The starting point for Egyptian sea expeditions was the *wādī* Hammamat (Bradbury 1988; Farout 1994; Vandersleyen 1989; 1996: 110f.), which connected the ↗Nile valley and the Red Sea via the eastern Egyptian desert. At the end of the *wādī*, the port of Marsā Gawasis was constructed (Sayed 1983), marked by stelae of Egyptian expedition leaders, remainders of ship parts, tools and anchor stones. Hieroglyphic inscriptions prove that this could have been the port to P. (Sayed 1983). Recent excavations have shed more light on the logistics of the expeditions (Bard – Fattovich 2007). The travel schedule was dictated by the currents that were directed southwards from June to September and northwards from November to March. With ships making ca. 40–50 km per day, the distance of 900–1,300 km could be covered in 20–40 days, which leaves sufficient time for the described voyages into the country. The Puntite port should be therefore localized between Port Sudan and ↗Asmära, with P. stretching from the wider Gaš/Barka lowlands to the Red Sea coast.

With the rise of Kuš, the trade between Egypt and P. came to an end. The relationships resumed during the New Kingdom, trade being carried out from the Egyptian port of Aqīq (Ptolemais of the Huntings). It is also during this period that the Egyptians undertook an unsuccessful attempt to cultivate incense, the main P. export item, in the Nile valley (KRI II: 514).

It is possible that due to the growing connection of African cultures with southern Arabia, starting with the reign of Ramses South Arabia was also considered part of P. Recent archaeological findings in Sābir, Yemen, confirm the presence of a culture with strong connections to the African side in the “Puntite” period, which would support the idea that the culture(s) of P. also reached the southern Arabian side (Vogt – Buffa 2005).

A major drought in north-eastern Africa and the simultaneous disappearance of settlements along the Atbara and Gaš coincide with the end of the Egyptian–P. relationship. The demise could have also been brought about by the growing

South Arabian influences in north-east Africa, which culminated in D^{c}MT kingdom. From then onwards, and until the Ptolemaic and Roman times, trade was under southern Arabian control, and in Egypt P. remained a toponym only reported in legends and religious texts.

In the course of modern Somali nationalism, the term "P." was used for the construction of an ancient past, and one region, where Raʾs Ḥāfūn is located, was called Puntland.

Francis Breyer

Pushkin, Alexander Sergeyevich

P. (Aleksandr Sergeevič Puškin; b. 6 June 1799, Moscow, d. 10 February 1837, Saint-Petersburg) was a Russian poet, novelist and dramatist, regarded as the founder of modern Russian literature, and traditionally believed to have been partly of Ethiopian (respectively Eritrean) origin, and as such sometimes claimed by Ethiopians as belonging to the history of Ethiopian literature. P. repeatedly referred to his descent from Abraham Ganibal [Hannibal] (b. ca. 1686, d. 14 May 1781 [Greg. Calendar] Suida/Saint-Petersburg), his great-grandfather, who was a godson of Tsar Peter the Great (1672–1725) and who rose to prominence in 18th-cent. Russia. P. made him the subject of an unfinished, largely fictitious, novel

The Moor of Peter the Great (1827/28, publ. 1837, first Engl. ed. 1875), and proudly refers to his descent elsewhere in his works, e.g., in notes to *Eugene Onegin*.

Some of P.'s works, poetic and prosaic, were translated into Amharic (s., e.g., Volpe 1988: 189). P.'s relationship to Ethiopia is symbolized by a bust of the poet, erected at Pushkin Square in Addis Abäba, in 1999. The origins of P.'s great-grandfather Abraham Ganibal, however, are not well documented. A petition written by him in 1742 documents that he was born in Africa at a place called Lago or Logon. Family tradition, first documented by his Baltic-German son-in-law in 1786, holds that he was an "Abyssinian"; he was one of about 19 children of a local (Muslim?) chief and, abducted by Ottoman troops, was shipped, like many other slaves (s. ↗Slavery), to Constantinople. His town of origin has been tentatively identified, by the present writer and others, with the "town" of Logo, in present-day Eritrea, indicated in ↗Salt's Map of Abyssinia (SalTrav 246), which may be identified with the historical region ↗Loggo Č̣əwa in ↗Säraye. At the time of his birth this was under the rule of *däggiyat* ↗Hab Śəllus, who may have had several minor conflicts with Ottoman troops from ↗Massawa. Another possibility is nearby ↗Loggo Särda further east, partially populated by Muslim ↗Sāho, who were tributary to the Ottomans and repeatedly rebelled (Solomon Ghebre-Ghiorghis 2002).

P.'s Ethiopian descent was accepted by most Soviet Ethiopisants. This identification is, however, rejected by a Benin author, Gnammankou (1996), who identifies Logon with Logone-Birni, south of the Chad lake, in today's Cameroon, as did Nabokov (1962); this was supported by Barnes (2005), whose most important argument seems to be that the motto on Abraham Ganibal's crest in an unknown language (FVMMO) would make sense in Kotoko, spoken in Logone; however, it more probably means Latin "Fortuna Vitam Meam Mutavit Oppido" (Cocks 2005).

Abraham's later life is better known. He was purchased in 1703 for Peter the Great, who had him baptized in 1705 in Vilnius, and subse-quently sent him, with a number of young Rus-sians, for modern education to France (1716–23), where he visited the military college in Metz. Abraham later followed a military career in the Tsarist army as a military engineer, among others fortifying the boundary to China, rising to the rank of General (in 1742 being the governor of Reval, Estonia), and married into the Russian aristocracy. Originally called Ibrahim, then Abraham Petrovič or Petrov (thus referring to his godfather Peter the Great), he later acquired the surname Ganibal, i.e. that of the Carthaginian leader Hannibal, this being one of the few Africans then known of in Russia. His estate, the village of Mikhailovskoye, was inherited by his great-grandson P.

Q

Qaalluu

Q. is a term used widely by ↗Oromo for two different types of major religious figures. The first of these refers to men who serve as the sacred ritual representatives of major Oromo groups, the second type of Q. are religious leaders in a wide sense. The first type of Q. mediate between humans and the supernatural world, preside over the most important ↗*gadaa* ceremonies, serve as the focus for major ↗pilgrimages, and thus help to give a sense of unity to widespread populations. Their followers believe that the rituals and other functions they perform are vital for "fertility, well-being, prosperity, peace, and justice" (Bassi 2005: 269). The Q. are intermediaries between humanity and ↗Waaqa and one of their major functions is to bless the people. Their positions are lifelong and are hereditary in certain lineages, and they are surrounded by sacred regalia (e.g., ↗*Kallačča* and a black turban, *ruufa*), numerous beliefs and myths, and retinues of retainers and servants who help them carry out both daily tasks and the sacred rituals and other activities necessary for the fulfilment of their duties.

In recent years the Q. have been prominent among the ↗Boorana of southern Ethiopia and northern Kenya, and among the ↗Guǧǧi Oromo (Hinnant 1978). They are associated with the organization of *gadaa* and play essential roles in the maintenance of that complex system by providing the sacred setting for the vital handing-over ceremonies (*gumii gaayoo*) every eight years, trying to ensure peace among various parties and claimants, anointing (↗*Muddaa*) participants, and, in some cases, choosing the new *gadaa* officials. The position of the Q. contrasts in several ways from the other officers in the *gadaa* system, both secular and ritual, who are elected for limited terms of eight years, and cannot either inherit or pass on their positions. On the other hand the Q. are supposed to be above party politics and must never bear arms. Despite these limits, however, Q. have sometimes been appointed to official governmental positions by Ethiopian government officials.

Today the Q. draw their followers mainly from among their own groups (the two Boorana main moieties each have their own Q., the Guǧǧi only one), but it is believed that the ancient (?) institution of the ↗*abbaa muudaa* Q. of ↗Bale, once fulfilled that function for most Oromo groups, before they were dispersed by migration. The *abbaa muudaa*'s ritual centre is a site of pilgrimage for some Oromo even today.

The term Q. is also applied widely to religious leaders of a different sort: spirit mediums whose power and importance comes as a result of their being possessed by *ayyaana* (↗Possession cults), a type of religious expert that resembles to a certain extent the ↗*qalləčča.* Incorporeal ↗spirits like the *ayyaana* are believed to take hold of individuals and make them do their bidding, speaking through the mouths of their human mediums, castigating those who have done wrong, answering questions from the afflicted, perhaps offering hope to the suffering. In some areas, at least, the *ayyaana* are believed to be guardians of morality, playing a role in punishing those who offend the social order (Knutsson 1967; Lewis 1990).

Although it is possible for an individual to inherit spirits, new Q. can arise spontaneously when they are "caught" by *ayyaana* and made sick or seemingly mad by them. The individual may subsequently reach a modus vivendi with the spirit so that he or she can live normally most of the time, but the *ayyaana* can be summoned by drumming, singing and dancing, and will appear when called upon by the faithful. On these occasions the Q., his or her entourage, and their followers, will gather at the temple (*galma*) dedicated to a spirit and will call upon the *ayyaana*, praising it, and begging it to seize the medium. When the spirit complies there will be a session, perhaps lasting many hours, as people lay their troubles before the Q., the *ayyaana*, and the public, telling of their illnesses, their fears, their troubles, and asking for children, health, relief, and aid. The crowds at the temple of a great Q. may number in the hundreds for days on end when the spirits will be present; they may be in the thousands when the Q. holds annual celebrations at a *galma*.

A Šäwa Oromo *qaalluu* Fayisa Innika, presiding over the annual celebration of *Masqali*-feast in his regalia, attended by his shield and spear bearers, at Tofe, between Holäta and Meṭi; photo 1966, courtesy of the author

Powerful Q. establish formal courts for conflict resolution and judicial proceedings on the sacred ground around the *galma*. Plaintiffs and defendants meet before panels of judges installed by the Q., and there are formal procedures similar to those in the government courts.

By all indications, this Q. institution is of recent origin, no more than a few generations old. It has been suggested that these new Q. are filling religious, social, and political vacuums left by the loss of the *gadaa* system, and its successors, war leaders (↗*Abbaa duula*) and wealthy landowners (↗*Abbaa lafa*), who lost their power as a result of the Ethiopian conquest. With their courts, their great ceremonials, the wealth they can accrue, and the following they develop as a result of the help they offer those in need, Q. can gain considerable influence both among their own people and vis-à-vis outside authorities. Despite having been discouraged, even banned, during the years of *Därg* rule, this form of belief, ritual, and leadership appears to be spreading in the 21st cent. as well.

Qäbäle ↗Administrative divisions

Qabeena

Qabeena language

Q. (self-name: Wombisanat^{a}, Qabeensinat^{a}) belongs to the ↗Kambaata group of the ↗Highland East Cushitic (HEC) languages; its closest relative is ↗Allaaba (Crass 2001). Geographically the settlement area of the Q. is separated from that of the other HEC languages by several ↗Gurage languages. Most of the ca. 52,000 (2007 Census) Q. also speak ↗Amharic and/or one or more of the regional contact languages (↗Oromiffaa, ↗Čaha, ↗Ǝža, ↗Muḫər or ↗Wäläne).

The consonant system of Q. is: plosives *p*, *b*, *p̣*, *t*, *d*, *ṭ*, *k*, *g*, *q*, ᵓ; fricatives *f*, *s*, *z*, *š*, *ž*, *h*; affricates *č*, *ğ*, *č̣*; nasals *m*, *n*, *ñ*; approximants *l*, *r*, *y*, *w*. Consonant gemination is phonologically distinctive. The glottal stop is never geminated; the geminated glottal fricative *h* is realized as voiceless velar plosive *k*. The vowel system consists of five phonemically short and long vowels (*i*, *e*, *a*, *o* and *u*). Short vowels are voiceless in unstressed word final position. Stress accent is of grammatical importance, especially for the distinction of accusative and nominative. Morphophonological processes (mainly in the verbal inflection) include assimilation, palatalization, metathesis and epenthesis.

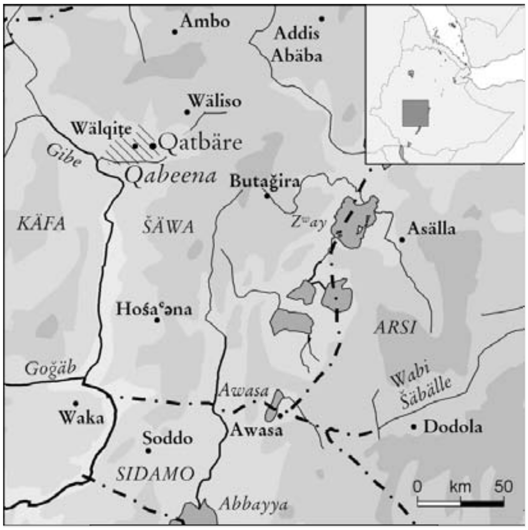
Nouns distinguish two genders: masc. (unmarked in the citation form [CIT]) and fem. (marked in the cit. form with the suffix -*t*^{a}). In respect of number, many nouns have three morphologically distinct forms: general number (bearing no reference to the number of entities), sg. and pl. (e.g., *č̣iwut*^{a} 'bird', *č̣iiččut*^{a} 'a bird', *č̣iwaakkat*^{a} 'birds'). Other nouns have two forms, either general number and pl. (e.g., *bokku* 'house', *bokkaakkat*^{a} 'houses') or sg. and pl. (e.g., *masičču* 'enemy', *masiččaakkat*^{a} 'enemies'). The singular can also be used to express the diminutive.

In respect of nouns (but not pronouns) Q. is a marked nominative language. The unmarked case is the accusative (ACC), which is used as cit. form and to mark direct objects and nominal predicates. The nominative (NOM) marks subjects of intransitive and transitive verbs. The other cases are genitive (GEN), dative, instrumental/comitative, locative (LOC; the latter two only distinguished in masc. nouns) and ablative. Nouns distinguish 13 inflectional classes. Proper names form a special word class. In some of their inflection classes the cit. form and the acc. are distinct forms (which never occur with nouns). Besides their primary use demonstratives are grammaticalized into markers of gender on nouns, copulas (Crass 2003) and nominalizers of verbs.

In verbal inflection, the 3rd pers. fem. is also used for the plural. The historical pl. form of the verb functions synchronically as the impersonal or polite form. Three sets of subject marker paradigms exist with distinct forms in the 1st pers. sg. and 3rd pers. sg. masc. (*y*, *ø*), the 2nd pers. pl. (*teen*, *toon*) and the impersonal/polite form (*ᵓeen*, *ᵓoon*). The other persons have only one morpheme: 1st pers. pl. (*n*), 2nd pers. sg./3rd pers. sg. fem./ 3rd pers. pl. (*t*). Independent verbs in the indicative are marked for subject (person, gender, number) and aspect (perfective, PRV: -*o*- and imperfective, IPV: -*a*-). The "additional morphemes", which follow the aspect vowel, can partly be considered secondary subject markers: they distinguish forms which are marked with one and the same primary subject morpheme. E.g., prv. *haam-t-oo-nt*^{i} 'you (sg.) went'; ipv. *haam-ø-aa-mm*^{i} 'I go'. The markers of the imperative (IMV) mood (including hortative and jussive, JUSS) and of converbs (CONV) are placed after the subject marker, i.e. in the position of the aspect vowels of independent verbs. Since the imv. mood and converbs lack the "additional morphemes", they do not distinguish either 1st pers. sg. and 3rd pers. sg. masc. or 2nd pers. sg. and 3rd pers. sg. fem.: e.g., negative juss. *háam-unka* 'I/he may/should not go!', purpose converb *haam-t-ot*^{a} 'in order that you (sg.)/ she go(es)'.

Verbs are derived by suffixes which follow the lexical base, e.g. -ᵓ or -*aqq* for middle, -*am* for passive, -*aqqam* for reciprocal, and -*is* or -*siis* for causative.

Q. is a strictly head-final language, i.e. all modifiers precede their head, and the unmarked word order is Subject – Object – Verb. E.g., *šif*^{i} *boorat*^{a} *ṭaafaan*^{i} *ᵓallaallo* (Shifa:NOM oxen:ACC *ṭef* field:LOC tend:PRV:3SG:MASC) 'Shifa tended the oxen in the *ṭef* field'. Nominal modifiers and relative clauses are marked by stress accent on the final syllable of the modifier. The function of the head noun in the relative clause remains unmarked. Verbal nouns are case marked and lack subject marking but the argument structure remains unchanged: *qurᵓaana* (ACC) *qaraᵓ-y-oo-mm*^{i} (PRV, 1SG) 'I read the Qurᵓān' vs. *qurᵓaana* (ACC) *qaraᵓi* (GEN) *diglálut*^{i} (NOM) 'the benefit of reading the Qurᵓān'.



Several areal features are attested, e.g. 1) the expression of the experiential perfect with a converb conveying the experienced event followed by the verb *kas*- 'know', e.g. *ᵓameerikaan*^{i} *ᵓorooᵓn*^{i} *kansoomm*^{i} (America:LOC go:CONV:1PL know: PRV:1PL) 'we have [the experience to have] been in America', 2) the use of the similative marker for complement and purpose clauses (Crass 2007).

Q. is influenced considerably in its lexicon by Ethio-Semitic languages and on a much smaller scale by Arabic. The basis for the integration of (Ethio-)Semitic verbs is the 3rd pers. sg. masc. perfective from which the final vowel is deleted, e.g. Arab. *kataba* > Q. *katab*- 'write', Amh. *kättäbä* 'he vaccinated' > Q. *kattab*- 'vaccinate'.

Amharic is the medium of instruction in primary schools. Q. is taught as one subject. An orthography based on the Ethiopic ↗script was devised in the late 1990s.

The ten-word list is as follows: *matu* 'one', *lamu* 'two', *sasu* 'three', *giirat*^{a} 'fire', *waa* 'water', *ᵓarriičut*^{a} 'sun', *ᵓaganču* 'moon', *qegu* 'blood', *ᵓarrabit*^{a} 'tongue', *ᵓinqut*^{a} 'tooth' (Crass 2001).

Joachim Crass

Qabeena ethnography

The Q. are an ethnic group of (in 1994) approximately 52,000 people (CSA 2007: 75 [population of Q. *wäräda*]) inhabiting the region of the upper ↗Gibe system. Most of them live in the Goro *wäräda* (since 2002 divided into the *wärädas* Qabeena and Abäšge) with the capital ↗Wälqiṭe which became part of the ↗Gurage Zone in the 1990s. Within the Highland East Cushitic cluster they are closely related to the ↗Ṭimbaaro, ↗Kambaata and ↗Allaaba. Culturally they have been very much influenced by neighbouring Gurage groups, particularly the ↗Čaha, ↗Ǝža, ↗Muḫər and Boz, and by Oromo groups of the upper Gibe such as the Wäliso and Amaya. The Q. belonged to the population of the old state of ↗Hadiyya and explicitly preserved the name "Hadiyya" as an ethnonym. More specifically they were called Womb Hadiyya. The term *womb*(*a*) is said to signify "the lower ones", because their settlements were mostly situated in the lower parts of the Gibe region (but cp. Crass 2005: 2).

The oral traditions of the Q. report that their ancestors originated from an area called Migo north of the Wabi Šäbälle bend (BrHad 155ff., 167–75). At the beginning of the 16th cent. they migrated together with the Allaaba to Qaweena in ↗Sidaama, and they still today consider the Qaweena subgroup of the Sidaama as their close relatives. In their oral traditions they claim to have spoken "Adäre", i.e. a Semitic language related to ↗Səlṭi. Together with the Allaaba their ancestors left Qaweena presumably during the first half of the 18th cent. and migrated in a northwesterly direction to southern Kambaata and Ṭimbaaro. In this area they abandoned their Semitic language in favour of the Cushitic Ṭimbaaro language. Ca. 1790 they proceeded from there to Waaččamo and Guuna in the present-day Hadiyya zone. Here, the Allaaba separated from the Q. and moved westwards in order to settle in the upper Bilate valley. This separation occurred ca. 1815. The Q. migrated in a northernly direction via the mountain of Mugo, Mafäd and Čaha in Gurageland to the valley of the upper Gibe, where they settled for a short period in the middle of the 19th cent. From there they proceeded via Abäšge and Čeka to Zenna-Bannär in the region east of Wälqiṭe which became their final domicile around 1860. Two decades earlier one faction had split from the bulk of the group in Mafäd and had crossed the Gibe to Abälti where they have preserved an ethnic enclave of the Q. in today's Ǧimma zone of Oromiyaa.

The title *qabeen* ↗*gärad* for the leader of the Q. was first documented by the Chronicle of *aṣe* Zärᵓa Yaᶜəqob for the middle of the 15th cent. (PerrZarY 16–23). Although they have been under strong Muslim influence since then, the Islamic cadre seemed to have continuously weakened over time. By the middle of the 19th cent., a leader called ᶜAlī was reported as a member of the noble clan Aǧaamo who carried the Cushitic title of ↗*woma* ('chief' or 'king'). At this time *imām* ᶜUmar Bak(is)sa of the Mogomanna clan from Čaha, obviously initiated a process of re-Islamization. According to the oral traditions he became the successor of *woma* ᶜAlī and attracted renowned *šayḫs*, such as Šihab ad-Din Aḥmad Daniyye, a member of the Qadiriyya brotherhood from Wällo, to settle at the Q. capital Moǧär. As reported by the Italian travellers Bianchi (1884: 263, 284, 303, 339, 353, 485f.) and Cecchi (1888: 82–85, 94, 96), the Q. had by then gained political importance and became a regional centre of trading activities. Cecchi (1888: 94) estimated its population at 56,000 and its military capacity at 2,000 horsemen and 4,000 infantrymen. In the early 1880s ᶜUmar Baksa was replaced as leader of the Q. by ↗Ḥasän Ǝnǧamo from the neighbouring Gurage group of Duula. He carried out a militant expansion of Islam all over Gurageland and organized a "holy war" against the armies of Mənilək II which started invading the area in 1876 (Cecchi 1888: 96; CerFolk 163f.; Borelli 1890: 135, 395, 400, 402; BrHad 172, 260–65). The Ethiopian troops under *ras* ↗Gobäna Dač̣i and *ras* ↗Wälde Aššagari met spirited resistance and were repeatedly beaten between 1886 and 1888; they finally managed to conquer Q. in 1889. The area was then included in the Ethiopian province of Gurage.

With regard to their settlements, their houses, material culture and economy, the Q. do not notably differ from the neighbouring Gurage groups. They cultivate ↗*ənsät* as their main staple food in the higher parts of their country and millet and maize in the lower parts. Fruits, vegetables and coffee have increased their importance in the final decades of the 20th cent. The Q. are Muslims with a high density of Qurʾānic schools.

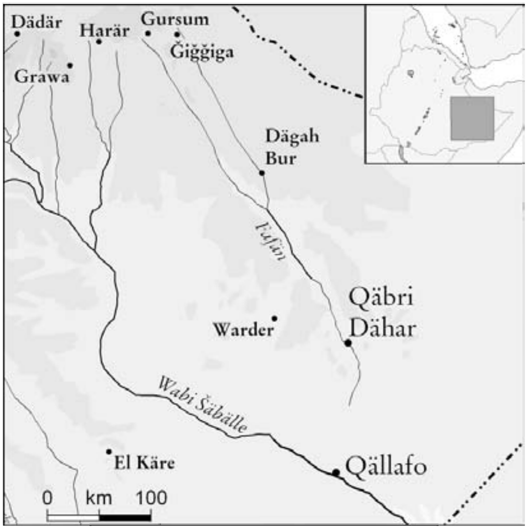
Qäbri Dähar

Q.D. (Qabridahare, 6° 44' 24" N, 44° 16' 41" E) is a town located on a hill (550 m A.S.L.) overlooking the Tuug Faafan (Fafän) valley, a tributary of the ↗Wabi Šabälle River. From 1942 to 1987 it was the capital of the eponymous *awrağğa* which was a division of the ↗Harär region and from 1987 to 1991, it was part of the ↗Ogaden autonomous region. Since 1991 it has been the capital of the Q.D. *wäräda* in the Qorrahe zone, part of the Somali *kəlləl*.

In 1938 Q.D. had 200 inhabitants and in 1981 less than 2,000 inhabitants, the population limit for being counted among the towns by the Central Statistical Office. Its *awrağğa* had 89,000 inhabitants and covered 28,000 km² (i.e. a density of 3.2 inhabitants/km²; CSO 1982). In the 1994 census Q.D. had 21,521 inhabitants and recently its population has suffered a rapid increase: 30,039 inhabitants in 2003 and 34,615 inhabitants in 2005 (CSA).



Since the first Ethiopian raids in Ogaden up to the Ethio-Somalian conflicts of 1963–64 and 1977–78, Q.D. was used by the Ethiopian Army as a fort from where to exercise control and collect tribute among the Somali pastoralists. Today, it has an airport service.

Qaç̣əl ↗Qəddase: Paraphernalia

Qaḍārif

Q. (Arab. قضارف, Engl. Gedarif) is the name of a Sudanese regional state at the Ethiopian border and of a city south-west of ↗Kassala (for location s. map for Qallābāt), which at times belonged to the Kassala province (↗Taka).

The city of Q. (capital of Q. state since 1994) was originally a caravan station and market, originally called Suq Abū Sin. It was mainly used by nomadic groups, such as the camel-herding Šukurīya, who dominated Q., but also ↗Ḥumrān, Bišarīn and other ↗Beğa groups, and Arabic groups such as the Arabic-Nubian Ğaʿaliyīn. In the 18th cent. the Šukurīya *šayḫ* of Q. was tributary to the king of ↗Sinnār, as reported by James ↗Bruce. In the course of the 19th cent., when the Ottoman–Egyptian administration was established in Kassala, Q. became a garrison, guarding the frontier to northwestern Ethiopia (↗Wälqayt), and a centre of administration. When in the 1880s the Mahdists expanded over virtually all of Sudan and into the Eritrean lowlands, they also used Q. as a centre, from where they raided the lowlands of Qafta and ↗Ḥumära in western Wälqayt and expanded further south. Q. is connected by road with Ḥumära and Gondär, ↗Mätämma (↗Qallābāt) and ↗Khartoum and has a railway station. The regional state of Q. includes Q. city, Faw, Qallābāt, and Fašaga.

Similar to the neighbouring region of Ḥumära the region is very fertile, has enough rain, but is afflicted with malaria. Originally a mainly nomadic area in the Sudanese borderlands, it has now changed into an area dominated by agriculture, with production of sesame, sorghum, sunflower, cotton and other seeds, especially since the consequent introduction of large-scale mechanized farming in the 1950s. This attracted migration from all parts of the Sudan (such as Furi from Darfur, Dinka, Nuba, Arabophone groups and even ↗Hausa, ↗Fellata etc.), Ethiopia and Eritrea. Traditionally Q. entertains close commercial relations with Ḥumära, Sudanese from Q. also settling there, and vice versa. Q. city's population today numbers ca. 350,000 inhabitants and has grown over five times in one generation. The northern part of Q. state included agricultural regions irrigated by the ↗Gaš and ↗Setit.

Qalä ^{c}Awadi

Əç̣ç̣age Q.^{c}A. (**ቃለ፡ ዐዋዲ**; d. 1686) was a prominent 17th-cent. ecclesiastic. He was first appointed ↗*əç̣ç̣äge* in April 1678 (GuiIohan 25 [tr.]), during the reign of *aṣe* ↗Yoḥannəs I, and was still in charge in September 1678 (ibid. 36).

In autumn 1679 a new *əç̣ç̣äge,* ↗Ṣägga Krəstos, is reported to have been present at the discussion concerning the relics of *abunä* ↗Ewosṭatewos (Perruchon 1899:175; GuiIohan 61; BassÉt 35; CerDLib II, 177).

Q.^{c}A. was reappointed in September 1686 by *aṣe* ↗Iyasu I. Though designated by the monks of ↗Däbrä Libanos of Šäwa, Q.^{c}A. is reported to have begged Iyasu not to appoint him, referring to the position as "the ruin of his soul" (GuiIohan 101f. [tr.]). Q.^{c}A. died before he could take office.

The process of the *əç̣ç̣äge*'s designation changed during the 17th cent., and it became possible to select an *əç̣ç̣äge* from heads of some other monasteries belonging to the network of Däbrä Libänos (Rossignol 2004: 28–33). The function of *əç̣ç̣äge* was a source of tension between the Emperor and the community of Däbrä Libänos. Iyasu I tried to scale down the office of *əç̣ç̣äge* and put him under his own authority. The interventionist policy of Iyasu destabilized the charge of *əç̣ç̣äge,* whose role changed significantly at the beginning of this Emperor's reign (Rossignol 2004: 105).

According to the list of the heads of Däbrä Libanos, Q.^{c}A. revised the musical notation of the ↗*Dəgg*^{w}*a* when he retired to ↗Betä Ləḥem, before or after his nomination (CerDLib II, 177; cp. ↗*Mələkkət*). Besides, Q.^{c}A. might be one of the owners of a manuscript containing the ↗*Wəddase amlak* and the Marian hymn ↗*Məsṭira ṣəgeyat* in Amharic (ms. EMML 1308, fol. 136a).

Əç̣ç̣äge Q.^{c}A. is mentioned in the royal chronicles (GuiIohan) but not in the "short chronicles" written in monastic circles (↗Historiography). This could indicate that he was criticized or condemned by his own monastic community.

Qalä Ḥəywät

Q.Ḥ. (**ቃለ፡ ሕይወት**, 'The Word of Life', also Kale Heywet) has Baptist roots. Its beginnings are related to the ↗Sudan Interior Mission (SIM), which under the leadership of Dr. Thomas ↗Lambie started work in ↗Kambaata, ↗Hadiyya, ↗Wälaytta and ↗Sidaama in 1928. As a result of this work, during the Italian occupation and in the 1940s, local congregations came into being and an independent indigenous church leadership developed. In spite of opposition and harassment from local authorities, the number of believers grew and by 1955, 538 congregations had come into being. After 1951, as a result of a split that took place in Kambaata, a group of people asked for membership in the ↗Ethiopian Evangelical Church Mekane Yesus.

During the 1960s the number of congregations grew to 1,603 and by 1967 the believers were 143,990 (61,000 in Wälaytta, 42,087 in Kambaata and Hadiyya and 16,600 in Sidaama). To co-ordinate them the local churches formed an Evangelical Believers' Association which held annual meetings. Expatriate missionaries were not members of the Association and had no right to vote. In February 1971, a denominational church known as Q.Ḥ. was formed. The Church approved a constitution and Mulatu Baffa was elected as its first president with *ato* Täklä Wäldä Giyorgis as the first General Secretary. Initially, the Church was based in the SIM compound at *ras* Täsämma Śäfär.

During the *Därg* Regime (↗Provisional Military Administrative Council) Protestant churches were closed, evangelists imprisoned and elders fined. In Kambaata and Hadiyya evangelical Christians experienced relative freedom to conduct their services but in Wälaytta nearly all churches were closed in the early 1980s. In Addis Abäba the Q.Ḥ. had five known congregations, out of which two were closed permanently and one temporarily.

The number of believers and congregations of the Q.Ḥ. has, nonetheless, steadily grown. In 1974, it had 2,030 congregations and close to 2 million members and in 1995 about 3,600 congregations with a membership of 3.2 million, making it the largest evangelical denomination in Ethiopia. In 2006 the number of members was about 5.7 million with 6,347 local churches.

During the 1990s and 2000s the Q.Ḥ. Church built its own buildings in the centre of Addis Abäba. The church carries out spiritual ministries across the country. It operates at least 115 lower Bible Schools training more than 4,000 students; 28 certificate-level Bible Schools for high school graduates in which the media of instruction is in Amharic. It has five diploma-level theological and ministerial training colleges in which the language of instruction is English at Dilla, ↗Hossaᶜəna, ↗Soddo, Durame and ↗Ǧimma. The Q.Ḥ. runs the Evangelical Theological College in Addis Abäba and in conjunction with other Evangelical churches of Ethiopia it owns the Evangelical Graduate School of Theology. Q.Ḥ. local churches run church educational ministries.

The Church has always offered social services in conjunction with its spiritual ministries. Following the 1973/74 drought it extended its social services and provided relief food in collaboration with partners inside the country and abroad. In the ensuing decades the focus of the development service shifted from relief and rehabilitation to long-range development, engaging in spring capping and drilling, in medical ↗HIV-AIDS programs, in establishing small-scale irrigation schemes, in providing fertilizers and farm tools and in other programs.

The Q.Ḥ. Church has no hierarchical structure and no office of bishop or archbishop. The local congregations are widely independent in administration and self-supporting led by elected elders. Leadership is mostly offered on a voluntary basis. The president of the Q.Ḥ. and Church offices are elected by the National General Assembly for a fixed period of time. The Church sent several cross-cultural missionaries both inside the country and abroad and is also active in Eritrea. The Q.Ḥ. is a member of the Evangelical Churches Fellowship of Ethiopia.

Qäleməntos

The Q. (**ቀሌምንጦስ**, or **መጽሐፈ፡ ቀሌምንጦስ**, *Mäṣḥafä Qäleməntos*, 'Book of Q.') is a seven-book Gəᶜəz work of pseudoepigraphical, apocryphal and canonical content, partly arranged and partly literally translated from Arabic texts in the 14th cent. The Q. owns its name to the semi-legendary disciple of St. Peter, Clement of Rome, who is traditionally believed to have been Peter's successor in the see of Rome and is a main character in early Christian apocryphal literature, esp. as is represented by the Pseudo-Clementine romance (the main works are the Latin and Syriac *Recognitiones*, and the Greek *Homiliae*, cp. CANT no. 209), to which the Q. is only marginally related through faint allusions. The Q. is at present included in the Ethiopian Biblical canon (cp. Cowley 1974: 320, 322; Bausi 1990: 60–66). The Gəᶜəz form of the name Q. does not seem to derive from Arabic (*Aqlīmas* and similar forms), but is rather to be explained by the early acquaintance of the Ethiopian tradition with Greek texts of apocryphal (lists of Apostles and disciples) and canonico-liturgical genre (cp. Bausi 2006: 60, no. 7), where the name of Q. is attested (also in the variant proto-forms **ቀለሜንጦስ**, *Qälämenṭos*,

ቀሌሜንጦስ, *Qälemenṭos*, from the Greek genitive form Κλήμεντος).

The work is arranged within the weak narrative frame of a great apocalypse (revelation) of Peter (to whom primacy among the Apostles is explicitly acknowledged) to Clement, in which the latter, as a disciple, asks the Apostle to teach him the secret mysteries Jesus Christ had revealed on the Mount of Olives, esp. concerning the creation of the world and the history of human kind, starting from the first generations up to Mary, although the narrative in the Q. actually ends with Jehoram, son of Jehoshaphat (cp. 1 Kgs 22:51). This section occupies the whole of Book I of the Q. and closely corresponds to the Arabic *Kitāb al-maǧāll*, 'Book of the Rolls' (up to Gibson 1901:47, l. 16 [text]: though the Arabic consistently proceeds up to the birth of Mary), paralleling and resuming narratives and materials of various related apocryphal writings: the *Vita of Adam and Eve*, also existing as a larger, independent work in Ethiopic (*Gädlä ↗Addam wäḥewa*, cp. CAVT no. 14), the *Cave of Treasures* (cp. CAVT no. 11; Toepel 2006) and the *Testament of Adam* (cp. CAVT no. 3; Bezold 1906). The *Cave of Treasures* and the *Testament of Adam* exist in Gəᶜəz as parts of the Q., not as independent works. Book II of the Q. opens again with the revelation by Peter to Clement concerning the mysterious secrets narrated by Jesus on the Mount of Olives 40 days after the Resurrection and before the Ascension. This revelation deals with cosmology and the creation of Heaven and Earth, the angelical hierarchies, the heavenly Jerusalem, Paradise, the fall of Satan and the development of the Christian faith, with a list of 70 heresies. The second part of Book II ends with an obscure historical apocalypse, generally believed to hint at mid-8th cent. events (succession to the caliphate and Byzantine-Islamic wars), in the style of Jewish, Christian and also Islamic historical apocalypses.

Both Books I and II of the Gəᶜəz Q. correspond to the portions included in the Arabic *Apocalypse of Peter to Clement*, a widely disseminated work, whose rich manuscript tradition has not yet been explored in detail (cp. GrafLit vol. 1, 283–92; Toepel 2006:9–13; cp. also Troupeau 1993), and which must not be confused with the Greek *Apocalypse of ↗Peter* (CANT no. 317). Some recensions of the Arabic work also contain a section of the *Acts of Peter* (CANT no. 205) actually related to the Pseudo-Clementine romance. Yet, the Gəᶜəz version of this section is not attested in the Q., but in revised and enlarged recensions (since the 17th cent.) of the *Gädlä ↗ḥawaryat*, where, in turn, since the earliest recensional phase a shorter genuine Pseudo-Clementine section of the *Acts of Peter* (CANT no. 204) is included.

At variance with Books I–II (a real first part of the Q.), no parallel can be ascertained for contents of Books III–VII (the second part of the Q.), apart from a generic correspondence with the Arabic *Apocalypse of Peter*. Of varying length and subjects, Books III–VII deal with several apocryphal and apocalyptical topics (eschatology, the advent of the Antichrist, the last judgment, demonological tales, fragments of apocryphal legends, exegesis), all instrumental to conveying canonical and penitential content, within the frame of general ecclesiastical discipline, which occupies by far the majority of the second part of the work. The final arrangement of Books III–VII may be due to an Ethiopian compiler, who worked starting from various sources and materials, although neither definitive evidence has yet been found (cp. Bausi 1992:32–35 for some clues), nor will it be possible till the manuscript tradition of the Arabic *Apocalypse of Peter* has been thoroughly studied.

At least some 30 manuscripts of the Q. are known (cp. detailed list in Bausi 1992:15f., Id. in WälYoh). The 14th/15th-cent. ms. EMML no. 1843 (a *↗Senodos* manuscript, where selected passages of Books III and IV of the Q. [against Sabbath observance, on the primacy of the patriarch of Rome, and on the observance of conciliar canons] were inserted on fols. 56va–58ra, cp. Bausi 1992:15) testifies to its early translation from the Arabic, probably not later than the 14th cent. Among the other more ancient manuscripts, Ṭānāsee 175 = Dāgā Esṭifānos 64 (15th cent.) and ms. Monumento Nazionale di Casamari (Veroli), Ms. 121 (15th/16th cent.) may be mentioned (cp. Proverbio 2004). Although ancient, the former depends upon a subarchetype common to the other six manuscripts where a significant mechanical transposition of a long passage in Book II occurs (cp. Bausi in WälYoh), also affecting ms. Tübingen, Universitätsbibliothek, M. aeth. 1 = M. a. IX 1 and ms. BN d'Abbadie 78, on which respectively Dillmann's fundamental study (1858) and Grébaut's translation (1911–21) were based.

There is neither an edition nor a unitary translation of the Q. Books I, II, part of III, and a few scattered passages from Books IV, V and VI have been translated by Grébaut (1911–21), also in collaboration with Roman (1927/28–30), on the basis of ms. BN d'Abbadie 78. Bausi (1992) has given an Italian translation of Books III–VII on the basis of mss. BritLib Orient. 751 (a facsimile of this ms. is also provided), also considering mss. EMML no. 1141, Tübingen, M. a. IX 1 and EMML no. 1843. Dillmann closely used the Tübingen manuscript for the compilation of his *Lexicon* (cp. DillmLex viif.). The critical edition of the Q. (for a preliminary analysis of the manuscript tradition on the basis of twelve manuscripts cp. Bausi in WälYoh) is an urgent desideratum.

As is to be expected in view of its various contents, the fortune of the Q. in Ethiopian literary tradition is twofold. On one hand, it has been widely used, also in the ↗ *andəmta* commentary tradition, as a source of information on Biblical history, cosmology and angelology (cp. Cowley 1988). On the other hand, the Q. is very often referred to (in hagiographical and theological writings) as one of the sources of ↗ Canon law, although the quotation of Clement might sometimes refer to other pseudepigraphical texts of canonical genre (first of all, the *Senodos*, where several texts are attributed to the disciple of Peter). The Q. must have played a decisive, probably still largely underestimated role, in the development of apocalyptic and exoteric writings at the turn of the 14th/15th cent.: e.g., the *Mäṣḥafä ↗ məśṭirä sämay wämədr* uses and quotes some apocalyptic sections of the Q. (cp. Bausi 1992: 35f.). According to some authors (cp. Getatchew Haile 1981: 103–09, and for a discussion of collateral implications, Fiaccadori 2004), a polemical and obscure passage of the *Mäṣḥafä ↗ məśṭir* by ↗ Giyorgis of Sägla (YaqMist II, 305f. [text] = 169f. [tr.]) aimed at contending the canonicity of the Q. Yet, it is now apparent that Giyorgis's statement must be put into a more complex frame by taking into consideration the number of texts Giyorgis was well acquainted with, and a reference to the Q. can not be taken for granted, it being much more likely that the target of Giyorgis's criticism was a canonico-liturgical collection (cp. Bausi in PICES 15). Although oral witnesses testify that *andəmta* commentary on the Q. still existed in the 19th cent., none seems to have survived (cp. Cowley 1977: 145, n. 7).

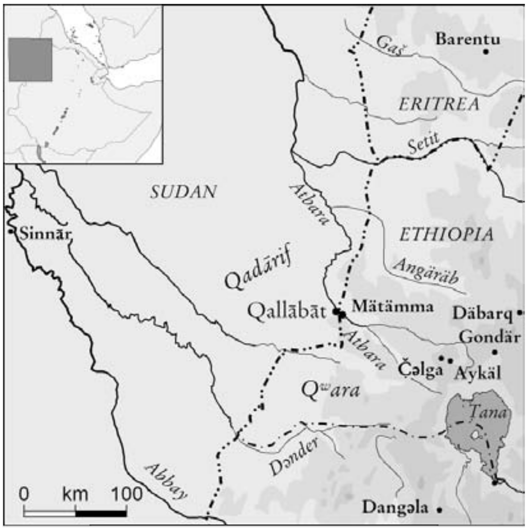
Alessandro Bausi

Qallābāt

Q. (Amh. ጋላባት Galabat, Engl. Gallabat) is the Arabic name of a historical "Takruri" sultanate (↗ Tukrir), which was at times tributary to Ethiopian rulers. It is also the name of a border town in today's Sudanese province of ↗ Qadārif. The Q. sultanate had its centre in the city of al-



Matamma, which later took the name Q. on the Sudanese side, and ↗Mätämma on the Ethiopian side of the modern border.

Q. was possibly named after the village of Q. in Darfur. The name, originally only applying to a hill above al-Matamma, subsequently superseded the original name of the whole district, ↗Ras al-Fīl. From the beginning, the population of Q. mainly consisted of Muslim settlers, originally Ǧaᶜaliyyin. Starting from the late 18th cent., new migrants settled in this border region after their pilgrimage to ↗Mecca. Most of them originated from Bornu, Darfur and Wadai; they were generally subsumed under the term Takruri. They controlled the customs post and, at the start, were tributary to Ethiopian rulers.

In the 1820s ᶜUṯmān b. ᶜAbdarraziq, a Bornu leader, ruled Q. until Furi groups from Darfur defeated him and established their political domination over the whole district. The followers of ᶜUṯmān, the *bani* ᶜUṯmān, fled to the Qafta region, near ↗Ḥumära (probably forming the nucleus of some of today's Takruri groups in north-western Ethiopia). Under the leadership of the Furi *šayḫ* (or *al-makk*) Miri, Q. entered into tributary relations with the Egyptians in 1838. An Egyptian garrison then guarded the frontier at the town of al-Matamma. It was attacked by the governor of ↗Qʷara in 1848, who, however, was not able to reestablish Ethiopian overlordship. Later, ca. 1860, Q. became tributary to ↗Tewodros II when he was at the peak of his power. However, Q. continued to pay tribute also to the Egyptian governors. A quarrel between two competing rulers of Q. led to an intervention by the Egyptians in 1863 and the full inclusion of Q. into the Sudan. The population of Q. then comprised about 30,000 people, in about 24 villages (Robinson 1926/27: 51).

The Takruri managed to preserve their form of self-government in Q. Their assemblies elected their *šayḫ* until the British established themselves in the Sudan, the Takruri of Q. thus forming a politically "distinct entity" until the late 19th cent. (Robinson 1926/27: 52). Q. remains an ethnically distinct "island" until today.

Wolbert Smidt

Qällafo

Q. (230 m A.S.L.) is the capital of the Q. *wäräda* in the Gode zone, a division of the Somali Region (for location s. map for Qäbri Dähar). Its name probably derives from Somali *aw* (*šayḫ*) Qalif. Located on the left bank of the ↗Wabi Šäbälle River it is an important market for pastoralists who exchange their products with the sedentary agriculturists who cultivate the irrigated valley. The river has occasionally flooded the town severely, e.g., in 1961 and 1968 (Lindahl ms.).

Q. was the centre of a sultanate of the Aǧuuraan clan (↗Hawiye) which was connected with the ports of ↗Mogadishu and ↗Hobyo.

Q. was one of the military posts which guarded the road to Bale and Arsi following the Wabi Šäbälle course and the Tug Fafän valley leading to Harär. As such Q. played a role in the ↗Italian war 1935–36. In 1933 the town, under the command of *fitawrari* Sämmo, was beleaguered by Somali–Italian troops. Even before the arrival of the Italians the area had already been raided by *sulṭan* Olol Dinle who became the most important collaborator of the Italian occupants (Lindahl ms.).

According to the 1994 census (CSA 1998) Q. town had 8,471 inhabitants. In 2004 the number is estimated at 13,623 inhabitants.

Qalləčča

The word Q. (ቃልቻ, Orom. *qalličča*) refers to a type of diviner-“shaman” prevalent in many parts of rural Ethiopia, but especially in the southwest. Presumably the term is derived from the Oromo word ↗*qaalluu*, a prestigious religious-ritual officiator (still retained among the ↗Boorana, ↗Guğği and part of the ↗Mäč̣č̣a), and was introduced by Amharic speakers as Q. in the rest of the country. The *qaalluu* was the most important religious official in the Oromo religion system, in touch with the sacred and descended from a “pure” lineage or family and of morally upright behaviour, but he also performed divination. The Q. has less social status, and being more of a healer-diviner connected to one or more spirits is often opposed to more “official” priestly or mediatory figures in society. He (or less frequently, she) assists people in distress and tries to solve personal and practical problems, i.e. thus having more of a problem-solving rather than a cosmological role.

Historically, the Q. was known in the 19th cent. (mentioned by Tutschek 1844) but specifically emerged in the late 19th–early 20th cent., perhaps as a response of recently conquered or dominated peoples in times of crisis and decline after conquest, when crisis cults emerged and spirit ↗possession increased. While Q. were known also among the Oromo alongside the *qaalluu* they emerged notably among the peoples of southern and western Ethiopia at the time. In central and northern Ethiopia the word Q. also refers to Muslim students and lower clerics (HusIslam) or spirit mediums. Q., while delegitimized and attacked by government officials since the time of the *Därg* regime, still occur among a large number of ethnic groups, among them ↗Hadiyya, ↗Sidaama, ↗Meʾen, ↗Dizi, ↗Yäm, ↗Benč̣, ↗Šeko, or ↗Maale (but also among southern townspeople of any background). They are known under other names elsewhere (such as *šarečč̣o* among the ↗Dawro or ↗Wälaytta). Little research has been done on the Q. as such or on their place and role in Ethiopian rural societies.

The Q. officiate as spirit mediums or magician-healers, responding to afflicted people’s needs in cases of misfortune, unexplained disease, possession, spiritual disarray or infertility. Their skills are usually inherited, the ancestry and reputation of their descent line giving them more credence. The Q. appeal to supernatural powers (God, gods or spirits), and have a strong personal, often charismatic personality. The clients either go through treatment on the spot, i.e. in the special compound of the Q. containing a kind of secluded sanctuary or spirit house, with the Q. performing a ritual (via induced trance) on behalf of them. Clients are often given the task of offering certain animals as a ↗sacrifice or offering, following food taboos, and paying the Q. a tribute. The Q. are also said to pronounce curses, which are much feared. The Q. are, however, not to be equated with Amh. ጠንቋይ (*ṭänqʷay*, ‘sorcerer’).

While the function of a Q. as a magician-healer-medium with supernatural or spirit-induced powers can, and often does, lend itself to abuse (e.g., high remuneration in money, goods or livestock), many of the Q. have a role as popular ↗healers and psychological “councillors” in rural societies that have no other means of treatment. Certain missionaries and other Christian and Muslim believers often translated Q. as “witch doctor”, but this is incorrect, as witchcraft (like in Bantu-speaking African societies) is a quite different phenomenon.

Qälləm

Q. (ቄለም, Orom. Qellem), more precisely Qellem Wallagga (also Qeellam Wallaggaa), is one of the four zones in Wallaggaa (↗Wälläga) which were established in 2005. Before the 1990s it was an *awrağğa*. Q. encompasses eleven *aanaa* (Amh. *wäräda*); these are ↗Sayyoo, ↗Gidaamii, Anfilloo, Garğeeda, Ğimmaa Horroo, Gaawoo Qeebbee, Daallee Sadii, Hawwaa Galaan, Yamaalogii, Haroo Sabbuu, and Laaloo Qilee. Today, its centre is the Sayyoo *aanaa*, while originally it was Gidaamii with the mountain Walal, regarded as sacred in local tradition. The administrative capital of Q. is ↗Dambi Dolloo in Sayyoo.

The holy mountain (Tuluu) Walal in Qälləm; photo 2008, courtesy of Negaso Gidada

The history of Q. is closely linked with the Leeqa kingdom of Q. which was founded in the 19th cent. At the very origin, Q. was just the name of a village in the Gidaamii district, were Q.'s first ruler *abbaa duulaa* Tulluu was born; the areas under his control were named after his village of origin. The name Q. was also transferred to the Leeqa Qellem ('Leeqa of Q.' [↗Leeqa]), Tulluu's group.

The Leeqa Q. live north of Walal in the Gidaamii (formerly Qumbaabii) region, beyond the Birbir River. Allegedly, they are of similar origin as the ↗Anfillo, but were classified ethnically as part of the larger ↗Mäč̣č̣a Oromo group (for Q. clans s. Negaso Gidada 2001:260f.). Starting from ca. 1730 Sayyoo groups had settled in the region (Negaso Gidada 2001:93–113, 241) and entered into a long history of competition with the Leeqa of Q. (ibid. 104). In the mid-19th cent., the Leeqa and Sayyoo were still organized socio-politically according to the ↗*gadaa* system, but later accepted the establishment of hereditary rule under local leaders (some data suggest that even before the arrival of the Leeqa and Sayyoo groups some social stratification had started in Q., s. Negaso Gidada 2001:94).

In the mid-19th cent. *abbaa duulaa* Tulluu unified the eight Leeqa groups of Gidaamii, Ǧimmaa and Horroo, becoming their ruler. His power over this newly formed kingdom of "Q." was based on the agricultural wealth of the area and the trade routes to the then Sudanese Fadasi, dominated by the ↗Berta (Fadaši). Tulluu's successor was his stepson *mootii* ↗Ǧootee Tulluu, who further annexed numerous neighbouring districts, such as Begii (↗Mao), the six Sayyoo subgroups, and the small kingdom of Anfillo (Terrefe Woldetsadik 1968:74), becoming the king of unified West Wallaggaa west of Aʾira (↗s. EAE, vol. 5) mountain. He retained the name Q. for this enlarged kingdom, and Gidaamii remained Ǧootee's centre of power. It was due to the threat of Ethiopian occupation, after the battle of ↗Əmbabo, that the *mootiis* of Sayyoo and Anfillo submitted to Ǧootee's rule in 1883/84 (Negaso Gidada 2001:236, 241).

At times he was helped by the ↗Mahdists (Triulzi 1981:162f.). However, in around 1886, the Mahdists established direct control over the region, levying taxes, which led to Ǧootee's resistance, in alliance with his neighbour, *mooti* ↗Moroda Bakaree of Leeqa ↗Naqamtee. As a counter-reaction, in 1888 the Ethiopian general *ras* Goobanaa (↗Gobäna Dač̣i) fought them with the help of the Leeqa (Triulzi 1981:164f.) and subdued Q., which became an Ethiopian fief under Ǧootee, now *däǧǧazmač* (ibid. 166).

Nevertheless, Ǧootee was deposed by ↗Mənilək II some years later, in 1908. In order to win the allegiance of Q., *ləǧ* ↗Iyasu then married into Ǧootee's family and re-installed him as the governor of Q. in 1913/14. After Iyasu's downfall, Q. was handed over in 1918 to Amhara governors directly ruled from Addis Abäba. This caused widespread resistance, which in turn provoked heavy punitive measures by *däǧǧazmač* ↗Bərru Wäldä Gäbrəʾel, after which many Leeqa Q. fled to Begii. Ǧootee was captured and imprisoned in ↗Däbrä Bərhan in North Šäwa, where he died after about six years. Starting from 1937, ↗Oliqa Dəngəl, a converted Protestant, initiated and led a considerably well-organized armed ↗resistance in Q. against Italian rule, with its centre in the Walal and Akaakil mountains and in the Sayyoo area.

After the incorporation of Q. into Ethiopia, a number of Leeqa and Sayyoo of Q. converted to Orthodox Christianity, and, during the short Mahdist domination in 1886–88, to Islam (Negaso Gidada – Crummey 1972; Triulzi 1975:66). The majority, however, continued to worship ↗*Waaqa*. From 1918, after the establishment of the American Presbyterian Mission in Dambi Dolloo, conversion to ↗Protestantism started, strongly furthered by *qes* ↗Gidaada Solan of Sayyoo. East of Q., the German ↗Hermannsburger Mission was established in Aʾira in Gimbii *awrağğa* in the late 1920s and spread the Lutheran denomination of Protestantism (furthered by *qes* ↗Dafaa Ǧammoo of Aʾira, ordained in 1941, and others). Today there are many thousands of followers of different Protestant denominations, including Adventists, and of Orthodox Christianity, Catholicism and Islam in Q.

Qallu

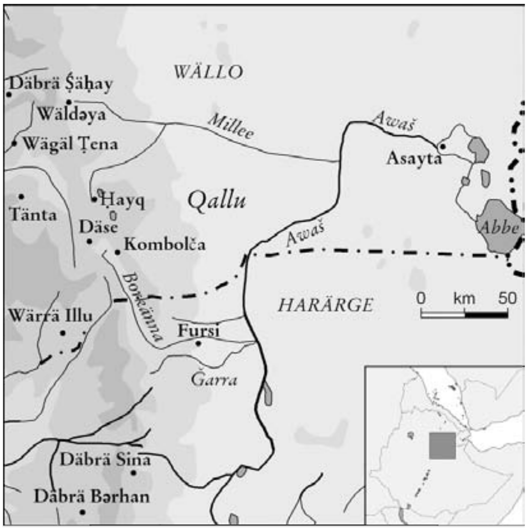
Q. is a historical area in south-eastern ↗Wällo. Its name is derived from Wärrä Qallu, the name of the Oromo clan who settled from the late 16th cent. in the valleys between the eastern escarpment and the western highlands of the mediaeval province of Amhara.

In the late 18th and early 19th cent, Q. became a chiefdom under its own hereditary dynasty, the most prominent member of which was ↗Bərru Lubo. Under him, Q. expanded to the south in order to subjugate Reqqe, Artumma and Däwwäy, districts on the frontier with the rising principality of Šäwa. This led to occasional conflicts with the Šäwan rulers. European travellers (s. IsKrapf, HarAeth, Combes – Tamisier 1838) described Q. as stretching from the border with the sultanate of ↗Awsa in the east to the ↗Millee River in the north-west, and to the Borkänna River in the west and the south.

The residences of the Q. potentates were at Ayn Amba and Gof. The principal market was Ančarro which was also a centre of the slave trade.

As a result of the interaction between the Oromo of Q. and the pre-Oromo inhabitants such as the ↗ʿAfar, the ↗Argobba and the ↗Amhara, the Oromo ruling families converted to ↗Islam. Whilst some of the later Q. rulers converted to Christianity, popular traditions portray them as attached to Islam. From the beginning, the heads of Q. were patrons of Muslim scholars and merchants and promoted long-distance trade with central and western Wällo, southern Təgray, Goğğam, Bägemdər and Šäwa, and with the Gulf of Aden coast through northern ʿAfar and the ports of Tağūra, Zaylaʿ and Berbera, and even with Yemen. By the 18th cent. Q. had developed into an important centre of Islamic learning. The traditional ↗education of Q. was particularly famous for such fields as Arabic grammar, law and mysticism. The area is also rich in shrines and centres of ↗pilgrimage such as Gäta, Mäğit, Ğäma Nəguś and Haroyye. Islam is still the dominant religion in the region today.

Q. Muslim scholars are renowned for their knowledge and for their teaching and preach-



ing abilities, as well as for resistance to forced conversion (cp. ↗Ṭalḥa b. Ǧaᶜfar). The *ᶜulamāᵓ* of Q. composed popular treatises in Arabic and Amharic (*ᶜağamī*) and Sufi poetry.

Q. as an autonomous administrative division was incorporated into the Ethiopian empire in the late 19th and early 20th cent., although members of the old dynasty were confirmed as governors. From 1946 to 1974, Q. was an *awrağğa* with the administrative capital in ↗Kombolča. Since 1994 it has been part of the South Wällo zone of the Amhara *kəlləl*. Its southern Oromo-speaking districts have been incorporated into the Oromiyya zone.

Modern infrastructure is still lacking in Q. The only motor road passing through Kombolča to ↗Däse and ↗Asäb was constructed by the Italians. The first (and the only) high school was opened in the late 1970s. A meat-canning and textile factories (and later a tannery) have been the only symbols of industrialization. Electric power for Kombolča was an extension from the main supply centre in Däse.

↗Administrative division

Hussein Ahmed

Qalqašandī, al-

Q. (القلقشندي, full name: Šihābaddīn Abū l-ᶜAbbās Aḥmad b. ᶜAlī; b. 1355, Qalqašanda, north of Cairo, d. 1418) was born to a family of scholars. He received his education in Alexandria, where he studied literature, tradition (*ḥadīṯ*) and law, with the intention of becoming a judge (*qāḍī*). His early works focus on this field. After a time spent teaching, he began to work at the ↗Mamlūk chancery (*dīwān al-inšāᵓ*). As a *kātib ad-dast* ('secretary at hand'), Q. had to accompany the *kātib as-sirr* ('chief secretary') when the latter spoke justice together with the *sulṭān*. The new post changed his interests as an author. From then on, he composed mainly books that became tools for those who worked in the *dīwān al-inšāᵓ*. The most important of such books is his voluminous encyclopaedia for secretaries *Ṣubḥ al-aᶜšā fī ṣināᶜat al-inšāᵓ* ('The Dawn of the Night-Blind on the Art of Composition').

This encyclopaedia reproduced as examples many original or allegedly original documents, among them Prophet ↗Muḥammad's letter to the ↗*nağāšī*, after the text transmitted by Ibn Isḥāq (d. 767; Qalqašandī 1913–19, vol. 6, 379; cf. Björkman 1928: 119), and the Ethiopian king's answer thereto (Qalqašandī 1913–19, vol. 6, 466f.; cf. Björkman 2928: 121). As an example of the correspondence with kings of the "unbelievers", Q. quotes the letters exchanged between the ruler of Ethiopia and the Mamlūk *sulṭān* Baybars in 1274 (Qalqašandī 1913–19, vol. 8, 39–41, 119f.; cf. Björkman 1928: 132, 134; Wiet 1938: 117). He also provides a list of standardized praise titles to be used in the official correspondence with the Ethiopian kings (Qalqašandī 1913–19, vol. 6, 80–94, cp. Gori 2002: 38–43).

Since a knowledge of geography was also necessary for a secretary, Q. included in the *Ṣubḥ al-aᶜšā* a description of the world known to him. In his account on Ethiopia (*al-Ḥabaša*), Q. depends upon the *Masālik al-abṣār fī mamālik al-amṣār* ('Routes toward Insight into the Capital Empires') by Ibn Faḍlallāh al-↗ᶜUmarī (d. 1349), whose information on the Muslim countries of Ethiopia goes back to ↗ᶜAbdallāh az-Zaylaᶜī (Qalqašandī 1913–19, vol. 5, 302–37; cf. Björkman 1928: 107f.). As to the rulers of Ethiopia, Q. enumerates the patriarchs of Alexandria. In the same vein is his statement that all Christians of Ethiopia are followers of the Jacobite patriarch, and that the Great King of Ethiopia is in his obedience (Qalqašandī 1913–19, vol. 11, 395). The geographical part of the *Ṣubḥ al-aᶜšā* also contains references to the ↗Beğa (ibid., vol. 5, 273f.).

Src.: ABŪ L-ᶜABBĀS AḤMAD AL-QALQAŠANDĪ, *Kitāb Ṣubḥ al-aᶜšā* ('The Book of the Dawn of the Blind'), 14 vols., Cairo 1331–38 H. [1913–19 A.D.].

Lit.: WALTHER BJÖRKMAN, *Beiträge zur Geschichte der Staatskanzlei im islamischen Ägypten*, Hamburg 1928 (Abhandlungen aus dem Gebiet der Auslandskunde 28); CLIFFORD EDMUND BOSWORTH, “al-Ḳalḳas̲h̲andī”, in: *EI*^{2} vol. 4, 1978, 509–11; ALESSANDRO GORI, “Sugli *incipit* delle missive inviate dalla cancelleria mamelucca ai sovrani d’Etiopia nel XIV e XV secolo”, *RSE* 44, nuova ser. 1, 1, 2002, 29–44; GASTON WIET, “Les relations égypto–abyssines sous les sultans mamlouks”, *Bulletin de la Société d’archéologie copte* 4, 1938, 115–40.

Ewald Wagner

Qämär

Q. (**ቀመር**) is the site in the western range of ↗Gär^{c}alta massif at the top of a mountain (2,385 m A.S.L.) overlooking the northern pinnacle of ↗G^{w}əḥ (s. map for Gär^{c}alta, EAE, vol. 2) and the location of a ↗rock-hewn church dedicated to the Four Heavenly Beasts (Qämär Arba^{c}ətu Ənsəsa).

The church, measuring ca. 11.5 x 9.5 x 4 m, is approached by an open rock-cut passage going along the north façade and turning west where it ends with a niche behind which there is the western doorway to the church, presently blocked. That place is used for the local ↗*maḫbär* celebrations. The church is excavated from white and beige sandstone. It has two aisles divided into six regular bays (three northern rectangular, three southern square) by two large cruciform pillars with simple bracket capitals. The pillars are connected by seven arches. Presently, two eastern bays, used as sanctuary, are partly screened by constructed balustrades. The southernmost bay is enlarged by a niche cut in the wall. The ceiling of each bay is flat and carved with decorative checkered patterns, except for the ceiling of the south-east bay which has a single large square-framed cross.

Qämär Arba^{c}ətu Ənsəsa, view towards the sanctuary; photo 2005, courtesy of Michael Gervers

Originally the north and south walls of the central and sanctuary bays had windows but they are now covered over. The doorway in the first northern bay is presently used as main church entrance. Small caves around the church are used as graves, the largest one behind the sanctuary. The church is difficult to date; so far, there is no information concerning manuscripts.

Ewa Balicka-Witakowska

Qändil: Mäṣḥafä qändil

The M.q. (**መጽሐፈ፡ ቀንዲል**, lit. ‘Book of the Lamp’) is a ritual for performing the sacrament of ↗Unction of the sick in the ↗Ethiopian Orthodox (Täwaḥədo) Church.

According to the published manuscript tradition, the service should be as follows: it should open with the usual introduction of the *śər*^{c}*atä qəddase* (i.e. as at Eucharistic liturgy, cp. ↗*Qəddase*) and a prayer over the ↗oil, which is then blessed with the sign of the cross. The Service comprises seven sections or “prayers”; each consists of the lighting of a wick, a supplication (*mästäbq*^{w}*ə*^{c} or *ṣäwatəw*, cf. VelMe II, 187 sq.; s. ↗Litanies), an epistle, the Trisagion, a Gospel reading preceded by the *Prayer of the Gospel* with incensing and a ↗*məsbak*, and a prayer. There follows the imposition of the Gospel book upon the patient’s head by all the priests, while the leading priest says the main prayer. Strophae, the *Our Father*, 41 *Kyrie eleison* and the *Prayer of Blessing* (found with the Anaphora of the Apostles) are also said. Now the anointing of the patient and of the people present takes place (as in the valuable Greek ms. Coislin 213: Mélia 1975: 219 and 226). A very long prayer “after the *qändil* has been completed” concludes the service.

The text is taken from the Coptic Church service of the *qandīl* (from the Gr. κανδήλη, ‘candle’, itself taken from Latin), which in turn is parallel to that of the Greek Church (cf. Burmester 1967). The M.q. was published by Chaîne (1913–14, with a Latin translation) from the oldest known ms., Paris BN éth. 78 (written in February 1561, most probably in Egypt); the title states that the book was translated from Arabic. The text of the liturgical editions of the M.q. fits more or less with that of Chaîne. The Rome 1974 edition, combined from several manuscripts, corresponds to the same *Vorlage*, but in a different translation.

Only a few details distinguish the M.q. from the Coptic service: there are minor discrepancies in the rubrics as to which usual prayers (e.g., *Our Father*, Creed, etc.) should be added; again, near the end of the first prayer (Chaîne 1913: 434, 435, line 15, between "days of his life" and "through the blood"), the Ethiopic does not include the sentence "yet, if it be ordained that [thy sick servant] be taken hence, let this be by the angels of light with power that will save him from the demons of darkness" (Burmester 1967: 147, lines 2ff.); the M.q. does not mention that "the sick man shall be anointed daily … [for] seven days" (a rubric which is found again in the Greek Coislin 213: Mélia 1975: 193), and has no mention either of extra prayers for severely ill people (Burmester 1967: 151); the last and very long prayer, full of Biblical allusions, of the M.q. (Chaîne 1914: 26–40), is not found in Coptic liturgical books. The readings of the seven turns are: (1) Ja 5: 10–20; Jn 5: 1–18; (2) Rom 15: 1–7; Lk 19: 1–10; (3) 1 Cor 12: 28–13: 8a; Mt 10: 1–8; (4) Rom 8: 14–21; Lk 10: 1–9; (5) Gal 2: 16–20; Jn 14: 1–20; (6) Col 3: 12–17; Lk 7: 36–50; (7) Eph 6: 10–18; Mt 6: 14–18.

As a whole, the Ethiopic seems to be a faithful 16th-cent. translation from a manuscript of the Copto-Arabic service.

Qanna Sambata

Q.S. (b. 1945, Adda Bərga *wäräda* [ca. 60 km north-west of Addis Abäba], d. 1991) was an Oromo painter. He was taught by the painter ↗Bərhanu Yəmänu whom he met while working in Addis Abäba as a photographer around 1970.

Q.S. was supported by the French expatriates in Addis Abäba such as the technical adviser Denis Gérard, the anthropologist Jacques Bureau, and the archaeologist Rémy Audouin, in whose houses he stayed and worked. They supplied Q.S. with paints and canvas, acquired his paintings, and organized exhibitions for him in the Alliance Française. His patrons encouraged him to paint topical events: parades on the Revolution (now Mäsqäl) Square, literacy campaigns etc. However, Q.S. continued to reproduce traditional subjects such as the life of the Oromo, views of markets, Christian feasts, or scenes from the life of *aṣe* Tewodros II. Three Q.S.'s paintings were bought by the Society of Friends of the ↗Institute of Ethiopian Studies and donated to its museum. Other paintings are in private collections.

Qaññäw

Q. (ቃኘው, Engl. sp. "Kagnew") was the name of a US military base and radio station in ↗Asmära from the 1940s to 1970s (↗United States of America, relations with).

It was under the aegis of the Lend-Lease Act of 1939 that ↗Eritrea was to become the focal point of an American effort to blanket the ↗Middle East with airfields, ordnance depots and support bases. The Royal Air Force support base at ↗Gura^c (operated by the Douglas Aircraft Company), the US Naval Repair Base at ↗Massawa, and various other projects in Asmära, ↗Ginda^c and ↗Dängolo were established to support British forces fighting in Libya and Egypt (↗World War II). All were closed following the defeat of Germany's "Afrika Korps" in early 1943. The history of Q. Station started with a War Department memo dated 26 January 1943, titled *Establishment of a War Department Fixed Radio Station in Africa*, which detailed the operational objectives for what was to become the 4th Detachment of the Second Signal Service Battalion (re-named the Army Security Agency in 1945). On 30 April 1943 an Army lieutenant arrived in Asmära to conduct a feasibility study. By 17 May, he had been joined by six enlisted men. They refurbished Radio Marina – an abandoned Italian naval radio station on a hill above Asmära – and sent traffic samples to Washington. Eritrea's geographical location 15° N at an altitude of ca. 2,300 m A.S.L. contributed to anomalous propagation of radio signals. The quality of the samples caused the War Department to quickly expand operations. By 4 December, 54 American soldiers were working at what was then known as "Asmara Barracks".

The name Q. Station came with the signing of the Base Rights Agreement with Ethiopia on 22 May 1953. The term "Q." had several military associations in Ethiopian history. Q. was the name of a warhorse that, riderless, charged the Italians at the Battle of ↗^{c}Adwa in 1896, and Ethiopia deployed the Q. Battalion to Korea in 1951 (↗United Nations). Although the base was re-designated the 4th U.S. Army Security Agency Field Station in 1958, it was commonly known as Q. Station, especially in Ethiopia and Eritrea. Still today, the hill is often called Q. in local parlance, but also *Forto* or *Rädyo Marina.*

Shortly after the Base Rights Agreement was signed, a small newspaper, *The Weekly Gazelle,* began to be published. In 1955, it was re-named *The Kagnew Gazelle.* Although its focus was the Q. Station community, it included occasional articles on world events, Ethiopian history and travel destinations in East Africa.

The first group of wives and children arrived on 11 September 1946, and the first American baby was born in July 1948. On 7 March 1948, one Navy officer and six enlisted men established the US Navy Communications Unit 3. They joined another Army communications unit, the 3176th Signal Service Detachment, which maintained circuits to New Delhi, Teheran and Washington. In the 1950s and 1960s, US-$ 70 million were invested in expansion projects. Separate transmitter and receiver sites were built, as were such amenities as a school, hospital and gymnasium. KANU-TV, an affiliate of the Armed Forces Radio and Television Service began broadcasting in December, 1955. Barracks and family apartments were constructed to accommodate an American population that peaked at 4,200 in 1970. Apartments for 120 families were built on the original Radio Marina site which was known as Tract A. In January 1964 the Defense Department announced that a deep-space research facility would be built at Q. Station. Called Stonehouse, its then-secret mission was to monitor the Soviet Union's space explorations. By the end of the 1960s, Q. Station had grown to 13.7 km^2 of land with 185 buildings and 40 km of roads.

On 9 March 1972, the Army Security Agency (ASA) announced that it was withdrawing from Q. Station as a cost-saving measure. The Navy was designated to replace ASA as the host unit on 1 July 1973. The civil war that began in 1974 caused operations to be curtailed and evacuation plans to be prepared (↗Revolution). In April 1977 the Ethiopian Army seized Q.'s remaining facilities. The last contingent of Americans left Asmära shortly thereafter.

Qarora

Q. (ቃሮራ) is a small town in the Səmen Qäyyəḥ Baḥri administrative zone of northern Eritrea, on the border with eastern Sudan. A town with the same name is also located on the other side of the border formed by the Wadi Fagat, along the main road from al-Ġayn to Toker. The local population never took political separation seriously, and social and economic cross-border interactions were common.

Q. is the site of an ancient human settlement, as evidenced by the monochrome and polychrome ↗rock paintings at Abba Čakat, ca. 2 km south of Q. These comprise at least four groups of painted figures that include images of domesticated cattle, camels, unidentified zoomorphic figures, and a number of human figures, some of which are associated with painted depictions of cattle.

The Eritrean Q. town was established by the Italians in the 1890s. The then *kantibay* ʿUṯmān Ḥədad Ḥasan welcomed Italian administration in Q. His brother, *kantibay* Mahmūd Ḥədad Ḥasan, opposed Italian expansion and was eventually forced to escape to Sudan. Q. grew thanks to its position as an Italian customs post and a trans-border market place. Between 1936 and 1940 its present inhabitants, the ↗Ḥabab, migrated to the town.

During the period of the ↗Ethiopian–Eritrean Federation, the local population strongly supported the ↗Eritrean Liberation Movement (ELM). Ethiopian troops installed a military garrison at Q. and arrested many ELM members, the remaining ones, together with their leader Idrīs Muḥammad Ḥasan, fled to Sudan. When in 1961 the newly established ↗Eritrean Liberation Front (ELF) tried to gain a foothold in Q., tensions arose between the ELM-loyal Ḥabab and the ELF-supporting ↗Bet Mäʿala. The Ethiopian army exploited these tensions and in 1967 it started to burn villages, fill up wells and confiscate animals in Saḥəl, including Q., forcing the population to flee to Sudan. During the civil war between the ELF and the ↗Eritrean Peoples Liberation Front (EPLF) in 1972, the Ḥabab supported the latter. In 1977, Q. was under the control of the EPLF; it withdrew in 1979, and restored its control in 1984.

Qäsis

Q. (Gəʿəz [/Amh.]: **ቀሲስ**, pl. *qäsawəst;* Amh.: **ቄስ**, *qes*, pl. *qesočč*, *qäsawəst*; Tgn. **ቀሺ**, *qäšši*, *qäyši*, pl. *qäsawəsti*, *aqəšti*; connected with Syr. *qaššīšā* 'old, elder; presbyter', *qaššā* 'presbyter') refers to the literal as well as ecclesiastical notions of 'presbyter' (πρεσβύτερος, 'elder, priest'), in contrast to *kahən*, 'sacerdos' (s. ↗*Kəhnät*). While the *Sacrament of* ↗*Ordination* (*Məśṭirä kəhnät*) refers to the Christian sacrament of Holy Orders in general, and is shared by bishops, priests and deacons, *qəssənna* ('priesthood') refers only to the presbyterate, which however does not exclude the use of *kahən* (cp. ↗*Fətḥa nägäśt*, chs. 6, 9).

Before becoming a Q., the person should serve as a ↗*diyaqon* for some years and settle either as a **ባለ፡ ሕግ** (*balä həgg*, lit. 'master of the law', i.e. sacramentally married) secular (*ʿalämawi*) person or as a (celibate) monk, as stipulated by the *Fətḥa nägäśt* and as is common in the Eastern Churches. Married priests prefer to take spouses from other priestly families. Widowed Q. may not remarry; a new marriage would result in their removal from the ranks of the clergy, although if sufficiently learned they may serve as a ↗*däbtära*. Worthy candidates are then introduced to their local bishop (while formerly only the metropolitan could ordain). Upon ↗ordination to the order of *qəssənna*, a Q. becomes the normal minister of the Eucharistic liturgy (*Mäṣḥafä* ↗*qəddase*, ch. II, no. 1) as well as one of the leaders of the community he is sent to: all the priests of a given community belong to the *säbäka gubaᵓe* (‘parish council’) of which the president is the ↗*aläqa* of the church (EOTC Holy Synod 1998/99).

In common language, the Q. is a married priest, as opposed to the *kahən,* usually the priest-monk. He can be addressed as ↗*abba*, for additional reverence, or ↗*mämhər*, to underline the Q.’s learnedness. Nowadays “Q.” can also be used as a title or a term of address.

The Q. acts as ↗*näfs abbat*, in addition to celebrating the liturgy (↗*Qəddase*) and the other sacraments or rituals, essentially ↗funerals. A Q. may serve as main minister (the *kahən* of the liturgical books) when he qualifies as **ቀዳሽ** *qäddaš* (first celebrant at the Liturgy, one of the *qäddašočč* appointed to assume responsibility for the liturgical services in a place with many priests). He may serve as *nəfqä kahən* (lit. ‘half-kahən’, i.e. the assistant priest) or not at all if he does not qualify well enough and if there are enough priests to serve. Q. may alternate their liturgical roles between officiating and just attending or singing with the choir. Officiating requires abstaining from intercourse with their wives three days before and two days after the service, hence the usefulness of the system of *sämunäñña* (‘hebdomadary’, pl. *sämunäññočč*; cp. ↗*Sämon*), which is used as an alternative word for clergy.

When celebrating the Eucharist and major services, the Q. wear liturgical vestments (↗Clothing: Ecclesiastical vestments). On a daily basis, the Q. can be distinguished by the hand-↗crosses they carry. They may don a white turban (*ṭəmṭəm*) and a *kuta* type of toga. Sometimes, they carry horsehair fly-whisks and umbrellas (↗*Dəbab*). As clerics in general, the Q. prefer to follow the traditional way of clothing. A recent custom of wearing headgear, only distinguishable from the monastic *qobᶜ* by a small hole in the middle of the top, was reproved by the Holy Synod in 2008.

At various times in Ethiopian history attempts were made (notably by *aṣe* ↗Zärᵓa Yaᶜəqob; cf. CRRicBerhan I, 19ff., 48–53) to raise the level of candidates for the priesthood and the faithful. In modern times this has become one of the primary missions of theological colleges such as ↗Holy Trinity Theological College and the various Clergy Training Centres administered by EOC/DICAC (Ethiopian Orthodox Church Development and Inter-Church Aid Commission).

Country priests live off the ↗*gʷəlt* of the church, which they cultivate with their families, as do their neighbours; in the past, they also received income from church lands. Stipends offered for services celebrated on request are an important source of income, as is the support of their spiritual children.

When greeting each other, Q. kiss their crosses or their right hands in order to acknowledge their mutual acceptance of their sharing in the same priesthood. A priest does not bless another priest (cp. BauSen 41, 73 [text]). At the time of blessing which concludes the Liturgy, priests kiss the palm of the celebrant’s hand instead of receiving the imposition of his hand as do deacons and the faithful (*Mäṣḥafä qəddase*, Anaphora of the Apostles no. 162).

The same term is used among the ↗Betä Ǝsraᵓel for a married priest.

Qaṭ

Q. (with variants: *qaṣ, qaṣo, qʷaṭ*) is a high-ranking administrative title of an uncertain origin (for some untenable etymologies s. BTafA 241ff.) used in both Christian and Islamic Ethiopia. The form *qāṭ* is peculiar to Arabic Islamic texts and possibly comes from *qaṣ*, with the evolution *ṣ>ṭ* common in the Southern Ethiopian Semitic Languages (Cerulli 1931: 44f. and n. 5 [= CerIslam 142, n. 15], CerStud I, 17). Chronologically, however, the form *qāṭ* is attested first, as it is mentioned by al-ᶜUmarī (UmMasGaud 6; UmMasSezg 18) who states that it is the title of the ruler (*mālik*) of ↗Ifāt (see also TrIslam 67). Indeed, the 14th-cent. ↗ᶜAlī b. Ṣabraddīn of Ifat is called *qāṭ* in the Walašmaᶜ Chronicle (Cerulli 1931: 44 [= CerIslam 142]). In this same text, a *qāṭ* Naṣraddīn is mentioned as the father of an Ibrāhīm, apparently a usurper not from the ↗Walašmaᶜ dynasty, who reigned in ᶜAdal for ten months in 1487–88 (Cerulli 1931: 49 and n. 3 [= CerIslam 147 and n. 41]).

During the reign of ↗Bäᵓədä Maryam the title *qaṣ* was bestowed by the ruler on the governor of ↗Wäğ (PerrZarY 112). In the ↗*Futūḥ al-Ḥabaša*, the title *qāṭ* is borne by ᶜUmar, one of the chief horsemen of *imām* ↗Aḥmad b. Ibrāhīm (BassHist *index s.v.*), who combined it with another title, *awraᶜī*, as a descendant of Balaw ᶜAbdallāh (for the title *awraᶜī* s. BassHist 255 n. 2 [tr.]; Cerulli 1931: 47 and n. 3, 78 and n. 1 [= CerIslam 145 and n. 30; 184 and n. 187]) Later, in ↗Śärṣä Dəngəl's time, the title *qaṣ* was borne by the chief of Konč who "as a good servant" (*gäbr ḫer*) welcomed the king and his troops beyond the River Zəbe (CRHist 33). During the reign of Susənyos, the unfaithful governor of Wäğ, ↗Dämä Krəstos, still bore the title of *Wäğ qāṣ* (PerChron 36). According to ↗Aṣmä Giyorgis, Q. could mean "governor of all the ↗Gurage", and the local governors in ↗Mänz and Märhabete were also called Q. (BTafA 241ff.).

This scant amount of information provides few clues about the evolution of the use of Q. (CerStud I, 17). It is likely, however, that Q. (*qāṭ*) could be originally, in the 14th cent., an Islamic dynastic title of at least some of Walašmaᶜ rulers. Maybe at the same time it was also used (as *qāṣ*) in the Christian state, but for the lower position of a local governor. The rank of the Q. was slowly lowered also among Muslims and eventually disappeared from the hierarchical pyramid, while it survived among Christians until the 17th cent.

Qatbäre

Q. (**ቃትበሬ**) is the name of a village, a *qäbälä* and an important Islamic centre, about 10 km east of ↗Wälqiṭe (for location s. map for Qabeena). Q. is situated in the territory of the ↗Qabeena ethnic group, which has a clan by the name Q. During the 19th cent. the place served as a merchants' camp on the trade route between ↗Ğireen and ↗Šäwa.

Q. owes most of its fame to the activities of *šayḫ* ᶜIsa b. Ḥamza of Q. (also known as "Qatbäriye" or *šayḫočč*; 1858–1941 A.M. [1865–1947 A.D.]). Besides *šayḫ* (*šayḫočč*) *sayyid* Budälla of ↗Abrät (s. EAE vol. 5), *šayḫ* ᶜIsa was one of the most venerated Islamic teachers among the ↗Gurage and the neighbouring ethnic groups. He allegedly even reached the position of *tallaq quṭb* or ‘great pole’, the highest rank in the hierarchy of the Qādirīya ↗Islamic brotherhood (Umär Bäšər 2005: 121).

Šayḫ ʿIsa of Q. was born in Abanğa Kurey (Kursiye) in ↗Ǝža as the son of Ḥamza Bäṭure and Ağəyat (probably the female title *adyät*) Geswät. According to an abridged genealogical list composed in Amharic verse (untitled ms. recording the genealogy of Ḥamza Bäṭure), his father claimed to have Sharific descent. *Šayḫ* ʿIsa’s education started in ↗Mäsqan, where he was taught Qurʾān by the *šayḫ* of Bidara. He was introduced into Islamic esoteric knowledge by the Šāfiʿīte *šayḫ* Saʿīd Ḥaw in Gädäbano (↗Wälane) and continued his studies under *šayḫ* Abbaye in Č̣änno, ↗Yəfat. He was initiated into the Qādirīya by the famous *šayḫ* Aḥmad b. Adam of Dana (“Daniye”) in ↗Yäğğu (Gori 2005: 80f.). Being authorized by the latter, *šayḫ* ʿIsa started teaching in Lahme (Yəfat) but then returned to Gurageland, where he first settled in Mafäd, ↗Ǝnnämor, on the land of his *təb* (‘clan’) Ǝnnämakki. After the conquest of Gurage by *aṣe* Mənilək II’s army *šayḫ* ʿIsa was granted seven *gašša* in Q. by *fitawrari* ↗Habtä Giyorgis. He also received land grants in Ǝža. Q. was then established as *šayḫ* ʿIsa’s main seat and became a centre of Islamic ↗education and religious practice. The *Šayḫ* also founded a second centre in Mäsqan which later became the nucleus of the ↗Butağira Friday mosque, a centre in Inseno and in Božžäbär (Ǝža) [oral informants].

Oral traditions describe *šayḫ* ʿIsa of Q. as a wise theologian and jurist as well as a man gifted by God with the ability to work miracles (*karāma*). However, his popularity is mainly due to his engagement as a great advocate for the rights of Ethiopian Muslims. During *ras* Täfäri’s regency he applied to the future emperor (↗Ḫaylä Śəllase I) for the recognition of Islamic marriage and other ↗*šarīʿa* institutions. After having at first rejected this request, the Regent agreed to tolerate the appointment of *qāḍīs* (Islamic judges). *Šayḫ* ʿIsa himself became *qāḍī*, allegedly the first to be officially recognized by a modern Ethiopian government (Gori 2005: 82; oral informants).

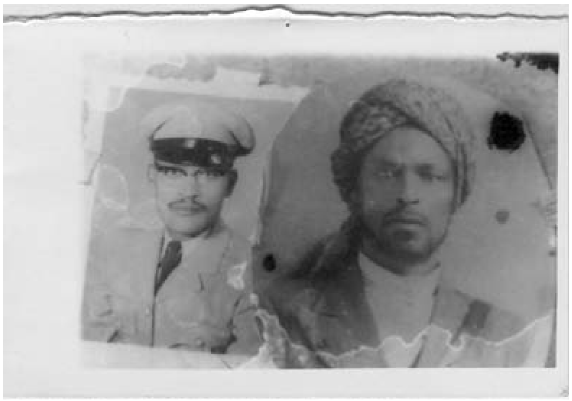
Šayḫ ʿIsa of Q. was successful in leading a Muslim movement for the establishment of a ↗mosque in Addis Abäba. Public prayer was, till then, prohibited for Muslims who had to gather in the private compounds of Arab merchants in the Arada area. *Šayḫ* ʿIsa of Q. applied to *fitawrari* Habtä Giyorgis and, after having his approval, raised funds among the merchants. The Masğid an-Nūr was constructed in Benin *säfär* of the Ethiopian capital in 1911. *Šayḫ* ʿIsa’s commitment took him into prison on several occasions. While he was in custody in Goğğam, due to his initiative a mosque was erected in Däğän in this province (Gori 2005: 82f.; oral informants).

Šayḫ ʿIsa of Q. was in good terms with the *imām* of the Ottoman consulate and consul general-in-chief *ḥağği* Tawfīq *bey* (in Ethiopia ca. 1915–22) who stayed in Q. for some time as the *Šayḫ’s* guest. *Ḥağği* Tawfīq married Nuriye, a daughter of a Wälane chief and relative of *šayḫ* ʿIsa (Dikbaş 2007).

During the Italian occupation *šayḫ* ʿIsa was able to maintain his influential position among Ethiopian Muslims. The Italian administration, attempting to foster its relationship with the Muslim population, recognized him as *qāḍī*. The *Šayḫ* entered into distanced but pragmatic relations with the Italians. Thus, certain combatant groups from the region collaborating with the Italians, in a war song nick-named themselves *Yäqatbäre banda* (‘the group of Qatbäre [*šayḫ*]’), as oral informants relate.

After *šayḫ* ʿIsa’s death his son, *ḥağği* Sulṭan, a *šäläqa* in ↗Ḫaylä Śəllase’s army, succeeded him as leader of the centres in Q. and Mäsqan. *Šayḫ* Faris, ʿIsa’s grandson and successor of Sulṭan, died in 1994.

Today, the significance of Islamic education in Q. has declined. The centre, mainly benefiting from the prestige inherited from *šayḫ* ʿIsa of Q. and his son, cannot compete with modern



Photographic collage (original size 7.6 cm x 5 cm) showing *šäläqa ḥağği* Sulṭan b. ʿIsa (left) and *šayḫ* ʿIsa b. Ḥamza (right) distributed among the visitors of the *zāwiya* as a religious souvenir; from the collection of the author

Islamic schools. In the religious life of southern-central Ethiopia it still has its place, e.g., during the ᶜ*īd* festivals (↗Feasts, Islamic). For such events the current *šayḫ* Badru *šayḫ* Faris, a successful businessman in the United States, is regularly present in Q. The *šayḫ's* family still today holds traditional rights on several forests (*yäšayḫočč bahərzaf*, 'eucalypt of the grand *šayḫ*') in their homeland Ǝža (oral informants).

Qäwəsṭos

Q. (**ቀውስጦስ**, fl. late 13th–early 14th cent.) is a saint venerated by the ↗Ethiopian Orthodox (Täwaḥədo) Church. The main source for Q.'s life is his Vita (↗*Gädl*), a relatively late but complex work of hagiography (ed. Raineri 2004 based on recent mss.), which resembles in its style and composition such Vitae as those of ↗Tadewos of Däbrä Maryam or ↗Yoḥannəs Məsraqawi, and shows a strong link to the hagiographic tradition of *abunä* ↗Täklä Haymanot.

According to his Vita, Q. was a son of Gälawdewos, the governor of ↗Däwaro, and Ǝmmənä Ṣəyon, daughter of Matewos, governor of ↗Wägda and Kätäta. The birth of Q. was preceded by a raid of ↗Motälämi, who captured Ǝmmənä Ṣəyon and Ǝgziʾ Ḫaräya (the future mother of Täklä Haymanot); both were later saved by angels. After his birth, Q. was baptized by the priest Ǝndrəyas and Ṣägga Zäʾab, the father of Täklä Haymanot. Q. was later given for rearing to Ḥəywät Bənä Bäṣəyon, Täklä Haymanot's grandfather, and they were brought up together. Through a "prophecy" (Raineri 2004: 74–127) Ḥəywät Bənä Bäṣəyon explained that Q. and Täklä Haymanot were distant relatives (ibid. 83), and told how their predecessors came to ↗Šäwa from northern Ethiopia. Further on, he vehemently spoke in favour of two ↗Sabbath-days, building his arguments on the story of Israel as told in the Bible and the ↗*Kəbrä nägäśt* (the reference to "King Ǝmnät" is certainly taken from one of the hagiographies of Täklä Haymanot, s. Nosnitsin 2007: 157, n. 43).

At the age of six years and six months Q. was consecrated deacon, together with Täklä Haymanot, by *abunä* Gerlos (↗Qerəllos), apparently in the last years of the ↗Zagʷe dynasty. Later, Q. and his father Gälawdewos went on pilgrimage to Jerusalem and Egypt (Raineri 2004: 172–79). Q. was consecrated as a priest at 42 by *abunä* ↗Yoḥannəs (ibid. 182f.) and returned to Wägda. From there, he started preaching Christianity, fighting "pagan cults" and performing miracles (Raineri 2004: 192–213). He also built a church at Däbrä Yäy, and baptized the people of Gälan, Gamo, Qäčäma, Zəm, Wälaso and Mäḥaggəl. He established the sanctuary of Nəbge Maryam (which still exists in Ṣəlaləš, ↗Bulga), went to Särmat, defeated the "witch" Sariti by means of the ↗Anaphora of Our Lord and re-built a church of St. Peter and Paul, calling it Däbrä Ǝlla Žanbär (ibid. 238–41; the church was originally established by ↗Abrəha and Aṣbəḥa, ibid. 236f.). At Däbrä Səgale he established a church of St. Aboli, and built one more church at Bäwa. After 45 years, Q. met Täklä Haymanot and received from him the monastic habit. Later, he also met ↗Zena Marqos in Morät, and was "officially" dispatched by *abunä* ↗Yaᶜəqob to Särmat and Mäḥaggəl. He is said to have proceeded as far as ↗Käfa and Žänğäro (cp. ↗Yäm). Finally, he criticized *aṣe* ↗ᶜAmdä Ṣəyon I for his marital habits, but was beaten and imprisoned in Bäyo, and killed in ↗Ǝnsaro on 21 *Ṭərr*. The Vita enhances the dramatic character of his ↗martyrdom telling that Q. was a half-brother of *aṣe* ↗Yəkunno Amlak (whom Ǝmmənä Ṣəyon was supposed to have born from Täsfa Iyäsus, Raineri 2004: 224f.).

The colophon of the Vita claims that it was composed during the reign of *aṣe* ↗Dawit (II) by Q.'s disciple Mäbaʾa Ṣəyon of Ǝndägäbṭon (cp. ↗Mäbaʾa Ṣəyon). Even though these claims can hardly be granted, the tradition of Q.'s veneration apparently predates the current version of his Vita.

The Vita of ↗Filəppos of Däbrä Libanos recounts that Q. was indeed one of the 12 *mämhəran* (Turaiev 1908: 198; cp. also TadTChurch 176, 183–86). Some of the place names referred to in the Vita are historical toponyms (like Mäḥaggəl, Särmat); some can be located in (central) Šäwa, a few of them being of more recent origin, suggestive of the late 16th-cent. Oromo migration ([Däbrä] Səgale, Gälan; cp. also Žänğäro [Raineri 2004: 268f.], which originally might refer to Ğənğäro, the river and region in Morät). The church at Bäyo is apparently today's Bäyä Qäwəsṭos (in Dännäba, Morät, Tägʷəlät – Bulga). Some of the hundreds of still little-known churches in central Šäwa might have been founded by *abunä* Q.

Qəbʾa Krəstos

Q.K. (**ቅብአ፡ ክርስቶስ**, fl. 1618–29) was a noble and governor. He was the brother of Aṣmä Giyorgis and Zämaryam and *aṣe* ↗Susənyos's son-in-law. According to Barradas and Almeida, Q.K. was married to *wäyzäro* "Phanae" with whom he fathered "Anfur" (BecRASO IV, 291; VII, 57, 243, 247, 441; XII, 281; XIII, 44).

Q.K. led a series of military operations for Susənyos: against the ↗Funğ king Ǝrubat in May 1618, at a time when he was *liqä ṣäbaʾit (*PerChron ch. 51, 155); in May–September 1620, against ↗Yonaʾel's rebellion in ↗Angot, where he was *blattengeta* (ibid. 188–91); in September–October 1625, against the Fälaša (↗Betä Ǝsraʾel) in Səmen, where he appears as *däğğazmač* (ibid. 218); in 1628–29, against the *təgre mäkʷännən* and *baḥər nägaš* ↗Täklä Giyorgis (ibid. 227, 229; Lobo 1971: 425–34).

According to Manoel Barradas, Q.K.'s *kätäma* was situated then at ↗Ḥawzen, Təgray and "Adecrrô" [ᶜAddi Qoro], close to ↗Dəbarwa, where he was also active (BecRASO IV, 22f., 141). Q.K. died during the war against rebels in Lasta, in April–December 1629 (PerChron 233, 238; BecRASO VII, 53; VIII, 269–73).

According to Jesuit sources, Q.K. was one of the first to have converted to Roman Catholicism at the court, thereafter becoming a staunch supporter of the new faith. He was also described as a virtuous, brave and ingenious man close to Susənyos (cf. BecRASO III, 379, 434; VI, 418; VII, 4, 26, 53, 56f.; XII, 282). The Jesuits attributed the rapid decline of their mission to the death of such supporters as Q.K. (ibid. XII, 387, 423f.).

Another namesake Q.K., son of a sister of ↗Yonaʾel, died during the rebellion of Yonaʾel in Angot in late 1620 (PerChron 190).

Qəbat

Q. (**ቅባት**; Amh., lit. '[an]ointment', from Gəᶜəz *qəbʾat* [/*qəbᶜat*], s. DillmLex 436f.), is, in Ethiopia, a designation for a Christological doctrine existing from the early 17th cent. and also known as **መንፈስ፡ ቅዱስ፡ ቅብእ** (*Mänfäs qəddus qəbʾ*, 'the Holy Spirit is the ointment', an abridgement of the formula "The Father is the anointer, the Son the anointed and the Holy Spirit the ointment"; Getatchew Haile 1990: 34) or **በቅባት፡ ወልደ፡ ባሕርይ** (*Bäqəbat wäldä baḥrəy*, 'Son of nature by Unction').

Like its opponents, esp. the ↗*Karra* who maintained that "the Son is the anointer, the anointed, and the ointment", Q., which called itself **ሃይማኖት፡ መሲሓዊት** (*Haymanot mäsiḥawit*, 'Messianic [i.e. Christian] faith', Getatchew Haile 1990: 34), was not a mere Christological creed, its followers being part of Ethiopian political life for nearly three centuries (cp. ↗Christology). It had a regional base in ↗Goğğam, in ↗Däbrä Wärq, but spread as far as ↗Ḥamasen (AbbSejour vol. 1, 218, n. 1).

↗Kidanä Wäld Kəfle distinguishes three types of Q. (KWKDict 780). He also exemplifies the animosity and mutual rejection between the *Karra*, Q. and ↗*Ṣägga* doctrines (ibid. 384, 743, 779f.). The Q. followers condemn the Jews, Arius, Macedonius, Nestorius, Leo, the Council of ↗Chalcedon, those who say "son by grace" and "two natures" (Getatchew Haile 1990: 3f., 11).

The *Qəbatočč* (adherents of the Q. doctrine) are often associated with the house of *abunä* ↗Ewosṭatewos (GuiIohan 47, 63 [text]; Raineri 1983: 477, 499; Conti Rossini 1925: 472);

in fact, it seems that the hostility between Q. and the ↗Däbrä Libanos-based ↗*Täwaḥədo* is part of the continuation of the old rivalry and quest for supremacy between the two monastic families.

The core of the dispute between the opposing Christologies was the role of the Holy Spirit in the Incarnation of the Son. The Q. motto is **በቅባት፡ ከበረ** (*Bäqəbat käbbärä*, 'He was honoured by the unction'), against **በተዋሕዶ፡ ከበረ** (*Bätäwaḥədo käbbärä*, 'He was honoured by the union').

Like *Karra*, Q. believed in ↗*Hulätt lədät*, the "two births" of Christ. Both doctrines defended their Christological tenets invoking Biblical and Patristic witnesses. Often the same text would be brandished with contrasting interpretations. E.g., the Cyrillian elliptic statement *bäzätäsäbʾa täqäbʾa* ('By the fact that he was incarnated he was anointed'; Weischer 1977: 76, Yaqob Beyene 1981: 37) became official doctrine ca. 1739, during the reign of *aṣe* ↗Iyasu II. According to the *Karročč*, the statement's meaning was that the union of the Logos with humanity constituted an anointing, while the Q. saw in Cyril's expression a confirmation of their position, that the Incarnation demanded an anointing. Confusing are also phrases like *täqäbʿa bäśəga* ('he was anointed in the flesh'; Getatchew Haile 1990: 2.4); "the meaning of Q. [anointing] *nəśʾat* [receiving], and *ḫədrät* [dwelling/resting] is the same. And with this anointing he became the natural Son, natural king and high priest" (ibid. 29 [text]).

The point of departure for the Christological elaboration of the "unction" are the N.T. passages on the role of the Holy Spirit in the conception of the Son and in his public ministry (e.g., Mt 1:18, Lk 1:35, 4:18, Acts 10:38). Remote roots of the controversy are also found in the first four Ecumenical Councils (↗Nicaea – Chalcedon). In Ethiopia, the beginnings of the controversy can be traced back to as early as ca. 500–25, even if it did not become fully appreciated at that time (Grillmeier 1996: 341). The key terms "union" and "unction" feature prominently in the ↗*Qerəllos*, translated into Gəʿəz during the ↗Aksumite period.

The conflict erupted during the reign of *aṣe* ↗Susənyos, in concomitance with the arrival of the ↗Jesuits. The specific role played by the missionaries either in raising the issue of the anointing of Christ or in expressing their position on that regard is unclear; the quality of the language and the argumentation of all the conflict sides are anyway totally Ethiopian.

In 1621/22 (Guidi 1900: 11) Susənyos was engaged in a campaign to defend Goǧǧam and Ǝnnarya from the Oromo, when two groups of monks came to him to ask for arbitration in a *Täwaḥədo* vs. Q. dispute. Whilst the official verdict was postponed until the completion of the military campaign, the Emperor warned that "anyone teaching that the union served as anointing stood condemned" (PerChron I, 217f.). The following year Susənyos held the council to resolve the conflict. According to ms. EMML 6285, fol. 92r. (tr. Getatchew Haile 1990: vii n. 3), the meeting took place in ↗Fogära. Susənyos officially endorsed Q. and ordered physical punishment against *abba* Kəfle (labelled Käfale, 'the divider') Krəstos who refused to obey. *Azzaž* Zädəngəl, the other main representative of *Täwaḥədo*, was barred from teaching his doctrine (PerChron I, 237ff.).

During the reign of *aṣe* ↗Fasilädäs, two councils were held at ↗Aringo. The first was held on 23 June 1655 (according to a "short chronicle", it was convened at Rača, s. BegCron 52), and the Emperor subscribed to Q., a verdict apparently backed by the Metropolitan ↗Mikaʾel IV who anathematized anyone deviating from the doctrine (Getatchew Haile 1990: 34f.). The second gathering took place in 1667 (BassÉt I, 347; BegCron 50f.). The controversy was disputed between Addam *zäʾənfraz* ('of ↗Ǝnfraz') for *Täwaḥədo* and ↗Zäʾiyäsus *ʿəwwur* ('the blind') for Q. (the latter's presence at the council has been questioned by newly emerged sources, s. Kindeneh Endeg 2004). This time the former's arguments were considered valid, and the Emperor was reportedly disgusted by Zäʾiyäsus's abusive language (Guidi 1893: 599f.). The victory of the *Täwaḥədo* was the result of political demands such as the rebellion of ↗Lasta, an area which took a symphathetic attitude towards the *Täwaḥədo*, and was on the verge of protecting the persecuted Catholics. Fasilädäs felt vulnerable and targeted a compromise at the expense of the followers of Q. (BegCron 52; Dei Sabelli 1936: 318ff.). It is possible that the Lutheran Peter ↗Heyling played some role in the Christological dispute.

The Chronicle of *aṣe* ↗Yoḥannəs I registers several meetings which debated the issue of the anointing (GuiIohan 23f., 40ff., 47f., 54f. [text]). A synod was held in ↗Gondär in 1668 (BegCron 53). At the council of 1681 the Q. were represented by *abba* Akalä Krəstos, and the *Täwaḥədo* by *abba* Niqolawos. The Q. lost, *and* Akalä Krəstos was excommunicated (BegCron 55).

Iyasu I held a council in 1687. The Q. was again condemned. In an attempt to reconcile the parties, the Emperor convened another gathering in Yəbaba in 1688. The *Täwaḥədo*, represented by *abba* Bete Krəstos and *abba* Wäldä Krəstos, won the dispute. The Q. leaders *abba* Ṭäbdan and *abba* Qozmos refused to submit and were condemned (BegCron 57f.). Thereafter, the Q. followers became *sədudan* ('outlaws'). In April 1697, Iyasu presided over another council, and the Q. *abba* Wäldä Tənsaᵓe and his brother *abba* Təᵓmərte were condemned (BegCron 72). In 1699 there was a confrontation between *abba* Bete Krəstos and the Q. *abba* Arkä Dəngəl which resulted in the latter's excommunication (BegCron 74f.). Violence against the Q. followers proved to be one of the major challenges of Iyasu's reign. The embittered *Qəbatočč* may have been involved in his assassination.

Also *aṣe* ↗Täklä Haymanot I's treatment of the Q. could have been a factor in his murder. After the council he held in March 1707 the Q. leaders were condemned and jailed (BegCron 87).

The reign of *aṣe* ↗Tewoflos brought a change in the Q.'s favour. Soon after his accession to the throne he made binding the formula *Bäqəbat wäldä baḥrəy* – a political decision aimed at winning over the allegiance of Goǧǧam (BegCron 90f.).

The situation remained favourable to Q. in the following years, especially during the reign of ↗Dawit III, who was overtly against the monks of Däbrä Libanos and had the Q. formula officially proclaimed in late March 1720 (BegCron 101). The Metropolitan ↗Krəstodolu III supported the Däbrä Libanos party, but at that time the latter suffered particular losses from an Oromo attack, in which many monks including *abba* Niqolawos were killed (BegCron 102; Guidi 1900: 20).

Under *aṣe* ↗Iyasu II, Q. was the state doctrine (GuiIyas 14, 101f., 202). The Council at ↗Kayla Meda in Gondär, 1–5 October 1763, represents a turning point in the Christological disputes. The Chronicle of *aṣe* ↗Iyoᵓas registers a split within the "house of Täklä Haymanot". The *Täwaḥədo* of Azäzo joined forces with the Goǧǧame Ewosṭateans to counter a splinter group (GuiIyoas 198). As the focus of the debate shifted to the question of the "births" of the Son, Q. ceased to be the main issue.

However, on 19 August 1854, Kaśa Ḫaylu (a year later crowned as ↗Tewodros II) presided over a meeting at ↗Amba Čara near Gondär in which Q. and ↗*Ṣägga* were condemned (Crummey 2006). *Däǧǧazmač* Kaśa Mərč̣a (future Emperor ↗Yoḥannəs IV), in late 1868 or early 1869 issued an edict banning Q. and all its adherents from his land (Conti Rossini 1925: 472). At the council of ↗Boru Meda (May 1878), seen as the last (official) chapter of the Christological controversies, Q. was not even on the agenda. The Q. doctrine seems to continue to quietly live on in Goǧǧam.

A detailed account of the various positions regarding the anointing is expressed in the **መጽሔተ፡ ልቡና** (*Mäṣḥetä ləbbuna*, 'The Mirror of Intelligence'). The text, inspite of claims to have been composed in 1614 (Cerulli 1960: 139), mentions issues from a later period (ibid. 139, 159f.) and seems to be a summary of two centuries of debates.

Tedros Abraha

Qedär: Mäṣḥafä qedär

The M.q. (**መጽሐፈ፡ ቄደር**, lit. 'Book of the Jar') is a ritual of ↗Penance (the so-called "Baptism of Penance"), meant to reconcile an apostate or a great sinner with the ↗Ethiopian Orthodox Täwaḥədo Church.

The term *qedär* (from Arab. *qidra*, 'jar', the term used for the original ritual of the ↗Coptic Church) refers to the container in which water for this ritual was kept. Once the jar is filled with water, the minister, a priest, with the liturgical vestments (↗Clothing, ecclesiastical vestments) and ↗incense, pours drops of oil into the jar three times, that is, in the name of the Father, the Son and the Holy Spirit (↗Trinity). During his prayers for the penitent, whom he calls by his baptismal ↗name, the priest lays his hands on the sinner and breathes repeatedly on the water ready for the washing ritual.

The ritual may take place in the church or at the penitent's house. It has seven sections, including an introduction, sets of psalms (↗Psalter), a reading from the ↗Epistles, a reading from the ↗Gospel, intercessory ↗prayers and the Nicene Creed. Each time, a priest, in the company of two deacons (↗*diyaqon*), starts with the prayer of thanksgiving (*akk^{w}ätet*) which introduces the *Śər^{c}atä* ↗*qəddase*.

The first set of psalms includes Ps. 50; 6; 15; 24; 29; 31; 34; 38; 75; 102; 114; 115; 117 (numbers given according to the Ethiopian/LXX tradition). Passages from 1 Tim 1:3ff; 1 Pe 5:5ff. and Joel 2:28ff. are read. The ritual prescribes the recitation of Ps 41; 48; 56; 109; 112; 123; 126; 132; 133; 141; 142; 143; 149; 150 and the Magnificat. After a set of prayers strongly relying on the Psalms themselves, the readings continue with Ps 13; 16; 27; 42; 76; 77. Another set of prayers is followed by Ps 9; 32; 58; 59; 65; 67; 72; 80; 99; 101; 104; 105. Finally, Hannah's prayer (1 Sam 2) precedes the reading of the Gospel.

After Ps 67:28–29a and Ps 50:3b–4b, the story of the lost sheep and the lost coin (Luke 15:3ff.) is read to underline the theme of joy that comes as a result of conversion. This is followed by a prayer for those who bring offerings. Other gospel texts may be used as an addition, or as an alternative. Mk 12:28ff. is suggested for the first commandment of "loving God with one's all heart …" after Ps 87:1b-2; Mt 5:33ff. is suggested for the prohibition of swearing falsely, preceded by prayers for catechumens and the Church as well as verses from Pss. 50, 19 and 30. Verses from Ps 50 and Luke 18:18–25 are also indicated after a series of prayers: prayers for the archbishop and the church, and a prayer for censing. The prayer for the dead and the laying on of hands constitute the last collection of supplications.

At the end of the prayers, the priest pours the water on the head of the penitent.

The M.q. seems to have been translated from Arabic. It was probably originally composed in the 14th cent. to address the problem of apostasy during the Islamic conquest of Egypt, at a time when Coptic Christians were forced to convert (cp. MacCoull 2000). Well before that, however, this rite of "baptism of penance" seems to have been administered in ↗Jerusalem (at least 8th cent. A.D.) to those who had committed apostasy (Brakmann et al. 2009:113–16).

The earliest manuscript in Ethiopic dates to the 14th–15th cent. (EMML 1496). The rite may vary considerably from manuscript to manuscript; the printed edition (1974), upon which the above description is based, is a conflation of different versions of the ritual (s. Cowley 1987:373).

The main difference between the Coptic and the Ethiopian rite is that in the Coptic tradition, unction with oil is performed after the pouring of water, the forehead, the heart, the middle of the penitent's shoulders and the hands being anointed, whilst in the Ethiopian one there is no anointing with oil.

The list of sins for which the ritual may be prescribed seems to have grown considerably nowadays. The introduction to the M.q. in the edition of 2001 lists "apostasy, sexual relation with an unbeliever, witchcraft, criminal theft, murder, grave false testimony, blasphemy".

Daniel Assefa

Qəddase

Q. (**ቅዳሴ**, Gə^{c}əz, lit. 'sanctification, hallowing', cp. Arabic *al-quddās*; also: *śər^{c}atä qəddase*, 'the order of the hallowing') is an Ethiopian term denoting the Eucharistic liturgy of the ↗Ethiopian Orthodox (Täwaḥədo) Church (EOTC), i.e. the ritual as a process of transformation of a community into the body of Christ through the growing communion brought about by the Holy Spirit. It fully corresponds to the Eucharist of the Roman, Byzantine, Syriac, Armenian or Coptic Churches and is understood as the continuation of the tradition begun by Jesus Christ himself at the Last Supper (cp. 1 Cor 11:24-26, Lk 22:20).

Held in the highest regard, the celebration of the Q. gathers the Christian people of a certain area according to the rhythm of Sundays and certain ↗feasts (cp. ↗Calendar). The feast days may concern all communities or only those who possess a ↗*tabot* with a name matching the event or saint commemorated (Fritsch 2001:67). The Q. may be celebrated almost every day of the year, early in the morning if there is no ↗fasting period or in the afternoon if there is a fast; always in the afternoon on weekdays in ↗monasteries (except from Easter to Pentecost). The early hour of the celebration relate it with the rising of the sun, cosmic symbol of Jesus Christ who is "the Sun of righteousness". A midnight mass is celebrated at ↗*Fasika*, ↗*Lədät* and ↗*Ṭəmqät* because Christ's return has not yet taken place. The Q. must always be after at least the *Ṣälotä ^{c}əṭan* (cp. ↗Incense: Use of incense in the liturgy of the EOTC) and the *Ṣälotä kidan* (from the ↗*Testamentum Domini*) have been performed before on the same day. However, the Monday, Tuesday, Wednesday and Friday of Holy Week (cp. Fritsch 2001:228; cp. *Fasika,* ↗*Gəbrä Ḥəmamat*) are aliturgical. The Q. is celebrated in ↗Gə^{c}əz, at least for the sung parts or as a reference language, and, in Ethiopia, often in ↗Amharic for the rest, while ↗Təgrəñña is used in Eritrea.

People support the clergy at the offering of the Q. especially on each day of ↗Lent and the two weeks preceding Assumption (↗*Fəlsäta*), as well as on the occasion of ↗baptisms and ↗funerals or the anniversary of the death of relatives (↗*Täzkar*), and the less frequent occasion of a sacramental ↗matrimony. They will particularly offer wheat (called **ግብር**, *gəbər*), dried grapes (**ዘቢብ**, *zäbib*), incense (**ዕጣን**, *^{c}əṭan*) and wax tapers (**ጧፍ**, *ṭ^{w}af*).

The norm is that five ordained ministers, the *qäddasyan* or *sämunäññočč* (↗*Sämon*) conduct the service (cp. ↗*Kəhnät*). This number matches the ↗*Amməstu a^{c}əmadä məśṭir*. The Patriarchate of the EOTC allows the number of two priests (↗*Qäsis*) and one deacon (↗*Diyaqon*) in the case of a shortage (the faculty is applied abroad only, where even fewer ministers may celebrate the Q., but never within Ethiopia). One presbyter (**ሠራዒ፡ ካህን**, *śära^{c}i kahən,* 'the acting priest', or **ገባሬ፡ ሠናያት**, *gäbare śännayat*, lit. 'the doer of good things') only presides over the liturgy. It has become the unfounded custom that if the bishop is present at his seat, he does the blessings and absolutions (except that of the Father, s. no. 69, below) while the priest conducts the service. He is assisted by the *nəfqä kahən* ('assistant [lit. 'half-] priest') and two or three deacons: the *śära^{c}i diyaqon*, 'acting deacon', or *gäbare śännayat*; the *nəfqä diyaqon,* 'assistant deacon'; the *abri* ('assistant of the celebrant', who may be a priest).

The particular importance given to the Q. demands serious preparation. Those who wish to receive sacramental communion must prepare themselves by fasting from any food or drink 18 hours beforehand. Married persons abstain from intercourse during three days before and two afterwards and must receive communion at the same Q. (one spouse may not approach if the other one is not willing or able to do so). Confession (↗Penance) to the ↗*näfs abbat* is a normal requisite, but not necessarily on each occasion. None of those who have received the communion wash their hands until the day after.

The book for the celebration is essentially the Missal, or the *Mäṣḥafä* ↗*qəddase*. It contains the

Communion, Church of Gofa Gäbrəʾəl, Addis Abäba; photo 2009, courtesy of the author

prayers and the rubrics (*təʾəzazat*) as well as a number of certain other texts associated with the Eucharist (also found in the ↗*Məᶜəraf*), the ↗litanies, and sometimes the ↗*Təmhərtä ḫəbuʾat*. The *Mäṣḥafä qəddase* usually lacks some elements necessary for the Q.: the short *Ṣälot zäzäwätər* (initial prayers found in the ↗Psalter), the *Aśərqot* at the *Ṣälotä ᶜəṭan*, the *Mälkəʾa qʷərban* (↗*Maḫbärä məʾmänan*), the ↗*Dəggʷa* antiphons for the bringing in of the offerings (**አግብኦተ፡ ግብር**, *agbəʾotä gəbər*), the *Mäṣḥafä gəbrä ḥəmamat* for the Resurrection hymn and dialogue proper to Eastertide. Besides, three distinct books should be added to *Mäṣḥafä qəddase* for the celebration of Q.

a) the *Mäṣḥafä* ↗*gəṣṣawe*, which provides for the Scripture readings and the text of the ↗*məsbak*, and indicates which ↗anaphora should be used on the particular day;
b) the ↗New Testament, traditionally in its separate volumes, which gives the pride of place to the Four Gospels;
c) the ↗*Zəmmare* hymns at Communion time.

It can be assumed that the Q. had been introduced by Frumentius (↗Sälama Käśate Bərhan), the first bishop of ↗Aksum (the view supported also by the Ethiopian doctors of the Church). Some clues as to the way the Q. might have been celebrated in the Late Antique period may prudently – insofar as Ethiopia is expected to have followed the mother ↗Coptic church and, on the other hand, as such sources reflects actual practice – be obtained from Alexandrine and other documents (Brakmann 1995; cp. BrakKirche 157–62), such as the prayer book of Sarapion of Thmuis (Johnson 1995) or the liturgy of St. Mark (Cuming 1990). Among those found in Gəᶜəz are, e.g., the ↗*Traditio apostolica* attributed to ↗Hippolytus and preserved as the first part of the ↗*Senodos* (Bradshaw–Johnson–Phillips 2002: 37–54); the liturgy of the ↗*Testamentum Domini* (Beylot 1984: 32–44 [text], 165–73 [tr.]); a Sermon added to the commemorations of 28th *Ṭərr* in the 15th-cent. ms. of the ↗*Sənkəssar* (d'Abbadie 66–66bis, fols. 149vb–51vb, 45ra–45vb, 152ra–52vb, s. Beylot 1983–84: 113–16; ColSyn IX, 214–31); a page of Yaᶜəqob of Wäsim's description of the Eucharistic rites in the course of 7th-cent. Egyptian monastic stories (Arras 1988: 235f.). One can also recall the 10th-cent. letter of Macarius about the chrism (Villecourt 1923) and the later Coptic *diataxeis* of Ibn Sabbāᶜ, Abū l-Barakāt Ibn Kabar (Villecourt 1923–25) and Pope Gabriel V (ᶜAbdallah 1962) etc. In addition, the archaeological study of ancient ↗church buildings, starting with the Aksumite ones, e.g., at ↗Adulis, ↗Mäṭära etc., then those found in Eastern Təgray and elsewhere, matched with both the archaeology of Egyptian churches, although not exclusively, and the study of the textual documents we possess on the Eucharistic liturgy in Egypt, particularly, allows some understanding of the development of the Q. from the earlier stages (Fritsch – Gervers 2007).

In contrast with certain ancient dispositions of the Missal which are still carried out in the same way (e.g., the ministers wash their hands and feet before entering the church to minister; while the celebrant gives the bread in communion to the assistant, he receives the chalice from the assistant and both give communion to the other ministers; those who have received communion do not use water for the whole day afterwards etc.) the Q. has at times had a complicated history due to historical or theological developments. It is especially striking in the following instances:

a) The preparation of the bread and wine is done at the altar itself at the beginning of the public celebration, with a set of actions and prayers intertwined with the ancient *prothesis* ('setting forth' of the bread and wine), *enarxis* ('initial section') and pre-anaphora. These actions and prayers used to follow a quite different order from the beginnings to ca. the 4th cent. in Egypt, and then between the middle of the 12th cent. to the turn of the 13th cent. in ↗Lalibäla (Fritsch 2008), triggered by Coptic changes: previously prepared before the public celebration by deacons, then by deacons and priests (usually) in the northern *pastophorion* beside the sanctuary (cp. ↗*Mäqdäs*), the offerings were thereafter directly transferred from the *betä ləḥem* to the altar at the beginning of the celebration, and no longer from the *betä ləḥem* to the *pastophorion* for the preparation (*prothesis*) just before Mass and then to the altar after the Gospel and homily (Fritsch – Gervers 2007).

b) The anaphoral *praefatio* is interrupted by the Diptychs and other commemorations and intercessions in imitation of St. Mark's liturgy. However, whereas they come naturally in the latter, they look like an interpolation in other anaphoras.

c) The Communion rites, significantly the transfer of the rite of the Fraction of the bread from its Coptic original position just before the *Our Father* (where the ↗*andəmta* of Q. maintains it to this day) to the conclusion of the anaphora as a continuation of the *Epiclesis*.

Certain features of the Q. such as Greek words or anaphoral elements point to Upper Egypt (cp. Lanne 1958: 11f.) before the movement to uniformity with Lower Egypt launched by Pope Gabriel Ibn Turayk's 26th canon (Burmester 1935: 40f.). Further creative developments, especially regarding the anaphoras, are due to theological developments in Ethiopia (Getatchew Haile 1981).

Another trend has prevailed in a far more dramatic way than in the Coptic milieu which triggered it, which has almost all ritual actions connected with the sanctuary or the *betä ləḥem* kept secret (*məśṭir*) from the faithful themselves. This is illustrated by the evolution from the open hall-churches of the 14th–15th cent. to circular churches, which have flourished from the Gondärine period up to the present, where active participation is made impossible by closed doors and curtains (↗*Mägaräğa*) that remain drawn, despite a growing tendency to correct this trend in the modern "cathedrals".

The authoritative work in which the *Śərᶜatä qəddase* is translated into Amharic, commented on and sometimes explained is essentially the *andəmta* of Q. by Archbishop ↗Mikaᵓel (Gärima Wäldä Kidan 1995/96). Previous attempts, much given to allegory, were the different "orders of the Church", or ↗*Śərᶜatä betä krəstiyan* (e.g., Kənfä Gabrəᵓel Altayyä – Getaččäw Däğäne 2006). Such books refer to the Holy Scriptures, the ↗*Senodos*, the ↗*Fətḥa nägäśt* etc. (the latter still somehow rules liturgical life, but very far from every detail of it).

Within the Q. several parts can be distinguished, according to Ethiopian scholars:

a) the Preparation – partly called the *Śərᶜatä Gəbṣ* ('Rite of Egypt') – up to the *Mimäṭän*, 'How (terrible) …' or the public section of the preparation.

b) the *Śərᶜatä qəddase* (from the *Mimäṭän*, through the *prothesis* and *enarxis* to the Liturgy of the Word, inclusively).

c) the Q. itself, i.e. in this context the *Akkʷätetä qʷərban* (anaphora).

The little book *Ṣälotä qəddase, yähəzb täsäṭwo* (here repr. 1989 A.M. [1997 A.D.]) indicates in its introduction a threefold structure of the Eucharistic service:

a) the Preparation section, from "O my brother…" to "How (terrible) …"

b) the Teaching section, from "How (terrible) …" to "Catechumens, go forth".

c) the *Fəre qəddase* (lit. 'The Fruit of the Hallowing') section, from "Catechumens, go forth" onwards. It includes the anaphoras. The phrase *Fəre qəddase* is used in reference to the sacramental Flesh and Blood of Christ and in contrast with the *Śərᶜatä qəddase* is employed to refer to all that precedes it.

According to liturgiology, the outline of the Q. may be arranged as follows (a structural detail, not mentioned, is that the liturgy unfolds structured by the recurrent dialogue: Deacon: "Stand up for prayer". People: "Lord, have compassion on us". Priest: "Peace to you all". People: "With your spirit"):

Part I. The introduction to the Liturgy

1) Ministers wash hands and feet before they enter the church to conduct the service
2) Deacons prepare bread and wine in the *betä ləḥem*
3) The Matins or Divine Office for the early morning, in various forms and more or less developped, but always including the *Ṣälotä ᶜəṭan* and the *Ṣälotä kidan*

Prothesis

4) Preparation of the Priest; of the altar
5) Celebrant's washing of the hands
6) Antiphon as procession with offerings enters the church

Qəddase

(The public service begins here)
7) Initial monition of the Priest (*Mimätạ̈n*)
8) Selection and preparation of the bread
9) Preparation of the chalice
10) Blessing of the offerings
11) Priests' expression of mutual support
12) Doxology 'One is the Holy Father' (*Aḥadu ab qəddus* + Ps 116)
13) Prayer of thanksgiving of St. ↗Basil
14) Supplication for those who bring an offering
15) Prayer of oblation (of the *prothesis*)
16) Covering of the offerings
17) Deacon's warning introducing the Absolution
18) Absolution of the Son (↗*Fətḥat zäwäld*)
19) ↗Litany

Censing

20) *Aśərqot* (even if already performed at Matins)
21) Prayer
22) Blessing of the five grains of incense
23) Laying of three grains of incense
24) Praise
25) Prayer of the incense
26) Intercessions
27) Hymn to the "Golden Censer"
28) Solemn incensation towards the four corners around the altar, in the *qəddəst* and all the church

Part II. The Liturgy of the Word

29) Reading from the Pauline ↗Epistles
30) Reading from another Apostle
31) Reading from the Acts of the ↗Apostles.

For each reading: a preparatory prayer; the reading towards a cardinal point; a concluding chant

32) Intercessions
33) Praise of Our Lady ↗Mary
34) Hymn of the Incense
35) *Trisagion* and Prayer of the Covenant
36) Gospel: Prayer of the Gospel
37) Psalm versicle (*məsbak*)
38) Blessing towards the four corners (Prayer of entrance)
39) Other prayers
40) Censing of the Gospel Book
41) Procession
42) Reading
43) Acclamation
44) Universal prayer by the Assistant Priest
45) Homily by celebrant, unless done before the final blessing by someone else

Part III. The Liturgy of the Eucharist

Pre-anaphora

46) Dismissal of the Catechumens.
47) Prayer of the veil, to access the altar
48) the Three Prayers for peace, the hierarchy and the assembly
49) Creed (*Amäknəyo* [from the *Didəsqəlya*], or Nicene [cp. Nicaea])
50) Washing of the hands
51) Greeting of peace

Anaphora [pattern of the Anaphora of the Apostles]

52) Title
53) Dialogue
54) Thanksgiving (1st part)
55) Diptychs
56) Prayer of Blessing (more intercessions including for the departed)
57) Thanksgiving (2nd part of the *praefatio*)
58) Pre-*sanctus* (with leader to Sanctus)
59) *Sanctus*
60) Post-*sanctus*
61) Institution narrative, concluded by the Command to Repeat
62) Anamnesis
63) *Epiclesis*, developed by a first *Consignatio* and the symbolical "breaking of the bread" (*fättəto*)

Communion

64) Prayer of the Fraction
65) *Our Father*
66) Embolism
67) Hymn *The Hosts of the Angels of the Saviour of the world*
68) Prayer of inclination
69) Absolution of the Father
70) *Sancta sanctis* ("The holy things for the holy!")
71) Elevation-Invocations: "O Lord, have mercy on us, O Christ …"
72) Prayer for the Reconciliation of Penitents
73) Confession of Faith in the Eucharist including a second Consignation, then the Commixture
74) Reading from the ↗*Haymanotä abäw*
75) Communion of the ministers followed by non-officiating clergy; singing of the *Mälkəʾa qʷərban*
76) Communion of the faithful, incl. the *Comminutio* (*Fəttate*)
77) Thanksgiving
78) The celebrants consume what remains of the Eucharist and purify the sacred vessels, singing the second part of the *Mälkəʾa qʷərban*
79) Homily by preacher, eventually the ↗*Mälkəʾa Maryam*, ↗*Mälkəʾa Iyäsus*, ↗*Wəddase Maryam* of the day]

Conclusion

80) Blessing and absolution
81) Dismissal
82) Imposition of the celebrant's hand
83) Blessed water is distributed
84) Clergy alone consumes the *eulogia* (bread not selected for consecration and additional bread)

The Q. has been sung according to the practice and teaching of the monastic centre of ↗Däbrä Abbay since about the time when Gondär ceased to be the capital. Before that (as it is taught in the ↗*qəddase bet*), the main chant was in the gentle tone of *säläl kulla* (called so after Sälläl Kulla, the district in ↗Šäwa). However, there still exist a few other traditions or the "unacademic" practice of imitating musical elements taken from here or there because they are easier to perform.

The chanting is always the same until the acclamation after the Gospel. The chant is then executed either in ↗*ᶜəzəl* mode or in the ↗*gəᶜəz* mode in the periods of *Astämḥəro* (Fritsch 2001: 81). To be precise, all the first part from the beginning of Mass to the acclamation of the Gospel (s. above, Part II, 41) is always in the *gəᶜəz* mode, except the antiphon at the beginning when it is Eastertide (*Yosef wäniqodimos*, from Fasika to Pentecost) and the *Trisagion* and *kidan* (s. above, Part II, 35), which are in ↗*araray* mode. Starting with the acclamation of the Gospel (s. above, Part II, 41) and on, *gəᶜəz* or *ᶜəzəl* are used according to the type of the period of year (*ᶜamät qäläm*: fast or not, solemnity etc.). It is easy to observe in the missals which have the ↗*mələkkət* that there may be two lines of those, one black (*gəᶜəz*, O.T., fast) and one red (*ᶜəzəl*, N.T., *fəssək*, i.e., non-fasting day). According to the degree of solemnity, it may take from two to three hours to celebrate the Q.

The Q. is one of the important fields of traditional ↗education. The lead is also given in this matter by the monastery of Däbrä Abbay and the masters trained there. The manuals are the *Mäṣḥafä qəddase* and the study mainly develops around the *andəmta* commentary.

Emmanuel Fritsch

Paraphernalia

The celebration of the Q. requires that a suitable place be prepared, properly equipped with sacred vessels available, along with an appropriate place to prepare the bread and wine for the sacrament, vestments etc. The *qesä* ↗*gäbäz* holds the overall responsibility for this.

I. Places

In addition to the church itself, the church compound includes the following buildings:

a) *Gəbər bet* (**ግብር፡ ቤት**, lit. 'house of the action') is a one room building (sometimes the first room of a larger *betä ləḥem,* s. below) meant for the storage of the wheat destined for the ↗Eucharist ([*fəre*] *gəbər*, lit. '[the fruit of] the action') which is measured in *mägäbbärəya* (ca. 3 kg). There is a white cloth on which the *gəbər läqami* (lit. 'the grain sorter') sorts the grain and grinds it to produce the flour. The ^{c}*aqqabi* (fem. ^{c}*aqqabit*, 'keeper') or *mäbälät* (lit. 'widow') keeps the key to the *gəbər bet* and provides the deacon and the assistant deacon with the flour on the eve of the Q.

b)*Betä ləḥem* (**ቤተ፡ ልሔም**, lit. 'Bethlehem') is a one room building located east to north-east of the church equipped with the necessary items for preparing the bread and wine for the Eucharist. It corresponds to a similar feature of Coptic churches (and, together with the *gəbər bet* and the ↗^{c}*əqa bet*, to the *skeuophylakion,* e.g., of Constantinople). Fresh water is brought for each Q. by a virgin or elderly woman. Outside the door of the *betä ləḥem*, water is found for each of the ministers to wash their hands and feet as they arrive, before they enter the church and begin the service. Water is used to make the dough and the wine, and is brought to the ↗*mäqdäs* in a water jug (*k^{w}əsk^{w}əst*) or a smaller ewer (*mäq^{w}ərärit*) for the three washings of hands and ablutions at Mass. It is distributed to the communicants after communion to "cover the Eucharist" or to those who came but were not able to receive the Eucharist. It is also drunk as a medicine.

A large wooden bowl *mägäbbärəya* (*quna* when made of basketwork or *ladan* when made of metal) is used to mix flour and water. The "dough" (*ḫariṣ*) acquires the leaven (*śənś*, lit. 'pregnancy') from the ambient air only.

The oven (^{c}*əton*) is made of a clay tray (*ṣə^{c}ədot*) supported by three stones (*mänbär*) placed over the top of the fire of the wood gathered by the *sämon azzaž* (cp. ↗*Sämon*); it is covered with an earthenware lid (*aklil*, 'crown'). A table covered with a clean tablecloth is used to prepare the dough, impress it with the stamp (*maḫtäm*) and lay the freshly baked loaves before they are all wrapped in a single piece of cloth (*maḫfäd*) to be placed in the *mäsobä wärq* (s. below).

To make the wine, the *qesä gäbäz* gives to the deacon 12, 24, or more (or at least five or seven) middle sized red or black raisins (*zäbib*) evoking blood, with the pips inside, but not completely dry. A kind of chalice or container only used for this purpose (called *həyäntä ṣəwwa^c*, lit. 'in lieu of chalice') is used to wash the raisins, which are then pounded in a bowl with a polished stone by the deacon who removes the pips from each raisin before he squeezes it into a pulp. After he has added the water, he forces the liquid through a sieve or strainer (*maṭarəya*) which in the past used to be a piece of cloth. The addition of water is necessary for it refers to the water which came out of Christ's side together with the blood signified by the *zäbib* (Jn 19:34).

The ashes of the oven are called *əmnät* (lit. 'faith') which the sick drink mixed with water in the hope of being healed (the ashes of the censer taken from the *azäqt* ['pit'] of the sancuary are passed over the limbs of patients before they are cold).

c)^c*Əqa bet*.

d)*Dede sälam* (**ዴዴ፡ ሰላም**, Amh. *däğä sälam*, lit. 'the threshold of peace') is often a gatehouse equipped with a room above a large porch on either side of which benches are arranged so as to allow for people to rest or share food made for celebrations, e.g., the weekly meetings of ↗*sänbäte* or ↗*täzkar* (a large hall is often built to house the same activities).

II. Sacred vessels

Sacred vessels (**ንዋየ፡ ቅድሳት**, *nəwayä qəddəsat*) are the vessels consecrated with holy Chrism (*Mäṣḥafä qəddase* ed. 1995/96 [hereafter MQ], ch. I).

1. The ↗*tabot* or *ṣəlle* (more common in the pl. *ṣəllat*), also known in the liturgy as the *məśwa^c* ('altar'). During and outside services, the *tabot* is wrapped in a veil (*mägg^{w}äna ṣäfiya*). In the sanctuary, it rests on the *mänbärä tabot*.
2. The *ṣaḥəl* (**ጻሕል**,'paten'), a flat circular dish ca. 25 cm in diameter with its edge turned upwards for receiving the bread (MQ, ch. II, *Qänona* §§43f.).
3. The *ṣəwwa^c* (**ጽዋዕ**, 'chalice'), receives the wine. It may be low in height and very shallow in depth or high and deep (MQ, ch. II, *Qänona* §§45f.).
4. The ^{c}*ərfä mäsqäl* (**ዕርፈ፡ መስቀል**, lit. 'the handle of the cross', MQ, ch. II, *Qänona* §§47ff.), communion-spoon, is likened to the pincers used by the cherub to purify the prophet Isaiah's lips with a coal from the altar (Is 6:6–7). It is used for administering the wine to all who take communion.

Outside the services, the sacred vessels are stored in the *kärśä ḥamär* (lit. ‘the womb of the ship’), i.e. the inside of the *mänbärä tabot*, or in niches made in the wall of the sanctuary, or in the *ᶜəqa bet*.

In addition, the following two items are kept in the place called *ḫaddafe näfs* (lit. ‘pilot of the soul’; s. EAE vol. 3, 766) and indeed anywhere in or around the sanctuary:

a) The *ᶜawəd* (**ዐውድ**, Gr. δίσκος) is a large circular tray upon which the paten is laid.
b) The *agobär* (**አጎበር**, ‘canopy’, Gr. ἀστερίσκος) is a tripod placed on the *ᶜawəd* to prevent the veil it supports over the paten from touching the bread during the distribution of Holy Communion. Only presbyters may touch it.

III. The vessels of the church

The vessels of the church (**ንዋየ፡ ቤተ፡ ክርስቲያን**, *nəwayä betä krəstiyan*) include other vessels but also religious images found at or near the altar.

1. Nowadays, the altar is adorned with the image of St. ↗Mary and the Child (called **ሥዕለ፡ ሉቃስ**, *śəᶜəlä Luqas*, lit. ‘the picture of [St.] Luke’), so as to witness to the Incarnation of the Word of God which forms the premise for the reality of the Christian mysteries, and with the image of the ↗Crucifixion (**ሥዕለ፡ ዮሐንስ**, *śəᶜəlä Yoḥannəs*, lit. ‘the picture of John [the Evangelist]’, s., e.g. Bosc-Tiessé – Wion 2005: 107).
2. The *maḫfädat* (**ማኅፈዳት**) are five pieces of material of various sizes laid upon the *tabot* (the *təlləq* [large] *maḫfäd*, which falls down before the altar), within the paten, around the Eucharistic bread, above the chalice and upon the *ᶜawd* (MQ, ch. II, *Qänona* §§ 41f.). Traditionally the inner face of these veils is white while the outer is dark so as to express the invisibility of the mystery of the Resurrection at work in the Eucharist. A larger veil covers both paten and chalice.
3. The *mudayä ᶜəṭan* (**ሙዳየ፡ ዕጣን**) is the ↗incense box in which there may be the spoon for the incense; it is placed on the right of the altar.
4. The *ᶜədä mäsqäl* (**እደ፡ መስቀል**) is the ‘hand-cross’ which rests on the left of the altar. It is used to give the blessings *zäʾafʾa* (‘outer’, i.e. on persons), not *zäwəsṭ* (‘inner’, i.e. on the offerings).
5. Altar lights are two wax candles (**ሰምዕ**, *sämᶜ*) lit on or beside the altar (MQ, ch. II, *Qänona* § 66).
6. Lit wax tapers (**ጧፍ**, *ṭʷaf*) guide the processions and provide light for symbolical as well as practical purposes. The assistant deacon often carries a lit *ṭʷaf* to accompany the deacon or in processions or at the distribution of Holy Communion. The fifth minister (*abri*) uses one to illuminate the Missal for the celebrant, who holds it himself when he reads the Gospel.
7. The Missal rests on a lectern (**አጥሮንስ**, *aṭrons*), at the left side of the altar.
8. The *ṣəna* (↗*Maᶜəṭänt*) hangs on a stand around the south-western corner of the altar. The *mäčariya* (**መጫሪያ**, or **ጉጠት**, *guṭät*) is a kind of little shovel for putting the coals into it.
9. The *mäṣor mäsqäl* (**መጾር፡ መስቀል**, ‘staff-mounted cross’) is carried by the deacons leading the ceremonies. This cross is also used by the priest to proclaim the Gospel or (nowadays separated from its handle) to introduce the *Kidan* (↗*Testamentum Domini*), to give important blessings including the final one at Mass; by the preacher to preach; by the cantor to execute the intoned part of the *angärgari* hymn at the festive ↗*Maḫlet*.
10. The ↗*dəbab* is held over the Gospel, the Eucharist and the *tabot* during the *nägś* procession, sometimes over dignitaries.
11. The *qaqel*, *qaqil* or *qačəl* (**ቃቄል/ቃቂል/ቃጭል**, ‘[small] bell’) is rung during the bringing of the offerings from the *betä ləḥem* into the *mäqdäs* (*agbəʾotä gəbər*), during the *Ǝgziʾota* (MQ, *Anaphora of the Apostles* § 92), during the distribution of Holy Communion (MQ, *Anaphora* §§ 117, 128), at processions around the altar, and between the Hours of the Holy Week. This item, mentioned by ↗Alvares (BeckHuntAlvar 125, 199f.), seems to have been practically inexistent beforehand and perhaps was borrowed from the Roman liturgy of the Portuguese.
12. The *ləbsä täkəhəno* or *albasat* (**ልብሰ፡ ተክህኖ/አልባሳት**, ‘[liturgical] vestments’) distinguish the ministers (Paulos Tzadua 1968: 82; Hammerschmidt in PICES 3, vol. 2; Tekle Maryam Semharay Selam 1930): *qämis*, *lanqa* and *aklil* (↗Crowns) for the deacons; *qämis*, *qaba lanqa* and occasionally *moṭaḥət* for the presbyters, with the monastic ↗*qobᶜ* as headdress for the religious, the *aklil* or *həbbane* for the married clergy. These should be white because of the Transfiguration (MQ, ch. II, *Qänona* §§ 63ff.) but today almost any colour is used (cp. ↗Clothing: Ecclesiastic vestments).
13. The *mänṭolaᶜət* (**መንጦላዕት**) curtains screen the sanctuary and altar (s. ↗*mägarädža*). The

oldest known ones seem to go back to the 17th cent. and were one pieces of cloth (cp. Mordini 1952; Staude 1959: 70, ill.; Gigar Tesfaye 1979: 98ff.).

14. The *mäsobä wärq* (**መሶበ፡ ወርቅ**, lit. 'golden basket'), though it may be made of metal (gold, silver or brass), is generally a basket made of dried grass by a virgin girl (likened to St. Mary) and adorned with velvet, bells, etc. It is covered with a veil when the Eucharistic bread is carried in it to the sanctuary (MQ, ch. II, *Qänona* §§ 50f.).
15. With a ewer for the three washings of hands and ablutions, there is a platter or basin to collect the water and throw it away.

IV. Books

To the paraphernalia, service books such as the *Mäṣḥafä qəddase, Mäṣḥafä ↗gəṣṣawe*, N.T. books (Four ↗Gospels, the ↗Epistles, the Acts of the ↗Apostles, the ↗Revelation of John), *Mäṣḥafä ↗zəmmare*, *↗Haymanotä abäw*, and the *Mäṣḥafä ↗sənkəssar* also belong.

Several of the items listed above have figured as donations recorded in manuscripts, e.g., on fol. 25v of the Gospel of ↗Iyäsus Moʾa, EMML 1832: *kʷəskʷəst*, *ṣəwwaᶜ*, one *ᶜərfä mäsqäl* of gold and one of silver (cp. also CRAxum 13 [text]). Besides, the items were sometimes listed in special inventories (**ዝርዝር**, *zərzər*), also found in manuscripts of church and monastic libraries.

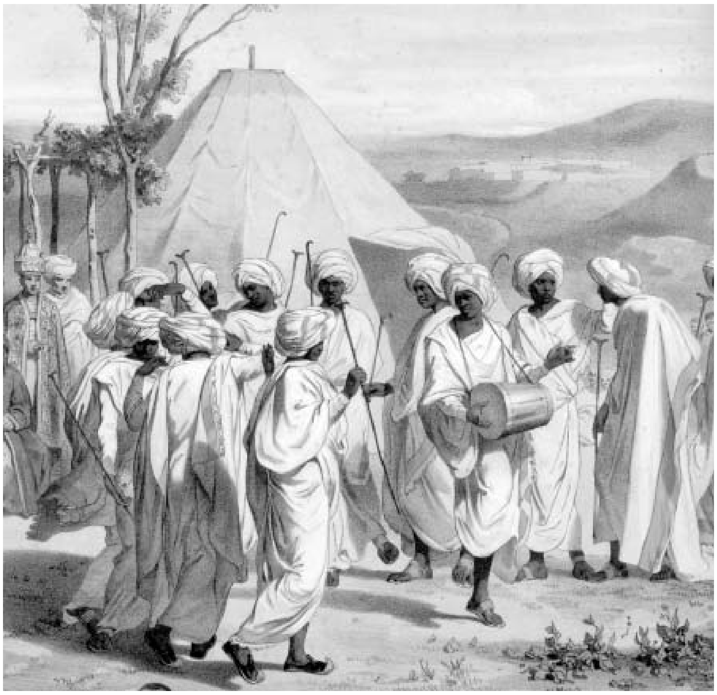
Liturgical music and dance

The liturgical ↗music of the ↗Ethiopian Orthodox (Täwaḥədo) Church (EOTC) is a vast and complex body of vocal practices, instrumental performance conventions, and prescribed movements that vary according to the liturgical occasion and its place within the annual liturgical cycle. The entire corpus of Church music as well as its notational system is credited in Church oral and written traditions to the inspiration of St. ↗Yared. The two main bodies of liturgical music for Ethiopian Christian worship are performed for the Q. and for the *Səbḥatä Ǝgziʾabəḥer* or *↗Maḫlet*.

The Q. (Mass) consists primarily of unaccompanied prayers and chants and is intoned weekly by ordained priests, with the support of deacons and the participation of members of the congregation on prescribed passages. The more elaborate forms of Ethiopian Christian liturgical music performance, however, are found within the *Maḫlet,* which is performed on holidays in the early morning hours prior to the celebration of the Q. The *Maḫlet* employs instrumental accompaniment on repetitions of certain chant portions, as well as includes patterned movement and dance.

The chants of the Q. are set mainly in two of the three Ethiopian **ስልት** (*səlt*, 'modes'), in *↗gəᶜəz* and *↗araray*, which are performed in antiphonal and responsorial style by the priests before the reading of the Gospel. The chants of the Q. are considered to be simpler to learn than those of the *Maḫlet*, which are often referred to collectively by the name of the main hymnary, the *Dəggʷa*. The *Maḫlet* is mastered only after many years of study in special church schools by *märigetas,* highly trained leaders of Church musicians called *↗däbtära*.

The *Maḫlet* for a given day includes multiple chants traditional for the occasion, drawn from the various chant collections and sung in one or more of the three *səlt* as convention and the occasion require. Certain important chants are sung



*Däbtära*s performing *aqqʷaqʷam* (liturgical dance) "in front of the Ark"; depiction from LefAbyss, pl. 34

without accompaniment, then repeated several times with different instrumental accompaniments. Following a performance of one plain chant (↗ *Qum zema*), the instrumental accompaniment commences with ↗ *zəmmame*, which entails moving the prayer staff (↗ *Maqqʷamiya*) rhythmically up and down in the air as well as from side to side, sliding it through the hand and striking it on the floor. Next follows a repetition of the same chant accompanied by rhythmic patterns sounded by the ↗ *ṣänaṣəl* (sistrum). The subsequent repetitions of the portion are termed the *wäräb*, marked by the entry of the ↗ *käbäro* drum. There are several stages of the *wäräb*, which become increasingly animated, culminating with a section called *čäbčäbbo*, featuring drumming at double the prior pace. During the final stages of the *wäräb*, the *däbtära*s put down their sistra and prayer staffs, and join in dancing (*masräggäd*), as the congregation claps and ululates. The number of dancers depends on how many *däbtäras* are available that day – 24 is the optimum number since it permits two lines with twelve dancers each, symbolizing the number of Christ's apostles. Whatever their number, the dancers divide into two lines that face each other, each line moving alternately forward and backward in stylized patterns of four steps in each direction. The combination of liturgical chant, instrumental practice, and dance are the subject of specialized study in special church schools. The study of instrumental practice and liturgical dance is termed ↗ *aqqʷaqʷam*.

Throughout its history until the late 20th cent., only male priests and *däbtära*s participated in public performance of Ethiopian Christian liturgical music. However, since the 1980s, women have begun to participate in choirs which sang newly composed hymns known as "Sunday School songs". By the 1990s, these choirs had become widespread at urban churches in Ethiopia as well as throughout the Ethiopian diaspora. Nowadays, women sometimes participate in choirs that sing after the *Maḫlet* or Q., or even perform with *maqqʷamiya*, *ṣänaṣəl*, *käbaro*, and liturgical dance, although there is resistance to such innovations.

Qəddase: Mäṣḥafä qəddase

The M.Q. (**መጽሐፈ፡ ቅዳሴ**, lit. 'Book of the [Eucharistic] Consecration/Hallowing', i.e. 'Missal') is the most important liturgical book of the ↗ Ethiopian Orthodox (Täwaḥədo) Church (EOTC). It essentially comprises the text of the Eucharistic celebration, or Mass (s. ↗ *Qəddase*), together with related prayers used in different instances.

There is no study on the diachronic development and arrangement of the various sections in the M.Q. The numerous printed editions consist of three distinct sections: (1) the rite of the Consecration or Hallowing from the beginning to the Pre-anaphora, i.e. Preparation, Prothesis, Enarxis, Liturgy of the Word, Pre-anaphora, commonly called *Śərʿatä qəddase* (‘The order of the hallowing’) and corresponding to the *Ordo communis*; (2) the 14 canonical ↗Anaphoras (and an additional six, of which two [*Mark* and *Mäʿaza qəddase*] are in occasional use in the EOTC); (3) priestly prayers for various situations; intercessions (↗*Mästäbqʷəʿ*), ↗litanies and prayers. These sections may be preceded by the ↗*Təmhərtä ḫəbuʾat* (*Mystagogia,* i.e. *Doctrina arcanorum*), which was probably used at an earlier period at every divine service, while today it is only used on several days. The three sections (e.g., in M.Q., Asmära 1993) include:

(1) (a) Ch. 1: Prayer over New Vessels (*Ṣälot laʿəlä nəwayatä ḥaddisat*): paten, *meron*, chalice and Eucharistic spoon; (b) Ch. 2: the beginning of the Mass itself; the subsection is dedicated to the preparation of the ministers and of the altar (*Śərʿatä qəddase zäyədällu läqäsis wälädiyaqon*) [cp. nos. 4–6 in the outline of the *Qəddase* above]; (c) Ch. 3: public liturgy up to, and including, the Gospel reading and homily (*Śərʿatä qəddase əskä gize mənbab zäwängel*) [cp. nos. 7–45 in *Qəddase*]; (d) Ch. 4: the pre-anaphora: from after the reading of the Gospel till the fruit of consecration (*Śərʿatä qəddase əmdəḫrä wängel əskä fəre qəddase*) [cp. nos. 46–51 in *Qəddase*];
(2) the 14 Anaphoras;
(3) (a) Prayer of the Covenant [of the three hours] (*Ṣälotä kidan zäśälästu gizeyat*); (b) litany for morning and evening, and litany for the Saturday of the Victory (*Liṭon zänägh wäzäśärk wäzäqädam śəʿur*); (c) intercessions; (d) prayer “the one who reigns” attributed to St. ↗Yared (*Zäyənaggəś zäʾabunä Yared*); (e) other intercessions (*Kalʾat mästäbqʷəʿat*).

The M.Q. was first printed for the EOTC at Addis Abäba in 1918 (Hammerschmidt 1987: 35; cp. ↗Incunabulas: Early prints in Ethiopia and Eritrea). Ethiopian editions (cp., e.g., M.Q. 1959) comprise parallel Amharic translations (cp. HamTana I, 27f.); editions with Təgrəñña translation have also been recently printed in Eritrea (cp. M.Q. 1993).

Editions of the M.Q. for the use of the Catholic community, however, were already printed in Kärän starting from 1890, on the initiative of the ↗Capuchin Mission, and in Asmära in 1914/15 on the initiative of the Sacra Congregatio de propaganda fide pro negotiis Ritus orientalis (↗Sacra Congregatio pro Ecclesiis Orientalibus). The Catholic editions of Kärän and Asmära can be characterized as heavily Latinizing (i.e. resembling the liturgical practice of the Roman Catholic Church), although they were an attempt to resume the practice of the Ethiopian rite after a period of the Roman rite in Gəʿəz.

A new edition of the M.Q. was prepared by the Vatican press in 1945 under the supervision of Arnold van Lantschoot, then *Consultor pro Ecclesia Orientali* (cp. Congregazione per le Chiese Orientali 1944; van Lantschoot 1937, 1946), in order to correct the shortcomings of the previous editions. The arrangement of this intentionally non-critical edition is substantially different from the average EOTC editions of the M.Q.: it comprises the *Təmhərtä ḫəbuʾat*, the ↗*Kidan zänägh* and the *Kidan zäsärk*, supplications, the *Liṭon zänägh*, the *Ṣälotä ḥaddisan*, excerpts from the ↗*Fətḥa nägäśt*, the *Śərʿatä qəddase*, and finally the ↗*Akkʷätetä qʷərban* consisting of 17 Anaphoras: of the Apostles, of Our Father, of Mary I, of Mary II, of John the Evangelist, of James Brother of Jesus, of Mark, of the 318 Orthodox, of Athanasius, of Basil, of Gregory of Nyssa, of Epiphanius, of ↗John Chrysostom, of ↗Cyril, of ↗Jacob of Serug, of ↗Gregory and of Dioscorus (although the index, p. 7, does not attribute it explicitly to the Alexandrian bishop, as explicitly – and correctly – stated by the editor, cp. van Lantschoot 1946; cp. also HabUff 126, n. 120, and 142, n. 56, but names it “the Anaphora by which the Missal ends”; however, the Catholic Church has now started to rectify its tradition and has resumed referring to this Anaphora by the name of “Dioscorus of Alexandria”, cp. Fritsch – Cogavin 2001:147–56). The edition was conducted on eclectic criteria, and for the purpose of putting an orthodox text at the Catholic community’s disposal.

It is not clear when the M.Q. emerged as a structured and autonomous liturgical book, as the relationship between the manuscript tradition of the single texts and the earliest emergence of the M.Q. as a unitary book has not yet been systematically analysed. Judging by the dates of the most ancient manuscripts in major collections (hundreds of M.Q. are recorded in library catalogues), as well as by the absence of the M.Q. in ancient inventories of monastic libraries, its *terminus ante quem* is probably not earlier than the 17th cent.:

cp., e.g., BritLib Orient. 545, dating to 1670/75; BN d’Abbadie 13 and 72, dating to the 17th cent.; EMML no. 1434, dating to 1680; no. 4190, of 1671/93; no. 2811, of 1671/75; nos. 2021, 3084, 3553, 3649, 3945, 4742, dating to the turn of the 17th/18th cent.; VatLib Comboni B 30, of 1660/65, and S 7, of 1676/94; Ṭānāsee 68 = Dabra Māryām 10, of 1683; Ṭānāsee 156 = Dāgā Esṭifānos 45, of the 17th/18th cent., where the *Təmhərtä ḫəbuʾat* is still retained.

The *Śərʿatä qəddase* was already printed in the first Roman edition of the N.T. of 1548, fols. 158–

67, by Täsfa Ṣəyon (s. EAE vol. 5), also translated in Latin by the same in 1549 (and furtherly Latinized in comparison to the edition by the mutilation of the invocation, in addition to the insertion of the *Filioque* in the Creed, probably by Pietro Paolo Gualtieri), then reprinted several times (cp. Brightman 1896: lxiiff.). The widely known, yet largely unreliable contribution by Mercer (1915; cp. Duensing 1916), had the only merit of publishing a facsimile edition with translation of *Ordo communis* and *Anaphora of the Apostles*, an English translation having been already published by Brightman (1896: 194–244).

The M.Q. is clearly composed of pieces of different provenance and age (translations as well as indigenous compositions), and undoubtedly preserves texts dating to the Aksumite period. The *Anaphora of the Apostles* as well as some of the *mästäbqʷəʿat* certainly belong to the earliest layer of the Ethiopian liturgy (cp., e.g., the *Euchologion* in the so-called "Aksumite collection", Bausi 2006: 60f.) and are transmitted within the ↗*Senodos*; the same is true for the *Təmhərtä ḫəbuʾat* within the *Kidan zäʾəgziʾənä Iyäsus Krəstos* (↗*Testamentum Domini*).

Musical notation (↗*Mələkkət*) usually accompanies the text of the M.Q.; in some of the most ancient available mss. the notation was clearly added later on by a different hand (cp. mss. BritLib Orient. 545 and 547).

Qəddase bet

Q.b. (**ቅዳሴ፡ ቤት**, lit. 'house of the liturgy') is the second stage (after the ↗*nəbab bet*) of traditional ↗education within the ↗Ethiopian Orthodox (Täwaḥədo) Church (EOTC). At this level, the students focus on the ↗*Qəddase* and the associated prayers, including the ↗Anaphoras, the ↗litanies, the intercessions (*mästäbəqʷʿat*), and the prayer for the Sacraments. Among the prayers are also the so-called **አንቀጽ፡ ዘኪዳን** (*Anqäṣ zä-kidan*, lit. 'the Gate of the Covenant'), the nine prayers of the *Kidan* (↗*Testamentum Domini*), distributed for reading in the morning, at midday and in the evening. The students also learn the ↗*Təmhərtä ḫəbuʾat* and the ↗*Säʿatat*.

The teacher of the Q.b. is referred to as **መጋቤ፡ ኅሩያን** (*mäggabe ḫəruyan*, 'the administrator/ teacher of the elected ones'). Whilst at Q.b. the students learn the texts and the melody (↗*Zema*) of the liturgical texts, their hidden internal meaning and the traditional interpretation (↗*Andəmta*) are only taught at the ↗*Mäṣḥaf bet*.

The first part of the Q.b. is the **አንቀጸ፡ ቅዳሴ** (*Anqäṣä qəddase*). Here the students learn the three modes of chant, ↗*gəʿəz*, ↗*araray*, and

↗*əᶜzəl*, and the Order of the Liturgy (*śərᶜatä qəddase*), i.e. their application to the parts of the liturgy to be performed by the deacon (*gəbrä diqunna*) and by the priest (*gəbra kəhnät*). The deacon's part is called **ተሰጥዎ** (*täsäṭəwo*, 'answer, response'); its mastering is necessary for one to be able to be ordained deacon (↗*Diyaqon*). The texts to be sung and their order are fixed, except for the particular readings.

At the next level of the Q.b., the singing of the 14 anaphoras used by the EOTC is taught.

Since the modes of chants are seen by tradition as having been introduced by St. ↗Yared, it is also to this saint that the foundation of the first Q.b. is ascribed.

Places famous for their Q.b. today are ↗Däbrä Abbay (Təgray) and Säläl Kulla (Wällo). *Abunä* ↗Samuʾel of Waldəbba is believed to have learnt the *zema* in a chain going back directly to Yared, and the monks claim an uninterrupted tradition ever since. The Q.b. of Säläl Kulla was similar, and it is said that *mämhər* Gäbrä Iyasus, a Q.b. teacher in Säläl Kulla, later taught at Däbrä Abbay. Zur Amba used to be a centre of education in *Qəddase* and ↗*Mäwaśəᶜət* but has lost its exclusive position.

Qəddəst Śəllase

Q.Ś. (**ቅድስት፡ ሥላሴ**), the Cathedral of the Holy ↗Trinity, is one of the main churches of ↗Addis Abäba, and one of the most important places of worship of the country. *Aṣe* ↗Ḫaylä Śəllase I decided to build it as part of his policy of strengthening Orthodox Christianity and spreading western civilization in the country. The Cathedral was grounded on 15 *Taḫśaś* 1924 A.M. [25 December 1931 A.D.], when foundation stone was laid by the Metropolitan *abunä* ↗Qerəllos and the other bishops. The construction was stopped for five years because of ↗Italian war 1935–36 and subsequent occupation. When the Emperor returned, in 1942 the work resumed, and on 17 *Ṭərr* 1936 A.M. [26 January 1944 A.D.] the first liturgy was celebrated there. On this day the bones of a daughter of Ḫaylä Śəllase I, Princess Romanä Wärq (who died in 1941 in Italy, in captivity) and the bones of the patriots who perished in the struggle against the Italians (↗Resistance) were buried with great honour in the crypt. In 1952, the bones of Ethiopian soldiers who died fighting in Korea were buried in Q.Ś. as well.

Since the number of the faithful was increasing, in 1946–47 the building was extended towards the North, South and West, and at that time it was given its present full name: Mänbärä Ṣäbaʾot Qəddəst Śəllase (**መንበረ፡ ጸባኦት፡ ቅድስት፡ ሥላሴ**). A third time the building was extended and decorated in 1960s during three year of extensive works; on 16 January 1968 A.D. it was re-opened with great celebration. The whole area of the Cathedral became 1,200 m^2, the height was 35 m, with the capacity of accommodating over 3,000 people standing or more than 1,500 chairs.

The style of the building imitates European Baroque in its eclectic form. It is a transeptal basilica with ceiling supported by 30 pillars, a cupola over the eastern part and two bell towers flanking the protruded western portico. The Cathedral has three altars: the main dedicated to the Holy ↗Trinity, the other two dedicated to ↗John the Baptist and ↗*Kidanä Məḥrät*. The Cathedral has 10 large windows and 18 small windows. On the ceiling and the walls of the Cathedral there are painting representing the 24 Heavenly Priests and the Angels; in the court, there are statues of four Evangelists, by a Greek artist.

The paintings were executed by Ethiopian artists: *aläqa* Asrässaḵäñ, ↗Agäññähu Ǝngəda, Ǝmmaʾəlaf Ḫəruy, Aläfällägä Sälam, ↗Mäzmur Dawit. The stained glass was produced by a Belgian artist; the paintings within the dome were executed by the Greek Artist Jereminis.

On the eastern wall of the sanctuary (cp. ↗*mäqdäs*) there is the ↗Crucifixion, below from right to left an image of the Baptism of Christ, Ḫaylä Śəllase and *ətege* ↗Mänän praying before Christ, the Assumption (↗*Fəlsäta*). To the South, there is an image of Ḫaylä Śəllase addressing the ↗League of Nations with his historical speech in 1935; to the North Ḫaylä Śəllase planting the Ethiopian flag in ↗Omedla. Near to the south entrance there is a picture of St. ↗George killing the dragon.

The special thrones of honour used by the Emperor and Empress, with their canopies, with four additional seats of honour for the royal family on each side were placed in the sanctuary. The graves of Mänän and Ḫaylä Śəllase (the latter reburied there on 5 November 2000) are in the northern part of the transept. Other members of the Imperial family are buried in the crypt under the building. The cemetery of the Cathedral is reserved for burial of the famous persons and high-ranking state officials and church ecclesiastics.

Below the building of Q.Ś., there is an older octagonal Mäkanä Śəllase church, built by *aṣe* Mənilək I in 1891, which is now known as the church of the Son (Baläwäld). Today, the courtyard houses are a museum.

The head of the Cathedral bears the title *liqä səlṭanat*. The most important church ceremonies take place in Q.Ś., such as the consecration of the Ethiopian patriarchs (↗Ordination; ↗*P̣ap̣p̣as*), as well as the national celebrations.

Qəddəstä Qəddusan ↗Church buildings

Qəddəste

Q. (**ቅድስቴ**; also **ቅድስተ፡ ክርስቶስ**, Qəddəstä Krəstos; d. *Mäggabit* 1704) was the favourite concubine of ↗Iyasu I. Her home was Bahrkänta on the south-western shore of Lake ↗Ṭana, just north of Qʷənzəla.

The chronicles report little about her beyond her name; it is obvious, nonetheless, that in the later years of Iyasu's reign he spent increasing amounts of time with her and that she became the chief recipient of his affection (cp. BruNile vol. 2, 511: "a mistress whom he tenderly loved"). Her death set in motion the events that brought Iyasu's reign to its tragic end. Iyasu mourned Q. greatly, spending much time in various monasteries and retreats of southern Ṭana in grief and contemplation. His absence provoked scheming among the nobles at court. They had grown estranged from Iyasu and feared that their opponents in Damot and Goǧǧam would rally around Iyasu (as they eventually did) and threaten their control of the kingdom. Another of Iyasu's concubines, ↗Mäläkotawit, feared that Iyasu would favour Dawit, his son by Q., for the throne instead of her son, the future ↗Täklä Haymanot I. These circumstances led to Iyasu's dethronement by the court nobles in March 1706 and to his murder the following October at the hands of Täklä Haymanot, Mäläkotawit, and her brothers. Two of Q.'s sons eventually ascended the throne – ↗Dawit III and ↗Yoḥannəs II.

Qəne

Q. (**ቅኔ**, pl. *qəneyat*, from **ቀነየ**, *qänäyä*, 'to intone, to compose, to sing a hymn', but also 'to worship, to subject [to God]', s. Admasu Ǧämbäre 1971/72: 9; LesCDic 437ab; DillmLex 447; KWKDic 798f.) is a genre of ↗Gəᶜəz literature. In the practice of the ↗Ethiopian Orthodox Täwaḥədo Church, it is a ↗hymn expressing adoration, praise or thanksgiving, improvized by the ↗*däbtära* during the celebration of the Divine Office and during the Mass after the distribution of Communion (↗*Qəddase*; HabUff 209ff., 223). Q. are not performed during ↗Lent. Like other hymns, Q. usually praise God and the ↗saints, but can also be composed in honour of secular and ecclesiastical personages (e.g., rulers) as well as particular places and events. Q. can also take the form of admonitions or castigations or have the character of a ↗prayer. In the past, emperors, local governors, princes etc. used to compose Q. on religious festivities whenever they wanted to address their people conveying them messages, guidelines, suggestions (Dästa Täklä Wäld 1953/54:97f.).

The Q.'s main feature is its spontaneity: it may be called **እንግዳ፡ ድርሰት** (*əngəda dərsät*, lit. 'guest text', i.e. improvisation). A Q. is composed only for a particular church and occasion and cannot be reused, even by its author. However, some Q. may be written down and preserved (e.g., in collections known as **መዝገበ፡ ቅኔ**, *mäzgäbä qəne*, 'the treasury of Q.') for the use of students, to be learnt by heart, as well as of traditional scholars, to maintain the cultural patrimony (Admasu Ǧämbäre 1970/71; Yəḫeyyəs Wärqe 1967/68: 132; LevWax 8; HabUff 220f.).

According to the position of church scholars (*liqawənt*), the Q. goes back to St. ↗Yared, since one can find short Q.-like compositions in the ↗*Dəggʷa*, traditionally ascribed to this 6th-cent. saint. These hymns, however, cannot be defined as Q.

The Q. has a rigid structure and must embrace at least three requirements: it must not break the ↗*zema*; it must have **ሰም** (*säm*, 'wax'), i.e. the immediate significance, and **ወርቅ** (*wärq*, 'gold'), i.e. the inner meaning (↗*Sämənnä wärq*), but still remain comprehensible; it must be rhymed, i.e. the final syllables at least must be identical, ending with the same consonant in the same order.

During the Mass, Q. are generally sung after psalms and canticles or they are interpolated after a certain number of lines of particular psalms. Some *Dəggʷa* elements may have the ↗*məlṭan* which can play the role of Q. In this case the *məlṭan* are called **ህየንተ፡ ቅኔ**, *həyäntä qəne* ('instead of Q.').

The main basic Q. modes (known as **ሙሉ፡ ቤት**, *mulu bet*, 'full verses') are, in order of learning in traditional ↗education: (1) *gubaʾe qana*: two *bet*, seen as symbolizing Christ's divinity and His humanity, sung in ↗*gəᶜəz* or ↗*ᶜəzəl* mode; (2) ↗*zäʾamlakiyä*: three *bet*, sung in *ᶜəzəl* mode; (3) ↗*mibäzḫu*: three *bet*, sung in the *mäwäddəs adäraräs* in the *gəᶜəz* mode; (4) ↗*wazema*: five *bet* in *räǧǧəm* ('long') *wazema*, three *bet* in *mahakkäläñña* ('medium'), two *bet* in *ač̣č̣ər* ('short'), sung in *araray* mode; (5) ↗*śəllase*: six *bet*, sung in *ᶜəzəl* mode; (6) ↗*zäyəʾəze*: *räǧǧəm* with five *bet*, sung with the *Nunc dimittis* (Lk 2:29) in *gəᶜəz* mode, and *ač̣č̣ər*, or *śaḥləkä*, with three *bet*, in *araray* mode; (7) ↗*mäwäddəs*: *fətaḥ litä* with eight *bet*, ↗*kʷəlləkkəmu* with 9 *bet*, sung in *araray* mode. The *mulu bet* Q. are used as the pattern for composition of any Q.

The Q. composed during the *Qəddase* fall into two types: ↗*kəbr yəʾəti* and ↗*ᶜəṭanä mogär*. Their chanting mode (*gəᶜəz* or *ᶜəzəl*) is defined by the melody of the *Qəddase*, and their length in turn by the chanting mode. *Kəbr yəʾəti* in *ᶜəzəl* has four *bet*, in *gəᶜəz*, three *bet*; *ᶜəṭanä mogär* in *ᶜəzəl* has eleven *bet*, in *gəᶜəz*, seven *bet*. The second strophe of the *ᶜəṭanä mogär* (fifth *bet* in *ᶜəzəl*, third *bet* in *gəᶜəz*) is called *aśärä nəguś* (lit. 'Footprint of the king') and is meant to praise the ruler and civil authorities, especially if present in the church. On various occasions, e.g., on Monday and Tuesday of the *Niqodimos* (last week of Lent), the *kəbr yəʾəti* and *ᶜəṭanä mogär* Q. can be replaced by *ḥawaryatihu käbäbä* (lit. 'He gathered his Apostles') and *ḥənṣeha* ('Her edification'), both of two *bet* (Yəḫeyyəs Wärqe 1967/68: 87, 144; Admasu Ǧämbäre 1970/71: 22; Elyas Abrəha 1996/97: 49). These two Q. modes are obsolete, except for a few churches in Goǧǧam. All Q. composed during the celebration of the *Qəddase* must always be devoted to the Holy Body and the Holy Blood of Christ and their effect on the communicants (s. HabUff 218f.; Elyas Abrəha 1996/97: 49). They are not learnt following a special course; advanced students learn them by having heard them.

The main categories of Q. verse-making are: *bet*, a verse, of varying length; *ḥaräg*, a phrase, which can be longer or shorter than a *bet*; *mändärdärya*, the second *bet* of *zäʾamlakəyä*, *wazema*, *śəllase* and *zäyəʾəze*, the third of *mäwäddəs*, the fourth of *ᶜəṭanä mogär gəᶜəz*, and the sixth of *ᶜəṭanä mogär ᶜəzəl*; *bʷahe*, the fourth verse of *mäwäddəs*; *läᶜaläm*, the sixth *bet* of *mäwäddəs*; *mäṣəfya*, the fourth *bet* of *wazema*, *śəllase*, *zäyəʾəze* and the ninth *bet* of *mäwäddəs* and *əṭanä mogär ᶜəzəl* (Ḫəruy Wäldä Śəllase 1926/27: 9ff.; HabTent 182; HabUff 220).

Q. is taught at the ↗*qəne bet*. The main centres are ↗Wadla (Wällo), ↗Gonǧ (Baḥər Dar, Goǧǧam), ↗Wašära (Damot, Goǧǧam); ↗Gondär (s. Admasu Ǧämbäre 1971/72: 10). They each have distinct traditions. The Wadla Q. is particularly difficult on account of its composition and interpretation, using many equivocal words, allusions and allegoric figures. The Gonǧ Q. is difficult to understand due to its profound meaning, using complicated concepts and images, often only understandable to the author. The Wašära Q. is relatively simple; its meaning can be caught even by someone who is not specialized in Q. The Gondär Q. is characterized by its melancholic mood; it is didactic, making allusion to the teaching of the Q. teachers.

The one who can compose (improvise) the Q. on the spot on the topic given to him, may be referred to as **ቅኔ፡ ዐዋቂ** (*qəne ᶜawaqi*, ‘expert in Q.’), or **ባለ፡ ቅኔ** (*balä qəne*, ‘master of Q.’), or **የሰምና፡ ወርቅ፡ ቅኔ፡ ባለቤት** (*yäsämənna wärq qəne baläbet*, ‘the master of wax and gold *qəne*’), after the techniques of traditional rhetoric used in *qəne*-poetry (↗*Sämənna wärq*). Anyone who can continue a Q. started by another is called **ቅኔ፡ ዘራፊ** (*qəne zärafi*, lit. ‘raider, looter of Q.’).

Today, the study of the Gəᶜəz Q. at the *qəne bet* goes hand in hand with the study of the Amharic Q. The latter must follow the Gəᶜəz Q. in length, rhythm and the number of *bet*-verses. In both cases the composer must keep in mind the melody on which the Q. must be sung. Usually, the Amharic Q. are composed for special occasions, to praise someone; they are never sung during Church services.

Qəne bet

The Q.b. (**ቅኔ፡ ቤት**, ‘house of the ↗*qəne*’) is a stage of the traditional church ↗education in the ↗Ethiopian Orthodox Täwaḥədo Church. It follows upon the ↗*nəbab bet*, the ↗*zema bet*, the ↗*qəddase bet* and precedes the ↗*mäṣḥaf bet*. In the Q.b. the students focus on the theory and practice of the composition of *qəne*.

The Q.b. student is frequently compared with the hermit (**መናኝ**, *männañ*, from *männänä*, ‘to renounce’; KaneDic 272f.) and hunter (**አዳኝ**, *addañ*), because he leaves everything, even his native village and relatives, in order to study *qəne*-poetry (ᶜƎnbaqom Qalä Wäld in PICES 3, vol. 2, 117).

The way to the Q.b. is long and difficult. The pupil must first perfectly master ↗Gəᶜəz and build up his vocabulary, which is the main instrument of learning as well as composing and interpreting *qəne*. He must also profoundly study traditional cultural, social, intellectual and educational values (Alemayyehu Moges 1973: 92). In turn, the knowledge of Q. is a precondition of the study of ↗*andəmta* in the *mäṣḥaf bet*. The Q.b. takes from three to five years.

The teacher of the Q.b. is called **መጋቤ፡ ምሥጢር** (*mäggabe məśṭir*, ‘the teacher/administrator of mystery/secret/sacrament’). A newcomer must ask him for permission to attend his classes. The advanced student of the Q.b. acting as assistant teacher is called **ዘራፊ** (*zärafi*, lit. ‘raider’). He can be permitted to teach the beginners; he can improvise *qəne*, continue a

Q. started by another, lecture *qəne* but always standing, until his graduation day as *qəne* master, and he is able to interrupt an author composing *qəne* (KaneDic 803b). The daily life in the Q.b. basically consists of hours of independent work, when the students memorize and analyse famous *qəne*, learn vocabularies and try to compose *qəne* of their own; and sessions where they recite their poems in front of the teacher and other students receiving the most profound critical evaluation of their work, accept from the teacher lessons and work on them etc. Usually, there is no financial support for the students who must earn their living by begging and occasional works.

On the day of his graduation the student is asked, by the guests and students present, to improvize as many *qəne* as they wish. At the end the graduation ceremony is closed by inviting him to sit on the chair (*wämbär*) of his master. The Q.b. teachers say that once the student has been taught the way of right thinking, he attains a position to express himself or to criticize others' views. He is thus able to analyse the *qəne* composed by other experts and thus learn the composition skills in greater depth.

There are different Q.b.; the main centres of learning are in ↗Wadla (Wällo), ↗Gonǧ (Goǧǧam), ↗Wašära (Damot, Goǧǧam); ↗Gondär (s. Admasu Ǧämbäre 1971/72: 10). The Q.b. schools differ in their thinking and teaching methods. Some students try to attend more than one master in more than one school, in order to reach a higher level of mastering *qəne.* Despite hardships during the time of studies, many students hope for a good position in the Church, where the masters of *qəne* have always been greatly appreciated.

Qəññət

Q. (**ቅኝት**, from Amh. **ቃኘ**, *qaññä*, 'to tune a musical instrument; to sing in a low voice … the hymn so that the other singers can begin singing it properly', s. KaneDic 803) refers to tuning systems or to melodic principles. For a ↗*mäsinqo* player Q. could also describe specific finger placement patterns or finger technique.

Q. is usually referred to in English as scale or mode. Various definitions have been offered for Q., based on general overviews of Ethiopian music or analyses of the music specific to a geographical region and/or a linguistic group. Q. can be regarded as a system of instrument tuning, melody type, interval set, or combination thereof.

Mondon-Vidailhet (MonVidMus) speaks about the "tuning" of the ↗*kərar* and ↗*bägäna* (without, however, mentioning the term Q.). Powne (1968), basing his research on instruments housed at the Institute of Ethiopian Studies (IES) and Mondon-Vidailhet's writings, uses *kərar* and ↗*wašənt* instrument tunings to determine Q.

In traditional secular ↗music, Ashenafi Kebede (1971) defines Q. as a system of instrument tuning. He recognizes four Q. commonly used among ↗*azmari* – namely, *anči hoy* (**አንቺ፡ ሆይ**), *təzzəta* (**ትዝታ**), *ambasäl* (**አምባሰል**), *batti* (**ባቲ**) –, dependent on relative pitch, tonality, dynamics, meter, and range of melodies. The instrumental introduction sets the vocalist's tessitura and melody (tones) in the proper Q. Song repertoires correspond to pentatonic melodic pattern types often bearing the same name.

Timkehet Teffera's study of children's songs in Goǧǧam (1998) shows that Q. is determined by melodic principles coupled with musical instrument tunings; it is less important as to which Q. a melody belongs. She asserts the theoretical pitch-sequence determinations of Q. are virtually unknown outside Addis Abäba.

Ezra Abate (2007) defines Q. as a scale, an important factor in identifying music of ethnic groups possessing different scales. Whilst the pentatonic scale is dominant, other types include *təzzəta* (with major and minor), *bati* (major, minor), Lydian (minor with raised fourth, major with raised fifth), *ambassäl*, *ančihoy*, Dorian pentatonic, Phrygian pentatonic, mixolydian pentatonic, diatonic minor scale, diatonic major scale, and other scales possessing 2–3 tones.

Zenebe Bekele (1987) distinguishes Q. (tuning) and *səlt* (**ስልት**, mode, scale). He recognizes seven modes: five pentatonic (hemitonic and unhemitonic), one hexatonic, and one chromatic.

For Amhara *mäsinqo* music, Kimberlin (1976, 1980, 2006) formulates a more broadly based theory of Q. as a fixed set of intervallic relationships in which each set consists of five pitches plus the octave. Since pitch is determined by the vocalist's tessitura, Q. is defined by the distance between fixed intervals rather than by fixed pitches. Amhara *mäsinqo* music possesses at least four pentatonic Q., each corresponding to interval sequence calculated in cents (an octave equals 1.200 cents): *ančihoy*: 135–370–115–345–235, *təzzəta*: 200–175–350–130–325, *ambassäl*: 115–345–235–135–370, *bati*: 325–200–175–350–150 (intervals that define a particular Q. are based on an average that falls within a pre-determined range deemed acceptable within the music tradition and by the musicians who practise it). *Təzzəta* and *anči hoy* are the basic and the older interval sets, with *bati* and *ambassäl* subsequently formed as intervallic permutations from the original; the latter two are named after a region and a town in Wällo. Other Q. types may also exist.

Qerəllos

The Q. (**ቄርሎስ**, 'Cyril') is a patristic collection, for the major part translated from Greek into Gəᶜəz in the Aksumite period (cp. ↗Aksum) – as a whole, one of the most important works of ↗Gəᶜəz literature. Named after ↗Cyril of Alexandria, it contains writings originating in the context of the Council of ↗Ephesus (431) and its immediate aftermath, with the later addition of a few patristic writings. Essentially of "a verbal-monophysite, anti-nestorian and achalcedonian" character (Weischer 1971: 93), the theological position of the ↗Ethiopian Orthodox (Täwaḥədo) Church faithfully reflects the Cyrillian Christology of the Q.

The Q. as it is, is the result of the conflation of two main different collections, with the addition of later materials. Both compiled in Alexandria (Egypt), the first section focuses on Christological questions debated at the council of Ephesus (431). It contains 18 writings (for the references to CPG [here inclusive of CPG Suppl.]; Lusini's [1987: 470f.] and Brakmann's [BrakKirche 164ff.] minor errors and omissions are corrected here; for additional references on the Coptic tradition cp. Lucchesi 2004):

three major treatises of Cyril of Alexandria:

(1) Prosphoneticus to the Emperor Theodosius II on the right faith (CPG no. 5218, Weischer 1973);
(2) Prosphoneticus to the Princesses Arcadia and Marina on the right faith (CPG no. 5219, Weischer 1993, which contains only the portion corresponding to ms. Ṭānāsee 42 = Kebrān 42, fols. 35^{ra}–44^{v}: indeed, the Prosphoneticus continues up to fol. 101^{va} with a long list of biblical witnesses which are still to be edited): it also includes a christological florilegium (cp. also Weischer 1980b);
(3) the Dialogue on the Unity of Christ (CPG no. 5228, Weischer 1966, 1967a, 1968, 1977a), and 15 homilies and letters (Weischer 1979a):
    homilies by
(4) Theodotus of Ankyra (CPG no. 6127);
(5) Cyril of Alexandria (CPG and Suppl. no. 5246 [omitted in Lusini 1987 and in BrakKirche, which probably depends upon the former]);
(6) Severus of Synnada (CPG no. 6145, preserved only in Gəᶜəz);
(7) Acacius of Melitene (CPG no. 5792);
(8) Juvenal of Jerusalem (CPG no. 6712);
(9) Cyril of Alexandria (CPG no. 5249);
(10) Rheginus of Constantia (CPG no. 6486);
(11) Cyril of Alexandria (CPG no. 5250);
(12) Eusebius of Heracleia (CPG no. 6143);
(13) Theodotus of Ankyra (CPG no. 6132 [omitted in Lusini 1987]);
(14) Firmus of Caesarea (CPG no. 6121, preserved only in Gəᶜəz);
(15) letter of the Council of Ephesus to John of Antioch (not preserved in Greek and not mentioned in CPG);
(16) homily of Cyril of Alexandria (CPG no. 5260, from his *Ancoratus*);
(17) letter of John of Antioch to Cyril of Alexandria (CPG no. 6310);
(18) letter of Cyril of Alexandria to John of Antioch (CPG no. 5339).

The second section consists of seven writings (homilies and symbols) on christological and trinitarian questions:

(19) a homily by Epiphanius of Cyprus (d. 403; CPG no. 3765), followed by
(20) a symbol of faith of the same (CPG no. 3744; cp. Weischer 1977b);
(21) a homily by Proclus of Cyzicus, Patriarch of Constantinople (d. 446; CPG no. 5800; nos. 19–21 ed., tr. by Weischer 1979b);
(22) a homily by Severianus of Gabala (d. 408; CPG no. 4206; Rodinson 1960; Colin 2003);
(23) a symbol of faith by Gregory of Neocaesarea (d. 270; CPG no. 1764; cp. Weischer 1977b);
(24 and 25) two homilies by Cyril of Alexandria on ↗Melchizedek (CPG no. 5280, preserved only in Gəʿəz: nos. 22–25 ed., tr. by Weischer 1980a).

Although some of the authors included in this section died long before the Council of Ephesus, they were considered theological authorities by Cyril of Alexandria, and thus their inclusion in the collection might be explained: Epiphanius of Cyprus was a fervent adversary of the Apollinarists and Severianus of Gabala called the Holy Virgin *theotókos*, and so did the fierce opponent of the Nestorians, Proclus of Cyzicus.

The second section of the Q. was probably also compiled in Alexandria, and added to the former by initiative of the Ethiopian translators and compilers (the statement by Weischer 1971: 87f., that this part of the Q. "was added ... in Alexandria", and that "the original corpus which became the first theological manual in the Ethiopian Church, was enlarged with theological treatises" is ambiguous).

A third, minor section of the Q. contains writings translated at a much later time (probably not earlier than the 13th cent.), from an Arabic *Vorlage* (Weischer 1969):

(26) a treatise on Melchizedek (together with a *Story of Melchizedek* and Cyril's two homilies from the second section of Q., it forms a small "Melchizedek dossier" in ms. BN d'Abbadie 94, fols. 34va–55^{rb}, where the third piece is attributed to ↗Rətuʿa Haymanot);
(27) a small treatise on the 318 Bishops of ↗Nicaea;
(28) on the birth and life of Jesus;
(29) an antiheretical treatise (on Arians, Chalcedonians, Nestorians, Severus of Antioch, Macedonius, Paul of Samosata etc.).

Finally, in some manuscripts of the Q. a short biography of Cyril is added, compiled from various hagiographical and historical works of the post–Aksumite period (↗*Sənkəssar*, Chronicle of ↗John of Nikiu, ↗*Abušakər*, History of ↗Giyorgis Wäldä ʿAmid).

Together with the ↗Bible, the Q. is to be regarded as the main Ethiopic linguistic monument of the Aksumite age. There is a general agreement on dating the translation of the Q. to the early 6th cent. (or to the 5th/6th cent.), on the basis of strong linguistic evidence: the Greek *Vorlage* of the Q. was a better and more complete Greek text than the presently transmitted one; the translator (certainly not a Greek speaker) did not correct the errors of the Greek text and provided a slavish word for word rendering; particles and gerunds were abundantly used as calques of Greek particles and participles, as especially appears in older mss. (cp. Weischer 1969), while the gerunds tend to be replaced in later manuscripts by the actually more usual coordinated perfects (cp. Rodinson 1960: 389–95; Weischer 1971: 89, 1973: 41f.). Yet, all in all, the transmission of the text is stable and consistent, with minor textual variants. A few adaptations were applied to proper names, where the corresponding Arabic forms (e.g., *Əllä Əskəndərya*) have often substituted the original Greek-based ones. Some theological terms were also updated (cp. Weischer 1967b). The linguistic, esp. lexical peculiarities of the collection have stimulated the development of exegetical tools devoted to the Q. in the form of ↗*Säwasəw*, where difficult terms are glossed by more common words (cp. DillmLex XV; Weischer 1973: 21–24). On the contrary, a general traditional interpretation does not seem to be particularly developed and/or attested (cp., however, the Amharic commentary on the Q. in ms. EMML no. 1669, dated between 1952 and 1957, fols. 246r–333r).

As far as the historical circumstances of the translation of the Q. into Gəʿəz are concerned, opinions vary. Some have suggested (Rodinson 1960; Weischer 1971: 89) that it was inspired by a reaction against Arianism and Judaism in South Arabia (in coincidence with ↗Theophilus the Indian's mission and the later military confrontation between Aksum and ↗Ḥimyar in the 6th cent.). Others have stressed the possibility of a polemical campaign against Julianists in Ethiopia and South Arabia (cp. Weischer 1973: 49; BrakKirche 165f.). The existence of a Nestorian target in the Kingdom of Aksum itself has also been suggested (cp. Fiaccadori 2006: 71, with n. 150). It is also possible that the arrangement of the collection was partly intentional, and partly the result of accidents of the transmission. What is clear is that the Q. has been acknowledged for centuries (till the translation of the ↗*Haymanotä abäw* in the 16th cent., and beyond, if we have a look at the relatively late date of most of the manuscript witnesses) as the Ethiopian theological collection *par excellence*.

Notwithstanding its great importance, the Q. has a very recent manuscript tradition: out of the 33 manuscripts listed by Weischer (1973: 16–19), apart from two fragmentary manuscripts in Erevan, Armenia, dating to the 14th and 15th cent. (cp. Weischer 1969), one ms. of the 15th cent. (Ṭānāsee 42 = Kebrān 42), and a couple from the 17th, all the others date from the 18th cent. onwards (the two mss. in Addis Abäba, ↗National Archives and Library are nos. 246, 20th cent., and 247 [cp. nos. 30–31 in Weischer 1973: 18, dated here to the 18th and 19th cent., respectively]). There are at least 14 additional manuscripts: RaiCer no. 57 (1923/24); EMML nos. 68 (20th cent.); 639 (19th cent.); 688 (20th cent.); 747 (1926/27); 1193 (1969); 1764 (18th/19th cent.), fols. 146^{r}–224^{v} (only nos. 1, 2 and 3 of the first section); 1993 (1768 A.D.: also includes a *Säwasəw zäqerəllos* and the biography of Cyril of Alexandria); 2108 (19th cent.); 2119 (17th/18th cent.); 2385 (18th/19th cent.); 4448 (17th cent.); 4459 (18th cent.); 4655 (18th/19th cent.).

The research on the Q. has marked important chapters in ↗Ethiopian studies. It was first substantially approached by Dillmann (cp. DillmLex and DillmChr), who largely underestimated the number of Q. texts of which a Greek *Vorlage* was preserved (cp. also SimDillmChr 303ff.), but it was Rodinson (1960) who posed the problem of the historical significance of the whole collection. His hypothesis (cp. above) was discussed and criticized at length by Altheim (1962) and Id. – Stiehl (1964ff.). Although at present, since Weischer's decisive contributions, the two German scholars have apparently been totally forgotten, they translated large portions of the text (Q. texts nos. 1–2, 5–6, 11 [only the beginning], 13, 15–16, 21, 23 [only the end], 24–26: but cp. the just and severe criticism by Weischer 1968: 132ff., 1971: 84, 90f.), either from Dillmann's *Chrestomathia* (DillmChr) or from a ms. of Addis Abäba, National Archives and Library of Ethiopia (cp. Altheim – Stiehl 1964: 441: indeed, the manuscript is vitiated by some transpositions) and animated the discussion on the Q. for ten years at least with a series of very polemic contributions (cp., e.g., Altheim – Stiehl 1971: 432–36, 462f.). They maintained the untenable hypothesis – in accordance with the late dating of the introduction of Christian faith into Ethiopia, not before the 5th cent. – that the Q. was translated in the 10th cent. from Arabic into Gəᶜəz. In the very same time Weischer was working on a complete critical edition of the Q. on a large ms. basis. The resulting edition is not totally satisfactory from the methodological point of view. Surprisingly enough, no attempt has been made at individuating any genetic relationship between the up to 22 mss. prior to the 19th cent. used for the edition; simply, the most ancient ms. Ṭānāsee 42 = Kebrān 42 has been chosen as the base ms. Moreover, a number of ameliorations by a second hand from a different textual branch ("nach einer anderen Vorlage"), which apparently bear "better" readings, have tacitly been inserted into the base text with no remark in the critical apparatus (cp. Weischer 1973: 28f.). All this notwithstanding, the completion (apart from the section of biblical quotations in the *Prosphoneticus to the Princesses Arcadia and Marina*, text no. 2) by Weischer of the Q. edition in 1993, 30 years after its beginning, is to be considered a fundamental scientific achievement.

Alessandro Bausi

Qerəllos

Abunä Q. (**ቄርሎስ**, fl. 13th–14th cent.) was an Ethiopian metropolitan (↗*Ṗappas*). The historicity of Q. seems to be proved by a charter from the "Golden Gospels" of ↗Däbrä Libanos of Ham issued by *aṣe* ↗Yəkunno Amlak in ca. 1270 (CRDLib no. 11). The beginning of Q.'s tenure (after ↗Giyorgis'?) remains unknown; but a few Arab authors quote a letter the Mamluk *sulṭān* Barsbāy (1260–77) received from an Ethiopian king in ca. 1274–75, with the request to send a new metropolitan (MHAlex I, 195–99), likely because the one in charge – probably Q. himself – had died. In terms of chronology, the Ethiopian ruler must have been *aṣe* Yəkunno Amlak; however, it seems that a new metropolitan from Egypt did not arrive during his reign.

These documents are further supported by a few Ethiopian hagiographic sources, like a brief ↗*Sənkəssar* commemoration of *abunä* Täklä Haymanot, who is said to have been consecrated deacon by *abunä* Q. under the ↗Zagʷe (Nosnitsin in VarAeth 156f.; in this source, the mention of the Coptic metropolitan Benjamin [1327–39] as the saint's contemporary is puzzling). The same episode also appears in the more recent versions of Täklä Haymanot's Vita. In addition, a few other works present some 13th–14th cent. saints (of the "generation" of *abunä* Täklä Haymanot and in most cases related to him) as those who received priesthood from *abunä* Q.: so *abunä* ↗Qäwəsṭos (Raineri 2004, s. index), or ↗Zena Marqos, Q. being sometimes styled Ger(əl)los (as in some later hagiographic traditions on of Täklä Haymanot), which is in fact the name by which ↗Cyril of Jerusalem is usually referred.

Denis Nosnitsin

Qerəllos

According to tradition, *abunä* Q. (**ቄርሎስ**; d. ca. 1828) was the 106th metropolitan of the ↗Ethiopian Orthodox (Täwaḥədo) Church (EOTC). He took up his office in 1816 and served until his death perhaps in 1828.

Q.'s tenure of office was troubled. He had been sent by the then ruler of Təgray, *ras* ↗Wäldä Śəllase. However, less than four months after his arrival, Wäldä Śəllase died. Already Q. had come into conflict with the clergy of Təgray over doctrinal issues (CRNuov 362f.). These issues had become embroiled in politics, as leading noblemen, according to conviction, or perception of political advantage, used doctrinal differences to discredit opponents and to rally support. Like his principal successors, Q. upheld a strict interpretation of Alexandrine doctrine, known pejoratively as ↗*Karra*. However, the teaching of ↗*Qəbat* was widespread in Təgray. Q. found a new champion in *däğğazmač* ↗Säbägadis, who aspired to replace Wäldä Śəllase as the dominant figure in northern Ethiopia. A year after his arrival Q. found himself further in conflict, this time in his attempt to recover the patrimony of his office, control of the district of ↗ᶜAddi Abun, near ᶜAdwa (Pearce 1831: 129f.). In this struggle, which lasted for at least a year, he enjoyed the support of the local clergy. On another occasion, he tried to use his authority to avert war between two contesting noblemen (ibid. 166f.).

In 1819 Q. was summoned to Gondär by *aṣe* ↗Iyoas II and *ras* ↗Gugsa to help resolve a doctrinal dispute. He arrived in June and met with obdurate resistance from the Gondär clergy, advocates of the ↗*Ṣägga* doctrine, led by *əč̣č̣äge* Wäldä Yona. A formal council was held in front of the Emperor and his court. Unable to assert his authority, Q. withdrew and returned to Təgray, where he lived out the remainder of his days (CRNuov 364f., CRReal 825–28). At least one source (CRReal 893) notes that he enjoyed the support of *däǧǧazmač* Säbägadis, while the list of metropolitans (Guidi 1899:14) claims that he was murdered by this same prince.

Q. sanctioned a number of *gʷəlt* grants, one by *aṣe* Gigar and *ras* Gugsa to Säbagadis (CRAxum no. 73; no. 81 taking reference to another grant of Q. and Gigar) and three grants by Säbagadis, one to Sərw Anbäsa or Däbrä Gännät Śəllase, Aṣbi (no. 82; cp. Nosnitsin 2008), one to an individual (no. 83) and one to the church of Mädḫane Aläm, ᶜAdwa (CRAxum no. 84).

Qerəllos VI

Abunä Q. (**ቄርሎስ**, formerly Sidārūs al-Anṭūnī; b. ca. 1880, Naghāmiš, Upper Egypt, d. 22 October 1950, Cairo) was the last Egyptian metropolitan (↗*Ṗappas*) of the ↗Ethiopian Orthodox (Täwaḥədo) Church (EOTC) and also the first to be appointed over the first five Ethiopian Bishops (cp. ↗*Eppisqoppos*).

Q. was consecrated Archbishop of Ethiopia in Alexandria, on 2 June 1929, along with three bishops (the following year Patriarch John XIX consecrated *əč̣č̣äge* Gäbrä Giyorgis, the future metropolitan *abunä* ↗Basəlyos as the fourth bishop). Q. blessed, anointed, and crowned *ras* Täfäri Mäkʷännən as Ḫaylä Śəllase I on 2 November 1930 in Addis Abäba.

Despite Ḫaylä Śəllase's reforms that effectively marginalized the Church and the *abun*, Q.'s service was comparatively unproblematic until the ↗Italian war of 1935–36 and subsequent Italian occupation. Q. stayed in Addis Abäba, and on 14 May 1936 he officially declared loyalty to the Italian government hoping to be confirmed in his position (TedEthPrel 1041). This led him to be remembered by most Ethiopians as a traitor who betrayed the country and the fighters of the ↗Resistance. However, some sources note that the Emperor, before his exile, begged Q. to stay in Addis Abäba and maintain calm among the people (del Boca 1965:201). He tried to persuade the Italian leaders to secure his position and the sovereignty of the Church. He tried to rescue *abunä* ↗Ṗeṭros from execution (Märša Alläḵäññ 2004:76f.). But his efforts failed due to the Italians' pro-Islamic policy (Sbacchi 1985:36). Attending the birthday party of the Prince of Naples on 19 February 1937 in the compound of the little *Gəbbi*, Q. was wounded on the right arm when nine hand grenades were detonated by resistance fighters.

Q. went to Rome on 21 May 1937 with the objective of receiving treatment and discussing the newly drafted regulation of the church by the invading power. His archiepiscopate was officially entrusted to the aged *abunä* Abrəham in the interim. Q. met ↗Mussolini and tried to prevent the breaking of the connection between the Ethiopian and the Egyptian Churches envisaged by the Italians. His efforts failed and Q. went to Egypt, whilst the Ethiopian clergy chose *abunä* Abrəham as the Archbishop of Ethiopia and he, with the support of the Italian government, ordained more bishops violating the long standing agreement between the two sister Churches. The Coptic Holy Synod excommunicated the new Ethiopian Archbishop and the bishops ordained by him. Outraged by the massacre at Däbrä Libanos and the plan of the Italians to separate the Ethiopian and the Coptic Churches, Q. openly condemned the Fascists (cp. Shenk 1972:128-32).

Q. returned to Ethiopia in 1942, accompanied by a delegation from John XIX, the then Patriarch of the Coptic Church. He then regained his office but with the precondition that his successor be an Ethiopian within the framework of "the See of St. Mark". The Ethiopians, wishing emancipation from Coptic domination and an

Abunä Qerəllos in Addis Abäba; from Rikli 1935:36

Ethiopian *abun*, made conditions unbearable for Q.; he was hardly able to perform even minimal ceremonial duties. In 1947, Q. left Ethiopia and retired to his convent in Egypt. Eventually, the Holy Synod agreed that upon Q.'s death an Ethiopian *abun* could be appointed.

Q.'s death marked the conclusion of the long historical domination of the ↗Coptic Church over Ethiopia. In January 1951, the Ethiopian Basəlyos was consecrated in Cairo as the Metropolitan. In 1956, he became the head of the new autocephalous church.

Qərš

Q. (Amh. ቅርሽ, also *gərš*, Tgn. *qərši*) is the word used for silver thaler (including ↗Maria Theresa Thaler, the main currency of Ethiopia for many centuries) as well as currently for local currency units in Təgrəñña-speaking areas (i.e. as a colloquial synonym for *bərr* or *naqfa*).

The term is believed to derive from the Arabic name for small money (piaster) *qirš* or *ġirš* (plural *qurūš* or *ġurūš* respectively). The form *qurūš* or *ġurūš* itself is borrowed through the Turkish *ġurūš* from the German *Groschen*, based on Latin *grossus*.

Qes ↗Qäsis

Qesä gäbäz ↗Gäbäz

Qirqos

St. Quiricus (also Cyriacus, Cyriac, Cyr, Gr. Κυριακός, Eth. Q. ቂርቆስ, Č̣ərqos ጭርቆስ) and his mother St. Julitta (also Julietta, Gr. Ἰουλίττα, Eth. ኢየሉጣ Iyäluṭa) were martyred in 304 A.D., under Diocletian, in Tarsus (in some sources: in Iconia or Antioch). According to their Acts (listed in the 6th cent. as apocryphal, *Decretum Gelasianum*) Q. was three years old, when he and his mother were tortured and beheaded.

Both saints were particularly popular in Ethiopia and are commemorated on 15 *Ṭərr*. The long version of their martyrdom appears in the earliest copies of the ↗*Gadlä sämaʿətat* (cp. Bausi 2002: 7f., n. 21), a shorter one is included in the ↗*Sənkəssar.* Some of Q.'s posthumous miracles make him a highly venerated warrior saint.

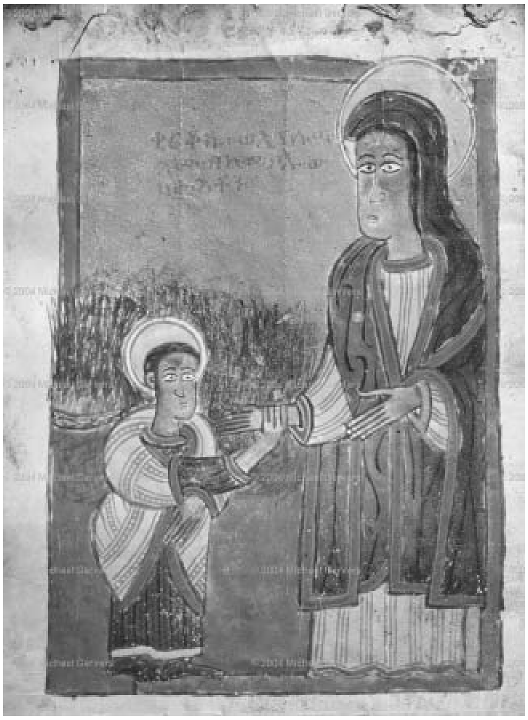
Besides the texts of the Vita there are the collections of Q.'s miracles (↗*Täʾammər*; the richest one containing over 20 stories) and numerous homilies (↗*Dərsan*), ↗*sälam* and ↗*mälkəʾ* devoted to both saints (e.g., mss. EMML nos. 303, 486, 615). A text containing a vision of Christ to Q. in connection with his ↗*kidan* appears in ms. EMML no. 519. Thanks to some of his posthumous miracles in which Q. appear as a holy warrior he joined the group of ↗equestrian saints highly venerated in Ethiopia.

Many Ethiopian churches are dedicated to Q. (e.g., Bole Q. in Addis Abäba; ↗Wəq̱ro Q., Sawne Q., Agwo Q., Wərra Q. in Təgray, Bilbäla Q. in Lasta). One of the most venerated shrines of Q. was the monastic church at Ṭana (↗Ṭana Qirqos), richly endowed by several Ethiopian rulers (Bosc-Tiessé 2008). Its ↗*tabot* was used as a *palladium* by ↗ᶜAmdä Ṣəyon I (Wajnberg 1936: 18ff.). The tale about Q.'s intervention to protect his main Ethiopian shrine from an attack by Farešämali, a general of *imām* ↗Aḥmad b. Ibrāhīm al-Ġāzī (also ascribed to St. ↗Fasilädäs), was one of the most popular and often copied miracles of the saint. *Aṣe* ↗Iyasu I visited the place several times at the yearly commemoration of the saint (GuiIohan 83, 96 [text]). *Tabotat* of Q. also appear in churches dedicated to other saints (e.g., ↗Yəmrəḥannä Krəstos).

Q. and his mother are a frequent subject in Ethiopian ↗painting. One of the oldest depictions is found in the Gospels of ↗Iyäsus Moᵓa of Ḥayq (fol. 16r) dating to 1280/81 (EMML no. 1832). In the 14th and 15th cent. their representations are often included in the illuminated *Gädlä sämaᶜətat* (e.g., ms. EMML no. 2514; a fragment kept in the treasury of the Aksum cathedral, s. Leroy 1967) and sometimes in paintings on wood (e.g., IES 4053). From the end of the 17th cent., the scene of the torture of Q. and Julitta by burning was introduced to the programme painted on the external walls of the ↗*mäqdäs* (e.g., ↗Däbrä Sina, Gorgora, ↗Maryam Dəngəlat, Ḥaramat).

Q. was also very early represented as an equestrian saint (e.g., 13th-cent. wall paintings in the churches Bilbäla Qirqos and ↗Gännätä Maryam, both near ↗Lalibäla). From the end of the 15th cent., he appears on some paintings on wood (e.g., IES 4001); from the beginning of the 18th cent. he is always one of the holy warriors depicted on the north side of the *mäqdäs*.

Every church dedicated to Q. owns at least one manuscript with Q.'s Acts, some of them illustrated. One of the finest examples is the manuscript executed in 1775, at one time in the possession of *aṣe* ↗Täklä Haymanot II (BritLib Orient. 720), with 30 miniatures of the Second Gondär school of painting.



Sts. Quiricus and Julitta, miniature from a 15th-cent. *Maṣḥafä säᶜatat* manuscript, fol. 52v, Däbrä Qʷäyäṣa, Šire, Təgray; photo 2000, courtesy of Michael Gervers

In Betä Golgota, ↗Lalibäla, one of the relief figures of the Apostles was at a later date identified by a secondary ↗inscription as Q., which is evidence of the popularity of the saint.

Qirqos ↗Ṭana Qirqos

Qobbo

Q. (Orom. *qobbor*, lit., 'castor plant', Amh. ጉሎ, *Gullo*) is the name of two towns and a *wäräda* in northern and eastern Ethiopia. In northern Ethiopia (North Wällo Zone) there is a Q. *wäräda* with a capital of the same name. It borders to the north on Alamata and ↗Wäfla, to the east on Gollina and Ewha, Harbu and Gubalafto to the south and Gidan to the west. The *wäräda* covers an area of 2,312 km^2.

Towards the 14th or 15th cents., ↗Dobaᵓa people are reported to have occupied what today is the Q. *wäräda* and its environs and in the ensuing cents. Amhara and Oromo people also settled in the region. Currently, the Q. *wäräda* hosts different ethnic groups – Amhara, Oromo, Təgray – though the Amhara are the majority. In 1999, it had a population of 197,995 and in 2006 of 250,000, the majority of them (over 82 %) farmers.

In eastern Ethiopia (Eastern Harärge Zone) there is the Q. town, in the Deder *wäräda*. In a recent population estimate the number of inhabitants was about 8,000. Though different ethnic groups live in the town, the Oromo represent the majority of the population.

Qoḥayto

Q. (ቆሐይቶ) is a large plateau, averaging 2,600 m A.S.L. and of ca. 32 km^2. It is situated in ↗Akkälä Guzay (*zoba* Däbub administrative zone), Eritrea, between 39,40°–39,44° E and 14,77°–14,91° N. It is partly bordered by steep escarpments and is inhabited by ↗Sāho-speaking Muslim agro-pastoralists scattered over more than 40 small villages and hamlets (ca. 4,000 inhabitants in 1997). The main village is Safira, in the area of which there are several ancient ruins.

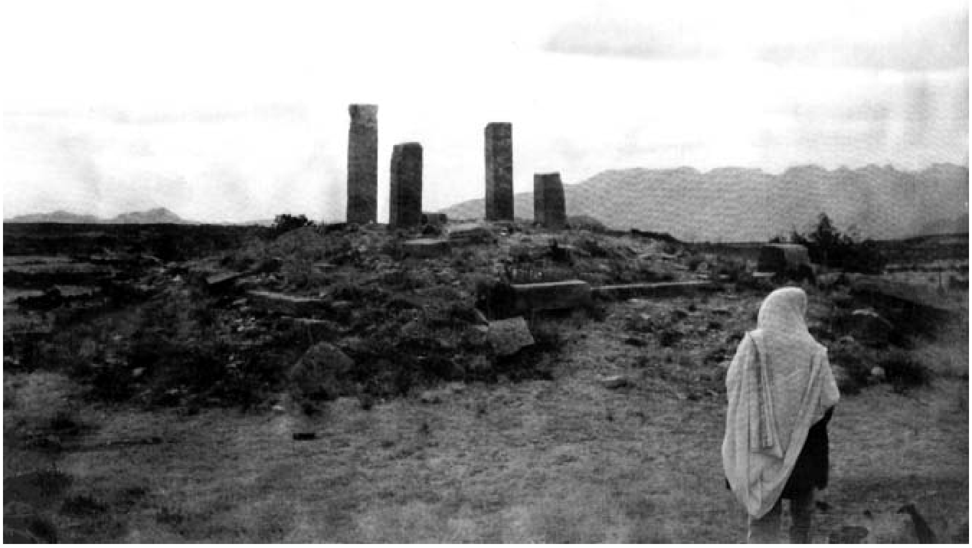
The plateau is accessed by two valleys, the Ḥaddaš Valley (north and west) which ends near ↗Ḥəšmele, and the Komayle Valley (north and east), which ends near Sänᶜafe/↗Mäṭära. Both connect the highlands with the Red Sea (Gulf of ↗Zula, ancient port ↗Adulis), from where the caravans reached the highlands. According to the author of the ↗*Periplus of the Erythraean Sea*, caravans needed three days from Adulis to ↗Coloë, and from there a further five days to Aksum. Some scholars consider Q. to be identical with Coloë (s. Voigt 1999:91f.), a trading post for ivory. Others (Kobishschanov 1979) proposed instead Mäṭära as the ancient Coloë.



The columns of a podium construction, Qoḥayto; photo 1997, courtesy of Rainer Voigt

The ruins on the plateau were first mentioned by Eduard ↗Rüppell (1838: 322) and then visited by Count Stanislas Russel and Giuseppe ↗Sapeto in 1859 (Sapeto 1871), Theodore ↗Bent in 1893, Max ↗Schoeller and Georg ↗Schweinfurth in 1894, Giotto ↗Dainelli and Olinto Marinelli in 1905 and the members of the ↗Deutsche Aksum Expedition (DAE) in 1906.

Max Schoeller considered the site as having once being a summer resort for wealthy people from Adulis, who spent the hot season there, an opinion that was widely accepted (Schoeller 1895). However, the ruins on the plateau might reveal several clusters of bigger and smaller villages or even "towns", separately built villas, cisterns, roads (?) and churches thus making it difficult to speak of a single town.

During their stay Schoeller and Schweinfurth investigated the so-called "Egyptian Tomb" with a stone superstructure and two rooms cut into the rock. The fact that in each chamber there is a cross carved on the walls has led scholars to consider it as early Christian, although it has not been proven that the crosses were not later additions. They also found about 70 skeletons wrapped in skins, 31 (not 32 as said in DAE II, 152) skulls were brought by Schweinfurth to Berlin where 29 still exist (s. Jungklaus in preparation). Bent described several ruins as well.

The DAE described ten monuments during its sojourn at Q.: the dam/cistern at Safira (DAE II, 148–52), the tomb (ruin no. 9, ibid. 152f.), ruins 1–8, 10 (ibid. 154–62). The dam (cistern) was said by many to be of pre-Aksumite origin, but all evidence points to an Aksumite origin (ibid. 148; Brunner 2006). In the vicinity of Safira there are house ruins and several podium buildings, both of Aksumite date. In addition, the DAE recorded many graffiti, mainly monograms (DAE IV, nos. 40–100 [RIÉ nos. 388–443]; for ↗inscriptions recorded later, s. Ricci 2002, 2003) and took a few small finds back to Berlin.

Recently, the plateau has been extensively studied by two archaeological missions, the German Archaeological Mission to Eritrea from Humboldt University and the ↗ᶜAddi Qäyyəḥ Archaeological Survey Project of the National Museum of Eritrea and the University of Florida (both in 1996–97). The first expedition found nearly 900 ruins and ruined complexes mainly from the Aksumite period. It also documented a few rock drawings and inscriptions, lithic tools and Islamic features and produced an archaeological map. It has been suggested that Q. belonged to the hinterland of Punt (Wenig 2003; Smidt – Habtom Gebremedhin in preparation). The second mission researched dozens of complexes to the west of the plateau.

go back to the early 1620s, when queen ↗Wäld Säʾala, wife of *aṣe* ↗Susənyos and mother of his successor, *aṣe* ↗Fasilädäs, founded a church at Qoma, overlooking the ↗Abbay gorge. She richly endowed it with land and created a large parish able to sustain more than 200 members of the nobility and chosen clergy. Fasilädäs did not recognize the creation of this monastery as this community supported his younger brother and rival *abetohun* ↗Gälawdewos. The Coptic metropolitan *abunä* Marqos III was supporting the queen Wäld Säʾala and Gälawdewos; he was exiled and maybe killed in 1648. The monastery preserved in its archives a *waqf* written by Marqos. Later, 1648, Wäld Säʾala negotiated with Fasilädäs and the church was re-dedicated to St. Basilides and obtained legal status.

The church compound is encircled by a 3-m-high stone wall. Today, the entrance to the compound is through a door in the north-western part of the wall. According to oral tradition, however, the main access used to be through the ↗ʿ*əqa bet*, with two 3-m-tall metal doors, one on the inner and one on the outer side of the building. The stone building is topped by an egg-tower (cp. ↗*ənqulal gəmb*) with a European-style bell, which was donated by queen Wäld Säʾala at the time of the foundation.

The church itself is circular, 30 m in diameter. 16 pillars, called "golden pillars" and made of different imbricated types of wood, support the roof. The four walls of the *mäqdäs* are covered with impressive mural ↗paintings, dating back to the foundation time. These are among the best preserved 17th-cent. murals, beside the ones of Wäyzazər Kidanä Məḥrät, in Qʷälala. On the eastern wall, two hapax were created: Jacob-Israel blessing his great sons Manasse and Ephraim, giving the precedence to the younger and ↗Melchizedek blessing Abraham. On the southern wall, the queen Wäld Säʾala is depicted with her father confessor, *abunä* Arsanyos. Above them, the first *mämhər*, Fəre Mäsqäl, receives his ordination from *abba* Sinoda, the founder of the Goǧǧame monastery of Däbrä Ṣəmmuna.

The church was restored by *abunä* Tadewos during the 1970s. The traditional thatched roof was replaced by a tin one, and the *qəne maḫlet* was widened by one meter, to better support the weight of the new roof.

From its very foundation, Q.F. has belonged to the ↗*Qəbat* monastic network. It is home to a distinct tradition of liturgical chant, *qomi zema*.

Qomos

Q. (Gəʿəz **ቆሞስ**, pl. *qomosat*, via Arab. *qummuṣ*, from Gr. Ἡγούμενος, 'the one who governs') is an Ethiopian ecclesiastic title. It originates from the older Coptic and Byzantine traditions, where Q. was primarily the monk-priest who is the superior of a monastery, i.e. the abbot (cp. ↗*mämhər*).

In Ethiopian annals Q. appears since ca. 15th cent. as one of the high-ranking ecclesiastics. The title does not seem to be found in the ↗*Senodos* and not even in the ↗*Fətḥa nägäśt*. Occasionally, it is recorded in a charter of *aṣe* ↗Zärʾa Ya^{c}əqob (Kropp in VarAeth 119, 133), and in a few Vitae (some of them associated with ↗Däbrä Libanos of Šäwa, RicEnbYoh III, here 77, 95–98). A Q. accompanied metropolitans ↗Yəsḥaq and ↗Marqos (Kur 1972: 88). In recent times, a document linked to *abunä* ↗Qerəllos refers to a Q. he appointed for a church in Aṣbi, Təgray (Nosnitsin 2007: 28).

Possibly there used to be married Q., whose role may have corresponded to that of a ↗*liqä kahənat*, since the title appears in contexts which lead to assume that it belonged to a married priest and not a (celibate) monk (cp. Nosnitsin 2007: 28). This would be congruent with the Coptic evolution of the title and practice into a kind of honorific degree of priesthood. Coptic monasteries having become empty structures in the course of the Middle Ages, they became parishes served by a married priest who used to accommodate his family in the buildings, was given the title of the former monastery and was ordained its *qommoṣ* (in the Egyptian context), a title which took the sense of "dean" or "archpriest" and a rank that both monastic and secular priests may receive. It is still frequent in Egypt. In today's Ethiopia, however, the Q. must be a monk, as in earlier times, but without having to be an authentic abbot.

Nowadays, for a priest-monk to be selected and ordained to the rank of the *qumsənna* ('Q.-ship') by the bishop, he must be outstanding in learning as well as conduct – like the *liqanä liqawənt* (cp. ↗*liq*) – the more so because the bishops are in turn selected from among the Q.

The ↗ordination rite for Q. (the Western Church would speak of an abbatial installation) is found in the *Mäṣḥafä pappas* (van Lantschoot 1940). It follows the same pattern as the major orders and includes the laying-on of hands. The bishop prays that the candidate may receive the grace of the Holy Spirit "so that he may … be an example to those who are under his obedience by his deeds, and that he may teach them the commandments of the Law, … provide for them in purity and love, that being saintly and without blemish, he may bring them to Christ the Bridegroom of heaven". This ministry concerns "the holy altar of the Orthodox loving city N." (Burmester 1985: 97), a detail made to match the ordinations proper and more fitting in an ecclesiastical than in a monastic context.

In fact, a Q. may nowadays be given charge of certain important monasteries or churches, be delegated by his bishop to receive widows and widowers into the monastic life, giving them the *qob*^{c} blessed for them by the bishop; he may bless the land where a church is about to be built and dedicate a new church, installing a ↗*tabot* sent for it by the bishop; he may re-dedicate a *tabot* or a church which has been defiled in some way etc. In such functions, as well as in questions of authority, the rapport the Q. may have had with the *əč̣č̣äge* needs to be clarified (cp. RicEnbYoh III, 95–98), especially since the Q. was not frequent until modern times.

Once ordained, the Q. may wear the Greek *rason* (Amh. *färäǧiya*) and *kamilauka* (Amh. *yägrik qob*^{c}, a cylinder headgear with edges) as well as the same large shawl (Amh. *šarp* – *šawəl*) with purple bands on his shoulders as bishops, although the Patriarchate currently requires that the shawl be dropped (2008 A.D.).

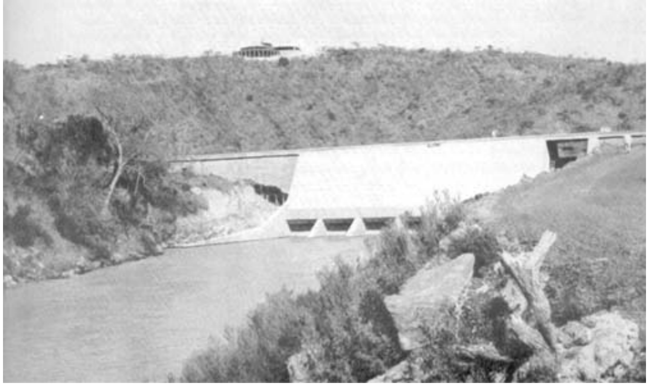
Qopreyanos ↗Cyprian of Antioch

Qoqa

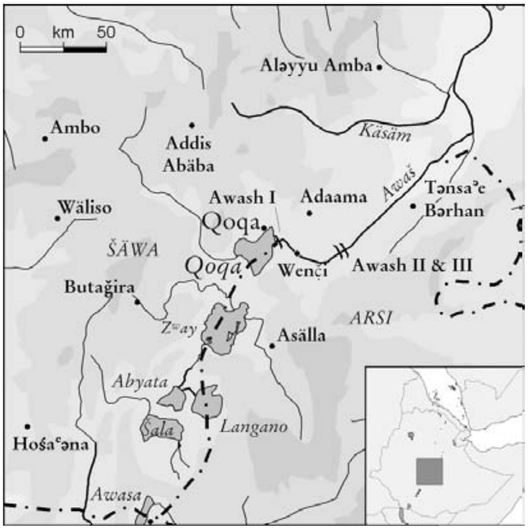


The Qoqa dam in the 1950s; from Ministry of Information 1969:215

Q. (ቆቃ, 08° 26' N, 39° 02' E) is the name of a town in Məsraq Šäwa zone of Oromiyaa *kəlləl.* Between December 1957 and May 1960 the Q. barrage was constructed across the River ↗Awaš to provide hydroelectric power. Capital for the project was obtained from Italy through the War Reparations Fund (*Bərr* 30,641,000). The poet ↗Täsämma Ǝšäte promoted the idea of the dam and was involved in the identification of the site. It was built by Italian engineers in a narrow gorge carved in a faulted basalt ridge that the Awaš River crossed, falling by ca. 20 m. The 454 m long barrage towers above the valley with a maximum 48 m in height. High water level reaches 42 m and low water 32 m.

After running through the Q. hydraulic turbines, water flows downstream through the two hydroelectric plants of Awaš II and Awaš III which generate 107,2 MW. With a 132,000 V high-voltage line, the first ever installed in Ethiopia, electricity is conducted over 450 km to Addis Abäba, Dərre Dawa and Harär.

In the last 40 years the capacity of the reservoir declined from 1,65 Mm³ to 1,186 Mm³ (i.e. a decrease of 0,464 Mm³) due to upstream deposits from the Awaš river and its tributaries (among them the Moǧǧo river) that drain a watershed of more than 10,000 km². The Q. dam impounded the "Qoqa Reservoir" or Lake Gälila in the Rift between the cities of Q. in the north and Ṭena Aläm in the south. Its average level is 1,595 m A.S.L. Depending on the season the triangular shaped lake changes its surface area from 180 km² to 250 km². Before the dam blocked the valley, the Awaš flow-off ranged from 650 m³/sec to 2 m³/sec while today it remains between 15 m³/sec and 90 m³/sec that allows a major water diversion for downstream ↗irrigation. The reservoir cannot retain the highest Awaš floods which, as in 2006, inundated and destroyed crops and flower greenhouses.



After the construction of the barrage the ↗Wänči sugar plantation was established. Later sugar and citrus fruit commercial farms (total area ca. 70,000 ha) followed downstream in the middle and lower Awaš valley. The lake is a rich resource for the fishing industry. Tourists from the capital who want to watch ↗hippopotamus and ↗birds are attracted to Lake Gälila. Since the valley has become a lake, outbreaks of ↗malaria occur.

On 28 March 1972 in Q. town an agreement was signed by envoys sent by President Ǧaˁafar Nimeiry of Sudan and Joseph Lagu, the leader of the Anya Nya Sudanese resistance movement, which granted broad autonomy to the Southern Sudan. The treaty was repudiated by Nimeiry and the rebellion resumed under the leadership of John Garang. After the fall of Nimeiry in 1985 another meeting was held at Q. in March 1986. This time representatives of the National Salvation Alliance, in power in Khartoum, met the envoys of the Sudan People's Liberation Movement/Army. However, no agreement could be reached.

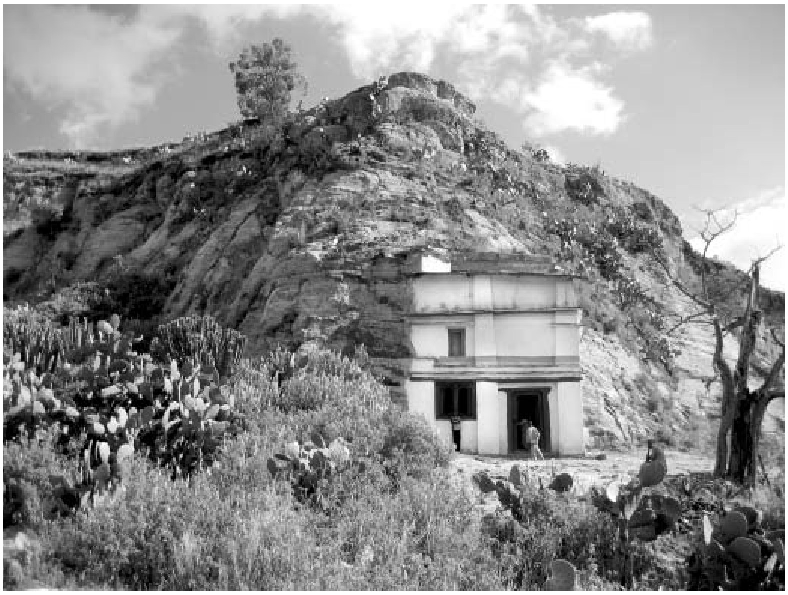
Qorqor

Q. (ቆርቆር) is a mountain of the ↗Gärʿalta massif and the site of a rock-hewn church dedicated to St. ↗Mary (s. map for Gärʿalta, EAE vol. 2). Known as Q. Maryam, the church was founded by the 13th-cent. *abba* ↗Danəʾel (of Däbrä Maryam; a small chapel dedicated to him is located on the very top of the mountain).

Originally, the church was a three-nave basilica (ca. 16 x 10 x 8 m) with a vestibule. The entire space is divided into five bays by four pairs of cruciform and one pair of squared pillars, all with bracket capitals and connected by the arches. The sanctuary in the shape of a horse-shoe is covered by a semi-cupola and communicates with a square chapel added to the east end of the north aisle. The chapel is connected via a tunnel with adjacent burial caves, also accessible directly from the church via secondary openings in the north aisle, cut 2 m above the floor level. The ceiling sections seems to have been originally carved to simulate roofing constructed of wood with cupolas, crossed beams, etc. Aksumite type friezes run below the ceilings of the sanctuary and the central nave, except for the central bay covered by an elaborate cupola with an imposed cross and a large boss in its centre. The ceilings of the first and second bay of the central nave and of the southern aisle, as well as the first southern pillar have collapsed; that part is presently divided by secondary pillars and a wall. The façade, except for its northern part and the south-west corner of the church, is a recent construction. To the left of the entrance there is a circular cell.

Whilst the cutting is poor, revealing irregularities both in the ground plan of the church and in most architectural elements, the interior is richly decorated with an extensive set of carved and painted ornaments. On the walls of northern aisles there are blind arcades framed with interlaces and filled with heraldic birds and antelopes; in the sanctuary and northern chapel there is the motif of false windows; the arches joining the pillars are accentuated by interlaces and decorated with intertwined crosses; crosses appear also inside the squared ceiling sections; the cupolas have spiral bands.



Qorqor Maryam Church, west façade; photo 2007, courtesy of Zara Thiessen

The walls, ceilings and the sides of pillars facing west and the central nave are decorated with ↗paintings. The programme includes scenes and figures from the O.T. (Adam and Eve, the Sacrifice of Abraham, ↗Moses on Tabor, the prophets Daniel and Jonah, the Youths in the Furnace martyrised in presence of King Nabuchadnezzar), the N.T. (Visitation, Entry into Jerusalem, the Evangelists) as well as the archangel Fanuʾel and a large group of saints (the ↗equestrian saints

Theodore and Cyriacus [↗Qirqos] with Julitta, Marina, Stephen, ↗Anthony, Onouphrios, *abba* ↗Gärima). Stylistic features point to three or four different painters. Some peculiarities bear witness to the preservation of the Early Christian iconographical tradition (e.g., the depiction of a jewelled cross flanked by two birds; the juxtaposition of the Entry into Jerusalem with the ↗*Maiestas Domini*, placed on the north wall; typology of the scenes with Moses and Abraham), others suggest a connection with the imagery of Coptic ↗Egypt and ↗Nubia (e.g., Punishment of the sinful souls added to the Adam and Eve scene; St. Mary presenting the Christ Child framed by a circular *clipeus*, locally called *ṭənsəta;* three sun-like faces of angelical beings known as the watchers; a figure wearing a crown reminiscent of the headgear of Nubian rulers). There is also a scene of a jousting or court festival, with horsemen and musicians – one of the earliest secular representations in Ethiopian painting.

The carved and painted decoration was probably executed at the turn of the 13th-14th cent., shortly after the completion of the church and, according to a partially preserved inscription added to the representation of Christ in Majesty, on the initiative of *abba* Danəʾel. The painted decoration is in poor state due to dissolution of the rock surface and careless treatment.

The church possesses several ↗manuscripts, including an 18th/19th-cent. copy of the Vita of *abba* Danəʾel (recently microfilmed, IES mf. 194) and a 15th-cent. ↗*Gädlä ḥawaryat*. It also preserves a ↗crown of the *zäwd*-type attributed by an inscription to *aṣe* ↗Zärʾa Yaʿəqob and a staff iron ↗cross with a gilded top, which may have belonged to *abba* Danəʾel.

The main church celebrations are two Marian ↗feasts: *Däbrä Qʷəsqʷam* (6 *Ḫədar*) and *Qəddase beta* (21 *Säne*).

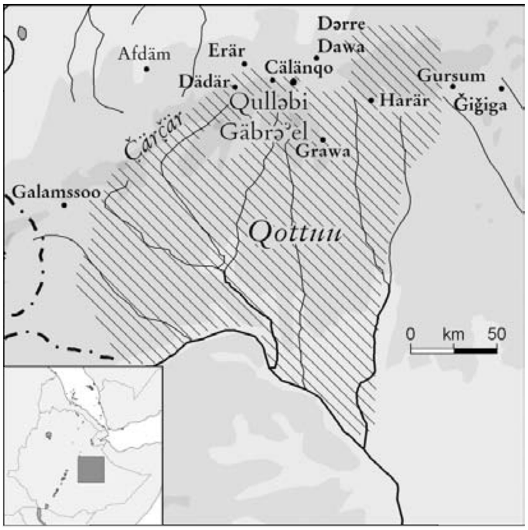
Qottuu

The term Q. became an ethnic label used for the Muslim ↗Oromo of the ↗Harär plateau. In Oromiffa Q. means "a person who cultivates the soil", i.e. someone who digs or ploughs (Akkaadaamii 1996: 481; da Thiene 1939: 281; Paulitschke 1893: 63). The term Q. was probably imposed, in a descriptive sense, by neighbouring groups (Paulitschke 1888: 421ff.; Brooke 1956: 67) but it contained no pejorative meaning. Observers who accompanied the Egyptian occupation of Harär in 1875–84, promoted the term externally, implying a notion of "industrious farmer" in contrast to "predatory pastoralist" (Mohammed Mokhtar 1876; HMSO 1884: 120ff.; Paulitschke 1887).

During the second half of the 19th cent., "Q." designated sedentary agriculturalists, belonging in political terms to the Afran Qalloo (also Afran Qalluu) federation, including the clans of the Ala, Baabbile, Noole, and Oborra (Michels 1937: 33f.; TrIslam 206), who had their villages in "the outer circle" of Harär (Yusuf Ahmed 1960: 21; Abdurahman Garad 1990: 42–45). Following the battle of ↗Č̣älänqo in 1887, and the inclusion of Harärge into the Ethiopian empire, "Q." was also used to mark the Islamized peasantry among the ↗Ittuu of the ↗Č̣ärč̣är mountains, and among the Annya, between the Erer and Ramiz rivers. The language of the eastern Oromo became known as *afaan qottuu* (Paulitschke 1893: 63; Seifu Metaferia 1978: 476).

Culture, Islam and language among the Q. developed in close interaction with neighbouring Somali, the Harari, and in accordance with the legacies of pre-16th cent. agricultural populations of the region, the ↗Harla and the ↗Argobba (Azaïs – Chambard 1931; Wagner 1978: 54–58). Among the Afran Qalloo, Q. relates to a regional



longue durée of peasantisation, starting during the late 16th cent., and associated with processes of sedentarization, exchange (of spouses and goods), social stratification (private ownership of land), administrative and religious changes (Waldron 1984: 35; Braukämper 2002: 110). The clan-system of the Q. became highly integrative of strangers, due to the needs of mutual assistance in the agricultural village life (Million Tesfaye 1961).

↗Sorghum appeared as the central staple food (s. Seifu Metaferia 1978: 487ff.). Rain-fed agriculture was sometimes intensified by terracing and irrigation techniques. The digging stick (Orom. *dongoraa*) and a wooden spade (Orom. *akaafaa*) were used until the ox-↗plough came into more general use during the Egyptian occupation (Paulitschke 1893: 216; Rosen 1907: 82; McCann 1995: 40f.). During the late 19th cent. Q. were prominent for the production of *wars*, a kind of saffron. Since the late 19th cent. ↗coffee and ↗*čat* became the cash crops that determined general economic development among the eastern Oromo (Paulitschke 1888: 245ff.; Ezekiel Gebissa 2004).

Until 1875 the Afran Qaalloo were organized by a version of the ↗*gadaa* system known as *raaba-doorii* (de Salviac 1901: 183ff.; Michels 1937: 106–20), and loosely linked as allies to the Harär Emirate (Mohammed Hassen 1980: 230f.; Caulk 1977: 382). The Egyptians enforced Islamization, and imposed the Harari hierarchy of security, land-ownership, and tax-farming estate-holders. The *damina* (Orom. from Arab. *amīn*, 'guarantor') became responsible for territorial security. The *garaada* (↗*Gärad*) received land rights and imposed tax obligations on the formerly collective land. This strengthened the land-holding class. Since 1887 the Ethiopian administration retained the Harari model of administration of the conquered Oromo and the rule of Amhara soldier-settlers (↗*Näfṭäñña*), known regionally as the ↗*mälkäñña* system ,was superimposed (Mohammed Hassen 1980: 236f.; Brooke 1956: 72). Q. became synonymous with the exploited ↗*gäbbar*.

The Italian colonial interlude (1936–41) abolished the *mälkäñña* system. Under the *Governo dell'Harar*, an expanded programme of road constructions integrated the Q. into wider market structures (Brooke 1956: 65ff.). The reconstitution of Ethiopian rule saw several regional uprisings, and an integration of politics among the Q. with pan-Somali and pan-Oromo ideas (Braukämper 2002: 123; Zitelmann 1994: 77f., 267f.). During the 1960s *afaan qottuu* became a medium of radio diffusion from Somalia (Gow 2004: 309), and the "Afran Qalloo" re-emerged as a symbol for cultural revival (Zitelmann 1994: 98).

Islam among the Q. appeared as a fusion of the popular veneration of saints, literate Sufism and Sunni orthodoxy (TrIslam 205ff.; Braukämper 2002). With the integration of the Q. into the Ethiopian empire, adherence to Islam provided a means of opposition.

Qozmos

Q. (**ቆዝሞስ**, fl. 14th cent.) was, according to the Acts of ↗Yafqərännä Ǝgziʾ, a monk who came from Aksum to a monastary called Zäzo. Due to a quarrel over the consecration of women as nuns he moved to a monastery called Wäyna.

Q. was an extreme ascetic who lived in a separate cell and refused all cooked food, as well as the Eucharist. He fled to ↗Səmen when he was threatened with arrest. Because of his miraculous powers and his ability to write, Q. was readily accepted by those who practiced the “religion of the Jews” (*haymanotä ↗Ayhud)* in Səmen and ↗Ṣällämt. He is said to have written the *Orit* (↗Octateuch) for them, and they are said to have viewed him as a semi-divine, even messianic figure. With Q. at their head the *Ayhud* rebelled once again, and defeated the ↗*käntiba* of Dämbəya, who was forced to join them. Because of his bitter memories, Q. appears to have singled out the clergy as special targets of his rebellion. *Aṣe* ↗Dawit II was forced to send fresh troops from Təgray (led by ↗Akḥadom, the governor of Təgray), which resulted in defeat of the rebel forces and death of Q.

Although the passage dealing with Q. is a brief episode in the text, it is of scholarly interest from several perspectives. Q.’s extreme asceticism is an excellent example of the tension which could arise between individual ascetics and the demands of communal ↗monasticism. Moreover, Q. appears to have played an important role in the emergence of monasticism and perhaps literacy among the ↗Betä Ǝsraʾel.

The story of a Christian monk joining the *Ayhud* and inspiring their religious-political opposition to the Ethiopian monarchs is echoed in Betä Ǝsraʾel oral traditions.

Quaderni di Studi Etiopici

The Q.S.E. (Amh. **የኢትዮጵያ፡ ጥናቶች፡ መጽሔት፡**, *Yäʾityoṗya ṭənatočč mäṣḥet*) was a journal published from 1980 to 1988 by Brother Ezio Tonini, head of the Catholic Pavoni Social Centre in Asmära. Prior to Eritrea’s independence, the Centre had sponsored the local Centro di Studi Etiopici. Beside the Catholic Church, the journal was also supported by ↗Addis Ababa University; there was also limited cooperation with ↗Asmära University.

The fascicles appeared annually, sometimes two volumes appearing as one biannually. The publication was stopped after vols. 8–9 (1987/88) due to the unstable political situation in Ethiopia and, mainly, in pre-independence Eritrea. After Eritrean independence, the publication was not resumed, as its name – in fact rather neutral, as it referred to the broad definition and framework of “classical” ↗Ethiopian studies – was felt to be no longer appropriate in the new political situation.

The aim of the Q.S.E. was to promote knowledge about Ethiopia and the ↗Horn of Africa in various fields, such as history, archaeology, arts, linguistics, nature, ethnology, religion, constitution and legislation, folklore, literature and the humanities. The editions covered a wide field and contained photographs for illustration.

ETIOPICI

Asmara 1985-1986

The title page of the Quaderni di Studi Etiopici, no. 6-7, Asmära 1985–1986

Contributions were mainly written in Italian and English, some in French and Təgrəñña, both by prominent and lesser known scholars from Europe and Ethiopia. They covered cultural issues concerning various ethnic groups, beyond the limits of the boundaries of the then Province of Eritrea. The Q.S.E. also included book reviews on current literature relating to Ethiopian studies; vol. 3–4 (1982/83) additionally contained notes on congresses and a list of doctoral dissertations with a focus on the Horn of Africa submitted to US Universities in 1970–82.

Qubba

Q. (Sudanese Arabic; Amh.: Gubba) was a Muslim–Sudanese state north of the ↗Abbay River that emerged around the end of the ↗Funǧ kingdom (↗Sinnār) on the Ethio–Sudanese frontier. According to oral tradition, Q. was founded about nine generations ago by a certain *šayḫ* Ḥammad on the Dungul hill. By giving 25 years to each generation, Q. would have been founded about 225 years ago, around 1780 (cf. also Cheesman 1968: 370). According to the traveller Juan Maria ↗Schuver, Q. was in existence at least starting from Muḥammad ᶜAli's occupation of the ↗Sudan in 1821 (James – Baumann – Johnson 1986: 174), and enjoyed a high degree of autonomy. Originally it may have been an autonomous province under the Funǧ. Q. corresponds to the present-day Gubba area in Wallaggaa (Wälläga).

Today, the people of Gubba trace their origin to the period of Funǧ rule, calling themselves Fuñ or Gubawi (oral sources; Tesser 1932: 273; Garretson 1980: 198). The population comprises ↗Gumuz, ↗Šinašša and ↗Berta. The rulers of Q. were most probably of Sudanese Arab descent, Ǧaᶜalīn mixing with the local population.

Some years before Schuver visited Q. in 1882, the Protestant ↗St. Chrischona-Pilgermission tried to establish a missionary station in Q. in 1867, but failed. An Italian hunter, Luigi Mondo, then spent two years with the chief of Q. in the mid 1870s in an attempt to procure Guereza monkeys for the Hamburg zoo. At that time, the chief of Q. was Ibrāhīm, the father of Abušok and Q. was not just emerging, but was already a well established state enjoying relations with its neighbours ↗Goǧǧam and Wälläga (James – Baumann – Johnson 1986:189f).

The late 19th-cent. ruler Abušok further consolidated Q. and re-asserted its independence during the collapse of the ↗Mahdist state, but thereafter it quickly became tributary to Ottoman–Egyptian rule. He expanded Q. and subdued several Gumuz, Berta and Šinašša villages. His son Ḥamdan then conducted a large-scale expansion and administrative consolidation.

In the 1880s, there were five divisions within Q. These include Q. proper with several Gumuz villages and with the seat of the chief; other Gumuz villages to the south-west; the Berta on the Beri hills who had fled from Famaka due to raids; the Šinašša to the east of Q.; and the Kadalo, who also lived in the Sudan. The territory and population of Q. then seem to have been as large as those of ↗Beni Šangul and Ḵomoša (James – Baumann – Johnson 1986:185).

However, the *šayḫs* of Q. were far from exerting the same degree of control over their territories as the rulers of ↗Beni Šangul (esp. *šayḫ* ↗Ḫʷağali), since the Gumuz had preserved much of their old autonomy in their respective hills. Thus the chiefs of Q. were not given equal recognition by Ottoman-Egyptian rule as the chiefs of Ḵomoša or Beni Šangul. Q. was considered to be under the distant chief of Ǧabal Gule, situated beyond Famaka. However, it was as important as Famaka, particularly as a centre of trade.

Until 1898, Q. was not effectively included under neither the Sudan nor Ethiopia. Having controlled the Bäläya region, *nəguś* ↗Täklä Haymanot of ↗Goǧǧam seems to have moved to incorporate Q. as well. He appointed a certain Yəggəzaw Č̣ufaa as governor of Bäläya who then attempted to annex Q. He attacked its chief, *manǧil* Abušok, captured him and handed him over to Täklä Haymanot. The *nəguś* imprisoned Abušok at Ǧəbbälla Amba when he marched to the Battle of ↗ʿAdwa. Then, during his Wänbära campaign of 1898, Täklä Haymanot released Abušok and sent him with troops to Q. to collect tribute. Abušok however, turned against these Goǧǧame troops; they escaped, and Abušok went on to consolidate Q. (Täklä Iyyäsus Waqǧiraa, ms., 143f.). This was later continued by his son *šayḫ* Ḥamdan, known as *däǧǧazmač* Banǧa.

Manǧil Ḥamdan succeeded his father, Abušok, as governor of Q. in ca. 1898. He was more concerned with coffee, cotton and tobacco trade and plantations and sought to expand his domains. Through raids he took full control of Beri, Dasifi and other Gumuz hills. Q. gradually incorporated other neighbouring hills such as Yaringe, Yabattal, Fanguso, and Damtay. Though temporarily, Ḥamdan was also able to occupy Abu Ramla in 1918 on the other side of the Dindir River, upon the death of *nəguś* ↗Wäldä Giyorgis. These expansions forced many Gumuz to desert their villages and to flee to the south of the Blue Nile River and to the Sudan (James 1986: 122).

At the height of its extension, Q. (ca. 1880s–1948) included relatively vast territories that helped it to defy orders from Ethiopian officials. *Šayḫ* Ḥamdan Abušok was directly responsible to Addis Abäba, but preserved his autonomy, owing partly to the consolidation of his power along the border and the strategic location of Q. Formally under Ethiopian control, Q. continued to exist on the fringes of the two states. By 1932 Ḥamdan was increasingly turning towards the Sudan, having included some members of the former Sudan Defence Force in his personal bodyguard and sent some of his children to Sudanese schools. At the local level, cross-border relations were close, reflecting a historical unity in the Blue Nile basin (Garretson 1980: 201).

The Ethiopian garrisons along the frontier were mostly responsible for collecting taxes rather than implementing effective central administration in the lowlands. From time to time, they raided the region for tribute. They considered the frontier peoples (as far as the White Nile) tributary, but actually the frontier peoples were not effectively incorporated.

After the death of Täklä Haymanot in 1901 the balance of power shifted to *ras* Mängäša, and Q. (now Gubba) was controlled by ↗Bägemdər. This went on until 1948 when a new administrative structure was introduced. The new ↗Mätäkkäl *awraǧǧa,* was created with its centre at ↗Čagni that included Gubba, Dangur, Wänbära, and Gʷangʷa *wärädas.* Gubba retained its close links to the Sudan; e.g., its police uniforms were copied from the Sudan (PerGov 326f.). In the 1960s, two other sub-districts were given separate *wäräda* status for more effective control, raising the number of the districts administered under the new *awraǧǧa* from four to six. These were Mandura and Dəbaṭi *wärädas*. Until then, Gubba and Dangur had been administered as out-lying districts of Bägemdər. In 1992, another new administrative structure was implemented that placed the whole of the Mätäkkäl *awraǧǧa* under the Beni Šangul-Gumuz National Regional State.

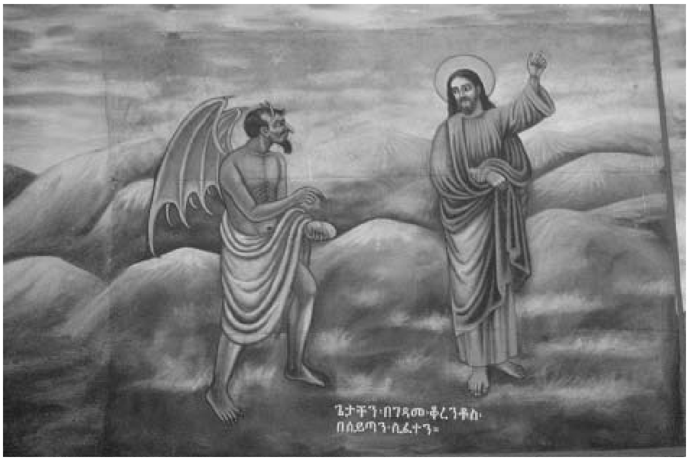
Qulləbi Gäbrəʾel

The church of Q.G. (**ቁልቢ፡ ገብርኤል**; full name Rəʾəsä Adbarat Qulləbi Däbrä Ḫaylä Qəddus Gäbrəʾel) is one of the most famous centres of ↗pilgrimage of the ↗Ethiopian Orthodox (Täwaḥədo) Church. It is located in Qulləbi, a small village in the ↗Č̣ärč̣är mountain range ca.



Temptation of Jesus by the devil, 20th-cent. wall painting from Qulləbi Gäbrəʾel; photo 2009, courtesy of Tom Owen

60 km north-west of Dərre Dawa and 70 km north of Harär (for location s. map for Qottuu).

According to local tradition, the region around Čärčär had been the scene of inter-ethnic conflicts and disputes. Peace was established in the area after negotiations between the feuding groups on the site of the present church. When the conflicts arose again in the 1890s, *ras* ↗Mäkʷännən Wäldä Mikaʾel made a vow (↗*Səlät*) to St. Gabriel that he would build a church in his honour if peace could be restored (Märša Alläk̠äññ 2007: 8; Ministry of Information 1967/68: 6). Thus, when peace returned, *ras* Mäkʷännən constructed the church on the already famous site and dedicated it to the saint as promised. The *tabot* was brought from the old church of ↗Bulga (Ministry of Information 1967/68: 5).

The church was consecrated on 26 July 1892. *Ras* Mäkʷännən lived in Harär but also often stayed at Qulləbi because of the cooler climate. It is said that he prayed at Q.G. on his way to the Battle of ↗ᶜAdwa in 1896.

Some renovations to the original structure were undertaken in 1920 but the shrine remained relatively unknown until the Italian occupation of 1936–41. Multitudes of pilgrims prayed at Q.G. throughout the years of ↗resistance struggle, and it was during this period that the church reportedly became a centre, not only for Orthodox Christians, but also for many Muslims living in the area. The church was bombed and damaged by the invading Italian army who considered it a rallying point for all the people of the area. Prayers were said to St. Gabriel for his help in ending the occupation. Many of the faithful in the area believe that for the second time in less than half a century the power of St. Gabriel helped defeat a European invader. Thus, after the liberation, Q.G. gained its greatest prominence as a national rather than as a primarily local shrine. Each year the crowds grow larger, coming not only from all parts of the country but also from neighbouring countries.

Qum zema

Q.z. (ቁም፡ ዜማ), translated as plain chant (Tito Lepisa in PICES 3, vol. 2, 162f.), is the term for unaccompanied Ethiopian Christian vocal chant; musicians also call unaccompanied chant the *gəss* (ግስ). Q.z. is performed by highly trained clerics, ↗*däbtära*, sung either by a single performer alone or by two singers in antiphonal style ("on two sides") with overlapping phrases. Q.z. is the most basic form of chant performance practice. It conveys the contours of each one of the vast repertory of liturgical chants within one of three church modes (↗*Zema*), named ↗*araray*, ↗*ᶜəzəl*, ↗*gəᶜəz*.

Although a chant is transmitted with a relatively stable melodic contour, each performance, even those by the same singer, may vary slightly in ornamentation and tempo of the melody. Chants for the more than two dozen different types of pieces, known as "portions", fall into three main groups that vary according to liturgical and musical criteria. The first group makes use of "model melodies", memorized by *däbtära* during the night (when it is too dark to study books). These chants are called የማታ፡ ትምህርት (*yämata təmhərt*, 'evening studies') or የቃል፡ ትምህርት (*yäqal təmhərt*, 'vocal studies') and comprise such liturgical portions as ↗*arbaᶜət*, ↗*aryam*, and *śäläst*. The second group of chants draws on standard melodic opening formulae that belong to the same musical family, termed **ቤት** (*bet*, 'house'). Many of this second group of chants begin with repetitions of the word *halleluya* or include refrains such as *əsma läᶜalam …* A third group contains many chants that are used with specific psalms or canticles and derive their names from these portions. E.g., the *yətbaräk…* takes its name from the First Canticle of the Three Children, Dan 3:52–56 (Shelemay – Jeffery 1993, vol. 1, 6f.).

The rendition of each chant as Q.z. further varies according to types of vocal style. In the past, there were a number of well-established schools of vocal style associated with different monasteries in the north central Ethiopian highlands. These included the *Betä Ləḥem* style (called after the church of ↗Betä Ləḥem); the *Qoma* style (↗Qoma Fasilädäs); the *Aç̣abər* style (Bərur Maryam monastery at Wänç̣äre, north of Däbrä Marqos); the *Tägulät* style (↗Zena Marqos monastery, north of Ankobär); and possibly others. Since the 16th cent., the vocal *Betä Ləḥem* style has predominated as a result of its historical association with the monarchy, and in the 20th cent., the consolidation of church musical transmission in Addis Abäba, and the training of many musicians in official church schools in the urban setting. However, singers of the *Qoma* and *Aç̣abər* schools maintain their styles of singing plain chant, with the *Qoma* style characterized as being "longer" (more sustained and ornamented) than either that of *Betä Ləḥem* or *Aç̣abər*. There are fewer differences between vocal style for the ↗*Qəddase* than for the ↗*Dəggʷa*.

Within performances of the Cathedral Office (which includes the *Dəggʷa* and other chant books), important liturgical portions based on Q.z. are sung more elaborately and then repeated within the **ወረብ** (*wäräb*), a performance style characterized by different combinations of instrumental accompaniment and dance. The chant is first repeated accompanied by motions of the ↗*mäqqʷamiya*, which is moved through the air, as well as struck on the floor, in a style called ↗*zəmmame*. Next the chant is sung with the accompaniment of the ↗*ṣänaṣəl*. Several additional repetitions follow, accompanied by the ↗*käbäro*, called *wäräb*, the final one of which, *čäbčäbbo* (**ቸብቸቦ**), is performed at double tempo accompanied by clapping and dancing.

Q.z. further provides the basic musical formulae represented by the Ethiopian notational system (↗*Mələkkət*).

Q.z. is the most musical of a variety of vocal styles used to articulate Ethiopian Christian sacred texts, psalmody, and liturgical chant. Q.z. is only sung, in contrast to other types of vocal articulations, which fall along a continuum between speech and song, and which are acquired early in their educational process by young boys in the ↗*nəbab bet*. Young boys first begin to read syllables in a regular, eighth-note rhythm called **ቍጥር** (*qʷəṭər*, 'counting style'). Next they read aloud in a sing-song manner, ascending and descending an interval of roughly a third, termed the *gəᶜəz* style. Next comes **ውርድ፡ ንባብ** (*wərd nəbab*, lit. 'descending reading'), a type of chanting on one pitch following an initium. Finally, regular reading with a bit of ritual grandeur, a type of pitched recitative, is termed *nəbab*.

Qunna

The Q. (**ቁና** or *qʷənna*) was, and is, one of the most commonly used Ethiopian measures of capacity. Based on a basket container (or a pot, **ቍና፡ ፈጅ**, *qʷənna fäǧǧ*), and used in most parts of the country, it was widely employed in the ↗measurement of grain. This unit, like other such traditional measures of capacity, varied considerably from one part of the country to another and even from one neighbouring market to another, and was the equivalent in volume of anything between 3 and 5 litres. Various types, and differing sizes, of Q., are reported. These included the **ቤት፡ ቍና** (*bet qʷənna*, 'Q. of the house'), the **አሥራት፡ ቍና** (*aśrat qʷənna*, 'Q. for paying tithe', and the **የንጉሥ፡ ቍና** (*yänəguś qʷənna*, 'king's Q.' for tax payment), **መሸመቻ፡ ቍና** (*mäšämmäča qʷənna*, a measure for the market), **ቍና፡ ተኩል** (*qʷənna täkkul*, 'big *qʷənna*', equal to 1½ *qʷənnas*) etc.

The size of the Q., in common with that of other traditional units based on volume, tended to expand in time of plenty, and contract during periods of scarcity. Another complication arose from the fact that traders in some markets made use of two sizes of measurement: a larger one when they bought, and a smaller one when they sold.

Qurᵓān, al-

The Q. (Ar. القران; very often qualified by epithets like *al-karīm* 'the glorious'; *al-ᶜaẓīm*, 'the magnificent'; sometimes *al-Furqān*, 'the salvation' used as a synonym for Q., but s. Paret in EI²) is, according to the mainstream Sunnī theological views, the uncreated word of God revealed to humankind through the mission of the last Prophet ↗Muḥammad. The Q. has a pivotal role in Islamic culture representing the core of theological thought, the basis of daily cult practice and the spiritual guidance for the faithful. The text of the Q. is divided in 114 chapters (Ar. *sūra*; pl. *suwar*; each of them has one or more titles) of different length (ordered basically from the longest to the shortest), in 30 equally long sections called *ǧuzᵓ* (pl. *aǧzāᵓ*) and in 60 *ḥizb* (= half *ǧuzᵓ*; pl. *aḥzāb*; for a general introduction to Qurᵓānic studies s. Welch-Pearson in EI² and Cook 2000).

The Q. text has several direct or indirect links to Ethiopia and Ethiopians. Ǧaᶜfar b. Abī Ṭālib recited in front of the ↗*Naǧāšī* Qur. 19:16–34 to give the king an idea of the creed of the Muslim refugees, which appeared to the Ethiopian monarch very similar to Christianity (TrIslam 45). Commentators of the Q. (*mufassirūn*) maintain that Qur. 5:83f. reflects the moved reaction of the *Naǧāšī* to Ǧaᶜfar's reading, and Qur. 3:199 and Qur. 28:52ff. refer to the *Naǧāšī* who converted to ↗Islam and will thus be granted a double reward in the hereafter. According to other traditions, Qur. 5:82–86 has to be interpreted as a mention of the people whom the *Naǧāšī* sent to the Prophet together with the Muslim emigrants going back to Medina: the Prophet recited to them *sūra Yā-sīn* (Qur. 36) and they started weeping and embraced Islam (as-Suyūṭī s.d.:116f.; al-Wāḥidī 1994:112ff.).

The Q. text contains a relatively remarkable number of loanwords from Gəᶜəz (e.g., *miškāt* < *mäskot; munāfiqūn* < *mänafəq*) which have been variously interpreted (list in Nöldeke 1910, Jeffery 1938; analysis of some of them in Kropp 2003, 2005, 2007).

One may surmise that the Q. spread in Ethiopia as early as Islam started gaining followers in the country, recited during the five mandatory daily ↗prayers, copied in bound ↗manuscripts (*muṣḥaf*, itself a loanword from Gəᶜəz) and studied and commented in the curriculum of traditional Islamic ↗education. The Q. is well represented in Ethiopian Islamic manuscript collections: in the IES library mss. nos. 258–60, 277, 279, 2154, 2324 (s. also Jomier 1967:287) are Q. while two partial 19th-cent. *muṣḥaf* and a long manuscript section of the Q. are preserved in the Robecchi Bricchetti collection of the Pavia Civic Library (mss. 1–3 fols. 1r–23v, Traini 1973:844f.).

No detailed study is available on the *qirāᵓāt* (readings; for a more precise definition of the term s. Paret in EI²) existing in Ethiopia. E.g., it still needs to be studied whether only the most wide-spread reading (of Ḥafs ᶜan ᶜĀṣim) is known in the country or also other *qirāᵓāt* were/are in use (e.g., the ad-Dūrī from Abū ᶜAmr, quite well known in Sudan). The Q. is learnt by heart in Qurᵓānic school where small children are taught to write and recite the sacred text from a very early age (e.g., for Harär s. Leslau 1965:172–88; Garad – Wagner 1998:67–95; for Wällo Hussein Ahmed in PICES 9, 99f.). Qurᵓānic exegesis is one of the main topics in the syllabi of traditional Islamic educational institutions and Ethiopian Muslim scholars have expounded the Q. in local languages and in Arabic both orally and in writing (HusIslam 93). An outstanding example of this practise is the huge work of the living *šayḫ* Muḥammad al-Amīn b. ᶜAbdallāh al-Urumī al-ᶜAlawī al-Hararī called *Ḥadāᵓiq ar-rūḥ war-rayḥān fī rawābī ᶜulūm al-Qurᵓān* (Beirut 2001, 33 vols.) which aspires to be a comprehensive handbook of Qurᵓānic sciences.

In the literary production of Ethiopian Muslims quotations from the Q. are almost always present especially to enhance the religious pathos of some passages (e.g. WagFath 107).

The Q. has been translated into many Ethiopian languages both by Christian and Muslim learned men. In the ↗*Anqäṣä amin* passages of the Q. are translated into Gəᶜəz to be analyzed by ↗ᶜƎnbaqom from a Christian point of view (DonEmbAnq 57–86). According to Dästa Täklä Wäld (DTWDic 12), a Gəᶜəz version of the Q. was realized by Zurambe Ǝngəda who put into Ethiopic an Amharic translation done by ᶜƎnbaqom. These two versions were said to be kept in Aksum and in Goǧǧam. This same source speaks of the existence of an “Amharic” Q. on parchment allegedly owned by an Argobba *šayḫ* who mentioned it to Dästa in Dərre Dawa in 1932/33: it is not clear if an Arabic text in *fidäl* is intended or more likely an Amharic translation. A partial Amharic translation was published by Mittwoch (1906) who edited the manuscript notes of *aläqa* Tayyä who had selected passages of the Q. translated by two Muslim acquaintances of his in Yəfag ten years before. This small anthology of the Q. (*kaq*^{w}*er*^{c}*an* [sic!] *yätäqädda*) contains also passages of the Q. in Arabic transcribed into Ethiopic ↗script. Sections of the Q. in Amharic may also be found in the Amharic version of the *Sylloges* of *šayḫ* Zäkkaryas (Gori 2003:64–68). Among the charges against *ləǧ* ↗Iyasu was that he had a Q. written in *fidäl* (apparently a transliteration of the Arabic text) with which he used to pray (HSLife [Amh] I, 31).

In 1965, ↗Ḫaylä Səllase I himself ordered a complete Amharic translation which was carried out by a group of Muslim Ethiopian scholars headed by ↗Muḥammad Ṯānī Ḥabīb and Sayyid Ṣādiq. The work was published by Artistik Printing Press in Addis Abäba in 1968/69 (review Ricci 1969, Kane 1974:613–27). It was reprinted in 2005 by Nejashi Printing Press with only minor changes, notwithstanding considerable criticism from contemporary Muslim Ethiopian intelligentsia. According to many, in fact, the Amharic text printed without the Arabic original might have engendered the idea that it could be used alone as a substitute for its divine and inimitable *Vorlage*. Moreover, the version was characterized by a wide use of phrase structures and lexical items which were literally modelled on Arabic syntax and vocabulary: the result was thus an Amharic style that was often hardly understandable to the common speaker of the language. Two other Amharic versions were to overcome these shortcomings. In 1996 Al-Huda Press in Addis Abäba published an Amharic translation by Ǧamāl Muḫtār of the first three *ǧuzʾ* of the Q. in three separate booklets. The publishing house intended to proceed with the publication of at least seven more *ǧuzʾ* but nothing has so far appeared. During 1998–2004, Nejashi printing press released a complete Amharic translation of the Q. by Ḥasan Tāǧū and Idrīs Muḥammad in 11 small volumes each of which contains one to three *ǧuzʾ*. An oral translation of the whole Q. in Amharic was carried out by *šayḫ* Sa^{c}īd Aḥmad Muṣṭafā and it is available – even if not constantly – on the internet for downloading.

No complete Təgrəñña version of the Q. is so far available. A translation of the last *ǧuzʾ* of the Q. by Bayān Ṣāliḥ was released in Saudi Arabia in 2002. The same translator published in 2006 in Riyāḍ a Təgrəñña version of the last tenth (*ǧuzʾ* 28–30).

In Oromo a complete version of the Q. was carried out by *šayḫ* Muḥammad Rašād: it was originally recorded on 26 audiotapes which were diffused and sold in the book markets in Ethiopia (and are now available online). A printed version of this same work has been distributed since early 2006. These more recent versions of the Q. are definitely not simple translations but in accordance with the *i*^{c}*ǧāz* dogma (the inimitability of the Q. text and the impossibility to translate it), they are conceived as more or less complete commentaries of the sacred text. They thus tend to make wide use of traditional Arabic *tafsīr* works to explain and expound the verses. The exegetical material is sometimes directly inserted in the translated text instead of being separated from it so that in the end it is almost impossible to differentiate between the plain translation of the verses and their interpretation.

The Q. is recited in every important collective gathering of the Ethiopian Muslim faithful: for instance, in Harär, before *ǧum*^{c}*a* prayer on Fridays, morning sessions of Q. reading are held in the main mosque (Leslau 1965:207f.); in ↗*Mawlid* and related ceremonies, the Q. (especially *sūra* 36 *Yā-sīn* and 67 *al-Mulk* or *Tabāraka*) is always recited. On ↗graves, verses of the Q. (mostly Qur. 2:256, 3:182, 48:1–3, 55:26–7, 122:1–4) always open the epitaphs (a complete list for the ↗Dahlak necropolis in Schneider 1983:60–63).

Many Muslim faithful believe that the Q. as the word of God carries a strong blessing and ↗healing power (*ḫawāṣṣ al-Qurʾān*; see Fahd in *EI*^{2}): amulets (*ḥiǧāb*; see Chelhod in EI^{2}) and talismans (*ṭilsam*) containing verses of the Q. are worn on the body (a *ḥiǧāb* is in ms. Robecchi Bricchetti, Pavia 6, fols. 1r–5v, Traini 1973:851); the ink used to write down the Q. on the ↗*lawḥ* or on paper is diluted in water and drunk to ingest the beneficial force of the sacred text (Slikkerveer 1990:191). Bibliomantic procedures, diagnosis and prognosis of illnesses using the Q. are well spread in the Islamic world and are also well attested in Ethiopia (e.g., Rodinson 1967:45, 80).

Passages of the Q. are frequently used in Christian ↗magic and medico-magical literature as a tool to strengthen the aura of supernatural power of the texts and recipes (Griaule 1930: 109ff. where Qur. 73: 1 and 9–15 is sketchily mentioned; the famous *Ṣälot bäʾəntä aynä ṭəla* is basically a collage of Q. verses more or less faithfully reproduced; see also *Bilal*, 1, 11: 22). It should however be said that most of the time the Q. sections used in these contexts are considered to have some mystical force also by Muslims (e.g., the famous *āyat al-kursī*, Qur. 2: 255).

Qurayš

The Q. was a tribe in ↗Mecca to which the Prophet ↗Muḥammad belonged. The Q. claim descent from Fihr, the leader of several Arab clans in pre-Islamic ↗Arabia who was involved in various struggles around the protection and control of the Ka^{c}ba. Both the ↗Qurʾān (esp. *Sūra* 5) and the *ḥadīṯ* associate the consolidation of the high status of the Q. among the Arab tribes with their divinely assisted defeat of the Abyssinian army led by ↗Abraha, which supposedly came to destroy the Meccan sanctuary (Rubin 2004: 329). The Q. eventually gained control of Mecca in the time of Quṣayy (6th generation from Fihr), who managed to muster his kinsmen, take control over the Ka^{c}ba, and become the ruler of Mecca (Watt in EI^2, 434).

Already in the pre-Islamic Ḥiǧāz, the Q. commanded a wide-ranging caravan trade network stretching to the ↗Byzantine empire, Persia (↗Iran), ↗Yemen and Ethiopia. By 600 A.D., several wealthy Q. merchants were able to monopolize trade between the Mediterranean and the north-western Indian Ocean area. But the accumulation of wealth and the consolidation of regional power gradually bred intricate internal struggles. Political competition between lineages led to the formation of rivalling clans, the most important (for subsequent Islamic history) being the rivalry between the descendants of Umayya b. ^{c}Abd Šams and those of Hāšim b. ^{c}Abdmanāf, to which Muḥammad belonged.

The importance of the Q. in the context of the history of ↗Islam and Muslims in North-east Africa is mostly associated with traditions of Islamization and the foundation of Muslim clans and lineages. From an anthropological perspective, tracing descent to Q., i.e. the Prophet's family, is invariably connected to the ascription of authority, legitimacy and prestige to Muslim dynasties, lineages, ethnic groups and clans. Traditions usually trace Q. ancestry either to the migration of clans who left the Ḥiǧāz and found their way to North-east Africa, or to the immigration of prestigious individuals who settled in the Ethio–Eritrean area, married locally and sometimes converted entire families and clans to Islam.

In the predominantly Muslim Somalia, most clans and lineages claim putative descent from the Q., specifically through ᶜAqīl b. Abī Ṭālib (brother of ᶜAlī, the fourth *ḫalīfa;* Gori 2003:26f.). In Ethiopia and Eritrea, too, several clan genealogies go up to the Q. – whether to the members of the first ↗*Hiǧra* of 615 (HusIslam 61f.), or to the Q. clans who fled the Ḥiǧāz due to political rivalries and struggles. E.g., whilst the highland Muslim ↗Ǧäbärti claim descent from the offspring of the Prophet's daughter Ruqayya and ᶜUṯmān b. ᶜAffān, her husband and future *ḫalīfa* (PollEr 43, 151), the ↗Argobba trace their lineage to Banū l-Ḥumāya, a Q. clan that was expelled from the Ḥiǧāz in 754–55 A.D. by the then politically dominant Banū ᶜAbbās (Braukämper 2002:22). The tracing of origins to Q. seems also to be the case of the ↗Hadiyya (BrHad 58–66).

The association of ruling Muslim lineages with Q. descent is discernable in medieval Ethiopia. The ↗Maḫzūmī dynasty of the Sultanate of Šäwa traced its descent to the Prophetic clan, the Banū Hāšim, namely to ᶜAlī's brother ᶜAqīl b. Abī Ṭālib, or according to another tradition to ᶜAlī's son, Ḥasan (CerIslam 218). ᶜUmar Walašmaᶜ, who defeated the Maḫzūmī dynasty in 1285 A. D. and founded the state of ↗Ifat, equally traced descent to Q., through Yaḥyā, the grandson of Ḥasan, himself the grandson of the Prophet (CerIslam 140). Some Argobba oral traditions point to past sectarian tensions and a degree of conflict between groups claiming descent from the Banū Hāšim and the Banū Umayya in the Ifat polity (CerIslam 218, HusIslam 62).

Most traditions of Eritrean Muslim groups emphasize the role of Arabian holy men in the process of their adoption of Islam and, sometimes, the foundation of their lineage. Groups who only converted to Islam in the 19th cent. often adapted traditions of Q. origin to both accommodate their newly acquired religious identities and establish legitimacy.

Among the Eritrean ↗Təgre-speaking groups and clans claiming descent from the Q. we find the ↗Bet Asgäde, ↗Säbdärat, Almada, Riqbāt, ↗ᶜAd Mäᶜalləm, ↗ᶜAd Šek, *qabīlat* Abū l-Qāsim, ↗Bilin (Bet Ṭaqʷe branch), Daqdaqi, Dobᶜāt, Bet Mäᶜala, most of whom trace their origin to the Banū Hāšim. The ↗Mänsaᶜ and ↗Marya, also Təgre speakers, trace descent to the Banū Umayya. Among the ↗Sāho-speaking groups claiming descent from the Q., the ↗Minifire and ↗Asaᵓorta trace descent through Banū Hāšim, while the ↗Ṭarūᶜa and ↗Ḥazo claim origins from Banū Umayya. Some ↗Beni ᶜAmər clans and families in Massawa and Ḥərgigo also claim Q. descent (MuhTarih 222–312).

Jonathan Miran

Qʷälla

The Q. (ቈላ) represents one of the six agro-↗ecological zones of Ethiopia, lying between the moderate ↗*wäyna däga* and the hot and dry lowlands, called *bäräha* (በረሃ). The Q. is situated on the slopes of the Ethiopian highlands which vary in their extent, but also many of the deep river valleys inside the highlands belong to it. Depending on the regional climatic patterns the elevation of the Q. varies quite largely (↗Climate). In western Ethiopia the Q. lies between 600 to 800 m A.S.L., in north-eastern and south-eastern Ethiopia it reaches 1,400 to 1,800 m A.S.L. The zone is divided into dry Q. (annual rainfall 300 to 900 mm), and moist Q. (annual rainfall 900 to 1400 mm), being predominantly situated in western Ethiopia. The rainy season varies from unimodal to bimodal and from about three months (northern and southeastern Ethiopia) to eight months (western Ethiopia). The annual average temperature of the Q. usually lies between 18 to 25 degrees. The natural vegetation of the Q. is woodland dominated by *Terminalia*, *Commiphora*, *Boswellia*, and ↗Acacia.

Traditionally, the population density of the Q. was quite low, mainly because of various dangerous ↗ diseases, wild animals and the unpleasant climate. A rich variety of ethnic groups, some of them semi-nomads, lived and live in these areas, the majority being ↗Oromo. Land use concentrated on ↗pastoralism, hunting was common. But also agriculture on a smaller scale often in irrigated areas was described by 19th cent. travellers. Due to population pressure and ↗migration into the Q., land use in general has been intensified especially since the 1950s. Depending on labour and capital input several ↗water conservation and ↗irrigation methods were introduced or extended and production systems were improved. Beyond traditional crops such as ↗sorghum, groundnut, pulses (↗Vegetables) and cotton, plantations of cash crops such as sugarcane, ↗fruits, sesame and flowers etc. was encouraged by the state and by private companies.

Qʷälläla

Q. (**ቈለላ**; 11° 13' N, 37° 37' E, 2,420 m A.S.L.) is a district in ↗Goǧǧam halfway between the localities of Däbrä May and ↗Moṭa (for location s. map for Qoma Fasilädäs). Towards 1611, the ↗Jesuits established their third residence there, after ↗Fəremona and ↗Gorgora (BecRASO VI, 237; XI, 261). With the support of the governor of Goǧǧam, *ras* ↗Səᶜəlä Krəstos, and the work of Francesco Antonio de Angelis, Q. become an important asset in the mission. The residence was granted lands, which were administred by *azmač* "Akaby" of Portuguese origin (BecRASO XI, 439; ↗Portugal). From there de Angelis led a series of proselytising missions to the neighbouring areas and, with the help of local monks and some Ethio–Portuguese, translated theological treatises into Amharic, Gəᶜəz and Agäw. In 1619, its school had 15 students, five of them children of local noble families (BecRASO XI, 295, 430, 443, 465).

Initially, Q. consisted of a few simple huts but towards 1625 the Jesuits Francisco Carvalho and Antonio Bruno relocated the residence to an elevated site nearby and began building a church using mortar ("chunambo": ARSI, Goa 39 I, 255r; BecRASO VI, 436). In 1628, the church, dedicated to St. ↗Ignatius of Loyola, was almost completed. The complex also had defensive purposes and, during an Oromo raid in 1629, the Jesuits from Ǝnnäbəsse, Ḥädaša and Liqä Nəguś took refuge there (BecRASO XII, 278).

During the 1620s, Q. was an active centre of missionary activities; religious processions and celebrations were there held in great pomp (e.g., BecRASO XII, 458f.). The residence also had authority over the monasteries of ↗Gonǧ Tewodros and Ṣəlalo (s. EAE vol. 5; BecRASO IV, 15). On 23 May 1631, ↗Śärṣä Krəstos tried to storm the site with his army but was deterred by the Jesuits' firearms and fortifications (BecRASO XII, 491; PerChron I, 315ff.).

After the expulsion of the Jesuits, Q.'s fortifications were used by the Ethiopian monarchs (cf., e.g., GuiIohan 13, 37, 128 etc.). Later, an Orthodox church, Yäwäyzazərt Kidanä Məḥrät, was built near the former Jesuit residence. The complex of Q. was surveyed by the French archaeologist Francis Anfray (in PICES 8, vol. 1, 21).

Andreu Martínez d'Alòs-Moner

Qʷara

Q. (**ቋራ**) is a frontier district that lies west-northwest of Lake ↗Ṭana. It borders the districts of ↗Ṭaqussa and Aläfa on the east, present-day Sudan on the west, and ↗Č̣əlga on the north. The River Dənder marks its southern boundary. Its eastern extremity is composed of mountainous uplands that give way gradually to hot forested lowlands in its centre and west (for location s. map for Qallābāt).

Several peoples are found within its boundaries. The Gumuz (Gumis, Ganza, etc. [↗Mao]), who speak ↗Koman, a Nilo-Saharan language, live along the western border. It is likely that they formerly occupied much if not the whole of Q. but have retreated westward under pressure from other groups, notably the ↗Agäw, who are in all likelihood the aboriginal inhabitants of northern Ethiopia. The ↗Gumuz live in villages, practise shifting agriculture, and have largely preserved their traditional culture despite pressures of Islamization from the west and Amharization from the east. Some have accepted Islam, and others Christianity.

The Agäw in the higher elevations of Q. probably began to convert to Christianity during the 16th cent. at the latest, in the process becoming ↗Amhara. Others became part of the larger ↗Betä Ǝsraʾel community of the north-west highlands. One of their traditions holds that they arrived in Q. in the 15th cent.; another tradition says the mid-17th cent. Regardless of when they arrived, Q. became one of the major homelands of the Betä Ǝsraʾel. Until perhaps the 19th cent., they spoke *Qʷaräñña*, a Central Cushitic language which they call *Kʷarili wana gämärŋa*, "the language which is in Q."; other terms are *Qʷaresa* or *Fälašan* (Appleyard 1998: 143). Formerly widely spoken by all Betä Ǝsraʾel in the north-western highlands, *Qʷaräñña* is no longer a living language, having been completely displaced by ↗Amharic or, in the north, by ↗Təgrəñña.

In the south, along the dry, forested north bank of the Dənder, live the ↗Kunfäl, a small Agäw group who trace their origins to Ačäfär and Kumbäl, locales south-west of Lake Ṭana. They call themselves *qʷälläññočč*, 'the lowland people', and speak a language they call "Agäw", related most closely to ↗Awŋi, the language of the Agäw of ↗Agäw Mədər to their east. The Kunfäl are mainly agriculturalists who favour the hoe over the plow, live in widely-spaced villages, and are at least nominally Orthodox Christians. They are often darker-skinned than the highland Agäw but not as dark as the Haméč (cp. article "Kunfäl" and Simoons 1960: 45; Bender 1975: 338), a Sudanese people who together with the Gumuz live intermixed with them. In the early 2000s, they numbered ca. 2,000.

Aside from the 18th and the mid-19th cents., Q., being a district on the western frontier, was and has remained of marginal importance to the centralized Ethiopian state. It was of commercial significance, however, because it lay adjacent to the main caravan route from the Lake Ṭana region to the ↗Nile basin. Subsidiary routes ran through Q. to Gumuz lands south of the Dənder, the source of ↗gold, ↗ivory, ↗cotton, and slave–routes that have certainly been in use since antiquity.

The people of Q. were active in the Christological debates of the 17th and 18th cents., being zealous devotees of the ↗*Qəbat* (Unctionist) doctrine. Beginning in the early 18th cent., Q. emerged from obscurity into the political limelight as the home of Queen ↗Bərhan Mogäsa (better known as Məntəwwab), her family, and her relatives. Known as *Qʷaräññočč* ('the Qʷarans'), they dominated the Solomonic court in ↗Gondär throughout the mid-18th cent., beginning late in the reign of *aṣe* ↗Bäkaffa (r. 1721–30), electing two of their number, ↗Iyasu II, "Qʷaräñña Iyasu" (r. 1730–55), and his son, ↗Iyoʾas (r. 1755–69), to the throne under Məntəwwab as regent. Qʷarans, commanded by Məntəwwab's brother, *ras* ↗Wäldä Ləʾul, formed the heart of the politico-military coalition that achieved and maintained Qʷaran ascendance in Gondär. The traveller, James ↗Bruce, described the Qʷarans' predominance thusly: "The governor of Kuara is one of the great officers of state, and […] carries *sendick* and *nagareet*. His kettle drums are silver, and his privilege is to beat these drums even in marching through the capital, which no governor of a province is permitted to do" (BruNile III, 260).

Q. produced another Solomonic ruler in the mid-19th cent. in the person of Kaśa Ḫaylu, later *aṣe* ↗Tewodros II. Born ca. 1820 either in Q. or Gondär to Ḫaylu Wäldä Giyorgis, governor of the province, Kaśa received his formal education at ↗Maḫbärä Śəllase Monastery in the heart of Q. As a young man, he perfected his military skills in the service of his Qʷaran overlords and as a ↗*šəfta* in the western lowlands. Known as "Kaśa Qʷarəñña", he made Q. his base of operations in the 1840s and thereafter drew on its resources as he sought recognition and the leadership of the kingdom. His first significant appointment was as overlord of the province in 1845; two years later, he was appointed governor with the title of *däǧǧazmač*. Qʷarans formed the core of his earliest armies and doubtless were among those who served him to the end. It was in Q., namely in Maḫbärä Śəllase, that he was reburied several years after his defeat and death at ↗Maqdäla in 1868.

The Sudanese Dervishes plundered Q. in January 1886, burning settlements, churches, and Maḫbärä Śəllase, an act repeated by the Italians during the ↗Italian war 1935–36, when they suspected the monks of harboring Ethiopian patriots. In the imperial administration of the mid-20th cent., Q. was a *wärädä* in Čəlga *awraǧǧa* with its capital at Tewodros Kätäma.

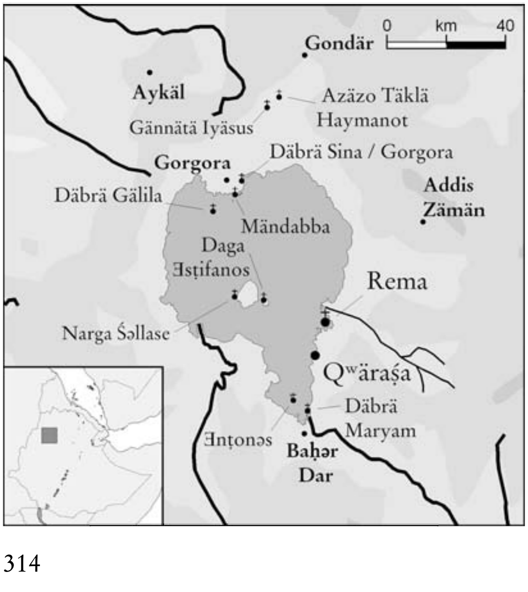
Qʷäraṣ́a

Q. (**ቈራፀ**, also Qʷäraṭa, Qoraṭa) is the name of a region, a settlement and a church and monastery on the eastern shore of Lake ↗Ṭana (1,908 m A.S.L.), which became famous as the home of the community of St. ↗Wälättä Ṗeṭros.

It was also here that, at the beginning of the 17th cent., Wälättä Ṗeṭros took refuge fleeing *ras* ↗Śəᶜəlä Krəstos. Since she fled into an already existing church, she was not its founder (Ricci 1970: 58). The community of Wälättä Ṗeṭros could have been founded in Q. after her death by a monk called Zäḥawaryat (Bosc-Tiessé 2008: 70); the circular ↗church building was constructed by *aṣe* ↗Fasilädäs (damaged ca. 1940, later reconstructed, cp. Guida 381; Angelini 2006: 93ff.).



The church of Q. was the only religious centre of Lake Ṭana to be part of the ↗*Täwaḥədo* movement. During the reign of *aṣe* ↗Iyasu I, Q. participated on his side in two synods, in 1693 and in 1699 (GuiIohan 174f., 214). Q. was also protected by *ətege* Məntəwwab (↗Bərhan Mogäsa): her chronicle opens with a prophecy attributed to Wälättä Ṗeṭros; and, soon after ascending the throne, the queen endowed the church of Q. with gold and re-distributed its ↗*gʷəlt*-lands (GuiIyas 39ff.).

The church library preserves a manuscript of the *Gädlä Wälättä Ṗeṭros* with an iconographic cycle dated 1716–21, which is one of the first witnesses of the "Second Gondärine style". Only one manuscript from Q. was microfilmed in the Ṭānāsee collection (SixTana III, 239ff.); part of the library was microfilmed by EMML (including the *Gädl*, no. 8448), although not yet catalogued.

One main asset of Q. was the church's right of ↗asylum, at least from the beginning of the 18th cent. (BassÉt 175; DombrChr 246f.; BegCron 89f.). Different texts, chronicles or archives, use Q. as a model to define the right of asylum. In the mid-19th cent., Q. was described as a rich commercial town where numerous dignitaries had houses to insure them protection in case they should need a shelter (AbbSéjour II, 81f.; Blanc 1868: 140f.; MasMis I, 206f.).

For a month starting from 14 February 1866, the group accompanying the British consul Hormuzd ↗Rassam, joined by the foreign missionaries and artisans who arrived from ↗Gafat, waited at Q. for the release of *aṣe* ↗Tewodros II's prisoners from Mäqdäla. Duncan ↗Cameron and others were released and arrived at Q. on 10 March. They left the town a month later. In March 1867 Tewodros tried to raid Q., but was prevented by the peasants.

In the 1870s, Carlo ↗Piaggia settled in Q. making it the centre for his naturalist collections during four years. Achille ↗Raffray, too, used the place repeatedly as his base.

Today, the settlement of Q. seems to have lost importance.

Anaïs Wion

Qʷarf

Qʷ. (ቋርፍ) is the staple food of the monks inhabiting ↗Waldəbba. Tradition relates that ascetics had settled there before the introduction of ↗Christianity to Ethiopia; it refers to the ↗*Dərsanä ᶜUraᵓel* which tells of the visit of the Holy Family to Ethiopia on a silver cloud, accompanied by ↗lions, and describes how the Christ child dug up bitter roots in the Desert of Wali. Christ prophesied that it would be the future food of great hermits, saying: "They will come from the provinces of Ethiopia and live in this desert".

In accordance with the old custom of Waldəbba, ↗cereals are considered worldly and banned from the central area of the monastic complex. Instead, for many centuries the monastic community ate Qʷ. made from plants known locally as *ṣable*, *gämälo* and *sadda*, bitter roots rendered edible by a laborious process, which involved shredding them and soaking them in water to remove potentially poisonous substances. Tradition relates that the 16th-cent. head of the monastery *abba* Muse wanted to replace Qʷ. with *dagussa qiṭṭa* (unleavened millet bread; cp. ↗Bread), but this attempt was foiled by angelic intervention. However, his successor *abba* Zäpäraqliṭos succeeded in establishing the cultivation of bananas at irrigated spots, which were sun dried to make a more convenient staple food.

Qʷ. remains a mark of the unique character of Waldəbba's monastic tradition, which tends to use resources rejected or considered inferior by the general population.

Qʷəndi

Q. (ቍንዲ, also Qundi; 9° 40' N, 39° 45' E, ca. 3,500 m A.S.L.) is a mountain and a historical settlement in northern Šäwa located 9 km north of the town of Goräbella, along the road between ↗Däbrä Bərhan and ↗Ankobär. Q. overlooks the plains towards Däbrä Bərhan, but is also close to the Ǝmmä Məẖrät mountain ridge and the lowlands of ↗Ḥarr Amba, sometimes used as a retreat.

Due to its strategic location, Q. is mentioned in sources for several periods, but it is above all famous as the capital of Šäwa during the short rule of ↗Wäsän Sägäd, who also established the church of Giyorgis there. Q. served as a base for controlling the ↗Oromo areas to the southwest. Although conquered and resettled during the rule of ↗Amməẖa Iyäsus, the plains towards Däbrä Bərhan were still vulnerable to Oromo incursions. In fact, after *märəd azmač* Wäsän Sägäd was murdered at Q. by a servant, the Oromo rebelled and burnt the land up to Q. The Oromo were later defeated, the frontier moved southwards, and Q. lost its significance.

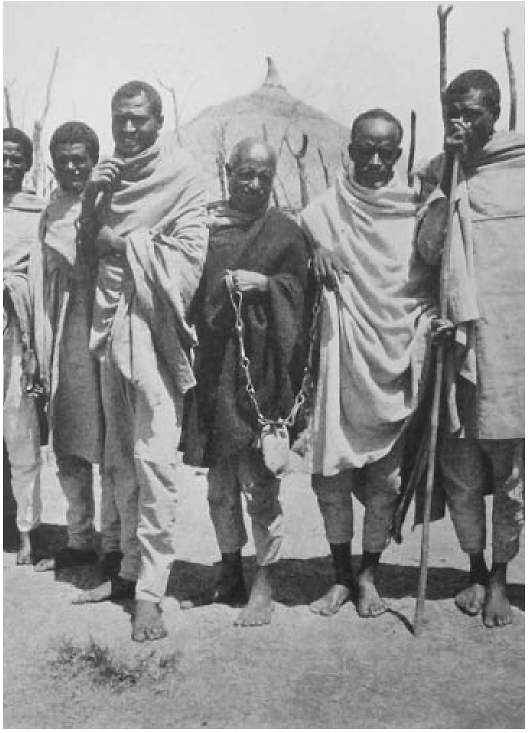
Qʷəraňňa

Qʷ. (ቍራኛ, 'the tied one') was the name given to an accused person whose right wrist would normally be chained to the left wrist of another person. The latter would usually be the person making the accusation, or his "brother" or other relative or appointee. In the virtual absence of strong prisons in traditional Ethiopia only persons considered a threat to the state, or political offenders, were imprisoned in former times.

Other accused persons, if unable to find security, were in many cases chained – with a light chain usually over a metre in length. Men accused of murder, according to Plowden (1868: 96), might on the other hand be chained to a soldier of the ruler's guard. Debtors and creditors might also be "tied" – less securely – by knotting their *šämmas* together (Rey 1923: 118). Guilty parties were also on occasion chained until they could raise a specified fine.



Creditor and debtor chained to each other; from Osgood 1928: 134

The above system of "human prisons" was not without value. It made the criminal's guilt widely known in the area of the crime, and, by introducing the criminal to his victim's relative(s) encouraged him to feel remorse – and repent (AbbSéjour I, 461f.). By the early 20th cent. the Qʷ. system was, however, discredited, and regarded as outmoded. Prisons were considered more "civilized". The practice of chaining a murderer to the "brother" of his victim was accordingly abolished by *ləǧ* ↗Iyasu, who ordered that the accused should be chained and watched by prison guards (GebMolIyas 328f.; Merśe Hazen Wolde Qirqos 2004: 113). This prohibition on chaining of criminals was continued by Emperor ↗Ḫaylä Śəllase I, who states in his *Autobiography* that he had ordered that they should be "guarded by wardens" (HSLife I, 73). The custom of tying debtors and creditors together was however continued until the Italian fascist invasion (Powell 1925: 109f.; Walker 1933: 168–74; Farago 1935: 31f.).

Richard Pankhurst

Qʷəraro

Q. (ቍራሮ, also Qəraro, Qoraro) is a mountain (1,930 m A.S.L.) in the western arm of the ↗Gärᶜalta range (s. map for Gärᶜalta, EAE vol. 2, 699) and the site of a ↗rock-hewn church dedicated to St. ↗Mary, which was founded by the local saint *abunä* Gäbrä Mikaᵓel (also venerated in Ḥaramat, Təgray).

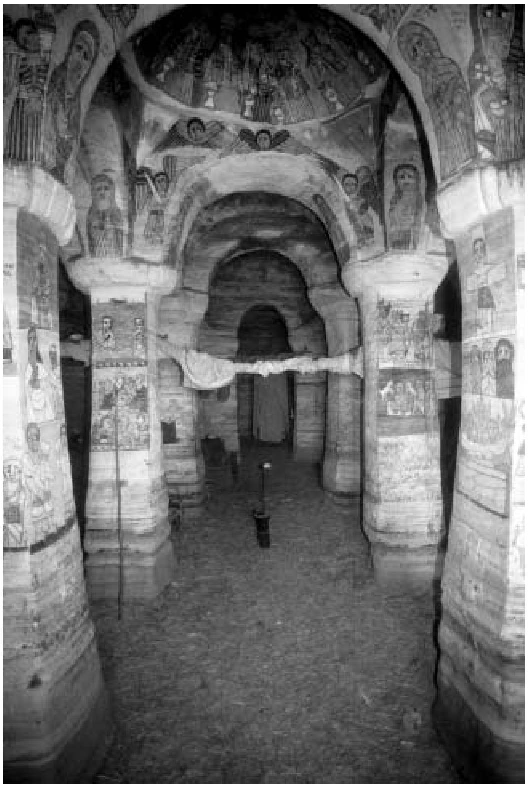
The church was constructed probably in the 15th cent. Accessible by a narrow and steep chimney, it is a structure (ca. 19.5 x 11.5 m) divided into the central nave (height 4.7 m) and two aisles (height 2.9 m), each ending with semi-circular apses. The northern apse houses a monolithic altar (cp. ↗ *mäqdäs*). Six squared pillars connected by arches and crowned by circular cut in sections capitals, organize the space. The bay-sections are covered by the domes with imitations of pendentives. Two circular cells are hewn in the walls of the aisles, both on the level of the second bay. The unified vestibule is preceded by an ambulatory with two entrances and two window-openings.

The church is decorated with wall ↗ paintings displayed on the first two cupolas and on the walls below them, on the arches and on all sides of the three first pairs of pillars. The dominating colours are bright yellow and blue applied against the white-washed background. The programme is an abbreviated version of the decoration designed in the 18th cent. for the *mäqdäs* of circular churches.

In the west dome of the central aisle ↗ equestrian saints are depicted: St. ↗ George (with his three companions) and ↗ Gälawdewos, as well as St. Michael rescuing sinful souls. The scenes on the walls below illustrate the O.T. (Original Sin and Expulsion from Paradise), the N.T. (Annunciation, Nativity, Baptism of Christ, ↗ *Kʷərᶜatä rəʾəsu*) and the ↗ apocrypha (Joachim and Hanna, Dormition of St. Mary). The arches feature three of the ↗ Nine Saints: ↗ Yəmʾata, ↗ Zämikaʾel Arägawi, ↗ Alef, and Ethiopian monks, including ↗ Gäbrä Nazrawi.

Inside the central cupola there are 12 out of 24 Heavenly Priests (probably a part of the ↗ *Maiestas Domini* which was never finished in the cupola at the front of the sanctuary) and on the walls below angels, archangels and cherubs, almost all labelled with names. The remaining of the Nine Saints are depicted on the arches. Similar kind of subjects are found on the columns: beside the ↗ Crucifixion, Entombment, Resurrection, the martyrdom of the Apostles, St. Stephen and Sebastian, there are figures of the most venerated Ethiopian saints: ↗ Gäbrä Mänfäs Qəddus, ↗ Täklä Haymanot, ↗ Samuʾel of Wäldəbba and ↗ Gäbrä Krəstos, as well as some local monks including *abba* Gäbrä Mikaʾel, and, finally, two narrative scenes: the story of ↗ Yared and that of the "cannibal of Qəmər" (*Bälaᶜ Säbəʾ*). There is also a donor depicted with his family and a nobleman surrounded by armed guards.

The church possesses an old staff iron cross and an ancient wooden *mänbärä* ↗ *tabot.* In a cell cut into the wall of the central bay of the north aisle, there is a kind of genizah full of fragments of old manuscripts.



Qʷəraro Maryam church, central nave; photo 2005, coutesy of Michael Gervers

200 m lower, at the foot of Q. mountain and close to the new Q. village the church dedicated to St. ↗ George of Lydda is located. It is an oval cave with two large, round pillars and a small almost circular sanctuary, the only decoration being three shallow domes, two of which are aligned along the east-west axis of the church while the third covers the south-east part of the ceiling.

The church owns a 20th-cent. manuscript of the Vita of *abunä* Gäbrä Mikaʾel, copied from the original which, according to a local priest, is kept in the church of Mädḫane ᶜAläm in ᶜAddi Gätät near ↗ Mälfa. Today, there is no monastic community at Q.

Qʷəsqʷam

Qʷəsqʷam (Koskam) in Ethiopian tradition

The Ethiopic name of Q. (**ቍስቋም**, also Qusqam), at present Qūṣiyya (known in Eth. sources as **ቍስያ**, Qʷəsya), resumes that of the Coptic Kōskam, Koskam (in the Arabic sources Quzqām, Qūsqām, Quṣqām, also Qūs Qām, Quṣ Qām, etc.), a mountain in ↗Egypt in the nearby of which the Coptic monastery of ↗Dayr al-Muḥarraq lies. Q. is abundantly mentioned in literary apocryphal traditions associated with the Holy Family's flight to Egypt, of which Q. represents the southernmost limit of diffusion in Egypt, as well as an important pilgrimage site with a famous Church dedicated to the Virgin Mary (Davis 2008: 135–39).

Christian Ethiopians have been since early times devoted to the memory of the Egyptian Q. and intimate and familiar with its traditions – what explains the fortune of the placename in Ethiopia (besides the famous church in the nearby of Gondär [s. below], cp., e.g., the church and monastery of Däbrä Qʷəsqʷam in the nearby of Dəbarwa, Eritrea, etc.). The strict relationship of the Ethiopians with Q. is attested by a twofold evidence: 1) situated on the traditional pilgrimage route of the Ethiopians to ↗Jerusalem and the Holy Land, an Ethiopian monastic community, for long time independent from the Coptic one, is attested at Dayr al-Muḥarraq probably as early as the 14th cent., visited by travelers still in the 17th cent. (e.g., by ↗Wansleben, who copied there some Ethiopic ↗manuscripts, cp. Bausi 1989: 7f., 26, 28) and survived until the 20th cent. (cp. CerPal vol. 1, 353ff.; Meinardus 1965: 28f.); 2) literary works of apocryphal Marian literature celebrating Q., originally composed in Coptic, then translated into Arabic (cp. Davis 2008: 135, n. 88) and finally into Ethiopic (cp. the so-called *Homily of Theophilos* [*of Alexandria*], in various recensions: ed., tr. Conti Rossini 1912; tr. Budge 1922: 61–80), came to be included, together with other narratives on Q. developed later, into the very popular ↗*Täʾammərä Maryam* (cp. CerMaria 206–10).

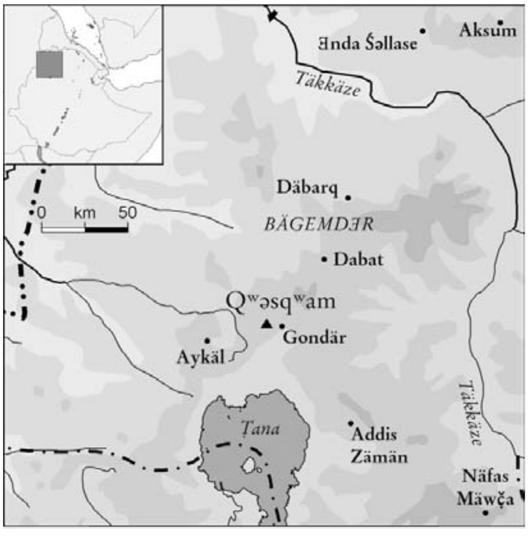
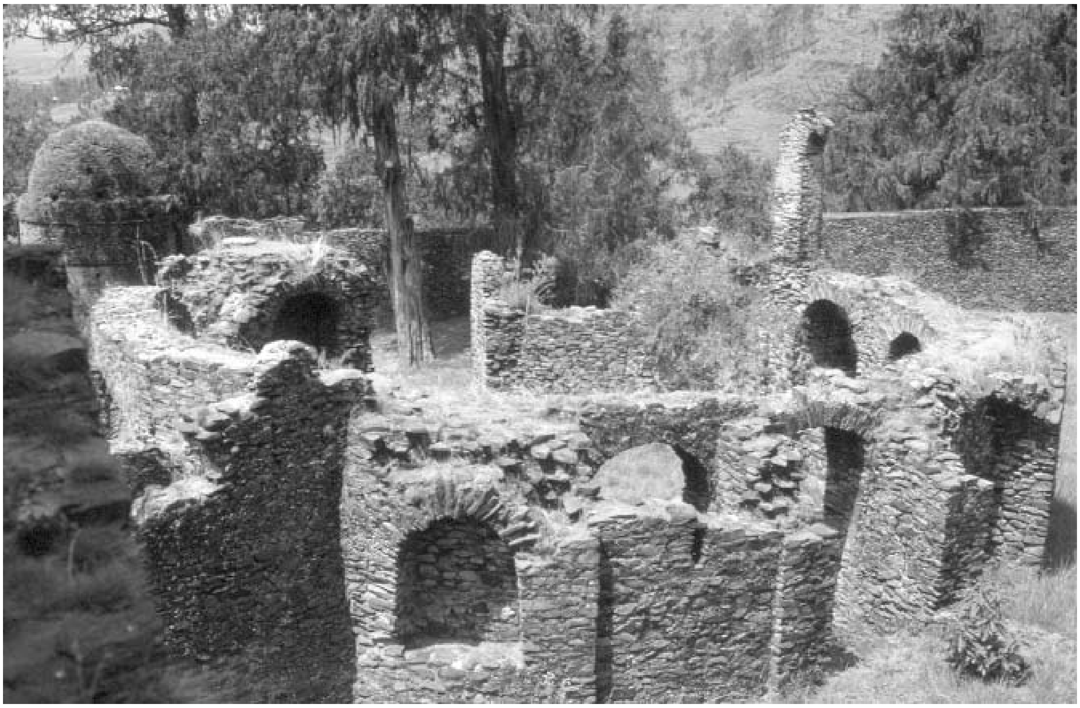
Qʷəsqʷam of Gondär

Q. (**ቍስቋም**) is a hill and the imperial complex built upon it, a few kilometres west of the main castle compound in ↗Gondär. The name comes from the locale in Egypt where the Holy Family allegedly dwelt after fleeing from King Herod. The site consists of a church, ↗Däbrä Ṣ́äḥay Qʷəsqʷam, and a "palace" area that served for





Ruins of the circular "oratory" in Qʷəsqʷam, viewed from the apartments; photo 1992, courtesy of the author

ceremonial purposes and living quarters, the whole surrounded by an oval stone wall with battlements, seven round domed towers, and two square, double-storey entrance gates, one for each half of the compound. The complex – or at least the church – was constructed in the 1730s by *ətege* Məntəwwab (↗Bərhan Mogäsa). Constructed of brown basalt and lime mortar in Gondär-style architecture, Q. represents the greatest refinement of the style, displaying new decorative highlights and architectural innovations, the work of Armenian and Greek craftsmen (Coffin in Pearce 1831: 240).

The chronicle of ↗Iyasu II's reign records in great detail the construction and endowment of Däbrä Ṣ́äḥay and the extravagant expense Məntəwwab lavished upon it, but it says nothing about her apartments and audience hall. The church, constructed between late 1732 or early 1733 and 1739 and 1740 (land endowment continued thereafter), was a round sanctuary erected on a three-stepped foundation. A circle of graceful arches springing from square pillars formed the outer ambulatory. Eight doors gave admittance to the *qəddəst*, which also featured eight windows with shutters. Door frames and shutters were decorated in part with painted porcelain tiles attached by brass rosettes. Doors and walls were covered with finely executed ↗paintings, those of Mary and the major saints being adorned with garments of silk with gold and silver decorations. The *mäqdäs* housed a *mänbär* (*mänbärä tabot*) covered in ivory, gold, and sapphires. Coloured silk hangings radiated from the apex above the *mäqdäs*; among other innovations were glass and brass lamps and a perpetually burning candelabrum that illuminated the image of Mary. The roof's summit was covered with red fabric, above which were set 380 mirrors that reflected red colour across the countryside. A large bronze cross and pinnacle ornament, all covered in gold, crowned the entire ensemble. Məntəwwab assigned 200 clerics to the church, which became a stronghold of the ↗*Qəbat* doctrine. She and two others (allegedly Iyasu II and ↗Iyoʾas) were buried in a tomb beneath the *mäqdäs*.

The palace buildings in the adjoining compound were divided into two groups, according to ↗Bruce, who resided at Q. in 1770–71. The largest structure was a two-storey rectangular hall with two towers at one end, one round and one square. The roof was flat and battlemented. Interior walls were plastered and decorated with colored porcelain tiles. At the far end of the second floor was a platform flanked by rostrums on either side and, behind, two niches; this may have been the “trellis” used during royal audiences in Iyasu’s reign. The external walls display the most distinctive decoration. Small windows are set within triply-recessed arches and framed with heavy red tuff moldings of a stylized Orthodox church, complete with conical roof and cross. Doors, also triply-recessed, are adorned with arched lintels of red tuff. Across the top of the wall are plaques of red tuff carved into human faces, animals, and geometric designs. This hall was used for celebrations, receptions, and audiences, certainly including the annual awards ceremonies over which Məntəwwab and Iyasu (and later ↗Iyoᵓas) presided.

Nearby were two-storey buildings, presumably Məntəwwab’s private apartments. Beyond was a small circular structure whose lower storey was composed of 12 pillars and arches joined by a wall that formed a closed gallery except for four entrances. An upper gallery replicated the lower one but was entirely open. Alcoves opening off this gallery were decorated with heavy silk hangings and painted porcelain tiles attached by brass rosettes, as in Däbrä Ṣ́äḥay. This remarkable building, without parallel in previous architectural construction, may have been an oratory (Monti della Corte 1938) or possibly Məntəwwab’s private chapel.

In December 1866, Emperor ↗Tewodros II carried off many of Q.’s treasures, and in January 1888, the Sudanese ↗Mahdists plundered and burned the buildings. Q. suffered further damage in 1941 during the war with Italy (↗War of Liberation). The post-war imperial government rebuilt Däbrä Ṣ́äḥay as a cemented stone structure covered with a metal roof, appropriately painted red. In the early 1970s UNESCO initiated conservation work on the palace buildings, stabilizing but not reconstructing them.

LaVerle B. Berry

R

Rābiṭa al-islāmīya, ar- ↗Muslim League

Rädaʾi

R. (**ረዳኢ**, or Rädaʾt; d. ca. 1579) was a 16th-cent. ↗Betä Ǝsraʾel leader from ↗Səmen. He is first mentioned in the context of the 1559 attempt by *aṣe* ↗Minas to defeat the Betä Ǝsraʾel of Səmen headed by R. and to force them to convert to Christianity. Unsuccessful in his campaign, Minas signed a treaty with the rebel forces, and enlisted Betä Ǝsraʾel troops into his army (Quirin 1992: 77ff.; BruNile vol. 2, 206).

In 1579, *aṣe* ↗Śärṣä Dəngəl abandoned his campaign against the Oromo in the south to renew the war against R. and the Betä Ǝsraʾel in an attempt to control the north-western part of his empire. Śärṣä Dəngəl was provoked by R.'s refusal to pay tribute to the Emperor and by his redesignating the Səmen mountains with Biblical names, an act which, according to Śärṣä Dəngəl, should have been the monopoly of the "real" Israelites, i.e. Christians, and was thus a challenge to royal authority. Betä Ǝsraʾel oral history additionally attributes Śärṣä Dəngəl's rage to an insult to his wife made by a certain Surafel, a high-ranking Betä Ǝsraʾel officer in the royal army.

The war, in which R. was supported by his brother ↗Kalef, lasted a decade. Eventually, Kalef's forces were overcome. In 1589, R.'s stronghold at Wärq Amba was captured and his troops were forced to surrender. R. and his family were put in chains and exiled to ↗Wäǧ. According to tradition, a general of Śärṣä Dəngəl, ↗Yonaʾel, offered to spare R.'s life if he begged the Virgin Mary for mercy. When R. refused, he was beheaded, and Yonaʾel hacked off his legs.

R.'s trumpets and crowns were transported to the island of ↗Daga in Lake Ṭana, signifying the end of Betä Ǝsraʾel political autonomy in Səmen. Many Betä Ǝsraʾel were subsequently captured, killed, converted or enslaved. In 1580, Śärṣä Dəngəl demonstratively held a mass in R.'s principality, and celebrated Christmas and Easter in the Səmen. In 1582–83, Kalef, who had escaped capture, attempted another revolt, but was again defeated.

According to Betä Ǝsraʾel tradition, R. and Kalef were brothers of two other Betä Ǝsraʾel leaders, ↗Gʷäšən and ↗Gedewon, and therefore possibly also of Śärṣä Dəngəl's concubine Ḫarägo.

Raʾəyä Maryam ↗Dərsanä Maryam ↗Mary, apocalypse of

Raʾəyä täʾammər

R.t. (**ራእየ፡ ተአምር**, 'Vision of miracles') is a collection of four 15th-cent. religious treatises in Gəᶜəz, designed to be read before the Miracles of ↗Mary (↗*Täʾammərä Maryam*) during church services.

The four treatises form a unity. Apart from conveying the same Mariological ideas, they are all based on, and introduced by, Rev 12:1 ("a woman clothed with the sun"). According to a warning at the end of the last part, they were authored by *aṣe* ↗Zärʾa Yaᶜəqob (Getatchew Haile 1992: 142). The style, contents, description of the author, and the occasion for the reading, are also indicative of production of Zärʾa Yaᶜəqob or his clergy. The R.t. is an important component of the ↗Mariology of Zärʾa Yaᶜəqob.

The four parts are rarely copied together; neither are they found in any standard order on their own or in manuscripts of the *Täʾammərä Maryam.* None of the published books of the *Täʾammərä Maryam* has any of the treatises. The R.t. must have been the last work of the Emperor added to his collection of the Miracles of Mary to enhance his Mariology. The four parts are:

– **በእንተ፡ ክልኤ፡ ድንግልናሃ፡ ለማርያም**, *Bäʾəntä kəlʾe dəngələnnaha lämaryam*, 'On the Dual Virginity of Mary';

- **በእንተ፡ ፹ወ፩፡ መጻሕፍት፡ ከመ፡ አሐዱ፡ ቃል፡ እማንቱ**, *Bäʾəntä sämanya wäʾaḥadu mäṣaḥəft kämä aḥadu qal əmmantu*, ‘On the 81 Scriptures: How They are One Voice’;
- **በእንተ፡ ምጽዋት**, *Bäʾəntä məṣwat*, ‘On Almsgiving’;
- **በእንተ፡ ጥምቀተ፡ ክርስትና**, *Bäʾəntä ṭəmqätä krəstənna*, ‘On Christian Baptism’.

A shorter version of the first treatise, the only one obviously centring on Mariological discourse of Mary being equally pure in body and in spirit, is used as an introduction to each of the other three parts, a characteristic feature of Zärʾa Yaʿəqob’s style.

Whilst the second treatise focuses on the faith with respect to the equal reliability of all books of the ↗Bible, the emphasis lies once again with Mary. Answering those who underline the fact that the Virgin was not as present in the writings of the Prophets and the Apostles, Zärʾa Yaʿəqob reviews the Scriptures to show how, symbolically and in reality, Mary had always been in their minds (cp. Getatchew Haile 1992: 99).

The third treatise is the shortest of all; the author assures the faithful that their charitable acts are brought to God by Mary for a guaranteed reward (ibid. 123).

In the last treatise, the author takes the opportunity to indirectly ascribe the authorship of the *Täʾammərä Maryam* to John “Son of Thunder”, i.e. the Evangelist, thus promoting the text to the status of the Gospel in being read in church as recommended by the ritual brought from Muʿallaqah (ibid. 132; for the church ritual imported from the Muʿallaqah church in old Cairo s. Budge 1933: xlvi–liv).

This treatise contains indications that in 15th-cent. Ethiopia there were also “simoniacal” ordinations, given or received through payment (Getatchew Haile 1992: 137, cp. also warning against “buying” priesthood, ibid. 140; ↗Ordination). The ardour of this text is directed against priests who require rich feasts prepared by the parents of a child to be baptized (ibid. 140; some also demand food and drinks in exchange for communion, ibid. 145).

This section and the collection conclude with the recommendation to the faithful to honour properly Virgin Mary and her ↗feasts.

Getatchew Haile

Raffray, Marie Jacques Achille

R. (b. 17 October 1844, Angers, Maine-et-Loire, d. 25 September 1923, Rome) was a French diplomat, naturalist (entomologist) and explorer. Stemming from a family of industrialists, he led a mission to Eastern Africa from 1873 to April 1875 on behalf of the Ministry of Education. During this mission, together with the Consul de Sarzec, he went on an exploratory trip to Lake ↗Ṭana, also visiting ↗Gondär, Lalibäla and ↗ʿAdwa, and encountering ↗Yoḥannəs IV.

In April 1879, R. returned to Ethiopia to act as French consul in ↗Massawa. He renewed contact with Yoḥannəs IV, who, through his mediation, sent a letter to the president of France Jules Grévy asking for help to recover the provinces occupied by the Egyptians (cf. RubActa III, doc. 232). In 1882, he left Massawa to pursue a diplomatic career in Africa, the Far East and Europe.

Achille Raffray; from Broc 1988: 276

R. published several pioneering scientific works on Ethiopia, including a valuable report on German activities in Ethiopia, which focused on the activities of Gerhard ↗Rohlfs. He also took to France three skulls for the collection of the museum of Anthropology and 924 species of insects for the Museum of Natural History in Paris. One of these species, a large black Goliath beetle, was named after him (*Goliathius pluto Raffr.*).

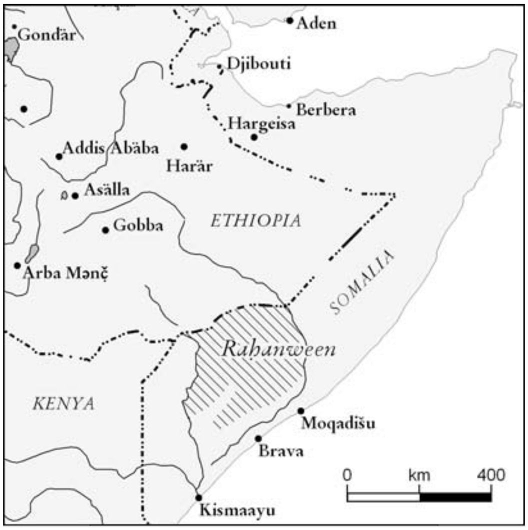
Lukian Prijac

Raḥanween

The ethnonym R. (also Raḥanweyn; Somali: Raxanweyn) refers to a ↗Somali group composed of the two clan confederacies of Digil and Mirifle. They inhabit southern-central ↗Somalia between the rivers Wabi Šäbälle and Juba. Together with the ↗Daarood, ↗Dir, ↗Hawiye and ↗Isaaq, they constitute the six clan-families that make up the ↗Somali nation. Whereas the latter four are largely pastoral herders of camels, cattle, and flocks of sheep and goats, the R., or "the Large Crowd", practice a mixed economy of farming and herdsmanship, growing corn, millet and sorghum, as well as keeping large herds of cattle and camels. On account of their living in the well-watered, fertile lands between the two rivers, the R. are economically better off than the pastoralist clans who eke a precarious existence out of the harsh plains of the north-west. Consequently, the war-like famine-driven pastoralists historically preyed on the pacific R., plundering their livestock and pillaging their crops. However, the violence and anarchy of the last two decades have moved the R. to organize and arm in order to defend themselves against the incursions of pastoral neighbours.

The R. dialect of Somali, or May, is barely intelligible to the dominant pastoralists, or Maḥay (Maxay), whose dialect is almost universally spoken in the Somali peninsula. Furthermore, the R. social system is based on territoriality rather than agnatic descent; that is, group identity and sense of affiliation, belonging and loyalty stem from a common settlement in the same territory, and membership in a community is earned by virtue of having been born and grown up in that community. Individuals from pastoral clans, for example, who are born and raised among the R., are adopted and integrated as authentic members of the R. Indeed, the vast majority of the R. are composed of adoptive individuals and families, many of whom eventually rise to the status of *malaaqs* ('ruling elders') of their communities. A good example of this are the Geledi, who are one of the major sub-units of the R., among which the sultan of Afgooye was chosen (Castagno 1975: 129; Cassanelli 1982). Though a reliable census does not exist for Somalia, the R., by an informed guess, may be said to constitute a quarter of the population. The dominant culture in Somalia, however, is that of the pastoral clan-families. By contrast, pastoral social organization is based on strict agnatic kinship relations. That is, group identity and belonging are based strictly on patrilineal descent and therefore shaped, inflexibly, by an organizing principle that social anthropologists refer to as the segmentary lineage system.



The R., in the wake of the Somali civil war, suffered severe damage when the late warlord General Muḥammad Farah ^{c}Aydiid descended on them in 1994 with his Habar Gidir militia, who occupied them, wreaking havoc on people and property. In response the R. appealed to Ethiopia against ^{c}Aydiid's occupation. The Ethiopians then intervened on behalf of the R., ejecting General ^{c}Aydiid and his troops. This was the beginning of Ethiopia's intervention in the Somali civil war, leading to its wholesale invasion of southern Somalia on behalf of the Transitional Federal Government of Somalia, actively supported by the United States.

Said S. Samatar

Raḥayta

R. (also Raḥayto, ^{c}Afar: Raḥaytó, from *raḥ*, 'to well up'; *raḥeyná*, 'where water springs up') is a coastal town, about 55 km south of ↗^{c}Asäb, in Southern Eritrea, and residence of the second ↗^{c}Afar Ad^{c}áli sultanate after ↗Tağūra (for location s. map for Obock). The first European mention could be "da furna" ('cavern') on Lazaro Luis' map (1563), south of "Masua" (Massawa). The map added to James Bruce's Travels (1790; BruNile) indicates Raheeda. Conti Rossini (CRStor 58, 60, 102ff.) identified R. with the Ptolemaic Deirē Epi Dires (which could be the Bāte Raḥayto, "the lost R.", of local tradition immediately to the north of the actual town). Blocks of basalt and holes which look like grain stores seem to confirm this hypothesis.

The R. sultanate is the result of a division of the territory of the Tağūra sultanate by its Ad^{c}áli founder, "Gibdi" Ḥamad, at the beginning of the 16th cent. This territory was originally possessed by the Ankāla tribe which had to withdraw to the vicinity of ^{c}Asäb, so that Warraysa Dagad, the salt plains to the south of the town became the northern limit of the sultanate. Like the system followed in Tağūra, a rule of alternation between the two sister branches Dînitté and Burḥanto was established in the R. sultanate at the beginning of the 18th cent., in order to put an end to rivalries between the sons of Kāmil, the grand-son of "Gibdi" Ḥamad. It is said that it was during this quarrel that the sultanate drums (*dinkaara*) were stolen by the third son Ḥamāsi and brought to ↗Mogadishu (s. EAE vol. 5).

Following the acquisition of ^{c}Asäb, sold to Giuseppe ↗Sapeto by *sulṭān* Burḥan "^{c}Asa Dardar" b. Maḥammad, the territory of the R. sultanate was divided between Italy and France. After Burḥan's death (20 October 1884) the sultanate was declared an Italian protectorate. Under Italian pressure, *banoyta* ('vizir') Burḥan b. Dîni questioned the validity of the French Treaty of 1862 (Borelli 1890: 4), although his father Dîni b. Maḥammad had signed it. His nephew, Ḥummad b. Maḥammad b. Dîni (*sulṭān* from 1887 to 1910) refused to recognize the Italian acquisition of ^{c}Asäb. He was put in jail and died after having inhaled a toxic gas.

The succession to the sultanate was not clearly established after Ḥummad b. Maḥammad b. Dîni's death, since the Italians undermined the original rule of alternation. Although the French administration always opposed the *sultan's* claim to rule (or even enter his territory inside the French colony), it paid him a monthly salary.

In February 1976, on the occasion of a meeting with delegates of the ↗Organisation of African Unity in Awsa, *dardar* Dawūd b. Maḥammad declared himself "representative of the ^{c}Afars of Raḥayto and Obock". His monthly allowance as well as that of his vizir were immediately cut off. R., which never counted more than several hundred inhabitants, is characterized by the size of its tents (*daboyta*) called locally *handag* (pl. *handooga*).

Railways

Addis Abäba–Djibouti railway

The main commercial revenues of ↗Djibouti come from its transit trade as a rail-head of the Chemin de fer Djibouti–Ethiopien (CDE), the railroad linking Ethiopia to a part of its ocean commerce, in addition to servicing ships at its port. The CDE is a meter-gauge line. It runs from the port city of Djibouti through the midpoint, semi-desert terminal of ↗Dərre Dawa, Ethiopia – containing the main railroad shops – up the escarpment on the high plateau to verdant ↗Addis Abäba, at 2,350 m A.S.L. The line extends 780 km of which 100 km are in Djibouti. Bridges and culverts number 1,919, but only one 167-m tunnel was necessary for the line. The change from steam to diesel-electric locomotives was completed in 1956.

The predecessor company of the CDE was the Compagnie du chemin de fer Franco–Ethiopien de Djibouti à Addis Abeba, which opened the centre of Ethiopia and its new capital, Addis Abäba, to passenger travel, information transmission, and freight commerce with the outside world. In 1897, the governor of French Somaliland, ↗Lagarde, signed a treaty with *aṣe* ↗Mənilək II making Djibouti city the designated port for Ethiopia's growing foreign commerce and communication. Mənilək agreed the French could build a R. to Addis Abäba. Due to opposition from some Amhara noblemen, the railroad construction progressed slowly from Djibouti.

Planned since 1894, begun in 1897 (co-founded by Mənilək's advisors ↗Chefneux and ↗Ilg), and continued, in fits and starts, the French completed their R. in 1917. The railroad finally entered Addis Abäba in that year with due celebration. This event led to a serious reduction and almost disappearance of camel caravans to ↗Red Sea ports (Collier – Perkins 1979). Along the R. line, the French Somaliland ↗currency was valid, and French was the working language; large areas along the line were in the possession of the CDE, which also administrated an important part of Dərre Dawa.

Replacing ↗mule transport, the R. enabled the profitable export of Sidamo ↗coffee onto the world market. Giving reduced rates for large shipments, the R. favoured highly capitalized, high-volume firms. This needed larger transfers of money, which aided the development of a modern capital market with the ↗Bank of Abyssinia. Thus, coffee-cleaning machinery could settle in Addis Abäba (McClellan 1988: 77, 112, 114, 120f.). In all, the R. helped usher Ethiopia's economy into the global market. Because of the R., commerce also grew in Djibouti during the 1920s.

After the Italian conquest of Ethiopia in 1936 (↗Africa Orientale Italiana), colonial requirements increased the rail traffic through Djibouti. Then, the Italians at tremendous expense, developed their Eritrean port of ↗^{c}Asäb and constructed a heavy-duty highway to Addis Abäba. Italy thus broke the French monopoly on Ethiopian trade. Accordingly, traffic through the French railroad and port plummeted in 1938. During 1941–45, the railroad performed admirably under the British Army, lifting troops and materiel to the plateau. On 30 June 1946, the ↗British Military Administration of Ethiopia (s. EAE vol. 5) handed the R. back to its French owners.

In 1959, the French government, owner of the R., transferred 50 percent of CDE shares to the Ethiopian government. After the federation of ↗Eritrea with Ethiopia in 1952, Ethiopia favoured and further developed the port of ^{c}Asäb (↗Ethiopian–Eritrean Federation). In 1962, the CDE became an Ethiopian firm and, in 1982, became jointly controlled by the states of Djibouti and Ethiopia.

During the late 1980s, the Ethiopian government planned an extension of the CDE from its mid-terminal at Dərre Dawa to the port of ^{c}Asäb, which the government had detached from Eritrea and included into ↗Wällo. Rail India Technological

& Economic Services, Ltd. (RITES), a consulting agency under the Indian Ministry of Railways, received a contract in 1987 to begin an engineering design study for the extension. The World Bank did not approve the project because its estimated cost approximated one-quarter of famine- and war-ridden Ethiopia's GNP. The RITES estimate for the proposed line of 4.5 million tons of freight per annum was found to be overly optimistic.

In October 1987, however, the USSR (↗Russia) and seven other COMECON countries, including Cuba, signed agreements by which this group of eight would support the extension project, with work starting in 1989. Then, the wall fell in Berlin and, consequently, the COMECON was dissolved. Other unfulfilled plans include one extension of the CDE to the southwest, from Nazret (↗Adaamaa) on the main line to Dilla, at a distance of 305 km in Sidamo, and a second extension to the coffee-producing area of ↗Ǧimma.

Today, a growing freight container R. traffic between Djibouti and Addis Abäba provides cost-effective, secure movement of cargo between the Red Sea and the Ethiopian highlands. The railroad still remains Francophone, uses French for all regulations, and provides employees with solid instruction in French (*Règlement Général de l'Exploitation* 1971).

Massawa–Biscia railway

The Eritrean R., of 95 cm gauge, has always been at the heart of defining and unifying Eritrea. Recently, the R. became a central part of the Eritrean heritage and identity and a source of national pride (Gamst 1996: 729; Id. in PICES 15, 1043).

R. in Africa formed part of the strategic actions of European powers. Facilitating Italy's imperialistic movement into the Horn, construction of the R. began at ↗Massawa in 1888 as a military line (Confidential Military Report on Eritrea 1906; *Guida* 189–92; Tekeste Negash 1987; Maggi 1994: 214–29). Plans for the R. would allow Italy to conquer, first, Eritrea and then Ethiopia. The R. linked the seaport of Massawa with the high plateau, reaching ↗Asmära in 1911. At Asmära, the Italians built the R.'s operating offices, mechanical shops, and major yard. The R. was extended to ↗Aqordät in 1922 and Bišа (Ital. Biscia) in 1930.

The railway in Massawa in the early 1960s; photo courtesy of Mike Metras

With the Ethiopian defeat of an invading Italian army in 1896 at ↗ᶜAdwa, Italy no longer needed the R. as a military supply line for conquering Ethiopia. Dedicated to road building, the Fascists allowed the R. to succumb to deferred maintenance. Perhaps the R.'s greatest detriment was the failure to bring in efficient locomotives. In 1941, British Commonwealth troops conquered the "enemy" colony of Eritrea. During ↗World War II, the British removed the track of the Aqordät-Biša line (31 km) and shipped it and several of the R.'s best steam locomotives to Libya (Small 1959; Maggi 1997). By 1945, the ↗British Military Administration of Eritrea [BMAE] maintained an all-weather highway and the R.; both linked Eritrea along its east-west axis. To save truck fuel and wear, during 1948 the British shifted highway freight traffic to the R. (BMAE 1941–48: 446; Eritrean Railway & Ropeway 1943).

To link Eritrea to the British Empire, unrealized plans existed to extend the R. through Biša to a terminus at Täsänäy, thereby linking it with the Sudan Railways (BMAE 1941–48: 292, 305). With the end of British occupation in 1952, the Ethiopian government gradually took hold of the R.

Along the 306 km of the R., in the prosperous 1960s, there were 39 tunnels, 65 bridges and viaducts, and about 1500 culverts along a roadbed well maintained by the R. In a post-war zenith of traffic, during 1965, ten 0–4–4–0T compound Mallets hauled freight up the 3.5 percent gradient to Asmära (Gamst 1969; 1996: 724; Id. in PICES 15, 1044f.; for R. motive power, s. Gamst 1996: 730–33).

In 1965, seven 0–4–0T shunting engines worked the Asmära and Massawa yards. Ton-miles from Massawa harbour up to Asmära were generally twice the amount handled on the downward trips. Manufactured goods for development and consumption came into Massawa by R.; and cereals, legumes, oil seeds, hides, and meat left Massawa (Gamst 1969; 1996: 733).

The littorinas (self-propelled, diesel-rail, passenger cars built by Fiat) and diesel locomotives were serviced in the barn opposite the steam engine house. In 1957 the R.'s four 650 hp diesel locomotives came from Krupp. Some of the gauges and electrical components for the Krupp locomotives were virtually the only items not manufactured in Asmära's R.-shops. Rail traffic control is by timetable and written train orders by telephone, originating fom the dispatcher at Asmära (Gamst 1969).

During 1975 wartime, R. became unusable owing to the dismantling of and damage to the R. property. After 1991, Italian and other advisors estimated that rebuilding the eastern line of the R. from Asmära, where most of Eritrea's commerce and industry is concentrated, to the port of Massawa would cost US-$ 400 million. However, the enterprising Eritreans rebuilt for far less, as a go-it-alone project. Mainly using hand tools, often-volunteer track workers first rebuilt the track around Massawa and Asmära. Others scoured the countryside for torn-out rails and ties for relaying, some of them re-used for local house-constructions. Next, the torn-up track and blasted and deteriorated bridges and culverts along the escarpment grade were reconstructed. Plans for restoring the western line from Asmära to Aq̱ordät are in progress (Gamst 1996: 726).

The alternative to having a considerable part of Eritrea's freight traffic carried, mainly in seaborne containers, over the R.'s eastern line would be to have it hauled entirely by road (Astuto 1943: 205–17; Maggi 1994: 60–74). This would be on the highway, largely of 1930s construction, climbing and ascending the 2,400-meter-high escarpment. Furthermore, the capital costs of importing tractors and their trailers, and their replacement parts, tires, fuel, and lubricants would put a great strain on Eritrea's limited reserves of foreign exchange. The reopened R. could greatly reduce such costs (Gamst 1996: 727).

Other railways

Sudan railway to Täsänäy

In 1941, with New Zealand Army engineers, Sudan R. built a military R. branch of 3 foot 6 inch (1.067 meter) gauge from Kassala 64 km to ↗Täsänäy in western Eritrea, to support the attack on the Italian bastion at ↗Kärän. The Sudan R. eventually dismantled its line to Täsänäy (Cody 1961: 70ff.; Small 1959: 26).

Zula military railway

In October 1867, Robert ↗Napier landed with 14,217 troops plus support forces at Zula, south of Massawa, to attack *ạṣe* ↗Tewodros II, inland at ↗Mäqdäla. For logistical purposes, Napier built an 8-km R. from the shore to an encampment. Two steam locomotives moved carloads of stores to the camp and commissariat sheds along the line. The army advanced from the railhead up onto the plateau with thousands of mules and camels. After the defeat of Tewodros, via the R., the army embarked for India in June 1868. The British abandoned the line, which was handed over to the Egyptian ↗Massawa Governorate (Stanley 1874: 289ff., 505).

Marsā Fāṭima potash railway

Early in the 20th cent., the Italians constructed a small port and a railway of 60-cm gauge south of Massawa at Marsā Fāṭima. A score of small steam locomotives served the line. The line tapped a potash deposit some 80 km inland at Qululli. This potash enterprise ended in 1929 (Small 1959: 27).

Massawa–Asmära teleferica

In 1937, the Italians competited directly with the Asmära–Massawa line, building with a 72-km teleferica, a high-capacity aerial cableway mounted on steel towers. Freight transportation was in gondolas suspended from one of a pair of moving cables - one eastbound, the other westbound. The British disabled the line by taking its electric motors (*Guida* 195f.; Gamst field notes).

Somali Railway, Mogadishu-Villaggio Duca degli Abruzzi (Ferrovie Somale)

The 113-km (70-mile) railway of 95-cm gauge connected the port of Mogadishu with agricultural settlements inland on the middle ↗Wabi Šäbälle. Bananas, sugar, and coffee were the main products transported for export. Construction began in 1914. Immediate plans were to extend the railway to the Ethiopian border with extensions to Addis Abäba. In 1941, the British stripped the line of its track and rolling stock as seized enemy (Italian) property. The steam locomotives and railcars were of the types used on the Eritrean Railway.

Rainmaking

The belief in rituals that control the rain, be it R. or the termination of rainfall, plays an important role in many cultural systems of the Horn of Africa. R. includes the magico-religious prayers known among Christians (s., e.g., ↗*Däbtära*) and Muslims as well as the practices of rainmakers in "traditional ↗religions". The timing of rainfall according to the normal seasons is considered as a blessing and a sign of the balanced state of the socio-cosmological order, while drought, torrential rain or irregular precipitation are understood as indicators of disturbed spiritual and moral conditions, or are interpreted as a divine punishment.

Rituals of R. were often carried out by specialists, some of whom had numerous additional ritual functions as well. R. often belonged into the class of traditional priests, such as, e.g., the *godemi* among the ↗Šangama. Some rainmakers, endowed with the elements of symbolism of divine ↗kingship, held king-like rank, such as, e.g., the *iru-baab* ('father of rain') of the ↗Šeko or the *ira-kati* ('rain king') in the dual system of kingship among the ↗Gofa. In some other cases the chief or king himself functioned as rainmaker. Among the ↗Maale the *kati* ('king') and his mother played a central role in the R. ceremony. Similarly, the king of Koorete was considered a rainmaker. The chief (*bogolko*) of the ↗Ṣamay, e.g., acted as the highest rainmaker and controlled the thunderstorms, while the ability to stop the rain was ascribed to experts who were members of certain clans and had to be born during the dry season. In ↗Mäč̣č̣a society a similar division of tasks existed between the *malima* or rainmaker and the ↗*č̣aamsituu*, the bringer of the dry season. In other cases, the power of R. was ascribed to people of low social prestige, such as, e.g., a certain clan of the ↗Manǧo of Dawro.

Many R. rituals are centred around an animal ↗sacrifice. Among the Arsi it included black sheep or bulls and honey. (Dark coloured animals, whose colour resembles the black/blue colour of the rain clouds, are used for R. among many Cushitic-speaking groups, e.g., Hadiyya, Kambaata, Burǧi.) The Arsi sacrificer, who was a member of the ruling ↗*gadaa* class, sprinkled the blood up in the air and dropped the honey onto the soil. The tradition of the ↗Gabra prescribed that every head of household should sacrifice a goat in the doorway of the kraal in order to end a drought.

Rama Kidanä Məḥrät

R. (**ራማ፡ ኪዳነ፡ ምሕረት**, or Däbrä Sina Rama Kidanä Məḥrät) is an important monastery situated in northern ↗Wällo, in the area known as ↗Rayyaa – Zobəl, adjacent to Lasta (for location s. map for Qobbo). From ↗Qobbo, R. can be reached by a seven-hour walk. The monastic tradition links the establishment of the monastery with *abba* ↗Guba. The monastery is said to have suffered much during the uprising of peoples associated with the legendary Queen Gudit (↗Ǝsato) in the 9th cent., and subsequently during the 16th-cent. invasion of *imām* ↗Aḥmad b. Ibrāhīm al-Ġāzī ("Grañ").

The monastery briefly came to prominence during the attempted imposition of ↗Catholicism as the state religion of Ethiopia under *aṣe* ↗Susənyos. A faction of the nobility who refused to adopt Catholicism was exiled. The group included many members of noble families and was led by ↗Fəqərtä Krəstos, who brought them to the present site of R. The community seems to have been centred around the cave where the church dedicated to the Archangel Gabriel is now located. The monastery declined with the migration of the non-Christian ↗Oromo to this region.

During the 19th-cent. campaigns of *aṣe* ↗Yoḥannəs IV to Wällo, his troops camped at the location of the abandoned monastery. The soldiers uncovered a cave where different paraphernalia and manuscripts were kept. They duly informed the Emperor, who re-established the monastery and made land grants. The present church dedicated to ↗*Kidanä Məḥrät* was built in 1957 through the efforts of *abba* Näʾakkʷəto Läʾab. It is documented in the monastic annals that the new church was built over the ruins of an ancient church building, which is believed to have been destroyed by Grañ. A nunnery was established; Prince ↗Asfa Wäsän Ḫaylä Śəllase, governor of Wällo, contributed much to the construction of the monastic church, where several dignitaries took shelter during the 1974 ↗Revolution. *Ǝmmahoy* Amatä Śəllase and the former police commissioner General Abbäbä Wäldä Śəllase (d. 1999) are also remembered by the monastic community as beneficiaries of R.

Recently, another church of Mädḫane ᶜAläm was constructed. Currently, more than 260 monks and nuns live at R.; the monastic school has eight teachers and many students. Most of the monastic income is generated from agriculture. The monastery maintains a huge area of natural forest and wildlife. In addition, the classical monastic way of life and a strong ascetic tradition are preserved among the members of R.

Ramaḍān

R. (Arab. رمضان; Amh. **ረመዳን**, *rämädan*, **ረመድዋን**, *rämädwan*, **ሮመዳን**, *romädan*) is the ninth and the holiest month in the Islamic lunar ↗calendar during which Muslims intensify their piety and devotion, strictly observe the second pillar of ↗Islam, the obligatory ritual prayer (*ṣalāt*), and demonstrate an unusual degree of intimacy and humility towards God. Historically, it was during R. that the Qurʾān was first revealed (Sūra 2:184) to the Prophet ↗Muḥammad in 610 A.D. and the Muslims decisively defeated the ↗Qurayš of ↗Mecca at the Battle of Badr in 624 A.D. R. is a month of absolute submission to God's will and the seeking of His forgiveness and blessings. R. is also an occasion for the purification of the soul, liberation from material pursuits and concerns, spiritual rejuvenation and the fulfilment of one's moral obligation to assist the unfortunate and the needy in the community. It is an occasion for social interaction among people, respite from the diversions and preoccupations of everyday life, and the strengthening of Islamic identity, solidarity and fraternity.

↗Fasting is enjoined by the Qurʾān (Sūra 2:183). It lasts from approximately an hour before the dawn prayer (preceded by taking the last meal [*saḥūr*]) until sunset. It is totally prohibited to consume food and drink, to indulge in the pleasures of life, to engage in idle talk, gossiping, to use harsh and abusive language, and to show bad temper. The breaking of the fast is marked by drinking water, juice or milk and eating some dates, followed by the performance of the early evening prayer (*ṣalāt al-maġrib*) and taking a full meal (*ifṭār*). The complete recitation of the Qurʾān at least once during R. is highly recommended.

The hope of reward from God and the sense of contentment for keeping the fast more than compensate for its physical hardship, inconvenience and disruption of the normal rhythms of life. That is why R. is popularly nicknamed, especially in north and central Ethiopia, as **አሮ፡ መዳን** (*arro* *mädan*), an Amharic term that describes the state of discomfort and deprivation caused by the pangs of hunger ending in a sense of gratification felt at the time of breaking the fast.

In Ethiopia, as elsewhere in the Muslim world, the approach of the month is eagerly awaited by adherents of Islam and a substantial amount of money is set aside by the well-to-do for expenses for renovating the house and buying items for daily consumption and ↗alms. Inviting a neighbour or a stranger or a relative for meals is a meritorious act.

During R. thousands of people from the rural areas, including young itinerant religious students, the elderly and the needy, come to the major towns to benefit from the generosity of the rich and the pious. It is also common for some prosperous urban residents to travel to famous Ṣūfī centres to spend the month in the company of prominent ↗*šayḫ*s and members of the local community.

Throughout R. the faithful offer their daily prayers in the ↗mosque where they also attend lectures delivered by religious scholars. Performing the last prayer of the day (*ṣalāt al-ᶜišāᵓ*) is obligatory. The optional and supererogatory congregational prayer (*ṣalāt at-tarāwīḥ*) [partially broadcast live on the national TV for the first time in 2008], which lasts longer and is physically more demanding than the *ᶜišāᵓ* prayer, is attended by the vast majority of believers.

Over the years, R. has stimulated a brisk trade in various items of daily consumption such as dates, bread, cookies, samosa, milk and cold drinks. Temporary stalls are put up around the mosques where goods are displayed. Locally printed and imported books and booklets dealing with fasting and matters related to faith and practice, as well as Islamic newspapers in Amharic, are available for sale, along with cassettes of panegyric songs composed in local languages and of lectures given by preachers, both indigenous and expatriate (↗*Manzuma*).

The end of R. is marked by preparations for, and the celebration of, the *ᶜĪd al-fiṭr* (↗Feasts, Islamic). The optional six-day-long fast, locally called *səddəsto*, which lasts from 2 to 7 *Šawwāl*, is observed by an ever-increasing number of Muslims.

Ras

R. (**ራስ**, Amh., also *əras*, old variant *raᵓəs*; Tgn. *raᵓsi*; lit. 'head') was the second highest rank and title (after ↗*nəguś*) in the feudal-military hierarchy of the Ethiopian empire. The exact time of its introduction is unknown. Like many other Ethiopian titles, it could be of military origin, with reference to a supreme commanding position, above ↗*däǧǧazmač*, ↗*qäññazmač*, ↗*fitawrari* and ↗*däǧän* (Berry 1976:300). It is attested first under *aṣe* ↗Zärᵓa Yaᶜəqob, when a number of high-ranking personalities bearing it appear in a document, some of them being regional governors (as *yäzan bäläw əras*; *bäᶜalä diho əras*), some others court officials with high, rather technical functions (*yäbet anśa əras*; *yägra azmari əras*; *yädäräba muᵓay əras*; *yäbägamatočč əras*). The court title of ↗*ədug ras*, of unclear nature, also appears in the same document (Kropp in VarAeth 119f., 134f.). The connection of the title of R. to specific governorate units is evident by the end of the 15th cent.: after a reshuffle during *aṣe* ↗Bäᵓədä Maryam's reign, R. became a title of the governor of such important provinces as ↗Däwaro (PerrZarY 112) and, slightly later, of ↗Bugna or ↗Angot (BeckHuntAlvar 200).

One could receive the title of R. only from the *nəguś*, i.e. by the emperor himself, who ranked first in the empire's hierarchy. In the 15th/early 16th cent., an occasional coalescence of the military-administrative rank of R. and the court title of ↗*bitwäddäd* is observed (e.g., for *ras* ↗Atnatewos; cp. also Varenbergh 1915–16:7, 13f.). According to ↗Almeida, by 1628 a major change was made under *aṣe* ↗Susənyos in the system of titles and court offices: the prerogatives of the two *bitwäddäd*s ("of the right" and "of the left") were transferred to the R., thus raised to the second most powerful dignity of the state, with an exclusive role especially in military affairs (BeckHuntAlm 74; cp. also LudHist II, 13, 26–37). At the apogee of the ↗Gondärine kingdom, the utmost position of the R. "who is *bitwäddäd*" was confirmed by the official "order of precedence" (esp. under *aṣe* ↗Iyasu I and *aṣe* ↗Bäkaffa, s. GuiIohan 146, 293 [text]; although, later, the titles were again separated from time to time). The most powerful *ras bitwäddäd* was ↗Fares, removed from the court by Iyasu I, and later responsible for the latter's murder. *Ǝtege* Məntəwwab (↗Bərhan Mogäsa) and ↗Iyasu II were careful to keep the title within the Qʷaräñña clan (↗Qʷara), bestowing it upon its most trustful and capable members (cp. ↗Niqolawos; ↗Wäldä Ləᶜul; Wädağğe [s. EAE vol. 5]). After the collapse of the Qʷaräññočč power, ↗Mikaʾel Səḥul was appointed R. and *ras bitwäddäd*, in 1767 and 1768 resp., by *aṣe* Iyoʾas.

During the ↗*Zämänä mäsafənt*, the joint position of R. and *bitwäddäd* could be still conferred by the emperor alone, although he was more often a puppet in the hands of powerful lords: thus ↗Wäldä Śəllase was appointed *ras bitwäddäd* by *aṣe* Täklä Giyorgis, and his appointment was confirmed by *aṣe* Sälomon, both made king by the same Wäldä Śəllase, who was de facto an independent ruler (SaltTrav 287ff.). A R. could bestow upon his followers the ranks below his own. However important the title of R. might have been, it was then a no better guarantee for acquiring political power than a person's actual influence, local support, military and economic capacity etc. Under certain circumstances, a *däğğazmač* could be de facto more powerful than a R.

The short dominance of the Goğğam dynasty in Gondär was marked by the bestowal of the title on ↗Ḫaylu Yosedeq and his son ↗Märəd. Many R. were among the late 18th/19th-cent. rulers of the ↗Yäğğu dynasty, controlling the Gondärine monarchs from 1799 until the rise of *aṣe* Tewodros II.

In the 19th cent., despite decentralization, the title did not proliferate. It was adopted in Šäwa: the Šäwan lords ↗Asfa Wäsän and ↗Wäsän Sägäd proclaimed themselves R., while ↗Sahlä Śəllase, retaining his title, called himself *nəguś* (↗Ḫaylä Mäläkot dropped the title R., and retained that of *nəguś*, without being properly crowned, s. Bairu Tafla in PICES 4, vol. 1, 599). An isolated instance is that of *ras* ↗Wäldä Mikaʾel Sälomon, made R. by the Egyptians in late 1876, and confirmed as such in 1878, when he submitted to *aṣe* Yoḥannəs IV (ErlAlula 11, 23). Quick promotions were rare; the case of ↗Alula Ǝngəda, raised from ↗*šaläqa* to R. by the same Yoḥannəs (ibid. 13), was unique. It is not until 1878 that Mənilək of Šäwa, having received the title of *nəguś* from Yoḥannəs IV, raised ↗Darge Śahlä Śəllase and ↗Gobäna Dači to R. (Bairu Tafla in PICES 4, vol. 1, 601). ↗Mäkʷännən Wäldä Mikaʾel became R. in 1890, ↗Mängäša Atikam in 1889, to become *ras bitwäddäd* in 1894. As governor, a R. was allowed to be accompanied by 24 ↗*nägarit*-drums, one of the main insignia of his authority.

Under Mənilək, a few of the most important provinces were administered by R., such as ↗Harär(ge), ↗Bägemdər, ↗Təgray etc. (MahZekr 638f.). The *ras bitwäddäd* was then appointed by the Emperor as his highest and closest counsellor (cp. ↗Täsämma Nadäw). *Däğğazmač* Täfäri Mäkʷännən was proclaimed R. and ↗*alga wäraš* in 1916. After he became *nəguś* in 1928, the new title of ↗*ləᶜul ras* was given by him in 1929–30 to ↗Kaśa Ḫaylu and a few other important representatives of local branches of the ↗Solomonic dynasty. During the ca. 30 years after the Liberation of 1941, Ḫaylä Śəllase appointed R. only some eleven persons (ClapHS 67f.), gradually restricting the power of the nobility and building a state hierarchy in which authority and privileges were defined by the position held by a person.

Both *bitwäddäd* (senior to R.) and *ras bitwäddäd* also existed in that period (the latter title was given in 1957 to ↗Mäkʷännən Ǝndälkaččäw).

Denis Nosnitsin

Ras al-Fīl

R. (colloquial Arab., lit. 'head of the elephant') is a former governorate of the Christian Ethiopian state, located to the west of the River ↗Atbara and ↗Mätämma near the Ethiopian–Sudanese border.

R. seems to have been the principal market for ↗gold on a caravan route between ↗Gondär, ↗Sinnār and ↗Funğ, very much frequented by ↗*Ğäbärti* as well as by Sinnār merchants. It was situated four days journey from Sinnār, and was also considered to be one of the safest trade routes between the two countries. Though its territorial extent is unclear, R. once consisted of 39 villages. After the military expedition of *aṣe* ↗Iyasu II

Ras al-Fīl (below, middle, “Ras el Feel”) on one of the first exact maps of the north-western Ethio–Sudanese border areas, showing the itinerary of Samuel and Florence Baker; from Baker 1867

and *ras* ↗Wäldä Ləᶜul against Sinnār, R. no longer paid tribute to Sinnār, and was considered as one of the frontier provinces of Ethiopia. Before, in the 16th cent., it might have been included in the Muslim Ethiopian–Sudanese kingdom of ↗Mäzäga, during its widest extension.

R. is a hot, mostly lowland, partially mountainous, territory, whose population was mainly Muslim. It is a semi-arid strip of land, full of thick woodland, unfavourable for agriculture, but fit for hunting. As a result, hunters from both sides of the frontier converged on R. to hunt ↗elephants, rhinoceros and other wild animals. As a frontier territory, it was subjected to attacks from both the Sudan and Ethiopia. There were considerable numbers of fugitives from the Sudan and other territories across the frontier living in R. In 1799, for instance one of the district governors of Sinnār, Ranfa Bādī, was exiled to R.; one generation before, even the deposed ruler of Sinnār, *makk* ↗Bādī IV, was appointed its governor under the Ethiopian ruler.

In order to secure the allegiance of the border communities to Ethiopian overlordship, Muslim governors were appointed along with Christian governors. According to James ↗Bruce, the deputy governors of R. were always Muslims. On occasions, such as the battle of ↗Sarbakusa, soldiers from R. faught among Ethiopian troops (BruNile VI, 93). R. helped Ethiopian governors to get a supply of horses and other lucrative items of trade across the border. Most of its inhabitants were strong and expert horsemen. At the time of Bruce’s visit, it was ruled by a Christian called *ato* Kənfu. Bruce was then offered the deputy governorship of R. which he did not exercise actively owing to its unfavourable location.

After the 18th cent. it seems to have belonged to the ↗Qallābāt sultanate.

Tǝgray *kǝllǝl* from the Amhara *kǝllǝl*. The summits, made of cenozoic volcanic rock (trap series), are no longer covered with persistent snow and small glaciers as they were during the Quaternary cold periods.

Since 1969 R.D. has been included in the Sǝmen Mountains ↗National Park and listed as a World Heritage site. Rare endemic species are to be found there: walya ibex (*Capra ibex walia*), Simen fox or wolf (*Canis simensis simensis*), Gelada baboon (*Theropithecus gelada*) and several bird species. Juniper forests (Afro-montane belt) grow on steep slopes rising above the ↗Däbarq plateaux (2,800 m A.S.L.). The summit plateaux are cultivated up to 3,500–3,600 m A.S.L., where small fields (cereals, pulses) have been cleared from the Ericaceous belt (*Ericea arborea* or giant heath). The highest altitudinal belt is the Afro-alpine belt (ca. 4,000 m A.S.L.) and is characterized by the occurrence of the Giant Lobelia (*Lobelia rhynchopetalum*) which can survive night frost. On the southern slopes, around 2,000 m A.S.L., ↗Agäw peasants grow *ǝnsät* and banana trees (Simoons 1960: 94).

Reportedly, the first expedition to R.D. was by Pierre Victor ↗Ferret and Joseph-Germain ↗Galinier in 1841, who provided the first geological and biological description of the mountain. Until the Gondär–Aksum road was built through ↗Däbarq during the Italian occupation, the mountain was isolated. For a long time ↗*šǝfta* took refuge here, attacking Italians, travellers and *Därg* troops.

The area is inhabited by Amhara farmers, who earn their living from agriculture, altitude cattle breeding, hunting and wood cutting. It has areas of high population density (108 inhabitants/km^2 in the Däbarq *wäräda* [CSA 2004]) and the poor peasantry supplement their income by helping tourists and trekkers. The recent opening of trails and an all-weather road from Däbarq to the Bʷaḥit Pass (4,200 m A.S.L.) might disrupt fauna and flora stability and induce farmers to leave their fields.

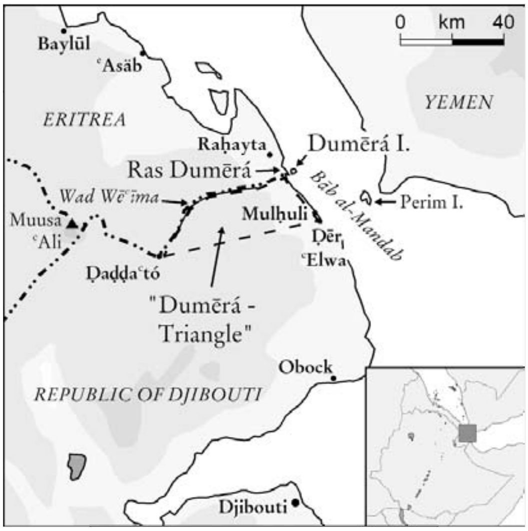
Ras Dumērá and Dumērá island

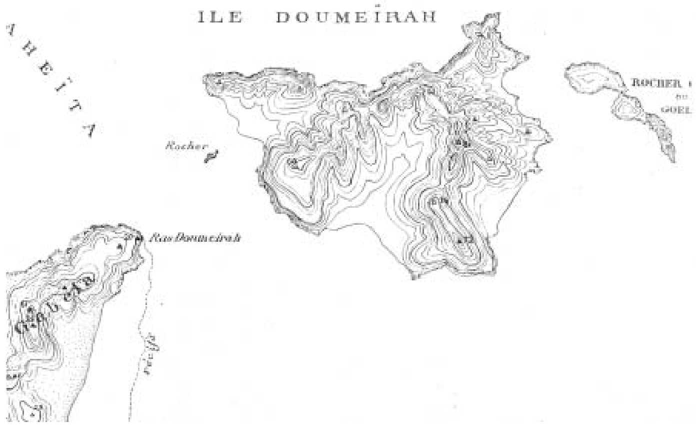


The triangle which was planned to be given to Italy in 1935

R.D. (Ar.: Raᵓs Dumayra; French: Ras Doumeira, official sp. in Djibouti: Raas Dumeera; 12° 42' 45 N, 43° 8' 12 E) is the ᶜAfar name of a small, hilly cape (Arab. *raᵓs*) on the ↗Red Sea coast (possibly the Deirē of ↗Ptolemy). It is facing the island of Dumērá and serving as a reference point for the boundary between ↗Djibouti and ↗Eritrea. The hill on R.D. which marks the boundary is called Gabla (Meḍgablá, s. MorDicAfar 147, s. maps). Historically, R.D. and the island belonged to the sultanate of ↗Raḥayto.

Already in the French–ᶜAfar treaty of friendship of 11 March 1862 R.D. served to define the western limit of the territories concerned (text s. MorDicAfar 264). The lowlands from R.D. to Ras ᶜAlī would be ceded to France together with ↗Obock. When the French effectively established themselves in the area in the 1880s, this treaty served as their legal reference, which cemented R.D.'s legal function (s. also ↗Boundaries of Djibouti; ↗Treaties).

R.D. again played a role when a radical reshaping of Ethiopian boundaries was discussed before Italy's attack on Ethiopia (↗Italian war 1935–36). On 7 January 1935, a series of agreements was concluded between the French foreign minister Laval and ↗Mussolini. They provided for the cession of the Ḍaḍḍaᶜtó–Dumērá triangle (the "saillant de Dumera"), west of R.D. in French Somaliland, to Italy; to the south, this triangle was bounded by the well Ḍēr ᶜElwa on the coast (south of Mulḥuli). Italy, in turn, would give up rights in French Tunisia and support France against Germany, while France secretly promised not to act against Italy in the "Abyssinian ques-



Extract from a French map, drawn by Lieutenant Blondiaux, showing the "Île Doumeirah" and "Ras Doumeirah"on the left, with boundary marks (black triangles) on the elevations, partitioning Ras Dumērá along the hill Gabla and setting a boundary also on Dumerá island on the southern most hill (72 m A.S.L.); 1899, Service géographique des colonies, 1:10.000, courtesy of Didier Morin

tion" (s. the official texts in Wheeler-Bennett – Heald 1936:18–24). The importance of this cession for Italian Eritrea lay in the fact that thanks to Ḍēr ᶜElwa it would acquire direct access to the the Gulf of Aden and the Indian Ocean and thus control the maritime traffic through the strait of ↗Bāb al-Mandab. These agreements, however, were not ratified and therefore never achieved any legal status. R.D. remained the legal boundary, thus Eritrea never becoming a riparian state of the Bāb al-Mandab.

Instead, after the war had started, the secret ↗Hoare-Laval-Plan of December 1935 suggested that a coastal strip north-west of R.D. (within Italian Eritrea) be ceded by Italy to Ethiopia in exchange for large Ethiopian territories. Originally, Mussolini secretly declared to be ready to accept. But after its premature publication it was rejected by leading members of the ↗League of Nations and by ↗Ḫaylä Śəllase I. This breach of the basic principles of the League led to the resignation of Hoare and the fall of the Laval government, and Mussolini himself opted for an occupation of all of Ethiopia instead. The plan did not lead to any legally valid agreements.

The French–Ethiopian Protocol of Ḍaḏḏaᶜtó of 16 January 1954 defined the French Somaliland–Ethiopian boundary as the ancient trace, i.e. first a strait line starting from the Gabla at R.D., then following the *wad* Wēᶜimá (s. map of the triangle). The question of ownership of the island of Dumērá, however, remained open. R.D. itself is almost equally divided between Eritrea and Djibouti (s. maps of 1899 and ca. 1935).

Occasional Eritrean indirect claims of the 1990s over the entire Ḍaḏḏaᶜtó–Dumērá triangle (e.g., in a map of the Eritrean Government of 1995), based on the obsolete Laval–Mussolini agreements, eventually contributed to the outbreak of a short-lived conflict with Djibouti in 1996 (Eritrea claimed to have just persecuted ᶜAfar rebels, but Djibouti claimed that Eritrea had occupied territory within Djibouti in the R.D. area). Eritrean claims over the whole triangle were, however, never made official. After a renewed short border conflict in 2008, the Eritrean army controlled all of R.D. and Dumērá island (this tiny strip of land not being identical with the much larger Ḍaḏḏaᶜtó–Dumērá triangle).

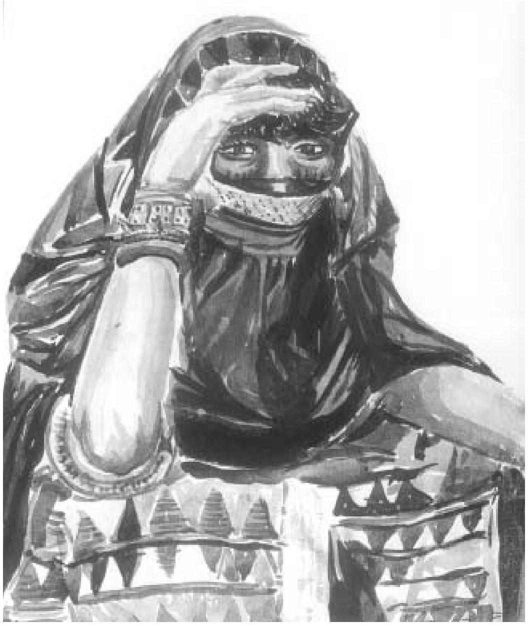
Rašāʾida

The R. (also Rašāyida; self-denomination Rašāyda) are an Eritrean people. They descend from Arabic-speaking bedouins who migrated from coastal towns in Arabia and sailed across the ↗Red Sea in the late 1860s. They settled in what the Egyptian administration called the ↗Sawākin and ↗Massawa governorates at that time. The boundary between these provinces ran approximately along the Sudanese–Eritrean border of today. From 1866 to 1895, however, it was a lightly policed frontier zone that the R. crossed at will. Even now some R. move back and forth between Sudan and Eritrea, whenever they need to escape political and economic pressures in these countries. Significant numbers of R. crossed the frontier in 1885 (to escape Mahdist armies in Sudan), 1892 (to evade Italian tax collectors in Eritrea), 1935 (to prevent Italian seizure of their livestock in Eritrea), and the late 1990s (to keep away from clashes in eastern Sudan between the Sudanese army and a Sudanese opposition group, the National Democratic Alliance, which was based in Eritrea). Thus it is impossible to understand the history of the Eritrean R. in isolation from the history of their relatives in Sudan. Both groups still consider themselves members of a single, tribally organized society, notwithstanding their political affiliations with Sudan and Eritrea.

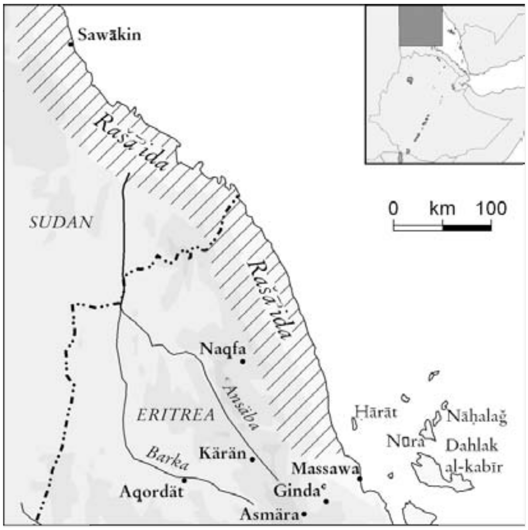
Most of the R. claim patrilineal descent from the tribe's eponymous ancestor, Rašīd al-Zōl. This man is also said to be the ancestor of related groups in Saudi Arabia who call themselves the Banī Rašīd. Many Sudanese and Eritrean R. regard the Saudi Banī Rašīd as their "cousins". However, some branches of the tribe – such as the ᶜAwāzim – have a separate genealogy and descend from other Arabian tribes. Regardless, in their dealings with outsiders the members of such branches identify themselves as R. (sg.: Rašīdī). Many R. resemble the bedouins of Saudi Arabia physically, having olive-toned skin and straight black hair. Some R., however, descended from "free" male ancestors and "slave" African concubines who were purchased by wealthy Rašīdī men in the 19th cent. These R. bear the surnames of their "free" male ancestors and have full membership in the tribe politically. There is some stigma attached to their "non-free" grandmothers, however, producing a tendency for them to marry among themselves.



Rašāʾida woman; an ethnographic portrait by Fəśśəḥaye Zämikaʾel, ca. 1990, private art collection, Asmära

All of the R. speak the dialect of Arabic found in their original homeland, the western highlands of Nağd, in Saudi Arabia. Their dialect differs in sound and vocabulary from Sudanese dialects. For example, in Rašīdī Arabic the consonant *k* is often pronounced as *č* when it falls near a high front vowel; thus one hears *mabrūk* 'congratulations [lit., 'you are blessed']!' but also *allāh yibārič fī-č* 'God bless you [fem. sg.]'. Some of their interrogative vocabulary, such as *ween naww-k* 'Where are you [masc. sg.] going?' and *ween naww-ič* 'Where are you [fem. sg.] going?' is distinctive.

Since 1870 the R.'s closest neighbours in Eritrea have been the Təgre-speaking ↗Ḥabāb subgroup, whose lands are adjacent to the frontier zone. In the 1880s most R. lived in Sudan, but in 1885 Mahdist troops attacked them and forced them to seek refuge with the Ḥabāb in what is now Eritrea. For the next ten years the R. stayed close to the Ḥabāb socially and geographically. During the rainy seasons, however, the Ḥabāb pastoralists tended to take their livestock into the highlands to graze while the R. lingered near the Red Sea coast with their camels. Although the coastal strip was not rich in pasture, it had harbours where Rašīdī merchants could bring in goods from Arabia and export goods from Eritrea. During the 19th cent. these goods were slaves and ↗firearms (↗Slavery). Slave dealers from the ↗Ḥədaräb/↗Hadándowa, Banī ᶜĀmir (↗Beni ᶜAmər), and Ḥabāb groups would seize captives



further inland, enslave them, and transport them to the coast, where Rašīdī merchants would embark with their human cargo for Jeddah, one of the centres of the Red Sea slave trade. The merchants would use the proceeds from this trade to buy firearms and bring them back across the Red Sea to sell in Eritrea and Sudan. Since the R. and the Ḥabāb had complementary roles in this commerce, they tended to develop inter-tribal partnerships. The trade in people was stopped by the British and the Italians early in the 20th cent., but Rašīdī merchants have continued to cross the Red Sea in small boats (*sanābīk*) to bring other goods – such as sheep, which are in high demand in Jeddah during the pilgrimage season – to markets in Saudi Arabia. In recent years many have gone to Saudi Arabia to work in pastoralism or livestock sales. Their fluency in a Naǧdī dialect and familiarity with Saudi culture helps them blend in to Saudi society.

Those R. who do not engage in commerce support themselves by combining pastoralism with rain-fed horticulture. They migrate with their livestock in search of pasture as soon as the first rains fall in July. After a few weeks of rain, when the soil is moist, they plant sorghum in wadi beds. After the grain sprouts they move away with their animals and let it grow untended. They harvest the grain weeks later and use some of it to feed their livestock during the ensuing dry season, when the pastures have dried up. Because their pastoralist economy requires frequent movement, these R. live in cloth tents. The tents are made by women. They make yarn from a mixture of cotton fibre, goat's hair, and camel wool and then weave the yarn into heavy, waterproof tent cloth. Men specialize in rearing livestock: finding pasture for them, taking them to water, branding them, taming them, and scheduling breeding and calving. During the 1990s the number of R. who still moved with their herds shrank. Many now prefer a sedentary life based on local work in commerce and labour migration to Saudi Arabia. Reliable statistics about the proportion of nomadic to sedentary R., however, have not been collected.

As Muslims, the R. circumcize their boys. Boys are circumcized about one year after birth. Although not required by Islam, there is a parallel genital operation for girls that involves removal of a small part of the clitoris. This custom contrasts sharply with the much more severe genital operations found in central Sudan, which the R. do not approve of.

In the Eritrean context, the R.'s clothing is distinctive. Men wear long turbans. Women wear masks made of decorated black cloth that cover their mouths and noses. Young women wear an even more concealing and more brightly decorated veil called a *burga*^{c} for the first year after their marriage. Then they switch to the more comfortable married woman's face mask (*ginā*^{c}).

In legal and political terms the R. of Eritrea have become one of nine officially-recognized "nationalities" in the new, independent state of Eritrea, while the R. of Sudan have remained Sudanese citizens. The cultural process that transformed the Eritrean R. into a "nationality" had its roots in British language policy between 1941 and 1952. During this period, the British promoted Təgrəñña and Arabic as the languages of instruction in Eritrean schools, arguing that Təgrəñña would serve the Christian Eritreans as a language of culture while Arabic would serve the Muslims. After 1952 Ethiopia attempted to impose Amharic, but this policy was reversed in 1991 when Eritrea became independent. Once Təgrəñña and Arabic were reinstated as languages of instruction, it followed logically that the R. should be recognized as the only native speakers of Arabic in Eritrea. This occured in 1993.

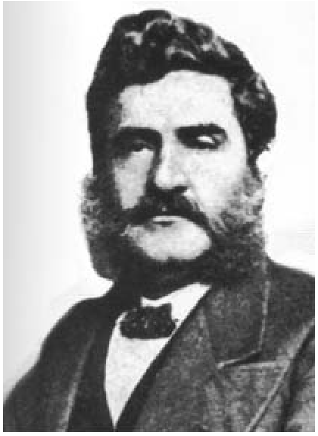
Rassam, Hormuzd

R. (b. 1826, Mosul, Iraq, d. 16 September 1910, Hove, Brighton) was a British agent who travelled to Ethiopia as Queen Victoria's envoy to *aṣe* ↗Tewodros II, and played a major rôle in negotiations preceding the Battle of ↗Fala below ↗Mäqdäla. Born as a Nestorian Christian he became an adherent of the Church of England, and took British nationality.

Originally employed as an Arabic–English interpreter, R. attracted the attention of the British archaeologist Austen Henry Layard, who sent him to Magdalen College, Oxford, to study archaeology. R. assisted Layard in his researches at Nineveh in 1845–47 and 1849–51, and was later appointed British agent for Assyrian antiquities, and subsequently a British political agent for Aden and Muscat. As such he was chosen – through the influence of Layard, by then a British Member of Parliament, as Queen Victoria's envoy to Tewodros, following the imprisonment of the envoy ↗Cameron whom Tewodros by then mistrusted.

R., bearing a letter from Victoria, landed at ↗Massawa on 23 July 1864. He immediately wrote to Tewodros, requesting an audience, but, receiving no reply, wrote again in October, and March 1865. During this long delay London critics complained that R. had failed because he was an "Asiatic", not a "European", while the Orientalist Richard ↗Burton declared that R. lacked "pluck". The British Government appointed a substitute envoy, William Palgrave. In the meantime, however, R., waiting at Massawa, received the long awaited reply from Tewodros on 12 August 1865. It invited him to enter Ethiopia through ↗Mätämma in the west. By then the British had abandoned an earlier plan of taking Tewodros a gift of 500 muskets.



Hormuzd Rassam; from Guadalupi 2005: 30

R., poorly supplied with gifts, but accompanied by two colleagues, Lieutenant ↗Prideaux and Dr. Henry Blanc, finally met Tewodros on 27 January 1866 – a year and a half after arriving at Massawa. R. was at first warmly welcomed by the monarch, who gave him several substantial gifts of Maria Theresa dollars, and asked him to try Consul Cameron and Tewodros's other European captives, which he did symbolically. R. was then allowed to take all the freed captives with him and leave Ethiopia, but on their way they were re-captured, Tewodros blaming R. for not respecting their friendship as he did not stay in his service. The ruler's letters to him show a high degree of sympathy towards R., but are also marked by exaggerated expectations.

R., together with the other Europeans, was dispatched to the Emperor's fortress of Mäqdäla, where they were all detained until the arrival of the ↗Napier Expedition; they were released on 12 April 1868. R. was in the British camp when a last letter from Tewodros arrived offering Napier a gift of cattle and sheep, in effect as a peace-overture. R., who served as interpreter together with Tewodros's confident ↗Samuᵓel Giyorgis, later challenged Napier's account of these proceedings: he suggested that the ruler had been deceived into thinking that the British had accepted his gift, and that peace had thus been concluded (Anon. 1869).

R., who subsequently worked for the British Museum in Mesopotamia, published a detailed record of his negotiations with Tewodros, with a clear account of how his government worked. For his service and sufferings, the British Government awarded him the sum of £ 5,000.

Richard Pankhurst

Rassegna di Studi Etiopici

The R.S.E. is an Italian journal devoted to ↗Ethiopian studies, published since 1941. The journal was founded by Carlo ↗Conti Rossini who edited it until his death in 1949 (no. 7, 2, 1948, publ. 1949). The link with the "Roman School" of Ethiopian studies was maintained by the subsequent editors, Martino Mario ↗Moreno (1950–63, nos. 8–19) and Lanfranco ↗Ricci (1964–2003). Since Conti Rossini's death, each number of R.S.E. commemorates the name of its founder beneath the title.

In Conti Rossini's intentions, the scope of the R.S.E. was that of "investigating the indigenous people of the Africa Orientale in every respect: ethnic, historical, philological, cultural", not only in view of specific scientific achievements, but also, reflecting the contemporary climate, in order to increase the interest of educated people in "Italian" Africa, and furnish knowledge for a better exercise of colonial rule (cp. Conti Rossini 1941). The journal soon emerged as one of the most important scientific tools for Ethiopian studies (cp. Ricci 1986: 154, who stressed its essential historical and philological approach: cp. also the revision of his own statements by Conti Rossini 1944–45: 6), with a high scholarly standard and contributors from all over the world; consequently, everyone involved in Ethiopian studies (whether history, archaeology, linguistics, philology, religion, anthropology, law, history of art, bibliography, etc.) could hardly avoid consulting the R.S.E.

For the first three years (1941–43) the R.S.E. was supported by the Ministero dell'Africa Orientale Italiana in cooperation with the Reale Accademia d'Italia, Rome. Three fascicles appeared each year. During 1944/45–51, it was sponsored by the Ministero dell'Africa Italiana – Ufficio Studi. One fascicle was published for the years 1944–45 (no. 4), but the *Studi Etiopici* (CRStud, 1945, under the auspices of the Istituto per l'Oriente) was conceived as a complement to R.S.E. (cp. Conti Rossini 1944–45: 6). Only one fascicle was published again for the year 1946 (no. 5), whereas two yearly fascicles were published in 1947 and 1948 (6 and 7). No. 7 included a supplement, edited by Conti Rossini (1948) and later brought to completion by Ricci (1953, 1971). The original editorial board included, besides Conti Rossini, Vinigi L. ↗Grottanelli and Antonio ↗Mordini.

During 1952–54 (nos. 11–13), the R.S.E. was sponsored (but not funded, cp. Ricci 1983: 5) by the Centro di Studi Etiopici e Cristiano-Orientali (Università di Roma – Istituto di Studi Orientali). In 1952 Ricci became editorial member under Moreno.

Publication resumed more than three years later (no. 14, 1955–58, publ. 1959) thanks to an agreement (inspired by Ricci and endorsed by Francesco Gabrieli) with the Istituto per l'Oriente (IPO, at present, Istituto per l'Oriente Carlo Alfonso Nallino, Rome), where Conti Rossini had played an important role in the previous decades (cp. Ciasca 1959; Ricci 1983).

Ricci took charge following Moreno's death in 1964. His direction was initially characterized by the irregularity of publication (no. 21, 1965, publ. 1966; no. 22, 1966, publ. 1968; no. 23, 1967–68, publ. 1969; no. 24, 1969–70, 1971; no. 25, 1971–72, publ. 1974; no. 26, 1973–77, publ. 1978; no. 27, 1978–79, publ. 1979; no. 28, 1980–81, publ. 1981). The 1983 agreement between the IPO (through which the R.S.E. was also funded by the Consiglio Nazionale delle Ricerche, CNR) and the ↗Istituto Universitario Orientale, Naples (IUO) secured a more substantial financial support. As a result, the R.S.E. appeared with more regularity (no. 29, 1982–83, publ. 1983; no. 30, 1984–86, publ. 1987; no. 31, 1987, publ. 1988; no. 32, 1981, publ. 1990 etc. till no. 43, 1999, publ. 2000; no. 40, 1996, though planned, was never published due to the lack of financial support from the CNR). The 1983 agreement also implied the establishment of an editorial board, including one representative each from IUO and IPO (Luigi ↗Fusella and Yaqob Beyene, respectively). Yet, it was Ricci, the Direttore, who remained exclusively responsible for editorial policy.

With the establishment of a new editorial board in 2002 (with Yaqob Beyene and Rodolfo Fattovich), Ricci launched a new series, of which only two fascicles have been published (no. 1, 1, 2002, and no. 2, 2003: no. 1, 2, 2002 was never published).

Throughout the journal's existence, its inner structure has changed insignificantly. The sections included articles, occasional personalia, and a bibliographical section containing reviews. The only exception was the almost monographic vol. 25 (1971–72).

Rastafari/Rastafarianism

The R. movement, whose name derives from "*ras* Täfäri Mäkʷännən" (i.e. *aṣe* ↗Ḫaylä Śəllase I), emerged in Kingston, Jamaica, in the early 1930s when a few persons (Archibald Dunkley, Joseph Nathaniel Hibbert, Robert Hinds, Leonard P. Howell), most of whom had been travelling in Central and Northern America, came back preaching the godly character of Emperor Ḫaylä Śəllase I. His coronation on 2 November 1930 was interpreted by the Rastafarians as the fulfillment of biblical prophesy. It is one of the major dates of the Rastafarian calendar and is faithfully commemorated every year. The R. movement was thereafter strengthened by news of the upcoming war between Italy and Ethiopia. The Rastafarians themselves reject the term "Rastafarianism" claiming that they have transcended all "isms and schisms".

The social and ideological roots of the R. movement are Jamaican popular religions which had been a tool of resistance during ↗slavery; the tradition of ↗Ethiopianism, through which blacks identified with Ethiopia by virtue of biblical symbolism; and the works of Marcus Garvey (1887–1940) who strove for Black Nationalism and Pan-African unity (↗Pan-Africanism). The R. movement at first took root among the poor and destitute black population of Kingston and met with strong opposition from Jamaican society and the colonial government.

It is characterized by a wide diversity of practices: there are probably as many interpretations of what the R. movement is as there are Rastafarians (or "Rastas"). Due to the constant refusal to abide by one homogeneous dogma, R. has often been understood as an allegory for individual freedom. However, beyond their faith in God's presence in man as represented by *aṣe* Ḫaylä Śəllase I, common traits can be pointed out: the inversion of symbolic values attributed to black and white identities; identification with the Hebrews taken into slavery; a world vision expressed by the term ↗Zion, representing Africa as the land of origin and the promised land, and Babylon, representing the Western world and its administrations.

Welcome sign of the Rastafari community at Šašämäne; photo 2009, courtesy of the author

The cultural system of the Rastafarians took form as early as the 1940s. Their *livity*, or way of life, is characterized by growing the hair in dreadlocks, an *Ital*, i.e. vegan and natural alimentation, and the ritualized use of the herb (*cannabis sativa*). The *Italk*, a subversion of Jamaican patois by the Rastas, expresses their confidence in the power of the word and of the subject ("*I*"). Rastafarian sacred music is called *nyahbinghi* and played with three types of drums (bass, fundeh, repeater). The *nyahbinghi* ritual of the Rastas may last as long as seven days and nights. A ritual of purification by fire and of praises for the Ethiopian Emperor, it stages a mythical confrontation between divine and evil forces. The cultural system of the Rastas is transmitted through a codified discourse known as *reasoning*.

The R. movement has been a major source of inspiration for artists, poets, film-makers, writers and intellectuals. Rastafarians, by restoring the pride of a black African identity came to embody cultural change in Jamaica after its independence in 1962. They have become an inescapable part of Jamaica's national identity even though they always claimed the right to leave the island and to go back to Africa, where they expect their redemption to take place. Many Rastafarians are settled in ↗Šašämäne, as well as in Ghana, South Africa, Tanzania, etc.

Bob Marley, world-famous Rastafarian and reggae singer, was awarded a peace medal by the UN in 1978 for his dedication to peace and solidarity. Thanks to the Rastafarian's involvement in reggae music, the Rasta movement has spread globally since the 1970s. Rastafari organizations such as the Ethiopian World Federation, the Twelve Tribes of Israel, the Ethiopia Africa Black International Congress and the Theocratic Order of Nyahbinghi were revitalized by growing communities in the Caribbean, Great Britain, and the United States. In addition, numerous communities emerged in continental Europe, Asia and the Pacific, Central and Latin America and, of course, Africa, where local Rastafarians have a vibrant voice.

Raydān

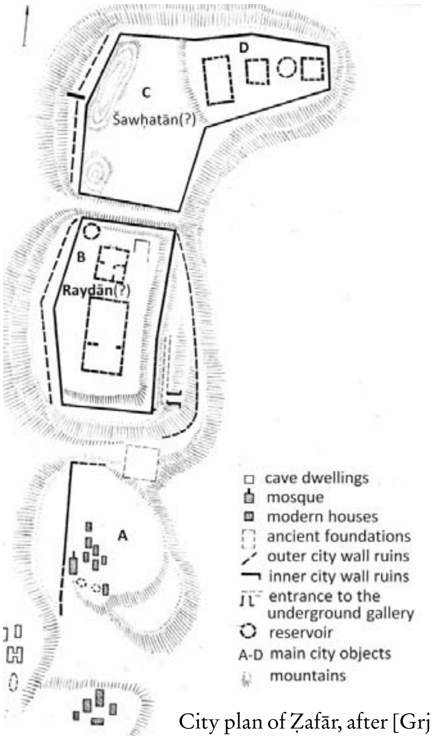
R. (ريدان; Sabaic RYDN; Gəᶜəz ረይዳን, Räydan; in unvocalized Gəᶜəz inscriptions RYDN and RD; in Gəᶜəz "pseudo-Sabaic" inscriptions RYDN^m, RYDN and RDN; in Greek Ῥαειδᾶν and Ῥεειδᾶν) is the name of the royal palace of ↗Ḥimyar, in the capital city of Ẓafār. In South Arabian epigraphic sources it is attested almost exclusively in the title MLK/SBᵓ/w-ḏ-RYDN, 'king of Sabaᵓ and ḏū Raydān' (lit. 'that of R.'), which was born by the supreme rulers of the Sabaean and Ḥimyarite kingdoms in the 1st to the end of the 3rd cent., during the period of the struggle for hegemony in South Arabia. After the unification of the region under the authority of Ḥimyar in the early 4th cent., this title was preserved as the first and essential part of the so-called "long" and "very long" royal titulary.

There is no doubt that R. was the main symbol of the Ḥimyarite political entity. The mention of R. in the title of the Aksumite king ↗ᶜEzana demonstrates his pretensions to power over Ḥimyar, which do not correspond to the real extent of his state. On the contrary, in the titulary of ↗Kaleb and his son ↗WᶜZB (RIÉ 191.8, 192 A.6), R. reflects the submission of the Ḥimyarite kingdom to ↗Aksum after the defeat of the Jewish king Ḏū Nuwās (↗Yūsuf Asᵓar Yaṯᵓar). As to ↗Abraha, an Ethiopian who came to rule over Ḥimyar, he merely adopted the "very long" titulary (including ḏ-RYDN).

From the early 2nd cent. A.D., the letters RYDN occurred on Ḥimyarite coins of different issues, especially on the majority of types attributed to King ᶜMDN BYN YHQBḌ. This mark obviously designated a mint that seems to have been situated inside the palace.

The 10th-cent. Yemenite scholar al-Ḥasan al-Hamdānī mentioned R. among the palaces and castles of Ẓafār, and emphasized that it had been the royal residence. Unfortunately, no detailed description of R. has been found in Arab Islamic tradition. At least one more royal palace bearing the same name was located by al-Hamdānī in the fortress of Dawram, situated in the wādī Ḍahr, not far from Ṣanᶜāᵓ.

The ruins of R. have not been identified with certainty. However, their location on the highest and most salient hill of the ruins of Ẓafār (recently excavated by Paul Yule) which is called Ḥuṣn Raydān still today, proposed by the Rus-



City plan of Ẓafār, after [Grjaznevich – Lundin – Gruntfest] 1978, scheme 5 sian Arabist and traveller Piotr A. Grjaznevich, seems to be quite convincing.

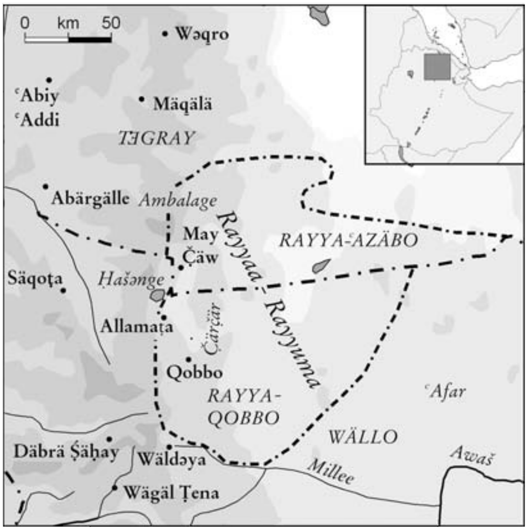
Serguei A. Frantsouzoff

Rayya ᶜAzäbo

Before the 1991 administrative reform the *awrağğa* of R. and ᶜA. (ራያና፡ ዐዘቦ, *Rayyanna ᶜAzäbo*; Orom.: Raayyaa Aseboo) was a division of the ↗Təgray region. Its capital was ↗May Č̣äw located on the plateaus while the main part of its territory consisted of lowlands populated by ↗Rayyaa and ↗ᶜAfar pastoralists, all Muslims. The highlands are the realm of Christian ↗Təgrəñña-speaking agriculturists, including the Rayyaa Oromo.

The *awrağğa* population increased from 91,600 inhabitants (1970 Census) to 141,846 inhabitants (2006 Census). Urban populations, besides May Č̣äw (in 2006, 35,980 inhabitants), were concentrated in Märsa (4,659 inhabitants) and in ᶜAddi Šäḥo (4,044 inhabitants [1984 Census]). Population growth in the region has been modest, as it has been affected by famine and civil war.



Today, R.ᶜA. is the name of a *wäräda* of the Däbubawi Zone, a division of the Təgray *kəlləl*, while the lowlands are united with the ᶜAfar *kəlləl*. According to the 1994 census (CSA 1998) R.ᶜA. had 87,638 inhabitants living on 1,440 km^2, mainly living in the highlands, while the urban population was still very low: Märsa (6,200 inhabitants), Wäyra Wəha (1,847 inhabitants). In the 2004 Statistical Abstract a noticeable increase is shown. The *wäräda* population reaches 116,047 inhabitants: i.e 80,6 inhabitants/km^2 as the average density which is slightly higher than the national average density. Märsa has 10,271 inhabitants and Wäyra Wəha 3,064 inhabitants, far behind May Č̣äw located at the north-south paved highway.

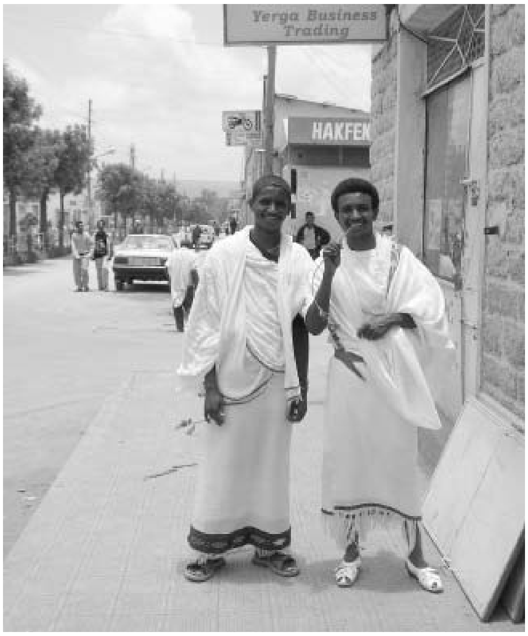
Alain Gascon

Rayyaa

R. (Raayyaa) is an ↗Oromo group living in southern ↗Təgray and northern ↗Wällo. Prior to the 1992 administrative reform, members of the R. were clustered in the two districts of ↗Rayya ᶜAzäbo (Raayyaa-Aseboo) *awrağğa*, in the Təgray regional state, and Rayya Qobbo *awrağğa*, of Wällo province. These two *awrağğas* are collectively known as Rayyaa-Rayyumma. This region extends from the Ǝmba Alağe (↗Ambalage) area of Təgray southward to the Lake ↗Ḥašənge area and from there down to Qobbo and the Alwəha (Aloha) area of Wällo; the other direction, the region stretches right from the southern edges of ↗Wäğğärat, to the Azäbo plain and from there to ↗Č̣ärč̣är and to the borders of ↗ᶜAfar (for location s. map for Rayya ᶜAzäbo).

Written and oral sources indicate that the ancestors of the R. Oromo settled in the Rayyaa-Rayumma region sometime between the end of the 16th and beginning of the 17th cent. However, there are other claims that the R. settled there before the 16th cent. Some other sources say that the Doba people, who had occupied the Lake ↗Ḫašəngä area around the 12th and 13th cent., are among the predecessors of this Oromo group (TrIslam 81, 194; Fekadu Begna 1990: 8–12; Oromiya Culture and Tourism Bureau 2006: 269–74; oral informants).

The direction of migration of the Oromo people to northern Ethiopia is said to have been through the eastern ᶜAfar plain. It is re-



Two young men on the *Ašända*-holiday in the traditional Rayyaa garb, Mäqälä, Təgray; photo 2005, courtesy of Wolbert Smidt

ported that the ↗Yäǧǧu Oromo moved via the River ↗Millee, while the R. group followed the Alwəha and Gollina rivers. Oral sources indicate that the early settlers of the R. were herdsmen who eventually adopted land-cultivation and became mixed-farmers.

There are conflicting reports regarding the genealogical line of the R. According to *aläqa* ↗Tayyä Gäbrä Maryam and ↗Baḥrəy (BeckHuntAlm), the Oromo people descended primarily from two of the Oromo fathers, Booran and Bareytuma (↗Baarentu). Of these two ancestors, Bareytuma is reported to have had six children, namely ↗Karrayyuu, Marawaa, Etu, Akitu, Waraneš and Humbana. Humbana is said to have been the father of Rayyaa, Assebu and Ašange (Tgn.: Ḥašəngä). Other sources associate the genealogical line of the R. people with Marawaa. According to them, Marawaa begot R. and R. begot the three brothers Egu, Annaa and Bari. (It is also suggested that R. fathered only two sons, Egu and Annaa.) These three brothers are reported to have had 15 descendants (five from each group) through whom the genealogical line of the R. expanded.

Socially, the R. Oromo have maintained their cultural values and beliefs a long period of time until the 19th cent. Between the 18th and 19th cent. the Ethiopian rulers, especially *aṣe* Yoḥannəs IV, tried to convert the R. to the Christian faith, either from their traditional ↗religion or from Islam.

The R. share many cultural traits with the other inhabitants of the Rayyaa-Rayyumma region, Amhara and Təgrəñña-speakers, one of which is their clothing. Traditionally, men of the Rayyaa-Rayyumma dressed in a woven skirt, locally known as *merto* (Orom.; Amh. *gəldəm* or *širet*; Tgn. *ᶜəṭaq*), which was tied around the waist by a girdle (*mäqännät*). The upper part of the body was covered by a *gabi* or *kuta*. Usually, clothes of both sexes were soaked with butter in order to give the cloth an attractive look, to oil the skin and to protect the cloth from lice, whose nits could not stick on such oily clothes (↗Milk and milk products).

It was also part of the culture of the inhabitants of Rayyaa-Rayyumma and Wäǧǧärat to engage in raids (↗*Gaz*), either in individual groups or by establishing alliances among the various groups. It is for this reason that the ᶜAfar termed their counter-raids against the neighbouring highlanders as *galla qarim* (raid against the "Galla", i.e. highlanders). The term denotes the fact that such counter-raids were launched not merely against the Oromo but also against the neighbouring highlanders of Təgray and Amhara. Moreover, the inhabitants of Rayyaa-Rayyumma were in constant political conflict with the Ethiopian rulers, particularly during the early 20th cent., and it was these Rayyaa-Rayyumma people, along with the Wäǧǧärat, who instigated the 1943-↗*Wäyyane* rebellion.

Another common cultural feature that is still alive in the Rayyaa-Rayyumma region and Wäǧǧärat, is a traditional type of song, *gumaye*, which expresses almost all the various feelings: joy, love, heroism and sadness. It is thought that the word *gumaye*, which is used as the refrain in every song of this type, derives from the Oromo term ↗*gumaa* ('blood-price' or 'compensation for a killed person').

Marriage interaction and, hence, cultural assimilation with the Amhara and Təgrəñña-speaking peoples resulted in ethnic and cultural assimilation and in an eventual decline of the Oromo language. Today, only few older people are able to speak this dialect of ↗Oromiffa fluently. One thing that signifies the prevalence of the strong cultural influence of the Oromo society, at least in the past, is the fact that there are a number of villages or settlements in the Rayyaa-Rayyumma region that bear names of Oromo origin (e.g., Azabo [Azäbo, Asäbo, Assebu], Wəčale, Čärčär and many others). Although the numbers of R. Oromo are declining, and despite partial cultural assimilation and social intermingling with the Amhara and Təgrəñña-speakers, they maintain their dialect and cultural traits. It is also worth mentioning that the Təgrəñña-speaking Rayyaa-Rayyumma people speak an eastern Təgrəñña dialect.

Raz, Shlomo

R. (b. 18 March 1936, Tiberias, d. 11 April 1999, Tel Aviv) was a Semitist whose research mostly focused on Ethiopian languages, esp. ↗Təgre and ↗Amharic, but also on Arabic dialects and on phonetics in general.

R. studied Linguistics and Semitic languages at the Hebrew University of Jerusalem, mainly under ↗Polotsky, and received his B.A. in 1968. After field research in Eritrea (1969 and 1970), he completed his Ph.D. on Təgre in 1974 at the ↗School of Oriental and African Studies of the University of London, with Edward Ullendorff as his supervisor. From 1974 until his death R. taught at Tel-Aviv University.

R.'s research on Təgre resulted in the only comprehensive grammar of this language to date (1983), as well as a number of articles on various aspects of its phonology, morphology and syntax. R. also began in Eritrea research on the ↗Beni ᶜAmər dialect of Təgre. In addition, he studied areal features in Ethiopian languages, esp. the employment of converbial and conjunctive forms in relation in compound tense forms. R.'s studies on the ↗Epigraphic South Arabian and modern South Arabian languages have remained unpublished. His comprehensive study of the phonetics and phonological structure of Palestinian and Syrian Arabic dialects has not been finished either.

R. was actively involved in organization and teaching process of the Department of Semitic Linguistics of Tel-Aviv University since its foundation. He was head of the Department of Hebrew and Semitic Languages and held various offices in the Faculty of Humanities at Tel-Aviv. In addition, he was Visiting Scholar at the School of Oriental and African Studies (1980–81 and 1993) and at the University of California in Los Angeles (in 1985); he was a fellow of the Institute for Advanced Studies in Jerusalem in 1990–91.

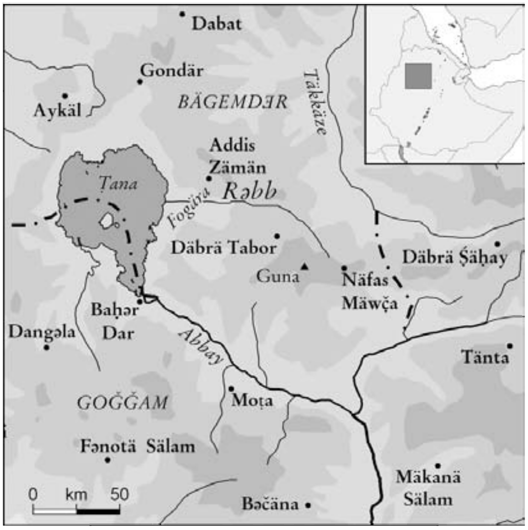
Gideon Goldenberg

Rəbb

The River R. (**ርብ**) rises on the southern slopes of Mount Guna (4,231 m A.S.L.). It runs through



the alluvial plains of ↗Fogära, first northwards, then westwards, flowing into Lake ↗Ṭana south from ↗Addis Zämän (South Gondär zone, Amhara *kəlləl*). During the months of *kərämt* the R. floods the lower part of its valley.

The R. is crossed by a bridge of the Gondär–Baḥər Dar road (at 1,906 m A.S.L.). The former Italian Gondär–Däse road ran along the R. until turning towards Däbrä Tabor. Today it is only a trail; the new "Chinese" road follows a similar route but leaves it south of Wäräta returning along the River Gumära to Däbrä Tabor.

The R. area was affected by outbreaks of ↗malaria (Simoons 1960: 58f.) until the surrounding marshes were cultivated.

Red Cross

The R.C. or International Committee of the Red Cross (ICRC) is a private humanitarian institution based in Geneva, Switzerland, founded in 1863. From its creation up to the 1920s, it did not consider Africa as a region needing help. An exception was the ↗hospital opened by the Russian society in Ethiopia in 1896. The wish of fellow Orthodox Christians to help the wounded of the Battle of ↗ᶜAdwa was an example of the R.C.s' early focus on neutral international collaboration for the relief of wounded soldiers.

The autonomous Ethiopian R.C. was born in July 1935 when, facing the Italian threat, ↗Ḫaylä Śəllase I agreed to endorse international documents developed by the ↗League of Nations Ethiopia had joined in 1923. In his search for international support, the country also became a member of the ICRC, which demanded the creation of a local chapter, the Association of Ethiopian Women's Work, which took on the task of producing bandages and organizing ambulance units, an innovation on a continent where local R.C. societies were led by colonial elites.

Women volunteers working for the Ethiopian Red Cross Society, presided by Empress Mänän (centre); from Pankhurst – Gérard 1996: 55

During the ↗Italian war 1935–36, two ICRC delegates, Sydney H. Brown and Marcel Junod, worked in Ethiopia. Ethiopians accepted Geneva's standard offer of help to belligerents, whereas Italy argued that its own R.C. had sufficient means. Envoys from six national R.C. societies brought supplies, services, and field hospitals to the Ethiopian army and civilians, with the support of 22 other national chapters. In Ethiopia, they faced the humanitarian consequences of a total war for the first time. Junod sent reports on the Italians' use of poison gas and the bombing of R.C. installations, which the ICRC refused to make public, in the name of its impartiality, and to protect the process of inquiry into the violation of conventions, which it experienced for the first time. This controversial gesture confirmed its neutrality in times of war. During the occupation, the Italian R.C. denied support to humanitarian institutions not answering to the Italian government.

In 1949, the R.C. founded the first national nursing school, a sign of its greater concern for civilians. It became part of the Federation of Red Cross and Red Crescent Societies in 1950. Permanently established in the country since 1977, the ICRC has provided aid and assistance in times of peace and has played an important role during the regional conflicts, which have received further international attention following the withdrawal of Soviet and Cuban support. Some authors have also argued that R.C. donations were used in the resettlement program launched by the *Därg* (↗Provisional Military Administrative Council) during the 1985 ↗famine (cf. Clay – Holcomb 1985: 134). At the turn of the 1990s, the Ethiopian Red Cross Society democratized its structures. Currently, it has a staff of 450 people and the ICRC of 1,000.

Red Sea

I. Introduction
II. Red Sea in antiquity
III. Red Sea and Ethiopian Islam
IV. Red Sea from the 16th to the 19th century
V. Red Sea and the political history of modern Ethiopia

I. Introduction

The R.S. or Erythrean Sea (Gəᶜəz ባሕረ፡ እርትራ, *Baḥrä Ǝrtəra*, also ባሕረ፡ ኢርትራ, *Baḥrä Irtəra* and ባሕረ፡ ኤርትራ, *Baḥrä Ertəra*, from Gr. *Erythrà thálassa*; Lat. *mare Rubrum*; Arab. *al-Baḥr al-Aḥmar*; Tgn. ቀይሕ፡ ባሕሪ, *Qäyyəḥ Baḥri*) can be considered as the north-westernmost arm of the Indian Ocean, which properly begins beyond the strait of ↗Bāb al-Mandab with the Gulf of Aden.

The origins of the R.S.'s name are much discussed, starting at least from the lost first book (§§ 2–5) of Agatharchides' *On the Erythraean Sea*, a valuable 2nd cent. B.C. summary of the results of Ptolemaic explorations. However, in keeping with a typical distinction of ancient ethnography between "clear" and "dark skinned", its name seems to be rather connected with that of ↗Ḥimyar, the land of the "Red" people of South Arabia, vs. ↗Kush, the land of the "Black" inhabitants of Nubia and Ethiopia (cp. "Black ↗Marya" vs. "Red Marya", etc.).

The R.S. separates the African and the Asian continents. On the African side, it is bordered, from north to south, by ↗Egypt, ↗Sudan, ↗Eritrea and ↗Djibouti (with Somalia on the southern coast of the Gulf of Aden) to the west; on the Asian side, again by Egypt (with the Gulf of Suez and the Sinai Peninsula), Israel, Jordan, Saudi Arabia (all of them on the Gulf of ᶜAqabah, with the Saudi Arabian *Ḥiǧāz* also bordering the R.S. north to south) and ↗Yemen to the east.

From a global perspective, the importance of the R.S. mainly lies in connecting the Mediterranean and oriental spheres with southern and south-eastern Asia and south-eastern Africa. As such, it gained significance at certain major historical junctures that also acted upon the development of Ethiopia. The ancient imperial competition between Persia (↗Iran) and Rome, then Byzantium (↗Byzantine empire), and the medieval and modern struggle between the Ottomans (↗Ottoman empire) and the Portuguese for control of the sea route to ↗India were cases in point. In contemporary times, the R.S. acquired extra global significance following the opening of the Suez Canal in 1869. From the late 19th-cent. onwards during the European imperialist powers' scramble for Africa until today, the R.S. has often played a pivotal role in international affairs, and implicated the undertakings of Ethiopia with those of the outside world.

A natural north-south sea-route, the R.S. was less navigable as an east-west bridge between ↗Arabia and the ↗Horn of Africa. Though thanks to shallowness of coastal waters, the few good harbours did not facilitate the Asian-African connection, the latter was nonetheless never interrupted. The very birth of Ethiopian civilization and its development rested on this connection. Immigrants bringing religious, linguistic, commercial and other influences crossed the R.S. to contribute to the shaping of the Aksumite culture and kingdom (↗Aksum). Aksum, in its turn, crossed back to control Arabia (518/25–590 A. D.) and acted, during that period, as a maritime power in the R.S. area.

From a historical Ethiopian point of view, the R.S. had a dual significance. It was the window that opened on the main outside sources of influence, and, at the same time, the door through which foreign aggressors threatened to impose their rule. As Ethiopia wavered between a siege culture and the urge for a fruitful dialogue with the wider world, the R.S. served as both a gate and a wall.

The rise of ↗Islam in the 7th cent. created the longest enduring challenge to the country's Christian culture. Islam spread as a global empire and mainly followed the land routes. Though born on the opposite shore of the R.S., it oriented itself away from Ethiopia. In the eyes of most Islamic empire-builders, the R.S. was a border rather than a jumping board, and Ethiopia rarely faced imperial Islamic invasions. Islam crossed the R.S. as a religion brought by traders and tribesmen whose communities in the Horn of Africa were only indirectly connected to, or inspired by, the core capitals of Middle Eastern Islam (↗Middle East). While the R.S. continued to function as a bridge between the various Islamic entities in the Horn, Arabia and ↗Egypt, its limitations in this role contributed to their disunity. The Christian kingdom, for its part, began to cut itself off from the R.S. and lost its momentum the more it distanced itself from the coast – from the decline of Aksum to the rise of the ↗Zagʷe.

Both Ethiopia's revival and downfall under the ↗Solomonic dynasty were related to the dual role of the R.S. On the one side, the renewed Ethiopian state strived to reconnect to the Sea. Reasserting control over parts of the coast, and a ↗*baḥər nägaš* was appointed over the territories close to the shores. On the other side, the entire Solomonic enterprise of religious-political renaissance also rested on outside contacts, especially with Egypt, through the ↗Nile route or the R.S., from which the enemies (like the friends) of the Christian state were to come in the following centuries.

Haggai Erlich – Red.

II. Red Sea in antiquity

Archaeological (↗Archaeology), epigraphic (↗Inscriptions) and literary evidence (besides Agatharchides, s. ↗Pliny, the ↗*Periplus of the Erythraean Sea*, ↗Ptolemy and, later, ↗Cosmas Indicopleustes and Procopius; cp. ↗Historiography: Foreign historiography on Ethiopia, Ancient Greek and Roman historiography) informs us that, despite the lack of natural harbours and easy anchorages, and despite the prevailing northerly winds (north of 20° N latitude) as well as scattered piracy later, the R.S. has, since prehistoric times, been a constant source of food and maritime transportation. In this capacity, not only did it divide, but it also connected the opposite shores, playing a decisive role in shaping common traits of civilization along its coasts (cp. ↗Punt). In particular, both archaeology (findings of Sabaic remains in Ethiopia) and linguistics (Sabaic inscriptions in Ethiopia) prove that the civilizations flourishing on both sides of the R.S. were the result of continuous (albeit variously interpreted) interrelationships and contacts, a common R.S.-Ethio-Sabaean culture (South Arabian states, Eritrea and northern Ethiopia [↗Təgray]) having been thereby supposed to exist from early times (since the 1st millennium B.C. at the latest). The term "Erythraic", i.e. Afro-Asiatic, has been also used in linguistic studies on account of the acknowledgedly central role of the R.S. area (cp. Tucker 1967; Mukarovsky 1981).

In historical times, economic, cultural and religious ties developed along the R.S. between, on the one side, Egypt, the continental Near East and later also the Mediterranean Sea area in the north and, on the other side, the central and southern areas and thence, up to the Indian Ocean, along the Persian Gulf and the South Asian coasts (cp. Zazzaro 2006). As the desert borders the entire littoral, commercial maritime purposes prevailed over strict political control in the Egyptian, yet not Ptolemaic, period, during which a number of ports and trading stations were established, especially on the western shore of the R.S. (Clysma, Myos Hormos, Philoteras, Leukos Limen, Nechesia, Berenice, ↗Adulis, also involving the respective hinterlands, e.g. ↗Coloë, in the case of the latter). Less known, and probably less numerous, were the ports on the eastern side. The R.S. was most important as a trade route in Roman times (1st cent. B.C. to 2nd cent. A.D.), when military and mercantile interests were combined (cp. ↗Aksum; ↗Byzantine Empire; ↗Monumentum Adulitanum), as is also typified by the Roman garrison detached to the Farasān islands (the Arabian counterpart of ↗Dahlak) according to a Latin inscription newly discovered there. Declining from the 3rd cent. A.D., with a revival in the 5th and 6th cent., the R.S. ↗trade was then affected by early Islam, the Sasanian demise and the collapse of the old political and commercial system of the Erythrean Sea. In this respect, under the permanent control of the Muslim empire, the R.S. was superseded by the Persian Gulf from the mid or late 7th cent.

Instrumental to the early diffusion of the Christian faith and its denominations (↗Sälama Käśate Bərhan, ↗Theophilus the Indian [s. EAE vol. 5] and ↗Gregentius, all travelled along R.S. routes), the relationship and interplay between the two shores of the R.S. was consolidated for centuries to come with the early establishment of Islamic settlers on the African coast, probably since the 8th cent. A.D. (↗Islam; ↗Inscriptions; ↗Arabic; ↗Dahlak islands; ↗Massawa; ↗Boats).

The R.S. coasts controlled by Aksum were pivotal to its economic system, and the port of Adulis in particular (active since ↗Pre-Aksumite times) was one of the few "ports of trade" there. At a different, more political, level, interrelationships between the two shores of the R.S. – i.e. Aksum and the South Arabian kingdoms (↗Arabia; ↗Ḥimyar) – culminated in the military occupation of South Arabia by the Aksumites in the 3rd and especially in the 6th cent. A.D. (s. Robin 1989).

The R.S. is named in Ethiopia after the Biblical literary tradition of the Book of Exodus (Ex 10:19, 13:18 etc., cp. Huddlestun 1992) as *Baḥrä Ǝrtəra*, i.e. a calque of the Gr. *Erythrà thálassa* occuring in the LXX version of the Bible (cp. DillmLex 742). It is very likely that the identification of the sea between Africa and Asia with the R.S. depends upon the literary fortunes of Exodus, especially evident in the ↗*Ardəʾət* Fälaša version (↗Betä Ǝsraʾel). In the ↗*Kəbrä nägäśt* a Biblical episode is developed where the R.S. trade route (within a context, however, that remains unclear) plays an important role (1 Kgs 9, 26ff.): there the *baḥrä alʾaḥmar*, 'R.S.' (a Gəᶜəz–Arabic form, proper Arabic being *al-baḥr al-aḥmar*) crossed by Dawit I (Bäynä Ləhkəm, ↗Mənilək I) on his way back from Israel to Ethiopia, is identified with the R.S. (*baḥrä Irtəra*) of the Biblical tradition (*Kəbrä nägäśt* ch. 55, in BezKebr 61b, cp. ch. 58, and *baḥrä Ertəra* in ch. 67).

Referring to ↗Kaleb's expedition to South Arabia to avenge the martyrs of ↗Nağrān, the Ethiopic version of the *Martyrium Arethae* (↗Arethas), i.e. the *Gädlä Ḫirut* ('[Spiritual] combat of Ḫirut', the Greek original [ed. in Detoraki et al. 2007], being one of the few reliable sources on early 6th-cent. R.S. navigation, s. Fiaccadori 2003:232f.), carries no mention of the R.S., although it hints at the Biblical Exodus in §28^{a} (Bausi – Gori 2006:246). In any case, it might well be that another passage from the *Gädlä Ḫirut* (§33^{c}, ibid. 276) inspired a feudal document by *aṣe* ↗ᶜAmdä Ṣəyon concerning his military expedition as far as the shore of the R.S. (cp. Taddesse Tamrat 1970:95f., the Biblical episode also appearing in ᶜAmdä Ṣəyon's chronicle, s. MarAmdS 158ff.). The importance of the coastal R.S. regions for the interior territories was also long felt in Ethiopian history, as testified by such titles as ↗*baḥər nägaš* and ↗*maʾəkälä baḥr*.

III. Red Sea and Ethiopian Islam

The R.S. is usually called in Arabic sources by the synecdoche *Baḥr al-Qulzum*, 'sea of Clysma' (s. Becker-[Beckingham] in EI²), but also *Baḥr al-Ḥiǧāz*, *al-Ḫalīǧ al-ʿArabī* and even *Ḫalīǧ ʿAyla* and *Baḥr al-Yaman*; sometimes, as in Yāqūt, the R.S. fully included the Gulf of Aden, *Ḫalīǧ Barbara* or *al-Barbarī*, otherwise part of the *al-Baḥr al-Ḥabašī* and *Baḥr al-Hind*. Muslim geographers write that the R.S. was not easy to navigate: the coasts were arid and inhospitable, the winds contrary and the water dangerous due to currents and submerged reefs. Especially the northern part of the R.S. was considered a deadly challenge to seafarers. The area around Raʾs Muḥammad – the southern tip of Sinai – was described as most frightening because the winds from the Gulf of Suez and ʿAqaba meet there. Sailing as close as possible to the shore as well as night anchoring were the measures taken by the ships to cope with the dangers of the R.S. The communication between the R.S. and the Indian Ocean, which was the main economic pivot of commercial movement from the Mediterranean to ↗India, was also complicated, and much of the merchandise from India was unloaded in Aden, Muḫa or Ǧidda and partially trans-shipped to ↗Egypt in smaller ships, that were easier to handle. The perilious nature of the R.S. is vividly represented in the many legendary traditions that flourished about it: e.g., the location of the island inhabited by the eschatological beast al-Ǧassāsa (s. Muslim, *Ṣaḥīḥ*, *Kitāb al-fitan*, *Hadīṯ* no. 2942).

Despite all these negative natural features, the exceptional geographical position enjoyed by the R.S. in the trade routes from and to India fostered – in ancient times – the birth of a long chain of ports on both its Asian and African shores. The establishment of Islam in the Arabian peninsula and its further expansion into Egypt and along the African coasts of the R.S. helped unify such a wide area under general and steady Islamic control. However, the successive Muslim dynasties ruling in Egypt had to fight bitterly for exclusive control of the most strategic points along the R.S. In particular, the ↗Fāṭimids first and the ↗Mamlūks after them, strove to keep navigation on the R.S. tightly under their control by repressing any local R.S. potentate: the Gulf of Aden (↗Yemen), the Yemenite and African shores of ↗Bāb al-Mandab were the key points of continuous rivalry between Egypt-based powers and indigenous rulers. The conquest of Egypt in 1517 favoured the expansion of the ↗Ottoman Empire southwards along the R.S. shores but also forced the Ottomans to confront the Portuguese (↗Portugal) maritime power stretching from the Indian Ocean and the revival of the Yemenite Zaydi imamate.

Ethiopian Muslim communities have always had a strong and deep relationship with the R.S. The R.S. played a crucial role in the spread of ↗Islam in all the North-Eastern African regions since from the very birth of the new faith, the Muslims of Arabia tried to find places in the countries around the R.S. where they might continue to live and consolidate their communities. The episode of the ↗*hiǧra al-ūlā* to al-Ḥabaša is perhaps the most emblematic event in this respect.

Later on, throughout the middle ages and into modern times, Muslim merchants and learned men crossed the R.S. and entered Ethiopian territory to trade, teach and settle. The ↗Dahlak islands (and then ↗Massawa) and ↗Zaylaʿ (and then ↗Berbera) were the two main gates for this economic and cultural exchange: the first spread of Islam in Ethiopia took place precisely along the routes connecting the coast to the hinterland as demonstrated by a number of Arabic ↗inscriptions found in ↗Təgray and south-eastern Ethiopia. Ethiopian Muslims also participated in this link across the R.S. by creating a sort of mutual connection: learned men and merchants travelled from Ethiopia to Arabia, Egypt and the Near East to trade, teach, and deepen their knowledge in the different branches of Islamic ↗education. The ↗pilgrimage to ↗Mecca was another important periodical occasion for strengthening the relationships between the two shores of the R.S., thanks to the influx of Ethiopian Muslims to the sacred lands of Ḥiǧāz (↗Arabia) and the use of the R.S. route by pilgrims coming from western Africa (the so-called ↗Tukrir; cp. also ↗Fellata; ↗Hausa).

The common Islamic affiliation of the peoples dwelling on the two shores of the R.S. most probably contributed in a decisive way to keeping the ancient ties between the Ethiopian (Christian) highlands and the trading centres on the coasts of the R.S. alive, which favoured the passage into Ethiopia of merchandise and ideas from the Mediterranean and India.

IV. Red Sea from the 16th to the 19th century

In the history of the R.S. as a crossroads of cultures and civilizations, the 16th cent. marks a turning point.

The fact that the R.S. became a focus of strategic and global competition in the early 16th cent. heralded threats and destruction. After the Portuguese “discovered” the sea-route to ↗India around Africa, and the Ottomans occupied ↗Egypt and inherited the ↗Mamlūks’ navy in the R.S., the two powers began a struggle over maritime domination. The main theatre of the conflict was the R.S. with the Gulf of Aden, but at stake was the future of long distance global trade. In the process, the Ottomans occupied Yemen and the Portuguese tried to build relations with the Solomonids. It was against this background, combined with the emergence in southern Arabia of a dynamic spiritual Muslim awareness, that Islam in the Horn of Africa united for a time – under ↗Aḥmad b. Ibrāhīm al-Ġāzī with his centre in Harär. His conquest of Ethiopia was directly inspired by religious leaders and Ottoman help from across the Sea. The salvation of the Christian Ethiopian kingdom, aided and inspired by the Portuguese, also came from the direction of the R.S. Following their final defeat in the maritime competition with the Portuguese (in 1555), the Ottomans took temporary comfort in capturing Massawa and the Ethiopian coast (1557) and naming it the Province of ↗Habeš. In 1578, they were defeated by *aṣe* ↗Śärṣä Dəngəl and limited their presence to a ↗*nāʾib* (‘deputy’) in ↗Ḥərgigo, a local chief who, during the next three centuries, symbolized the rather abstract Ottoman claim to the African coast of the R.S.

With the decline of the Ottoman presence in the R.S., commercial ties between the latter’s coasts dwindled. The slave trade (↗Slavery) continued to supply *Ḥabašī* (i.e. ‘Abyssinians’) captives to Arabia, but the general decline in R.S. trade proved effective enough to deny the Ethiopian state vital connections and resources. This was arguably one of the reasons for Ethiopia’s shutting itself off in remote ↗Gondär and then deteriorating into the ↗*Zämänä mäsafənt*. Indeed the beginning of the Ethiopian revival in the mid-19th cent. coincided with the reawakening of the R.S. as an international political and commercial theatre.

During the reigns of the emperors ↗Tewodros II, ↗Yoḥannəs IV, and ↗Mənilək II, the R.S.’s traditionally twofold role was revived and intensified. The first to reintroduce foreign ambitions was the modernizing Egyptian state under Muḥammad ᶜAli *bāšā* and his successors, notably *ḫidīw* ↗Ismāᶜīl. The former penetrated into Arabia and occupied Massawa, but it was his grandson Ismāᶜīl who inaugurated the Suez Canal and concentrated on an effort to build an African empire connecting the Nile Valley and the R.S. His occupation between 1870 and 1875 of the R.S. and East African ports, and of ↗Harär were followed by wars with Ethiopia (↗Massawa Governorate; ↗Egyptian–Ethiopian war, 1875–76). After the demise of the Egyptian imperial enterprise in 1885, Italy became the main foreign threat to Ethiopia from the direction of the R.S. Heralding the European “Scramble for Africa” in this arena, the Italians finally established their colony of Eritrea (↗Eritrea: Colonial history of Eritrea) in 1890. Named after the Latin “Mare Erythraeum”, i.e. the R.S., the Italian colony, together with Italian Somalia, played a pivotal role in Ethiopian history. Its aggressive dimension culminated in the days of ↗Mussolini and his conquest of Ethiopia, 1936–41. The British and French presence on the R.S. scene also had an important influence on Ethiopian affairs throughout the colonial period.

The revitalization of the R.S. as a global arena also carried promise for Ethiopia. The 19th-cent. import of ↗firearms in growing quantities, arguably the process that enabled the unification, survival, and expansion of the Ethiopian empire at a time when most other African peoples succumbed to foreign aggressors, was due in part to this dynamism. It was through the R.S. connection that Tewodros’ enterprise to centralize power was energized, that Yoḥannəs’ effort to strengthen the Church by importing more bishops from Egypt was made possible, and that Mənilək’s translation of territorial expansion into commercial relations and further rearmament was enabled. This mixture of promise and threat indeed led to a dual conceptualization of the R.S. Tewodros did little to gain access to a sea port, Yoḥannəs would have settled (in the ↗Hewett Treaty, 1884) for what he hoped to be friendly British management of the

port of Massawa (before they allowed the Italians to capture it), and Mənilək finally did recognize Eritrea as an Italian colony. Mənilək's dual approach to access to the R.S. was also reflected in his policy regarding the railway to ↗Djibouti (↗Railways), Ethiopia's main outside link. His reluctance to have such an opening was a major factor in the project's late completion in 1917, four years after his death.

In the 19th cent., the R.S. area was called ↗Erythraea by some geographers, a vague term which meant the R.S. and its (mainly African) shores. Around the same time, the R.S. was also occasionally called "Erythräisches Meer" in Ger-

Haggai Erlich – Red.

V. Red Sea and the political history of modern Ethiopia

It was ↗Ḫaylä Śəllase in the aftermath of ↗World War II who made the most serious Ethiopian effort to gain direct access to the R.S. His international diplomatic campaign to reclaim Eritrea yielded the federal arrangement that in 1952 recombined the former Italian coastal colony with Ethiopia (↗Eritrea from 1962 to 1991). The R.S. as an international arena, however, was an integral dimension of this history. The first development was the turning of the R.S. into a major theatre in the struggle between Nasserite pan-Arabism and its opponents in the Middle East and the Horn of Africa. It was within the context of the inter-Arab war in Yemen (1962–69) that the Emperor, alarmed by the revolutionary Arab ideas behind the establishment of the ↗Eritrean Liberation Front, finally terminated the special status of Eritrea, thus contributing to further escalation of the problem. Eritrea's R.S.-Arab orientation was an ideological premise of the strongest wing in the Eritrean movements of the 1960s and 1970s (best formulated by ^{c}Uṯmān Sāliḥ Sābbi, 1974). The Arab–Israeli conflict of that time, with its Ethiopian implications, also had much to do with the issue of free navigation in the R.S. With the June 1967 Arab defeat, the Suez Canal was blocked, and for a while, the R.S. was rendered marginal again. This, together with the oil crisis that began in 1973, had an impact on the Ethiopian economy, with implications for the collapse of Ḫaylä Śəllase's regime (↗Revolution).

With the reopening of the Suez Canal in 1975, the R.S. regained its strategic importance due to Soviet penetration and positioning along what was now a main artery of the global economy in the middle of an oil crisis. As Mängəśtu's Ethiopia (↗Provisional Military Administrative Council) joined the Soviet camp (together with South Yemen, Somalia, and indirectly, the Eritrean liberation fronts), pro-western Egypt, Sudan, and Saudi Arabia deepened their R.S. military coordination. In their effort to combat an Ethiopian presence, they declared the R.S. to be "an Arab lake" (and lured the Somalis into joining their cause). The international tension around the R.S. erupted during the 1977–78 ↗Ogaden War (in which Soviet-aided Ethiopia defeated the Saudi-aided invading Somalis), and for a while, it looked as if the R.S. sphere was becoming the focus of the global Cold War. However, the 1979 Islamic revolution in ↗Iran and the Soviet invasion of Afghanistan soon shifted global attention to the Persian Gulf arena and the R.S. has since remained a sideshow, from a global perspective.

The changes in the Ethiopian-R.S. context during the last two decades of the 20th cent. had more to do with local developments. The pivotal issue was the war over Eritrea in the 1980s, which was gradually lost by Mängəśtu's regime. The new Ethiopian Peoples' Revolutionary Democratic Front government established in 1991 had to accept the separation of Eritrea and recognize its sovereignty, officially declared in 1993. Ethiopian–Eritrean relations deteriorated into open conflict and, once again, Ethiopia lost direct contact with the R.S. However, since the 1990s, Ethiopia has rapidly shed the old siege culture and opened itself again to its own diversity as well as to the wider world. This openness also centred on intensive relations with neighbouring Middle Eastern countries and consequently the R.S. – now through Djibouti and by air – is being revived more as a bridge than as a wall.

Haggai Erlich

Rədätä bərhan

R.b. (Gə^{c}əz: **ርደተ፡ ብርሃን**, ‘Descent of the Light’) is the Ethiopic name for the ceremony of the Holy Fire (Gr. ῞Αγιον Φῶς, *Hágion Phôs*, ‘Holy Light’; Ar. ^{c}*Īd an-nār*, ‘Feast of the Fire’) held at ↗Jerusalem from the later 9th cent. at least, when it is well documented, but possibly harking back to the late 4th cent. (Fiaccadori 2003: 194f.). Performed every year in the Anastasis or Rotunda of the Resurrection on the Saturday of Orthodox Easter (cp. ↗*Fasika*; ↗*Gəbrä ḥəmamat*), it celebrates the miracle of the descent of the Holy Fire from heaven into the Edicule of the Holy Sepulchre, and is considered to be the longest-attested annual miracle in the Christian world. The essential of the ceremony has remained almost unchanged (s., e.g., its description by al-Bīrūnī, 1000 A.D., in Strohmaier 2000: 520), but the form of the Edicule has been modified to provide its setting, first and foremost after the “destruction” of 1009 (Biddle 1999: 138).

On the appointed day, at noon, the Greek patriarch with his clergy, followed by the Armenian patriarch and the Coptic bishop with their clergy as well, marches in grand procession thrice, singing hymns, round the Holy Sepulchre. After that, he (or another Orthodox archbishop) recites a specific prayer, puts off his solemn garments and enters alone into Christ’s Tomb Chamber, whilst the Armenian and Coptic prelates wait for him in the Chapel of the Angel. Before entering, he is examined by Israeli authorities (in former times, by Turkish soldiers), to check he is not carrying any form of lighter. Then, the congregation chants the *Kýrie eléison* (‘Lord, have mercy’) until the Holy Fire spontaneously descends on the 33 white candles tied together by the patriarch (in the past, on a lamp kept within the Edicule), the flames of which are immediately passed to the other lights all over shrine – as the patriarch comes out from the Tomb Chamber, reciting prayers and lighting candles quickly handed over to the congregation.

The appearance of the Holy Fire in Jerusalem: lighting of the Edicole and Church of the Holy Sepulchre; from the photo archive DSAMS, University of Milan

Skepticism and criticism about so spectacular a miracle date back to the days of the Islamic rule of Jerusalem (Hartmann 1916; Canard 1965: 31, 34f., 39ff.), but were especially marked among western Christians, not only during the period of the Crusader domination (CerMaria 134f.; CerPal vol. 1, 311); in 1238, Pope Gregory IX even denounced the Holy Fire as a fraud. The ceremony, however, was never stopped, because of the significant revenues brought to local governments by pilgrim attendance.

Ethiopians are likely to have dwelt in Jerusalem, on the Holy Sepulchre’s premises, since Aksumite times. Likewise, as early as the 5th/6th cent., their participation in the R.b. ceremony is attested to by the 14th-cent. Vita of ↗Libanos/Mäṭa^{c} (§ 29, Bausi 2003: 14), possibly based on older sources. Later, with reference to 12th-cent. events, an interesting depiction of the ceremony is provided in the 15th-cent. Vita of ↗Yəmrəḥannä Krəstos (Marrassini 1995: 54), also compiled from older sources. Further and more or less contemporary hints at the R.b. are found, for the 14th–15th and the 16th cent., in such works as the ↗*Tä᾽ammərä Maryam* (CerMaria 129ff.; Velat 1948: 172), the *Mäṣḥafa* ↗*məśṭir* by ↗Giyorgis of Sägla (YaqMist I, 129f.; Conti Rossini 1948: 18) and, resp., the Vita of ↗ᶜƎzra of Gundä Gunde (Caquot 1961: 78). Like the Vita of Libanos, they all stress the importance and effectiveness of the presence of the Ethiopians to the successful lighting of the Holy Fire – for which their leadership was indeed acknowledged by western medieval and Renaissance travellers (CerPal vol. 1, 375ff.; vol. 2, 62f., 82f., 89f., 125f.).

From the above writings, the original formula uttered by the Ethiopians during the ceremony, when following the procession round the Holy Sepulchre, can also be retrieved, which coincides with the one still used by them today on the same occasion: *tənśa᾽ekä lä᾽əllä amännä. bərhanäkä fännu dibenä*, 'Thy Resurrection is for those of us who (have) believe(d). Send thy light upon us' (s. Fiaccadori in StudAeth 37–40).

On the evening of Easter Saturday, a peculiar Ethiopian celebration takes place at ↗Dayr as-Sulṭān: the archbishop, accompanied by drummers and dancers, leads a procession of his clergy carrying torches lit with Holy Fire three times around the dome of the Armenian chapel of St. Helena found in the middle of the monastery's courtyard.

Gianfranco Fiaccadori

Reinisch, Leo

Simon Leo R. (b. 26 October 1832, Osterwitz, Steiermark, d. 24 December 1919, Lankowitz, Steiermark) was an Austrian Egyptologist and scholar of Northeast African languages. In 1859 he obtained his doctorate from the University of Tübingen for an etymological study of the name of Egypt in Greek and Semitic sources and received his "Habilitation" in Vienna in 1861 with a thesis on the history of the Orient including Egypt. His catalogue of the Egyptian collection of Archduke Maximilian, who became his patron, marks the beginning of Egyptology in Austria (1865). After fieldwork in Egypt in 1865/66, R.

Leo Reinisch; photo collection of the Hiob Ludolf Centre for Ethiopian Studies, Universität Hamburg followed Maximilian to Mexico where he conducted pioneering historical and linguistic studies (1866/67). Upon his return to Austria, R. was appointed Associate Professor (1868) and Full Professor in Vienna in 1873. In 1884 he was admitted to the Academy, became dean in 1890/91, then chancellor of Vienna University in 1896/97, and was appointed Privy Councillor in 1899 before his retirement in 1903.

In the course of almost 40 years of active publication between 1872 and 1911, R. presented grammatical descriptions of many languages of Ethiopia, Eritrea and Sudan, largely based on data he had collected in the course of extensive fieldwork in Sudan and Eritrea in 1875/76 and 1879/80. The major part of his documentary work is devoted to the ↗Cushitic languages: Northern Cushitic ↗Beğa (1893–95); Central Cushitic ↗Bilin (1882, 1883, 1887), ↗Ḫamtaŋa (1884) and a variety called Qʷara (1885, 1887; s. ↗Kəmantnäy; ↗Agäw); and East Cushitic ↗Sāho (1878, 1889/90), ↗ᶜAfar (1885) and ↗Somali (1900–03). R. also worked on Nubian (1879, 1911), ↗Omotic (↗Käfa, 1888), and ↗Nilo-Saharan languages ("Barea", 1874 [i.e. ↗Nara], and ↗Kunama, 1881–91). Most of his grammatical descriptions are accompanied by dictionaries and text collections (which are also invaluable ethnographic sources on the history and oral literature of these populations).

Although hampered by a somewhat indiscriminate mix of language description, typological statements and sweeping diachronic speculations about the "common origin of the languages of the Old World", R.'s work contains brilliant ideas. He coined the term "Erythraic" for what is now known as ↗Afro-Asiatic or the Afrasian phylum and suggested its African origin. His ideas about the genesis of new tense/aspect paradigms of verbs via nominal periphrasis and the innovation of independent pronouns from frozen syntagms of pronoun plus copula anticipate modern findings of historical typology and research on grammaticalization. In contrast to the spirit of the age, R. insisted on the rigid methodological separation of linguistic and anthropological features for the reconstruction of African history – the strict observation of which would have spared some 50 years of ↗"Hamitic" aberrations.

Apart from his role as "father" of Egyptology in Vienna, R. must be regarded as the founder of Cushitic and Omotic studies as well as North-East-African philological studies in general (for bibliographical references s. Böhm 1987). His descriptive work, especially his work on the moribund Agäw languages, remains – in spite of the cumbersome phonetic transcription which necessitates meticulous reanalysis – an invaluable source until today.

Relics

A R. is an object, usually a part of the body or a personal item such as clothing, which belonged to someone of religious significance, including ↗saints, heroes, ↗martyrs (cp. Paulos Tzadua 1968: 120), religious founders and other ↗holy men and women. Although R. are found in many religions, they are most prominent in Catholicism and Orthodox Christianity (and Buddhism), and virtually absent in Protestanism and Judaism (and Hinduism). In Ethiopia they are particularly associated with the ↗holy men and ↗saints of the ↗Ethiopian Orthodox (Täwaḥədo) Church (EOTC), and to a lesser extent with ↗*walī* (Muslim holy men). Historically, the EOTC accepted the veneration of R. (called **ዐፅመ፡ ቅዱሳን**, *ᶜaṣ́mä qəddusan*, lit. 'bone[s] of saints') and celebrated them in its ritual and literature. Some Muslim theological schools (e.g., Hanbalis) have formally rejected the veneration of R. as a manifestation of idolatry, but mainstream ↗Islam normally accepted their existence (s. Goldziher 1967).

In this article, we use the term R. in the narrow religious sense cited above and do not include so-called cultural R. such as ↗manuscripts, church vessels (including the ↗*tabot*), ↗crosses and other antiques or objects of archaeological value, or "traditional and cultural items".

Perhaps the most celebrated R. in all of Ethiopia was a fragment of the True Cross (s. "Relics of the True Cross in Ethiopia" below) which is said to have reached Ethiopia in the time of *aṣe* ↗Dawit II (cp. ↗*Mäsqäl*), who had also other R. sent from Venice, ↗Italy (including, e.g., body parts of St. Anne and children massacred by Herod, by the time of *aṣe* ↗Zärʾa Yaᶜəqob at ↗Ambä Gəšän, later preserved at ↗Tädbabä Maryam, s. Caquot 1955: 105; Spencer 1972: 77f.; Heldman 1990: 443; Fiaccadori 1989: 148 n. 10, 159). Indeed, the Finding of the Cross is paradigmatic for the rewards and blessings which are granted to those who search for and discover R. (Getatchew Haile 1990: 109).

Possession of the R. of a saint was both prestigious and beneficial to a church or monastery. Because of their holiness and efficacy R. attracted pilgrims eager to benefit from miracles, particularly healing. In cases in which a holy man died in or around the monastery where he had lived and with which his fame was associated, no question usually arose as to the jurisdiction over his remains. In this context, it is interesting to note that despite the existence of a paradigmatic justification for "sacred theft" in the story of the theft of the ↗Ark of the Covenant in the ↗*Kəbrä nägäśt*, R. theft does not appear to have been accepted in Ethiopia (cp. Geary 1978). However, when the saint's death took place unexpectedly, while on a journey or in exile, the competition for control of his R. was often intense. When *abunä* ↗ᶜƎzra died while on a visit to ↗Gundä Gunde, monks from Kaswa sought to claim the body. Neither the abbot, ↗Gäbrä Mäśiḥ, nor the local ruler acceded to this request. Only years later, a different abbot agreed to have the body secretly translated. Similarly, *abba* ↗Samuᵓel of Däbrä Wägäg was initially buried at Däbrä Ṣəyon, and only months later were his remains buried at ↗Däbrä Wägäg. Such competition was not limited to Christians. When *šayḫ* ↗Muḥammad Šāfī was on his death bed a local district chief tried to seize body for burial in his district. However, he was dissuaded by the saint who wanted to be buried in Ǧamā Nəguś (HusIslam 100). Of course, stories of the burial of a saint's R. in a particular location do not preclude the possibility of rival claims to possess R. of the same saint. Several Coptic churches in Egypt, for example, claim to have remains of *abunä* ↗Täklä Haymanot, which are generally believed to be found at his monastery of ↗Däbrä Libanos in Šäwa.

Secular rulers were often intimately involved in the disposition of R. Thus *abunä* ↗Märḥa Krəstos was only able to have the remains of his spiritual father, ↗Ǝndrəyas, brought to Däbrä Libanos with the agreement of *aṣe* Zärᵓa Yaᶜəqob. The same Emperor is said to have approved the translation of the R. of another of his opponents, *abunä* ↗Täklä Ḥawaryat, but died before it could be realized. His son *aṣe* ↗Bäᵓədä Maryam carried out the translation. In 1679, a R. of *abunä* ↗Ewosṭatewos (a bone from his hand) was brought from ↗Armenia and accepted with honours by *aṣe* Yoḥannəs I, which raised the opposition of the monks of the "house of Täklä Haymanot" in ↗Azäzo (GuiIohan 39 [tr.]), the fact probably reflecting the traditional reservation to body-part R. (Fiaccadori 1989: 148).

In cases of Ǝndrəyas and Täklä Ḥawaryat, as well as some others, the body of a saint was buried, then exhumed and re-interred at a later date (cp. Marrassini 1980: CV–CIX). Most commonly this appears to have taken place when the saint had died after having fallen from favour, but was rehabilitated many years after his death. In some cases this is recounted in the saint's Vita (↗*Gädl*) but it may also be the subject of an independent composition, in which the translation (*fəlsät*) of the body was recorded as were the miracles, particularly healings, which accompanied it (cp. ↗Hagiography). Thus the sack which was found in the grave of *abunä* ↗Filəp̣p̣os is said to have been divided up among his spiritual descendants and to have healed many people (Getatchew Haile 1990: 92 [text],109 [tr.]).

It is significant to note that except in cases of delayed or re-burial Ethiopian R. were almost always associated with the presence of the "holy" at a grave. Unlike other parts of the Christian world where a thriving trade in R.'s developed in Ethiopia no market existed for the alleged body parts of the blessed. Usually the complete body of a saint, and not its part (with a very few exceptions), was venerated (the centre of veneration was thus in fact only the burial; cp. Cerulli 1958: 273f.; Fiaccadori 1989: 148). Indeed, in Ethiopia R. were not widely displayed, but rather were present in a tomb. In both Islam and Christianity, the belief in the power of R. is not a theological proposition but a practical one, based on experience and evidence. Moreover, dust or dirt from the saint's grave was believed to have miraculous ↗healing powers for it was considered to be his flesh and blood changed to earth (s. Getatchew Haile in EtRicci 103 [text], 111 [tr.] and n. 2; cp. ↗*Ṣäbäl*). It was of special importance because unlike the body itself it could easily be transported and thus brought to those not privileged to go on ↗pilgrimage to holy sites (On the tensions in Late Antiquity which could develop between "mobile" R., i.e. body parts which travelled to people versus pilgrimage in which people travelled to holy objects, s. Brown 1981: 88f.).

In modern times in particular, the EOTC has had to combat the claim, particularly from rival religious groups, that the veneration of R. was "a superstition, a form of idolatry or a survival of paganism" (Aymro Wondmagegnehu – Motovu 1970: 86). However, the contemporary Ethiopian tradition neither stresses nor actively propagates the veneration of R.

Steven Kaplan

Relics of the True Cross in Ethiopia

The R. of the True Cross venerated in Ethiopia consist in a fragment of the left arm of the Cross that was sent to the Patriarch of Alexandria after Empress Helena, Emperor Constantine's mother, had discovered the True Cross and divided it into four parts (also five in Ethiopian tradition: s. the text published by Conti Rossini 1948: 48f.). The story of the discovery is transmitted in the widespread *Legend of the Finding of the Holy Cross*, as well as in the *Legend of the wood of the Cross* (s. the two subarticles to ↗*Mäsqäl*; Raineri 1999 and 2007).

Even though Ethiopian written sources, as well as oral tradition, relate the arrival of the R. of the True Cross to Ethiopia in different ways and link it to different historical figures, there is positive evidence for an early interest in R. of the True Cross by *aṣe* ↗Dawit II, towards 1402, and their arrival in Ethiopia a few years later (cp. Tedeschi 1974; Heldman 1990: 443f.; Fiaccadori 2009: 36ff.). According to the *History of the Patriarchs of Alexandria* (SawHist III, 3, 144ff.), at the time of Patriarch Matthew I (1378–1408), the king of Ethiopia sent legates "to the king of the Franks" (here, the doge of Venice), asking for relics of "Our Lord", which were to be found in his country. The Ethiopian embassy, probably the one led by Antonio ↗Bartoli in 1402, came back with a number of R. (some of them later traced by Spencer [1972: 77f.] in the monastery of ↗Tädbaba Maryam), including a fragment of the True Cross, as confirmed in a series of Ethiopic 15th/16th-cent. homilies transmitted in ms. Vat. Aeth. Raineri 43 (Raineri 1999, 2007; for their authorship and chronology, s. Fiaccadori 2009: 36f.). Probably, those R. were taken from Egypt to ↗Sinnār by delegates of the Coptic Patriarch, and then handed over (*ante* 1419/20) to ↗Märqorewos of ↗Däbrä Dəmaḥ, who received them for the Emperor (cp. Conti Rossini 1904: 44).

Essentially in keeping with this tradition, several Ethiopian chronicles mention that the R. arrived during the reign of *aṣe* Dawit II (s. BassÉt 11; FotiChr 91f.; Guidi 1926: 360). We may surmise that their importance increased after the cult of the Cross was enforced by *aṣe* ↗Zärʾa Yaʿəqob (cp. CerMaria 122), who also introduced a proper festival, *Yaṣe Mäsqäl*.

Some pseudo-historical compilations give more details about the event: Dawit II received the Holy Cross together with others R. as a tribute from a ruler of ↗Egypt when he threatened him with diverting the course of the ↗Nile; the Cross was placed upon a throne covered by a precious textile installed in a specially built church (or in a shrine added to the royal palace, Guidi 1926: 360; one of the field chapels was actually named *Mäsqäl*, probably after the arrival of the R. of the True Cross during the reign of Dawit II, cp. CerMaria 122), and a festival was established to commemorate the occasion. Some other sources enrich the main story with several picturesque details in connection with *aṣe* ↗Ləbnä Dəngəl (Perruchon 1898), who is there obviously confused with Dawit II.

An oral tradition kept at ↗Däbrä Wärq has it that Dawit, "the fourth king of Ethiopia [by name?]" (for this royal name, s. ↗Dawit III), obtained a fragment of the Holy Cross from ↗Jerusalem (Cohen 1923: 148, 150). According to another version of the story, the True Cross, brought from Jerusalem with other precious R., was later sent to ↗Amba Gəšän by Zärᵓa Yaᶜəqob.

In this connection, the longest account is that of the *Mäṣḥafä* ↗*ṭefut* of Amba Gəšän. Speaking of R. obtained by Dawit II (who would have died on his way to Sinnār, losing the Cross to the Muslims), the text provides a historical background to the event, by referring to the protracted conflict with Egyptian rulers. Furthermore, it describes the vision on account of which Zärᵓa Yaᶜəqob took the R. to Amba Gəšän, to the church dedicated to God the Father (Ǝgziᵓabəḥer Ab). The Cross, in a reliquary made of gold, silver, iron, bronze and ivory, was deposited under a cross-shaped stone altar, and the Emperor established commemorative festivals with appropriate rituals for all memorable events concerning the R. Amba Gəšän thus became a place of ↗pilgrimage, and it was decided by the "king, bishops and archbishops" that its indulgences were of the same importance as those received in the Holy Land.

The Ethiopian Orthodox Christians believe that the fragment of the True Cross is still there. Buried under the altar, it was not destroyed when the church was burnt down by *imām* ↗Aḥmad b. Ibrāhīm al-Ġāzī ("Grañ"). *Aṣe* ↗Tewodros II did not succeed in retrieving it either. At present, two stone slabs marked with crosses outside of the Ǝgziᵓabəḥer Ab church indicate the presence of the R. In the church, which was rebuilt in the mid-20th cent., there are contemporary murals representing the story of the True Cross, from the vision of Emperor Constantine to the arrival of the R. in Ethiopia.

Relief and development organizations

In Ethiopia it was the ↗missions that were the precursors of present-day R.D.O. A number of missions were operating schools and offering basic health services in various parts of Ethiopia (and Italian-ruled Eritrea) from the early 1900s.

The post-World War II period also saw the beginning of another type of development organization: that of the bilateral aid agencies. As early as 1945, a development plan for Ethiopia, focusing on a processing industry based on a limited number of agricultural products, was developed by a United States (US) technical mission (↗United States of America, relations with). American assistance was given to different initiatives, including ↗road building, the establishment of ↗Ethiopian Airlines, and the new Ethiopian ↗currency. The US remained the key donor throughout ↗Ḫaylä Śəllase I's rule, and Ethiopia was the largest recipient of (the relatively modest) US aid to Sub-Saharan Africa in the period 1961–76. Formal bilateral cooperation was also established between ↗Sweden and Ethiopia in 1945, through the signing of a technical assistance treaty for vocational and technical ↗education. A number of other bilateral donors appeared during the 1950s, including countries such as the ↗United Kingdom, the Netherlands, ↗France, ↗Italy and Canada. The Emperor also balanced Western aid with Eastern bloc credits – and used this as leverage to obtain increased US support. The prioritized sector for many of these efforts was education, which was the key imperial strategy for modernization. However, the focus was overwhelmingly urban, especially on ↗Addis Abäba, and development in the rural areas was minimal.

In 1957–58, ↗famines in different regions of Ethiopia raised concerns, and the US provided food aid for the first time. However, the real extent of the problem was greatly underestimated, and the response was much too small to address the needs. This was to become a pattern for the coming decades, with food aid arriving in most years, but always far below what was needed.

In response to the recurrent famines, there were suggestions from donors that far-reaching changes to Ethiopian ↗agriculture were needed, including reforming the ↗land tenure system. This, however, was not something Ḫaylä Śəllase would contemplate, and development efforts to promote increased agricultural production were few and largely aimed at limited pockets of large-scale farms. It was only towards the end of the 1960s that the ↗Č̣əlalo Agricultural Development project, aimed at introducing green revolution technology to small farmers, was initiated with Swedish support. For a number of reasons, however, the results of this project did not meet with expectations.

In ↗Wälamo province important development actors during this period were *däǧǧazmač* Wäldä Sämayat Gäbräwäld (1962–74) and the Agri-Service Ethiopia established by the French Capuchin Mission. The latter would integrate into the Wälamo/Wälaytta Agricultural Development Unit, a government sponsored secular organization established in 1970 (Dessalegn Rahmato 2007: 27–34; GasEth 47).

The great famines of 1973–74 and 1983–85 were both highly publicized internationally, and resulted in the influx of a great number of new international relief and development organizations. In particular the Non-Governmental Organizations (NGOs) became important. While Catholic Relief Services and Care International had been key operators of US food aid since the late 1950s, the scale of food aid was vastly expanded, as was the number of NGOs involved in the relief efforts. Having started as relief organizations, many of these organizations continued with long-term development programs, and thus became a fairly permanent and quite visible part of international aid.

Famines and the attempts at responding to them in Ethiopia became very politicized. Throughout the 1980s, food aid was a key resource in the war between the *Därg* Regime (↗Provisional Military Administrative Council) and the guerrilla movements in the north. The huge cross-border food aid programs, provided by the church-based NGO-consortium Emergency Relief Desk from the Sudan to the ↗Eritrean People's Liberation Front and the ↗Tigray People's Liberation Front controlled areas, was extremely important for the armed movements in building local support and thus gaining the strength to eventually overthrow the regime. The World Food Programme and other ↗United Nations organizations, on the other hand, had no mandate to work in guerrilla-controlled areas, and channelled all relief to the Government, which in a number of instances used it for its own political purposes.

Bilateral donors of development aid have also sought to use the support politically. The US stopped aid to Ethiopia in 1985 in reaction to the policies of the *Därg* regime. However, the drop in aid levels this implied was more than offset by increases in aid from European Community countries. There were a number of similar occurrences after 1991, when some donor countries sought to influence the Ethiopian People's Revolutionary Democratic Front regime by withholding aid, for instance during the war with Eritrea, and following the 2005 election; however, other donors came in and ensured that Ethiopia had not experienced substantial drops in assistance. Indeed, a common thread in the history of aid to Ethiopia is the lack of success of donor conditions. The three successive Ethiopian regimes were all able to resist policies being imposed from outside, due in part to the above-mentioned lack of coordination among donors, but also because of the independent-minded nature of these regimes.

Aksumite religion

The data on pre-Christian religious beliefs and practices of the Aksumite kingdom are scarce. The polytheistic R. of ↗Aksum took its origin from the Sabaic one (↗Sabaᵓ) and probably underwent some Hellenistic influence. Its pantheon can be only partly restored. The deities venerated by the Aksumites are mentioned mostly in the protective formulae at the end of royal ↗inscriptions. The triad composed of ↗ᶜAstär, ↗Bəḥer and ↗Mäḥrəm is the most frequently attested (RIÉ 185 i.20–21, 185bis i.22–23, 185bis ii c.35–36); once Bəḥer is replaced by ↗Mədr (RIÉ 185 ii.21). In RIÉ 188.25–26, ᶜAstär, Bəḥer and Mədr are invoked, while Mäḥrəm is omitted; but he appears afterwards (RIÉ 188.29–30). The identification of Bəḥer and Mədr as two names of one chthonic deity (s., e.g., BrakKirche 38) is highly speculative.

The extent of Hellenistic influence is rather unclear. In the relevant passages of the Greek inscriptions, Hellenic deities are mentioned. Thus, RIÉ 270bis has a dedication to Uranus, Gæa and Ares (ls. 30–31: τῷ οὐρανῷ καὶ τῇ γῇ καὶ τῷ … Ἀρέει), probably corresponding to ᶜAstär, Mədr and Mäḥrəm. This allows one to identify ᶜAstär and Mədr as deities of heaven and earth resp., and Mäḥrəm as war-god – as his epithets also suggest (cf. also DAE IV, 13).

In the *Adulitana II* (↗Monumentum Adulitanum), the divine triad includes Zeus, Ares and Poseidon (RIÉ 277.39–40). Littmann (DAE IV, 13) equated them to ᶜAstär, Mäḥrəm and Bəḥer resp., although only the second identification is supported by other inscriptions; the name of Poseidon more likely refers to a local god venerated by sailors in ↗Adulis (cf. Kobiščanov 1966: 252f.).

More certain are South-Arabian elements in Aksumite R., notably the "Crescent and the Sun" symbol (s. ↗Moon) which occurs on both pre-Aksumite and Aksumite artefacts. The custom of putting votive thrones has a parallel in ancient South Arabia, in the region of al-Ǧawf.

Of Aksumite deities, only ᶜAstär can be undoubtedly identified with a South Arabian deity, ᶜṮTR (ᶜSTR/ᶜṮTR in the Sabaic inscriptions of Ethiopia), the head of the South Arabian pantheon. Appearing always at the first place in the divine triads (or dyad in RIÉ 198 I), ᶜAstär may have played a similar role in the Aksumite pre-Christian R. His dominant position may be still reflected in the Ethiopic version of the Book of Sirach (Sir 31: 8, 37: 21), where the Greek κύριος, *kýrios* ('lord') is rendered as *ᶜastär*, rather than the usual ↗*əgziᵓabəḥer*. The opposition between ᶜAstär and Mədr as deities of heaven and earth finds obvious parallels in other traditional R. of Ethiopia. There are, however, no solid indications of Judaic influence on Aksumite R. (s. ↗Judaism).

On the basis of both the *Adulitana II* and ᶜEzana's inscriptions, it appears that an Aksumite king was considered to be a son of Mäḥrəm/Ares (cp. ↗Kingship, divine). In all probability, this war-god supported not only the rulers of Aksum, but also their state, like ↗Almaqah in ancient Sabaᵓ.

No ancient monument or archaeological evidence survive that can be safely traced to an Aksumite pre-Christian temple (a Greek inscription [DAE 2 = RIÉ 269] may refer to a sanctuary of Ares, i.e. Mäḥrəm). Yet, presumably, at least some of the early Christian churches were founded on the sites of older cult places. Nothing is known about Aksumite pre-Christian priesthood, and very little about religious rites. Animal and human sacrifices were probably offered to Mäḥrəm/Ares (RIÉ 188.29–30; but cf. Schneider 1984: 167f.). Both copies of the "trilingual" inscription mention anthropomorphic statues of gold, silver and bronze (Gəᶜəz sg. *msl*, **məsl*, in South Arabian script *mṯl* and *msl*, Gr. ἀνδριάς, lit. 'image of a man'; RIÉ 185 I.17–19, 185 II.18–20, 185 bis I.19–21, 185 bis II C.24–31, 270.29–31, 270 bis.26–29), and unknown objects styled as *swt/w-bdḥ* (RIÉ 185 II.25, 185 bis II C.44; RIÉ 270 bis.37: COΥʽATE καὶ BEΔIE) that are offered to the same deity.

Pre-Christian deities were often seen as protectors to whom certain objects could be entrusted: e.g., votive thrones (Gəᶜəz *mänbär*, Gr. δίφρος). In one case, such a throne was offered to ᶜAstär, Bəḥer and Mədr (RIÉ 188.24–26), in the second, to Ares or Mäḥrəm (RIÉ 277.42–43). Likewise, a stone basin (*zgl*) was put under the protection of ᶜAstär and Mədr (RIÉ 198 I). The "trilingual" inscription was entrusted (Gəᶜəz *ʾbʾ*, **ʾabəʾa* 'to offer' in RIÉ 185 I.20, 185 II:20–21, but *ʾmḥṣ́n*, **amaḥṣ́änä* 'to entrust' in RIÉ 185 bis I:22, 185 bis IIC:34, Gr. ἀνέθηκα … καὶ παρεθέμην, 'dedicated … and offered' in RIÉ 270bis.29–30) to ᶜAstär, Bəḥer (Mədr in RIÉ 185 II.21) and Mäḥrəm (to Uranus, Gæa and Ares in the Greek version).

One can suppose that the essential elements of traditional religious concepts in Ethiopia – such as beliefs in the ↗spirits, ↗possession cults, ↗magic etc. – were also important features of the pre-Christian beliefs of the Aksumites. This may be reflected in oral traditions of the Ethiopian highlands and in local historiography, where the pre-Christian veneration of the ↗serpent is a recurrent theme. However, evidence of these aspects of Aksumite R. is scarce.

Some hints can be gleaned from the monolythic ↗stelae of Aksum (Fattovich 1987; Phillipson 1994). The stela (*ḥwlt*) at ↗Mäṭära, as its inscription possibly suggests, may be connected with the cult of ↗ancestors (RIÉ 223, cf. Drewes 1962: 67f.). Since at least the 1st–2nd cent. A.D., stelae were used for funerary purposes, marking the elite tombs. The "false doors", appearing not only on the storeyed stelae but also elsewhere in funerary architecture, were probably an essential element in Aksumite beliefs concerning post-mortem phenomena (s. Phillipson 1994: 208).

Funerary rites of the pre-Christian Aksumite society remain obscure. The use of rock-cut tombs and stone sarcophagi was not rare, but all the sepulchres (cp. ↗Graves) have been looted. The discovery of animal bones and charcoal in some sites possibly indicates certain sacrificial ceremonies on the occasion of death and burial.

Serguei A. Frantsouzoff

Traditional religions

A wide range of religious systems existed throughout the history of the Ethiopian and Eritrean region and many still are practised. Here, only a few examples can be mentioned within a rough phenomenological framework. The technical term "traditional R." is one of many possible attempts to categorize religions which cannot be considered as universal world religions (such as Buddhism, ↗Christianity, ↗Islam, ↗Judaism) or other global religious movements (e.g., ↗Bahai, ↗Rastafarianism). Alternative terms may be "folk-religions", "ethnic religions", "local religions", "autochthonous religions", "non-Abrahamic religions" or combinations of these terms. Most designations, including "traditional R." itself, are unbalanced or limited in their conceptional perspective and may cause misunderstandings. The words "traditional" or "local", for instance, are problematic because also Islam and Christianity follow "traditions" and obviously have local dimensions and forms. In the case of the ↗Betä Ǝsraʾel, their relatively recent self-definition of being part of Judaism, relates this regional faith to a global phenomenon.

Christians and Muslims frequently despise followers of Ethiopian traditional R. as "unbelievers", "idolaters" or "pagans" (Amh. **አረማዊ**, *arämawi*, Arab. *kāfir*; for the Christian Orthodox view on traditional R. s. also ↗*Arwe*; ↗*Däsk*; ↗Demons). Likewise, traditional R. are subsumed under terms like "superstition", "sorcery" or ↗"magic". With a similarly one-sided view, based on cultural evolutionism, scholars categorized a great variety of different religions under superordinate concepts, like "primitive religion", "animism" or "natural religion". The term "animism", which today is sometimes used in the context of African religions as a neutral term, reflects an outdated 19th-cent. anthropological concept, first discussed by Edward Tylor in 1871, which is not adequate for most of them.

There are practically no features which can be exclusively found in traditional R. nor, at least to some degree, in those world religions present in Ethiopia; this is due to reciprocal influences throughout history as well as independently evolved structural parallelism. However, in comparison with Christianity and Islam some peculiar characteristics of traditional R. may be identified: (1) traditional R. mainly rely on orality; (2) they are less systematized or standardized and, therefore, (3) comparatively open to ↗syncretism and co-existence with other religions; (4) they are often characterized by pluralism/parallelism of relatively independent local cults rather than having a unified church-like institution; (5) institutions of traditional R. are not separable from the culture in which they are embedded. They form an integral part of the socio-religious system or holistic social order (e.g., ↗*Aadaa*, ↗*Seera*) and their ethics are inseparable from it; (6) in most cases they are exclusively practised among members of a single ethnic group (a prominent exception being some ↗Possession cults, s. esp. ↗*Zar* and ↗*Gäramanǧo*).

Religious experts

Although a great part of religious or ritual tasks can be carried out by every member of a society that meets the defined ritual requirements, such as gender, age, initiation status, ritual purity etc., autochtonous folk-religions in many aspects rely on persons with special religious or magico-religious skills, knowledge and charisma. Fields of expertise may be, e.g., transmission of cultural knowledge, blessing (and cursing), protection against the "evil eye" (↗*Buda*) or magical attacks, ↗oracles and divination, ↗rainmaking, spirit mediumship, communication with the animal world (s., e.g., ↗Hyenas, ↗Leopards, ↗Monkeys, ↗Serpents), ensuring success in war or in hunting and ↗sacrifices. Many religious experts are also ↗healers and practitioners of traditional ↗medicine. The sources of authority and legitimation of religious office-holders which in combination constitute their "symbolic" or "religious capital" (Pierre Bourdieu) may be magical or healing skills, traditional knowledge, the descent from a culture hero or spiritual being as well as the possession of magical objects or ownership of a holy place.

The spectrum of religious experts ranges from persons specialized in very limited fields to those who combine a broad range. While the fame of some does not exceed the boundaries of their village descent group, others can obtain even a trans-ethnic following. Some religious office-holders combine their religious charisma with political authority while others fulfil merely spiritual duties. Often religious experts serve as arbitrators. Many socio-religious systems establish a division of "ritual labour" among different segments of society in which specific clans or moieties, occupational groups (cp., e.g., ↗*Fuga*, ↗Blacksmiths [↗Iron], the Manǧo of Dawro etc.) and members of other ethnic groups provide specific ritual services.

A characteristic feature of many socio-religious systems in Ethiopia is the institution of divine ↗kingship in which a priestly king is symbolically placed at the centre of the "socio-cosmological" order. In a similar way, in many polycephalous societies high-priests of traditional R. are venerated as *homme fétiche*. Their cults in many aspects (esp. ↗Taboos) resemble the rites and the symbolism centred around a sacred king. This is true, for example, in the case of the ↗*abbaa muuda* and other religious experts of the ↗Oromo traditional R., such as ↗*qaallu*. Similar features shaped, e.g., the cults of the *Hawzulla* spirit medium of ↗Kambaata (BrKam 261–66) and the priests of the Gurage deities (s. below). Among the ↗Surmic-speakers, a rather egalitarian society, ritual leaders, called ↗*komoru*, combine religious and political functions.

As mediators between the human and spiritual world (or as representatives of certain spirits, such as the *gäramanǧo* of ↗Käfa and the *saʾamär dam* of ↗Ǝndägañ), religious experts in exchange for their blessing or other services often receive regular or occasional ↗gifts from their adherents. Before the Ethiopian Revolution, these gifts often took the form of quasi-tribute in cattle, butter, honey etc. For those religious experts who were exempted from agricultural work by the taboo regulations connected to their office, this income maintained their large households and shrines as well as permitted a redistribution of goods during ↗feasts.

Rituals

While the cosmological and philosophical ideas of traditional R. in most cases do not develop into doctrinal systems but are encoded in myths and folk wisdom, ritual practice can be very elaborate. Main ritual occasions are seasonal feasts and ceremonies connected to the life cycle. Such *rites de passage* are ↗birth, ↗initiation (s. also ↗Circumcision), ↗marriage (s. also ↗Weddings), and death (↗Burials).

A common feature of religious rites is the ↗sacrifice in which something, e.g., a twig, solanum fruits, coffee, a slaughtered animal or ↗incense etc., is dedicated to, and then often symbolically shared with, the spiritual sphere. Examples from the Oromo cultural context are the ↗*ḍibaayyuu* and the ↗*buttaa qallaa* ceremonies.

Many rituals are based on the concept of blessing, i.e. the distribution of a kind of subtle supernatural principle that heals, protects and brings fertility. However, when employed with destructive intention or by unauthorized or ritually impure persons, the very same principle can be dangerous. Blessing may be interpreted as a medium in which supernatural power can be possessed and transmitted by humans. A typical blessing ritual is the Oromo ↗*muudaa* ceremony in which blessing is transmitted by anointment. Other important ritual practices are (1) formal and informal prayers (i.e. reflection, asking for things, praising), (2) ↗fasting (s., e.g., ↗*Fandanaano*) and the observance of ↗food avoidance rules, and (3) ↗pilgrimage to holy places (for Oromo s., e.g., ↗*Ǧiila*), which allows participants to receive blessings and to express their religious devotion as well as their social identity.

The human and the supernatural spheres

The belief in and the communication with spiritual beings is one of the basic features of traditional R. There is no sharp dividing line between the supernatural, the natural and the social spheres. The supernatural interferes directly into human affairs by the forces of nature and fate. Spiritual beings express their will by way of spirit possession, prophesies and signs. They may also intervene directly, which is especially the case in myths of origin, were they often act as creators (e.g., the deity Zabi of the ↗Ubamär) or as culture heros (e.g., Ulawada, a venerated ancestor of the ↗Banna, VSAe I, 316ff.).

The typology of spiritual beings, deities and ↗spirits is complex; often a differentiated, but not clearly systematized pantheon exists. The (lower) spirits are believed to roam near or amongst the people or in the wilderness. While some of them are directly connected to individuals or specific descent groups (e.g., the spirits of martial "heros" or ↗ancestors), others are connected to certain animals, natural phenomena or magical objects. The hierarchical pyramid of spiritual beings, in many cases, is headed by a single, often celestial, deity (e.g., Magano in ↗Sidaama traditional R. or Ana in ↗Kunama) or, as is wide-spread in Ethiopia, by a dichotomy of a sky-god and a god(ess) of the earth. Examples are the Oromo male deity ↗Waaqa and his female counterpart Lafa ('earth, land'; cp. ↗Ateetee; VSAe II, 561–65) or, in Käfa, the sky-god Yero or *Šima tato* and the Earth or *Šowo tato* (cp. Lange 1982: 286). The Konso religion recognizes the male sky-god Waga, who is linked to rain, thunder, social order and war, and a female chthonic deity associated with fertility (Hallpike 1972: 222–304). The traditional R. of the Gurage is centred around a divine triad consisting of the protecting spirit of the female sphere ↗Dämʷamʷit, the thunder spirit and guardian of social order ↗Božžä and the spirit of war, ↗Waq; the latter venerated in various local forms. Above this triad is a *deus otiosus* by the name of Ǝgzer (from Christian ↗Ǝgziʾabəḥər). The pantheon of the Ubamär traditional R. includes Zabi, the sky-god and creator, Beri, the earth- and fertility-godess, and Ṣosi, who punishes wrong-doers and represents the forces of destruction (VSAe I, 177f.).

Soul and afterlife

Concepts concerning the soul and the afterlife are manifold. Among the Konso, for example, it is thought that when common people die, their breath (*nesa*) is taken by the sky-god Waga, their vitality (*lupoda*) ends, but the 'shadow person' (*katiliida*) becomes a ghost (*kareeya*) that dwells on earth (Hallpike 1972: 160). The traditional soul concept of the Kambaata is centred around the life principle *foole* which leaves the body when the heartbeat stops and then enters into the hereafter, which is paradise for some and hell for others (BrKam 274f.). The Oromo locate the soul in the 'throat' (*lubbo*) or in the heart (*onnee*). Death is defined by the end of 'breath' (*afuura*) and by *onne* leaving the body. Ideas of an afterlife varied and are diffuse (VSAe II, 571).

Modern situation

The strong influence of the various Christian missions and Islam but also, after the Revolution, the "anti-superstition" policy of the government inspired by Marxism-Leninism as well as the ideological dominance of modern scientism has considerably weakened traditional R. This the more so, because modern development has led to a still ongoing, profound culture change which often has a disintegrating effect on "traditional" socio-religious systems. In some cases this process has resulted in their complete disappearance. According to the 2007 Ethiopian Census, 2.6 % of the entire population professed one of the traditional R. (CSA 2008) but a higher percentage of occasional practitioners can be assumed.

However, some ethnic identity movements (↗Ethnicity) choose traditional R. as markers of ethnic distinction and sources of pride; a limited revival can be observed. Furthermore, t.R. survives as a strong element in new syncretistic cults established by local "prophets" or ↗*qalləčča* and modern religious movements, such as, e.g., the *aqaat qaal* of the ↗Aari (s. Alexander Naty 2006).

Rema

R. (**ሬማ**, also **ሬምሃ** Remha) is an island situated near the eastern shores of Lake ↗Ṭana (for location s. map for Qʷäraśa), known for a church and a monastery dedicated to the Savior of the World (Mädḫane ᶜAläm).

The alleged foundation of Rema Mädḫane ᶜAläm in the early Solomonic period is ascribed to *abba* ↗Nob. *Aṣe* ↗Yəsḥaq ordered the commemoration of his brother Nob, as confirmed by records in the monastic libraries of the Lake Ṭana islands (Fiaccadori 1998: 46ff.; HamTana II, 168). Thanks to this royal connection, the foundation enjoyed an important status in the 15th cent., as witnessed by grants by Yəsḥaq probably from 1419 (CrumLand 41).

Later, the neighbouring monasteries ↗Ṭana Qirqos and ↗Daga Ǝsṭifanos gained more prominence. R.'s importance increased again when, at the beginning of the 17th cent., the nun ↗Wälättä Peṭros came to spend the last period of her life on the island, which was accessible for women, at least temporarily. Wälättä Peṭros was buried close to the church of Mädḫane ᶜAläm. About 20 persons, including her close relatives, such as her father, her brother who held the title of ↗*däǧǧazmač* and her mother, were laid to rest either in the *mäqdäs* or in the *qəddəst* of the church. *Aṣe* ↗Śärṣä Dəngəl as well as the monastery's alleged founder Nob were also buried there (Bosc-Tiessé 2000: 233f.).

The close relation to the royal court is also testified by the possession of a wooden panel of the 15th-cent. painter ↗Fəre Ṣəyon representing St. ↗Mary with Child (Heldman 1994: 29ff., 168f., 173, 186). In the church three large panels representing the ↗Evangelists Mark and John and St. Mary in the style of the Second Gondärine school of ↗painting are also preserved.

The church was restored by *ras* ↗Gugsa Märsa at the end of the 18th cent. It is probably from this time that the church murals date. In the ambulatory of the church, one can see carved stones reused from a Portuguese building.

Nowadays the community of R. has moved to the mainland opposite but on festive days believers visit the church for the liturgy.

The 25 manuscripts of the library of R. were microfilmed and described by Hammerschmidt (HamTana II, 122–66). He also compiled a preliminary and incomplete list of the abbots of the monastery (ibid. 168).

I. Ethnological and ethnographic research

Ethiopia and Eritrea, ethnically and religiously diverse countries at the historical crossroads of continents, trade networks, religious systems and migration/pilgrimage routes, have been the subject of numerous ethnographic, ethno-historical and anthropological studies in the past century. This entry can only present a short survey, with a few examples (also in the list of references), of an extended and growing field of R. While inter-disciplinary link with other social sciences (history, linguistics and sociology) are valuable, these will not be elaborated upon here.

Ethnological and ethnographic R. in Ethiopia-Eritrea took off in the late 1960s but was preceded by a rich tradition of travel literature, which, perhaps because of the region's singular position in Africa as an area with an ancient Christian empire and important Muslim sultanates and with many independent peoples was often visited and extensively explored, notably by Europeans. The many travel books published since the 16th cent. (starting with Portuguese travellers), contain invaluable information and graphic images of life and culture in the region. While the travellers may often have been remiss in presenting Ethiopian life and society, often describing it through the prism of their own concerns and aims in the country (adventurism, exploration, diplomacy, political support, mission, conversion, trade, etc.), many works reveal a genuine interest in the cultural other and an urge to describe and explain unfamiliar places, peoples, and historical traditions in their own right. The travellers' accounts have contributed in no small way to understanding the cultural and historical continuities of Ethiopian society until today. Some of the "proto-ethnological" authors one could mention are: Richard ↗Burton, Mansfield ↗Parkyns, Antoine ↗d'Abbadie, Juan Maria ↗Schuver, Werner ↗Munzinger, and Alexander ↗Bulatovich. In the early 20th cent. there were also maverick pioneers, such as Arnold W. ↗Hodson (1929) and Charles H. Walker (1933), publishing quite informative surveys of Ethiopian life based not on travelling as such, but on their long-term field experience in the country. A path-breaking French account by an ethnologist but in the form of a travelogue was Michel ↗Leiris (1931) who was member of Marcel ↗Griaule's ethnographic Dakar-Djibouti expedition (s. also *abba* ↗Jerome).

Professional ethnological (anthropological) studies were first made in the 1950s and especially during the early 1960s, mostly by foreign scholars. In the 1950s local "amateur" ethnographers at University College Addis Ababa (↗Addis Ababa University) also made ethnographic contributions (cf. Pankhurst 2002), but did not have a formative impact on the discipline. Ethnological and ethnographic research in the 1960s was done mainly by researchers from the USA, United Kingdom, France, Germany, Italy and later Japan, with the occasional Swedish, Israeli or Dutch joining in. Most were either teaching for some time in Addis Abäba or Asmära or were doing their own research projects, often in conjunction with linguists or cultural historians and with Ethio-Eritrean counterparts. Despite their biases and limitations, they produced a substantial body of empirical data and knowledge on Ethio-Eritrean societies, some of it irreplaceable and non-replicable. Among the "highlights" of the development of ethnological and ethnographic R. via these foreign traditions, the following authors and themes can be mentioned.

Italian colonial researchers worked on ethnography, law, and local history, as evident in the work of the prolific Enrico ↗Cerulli, and of Carlo ↗Conti Rossini, Lorenzo Vinigi ↗Grottanelli, Alberto ↗Pollera, Rufillo Perini, etc. While not all were trained ethnologists, they provided important source materials and observations on ethnological subjects (e.g., Grottanelli on the ↗Mao and other west Ethiopian ethnic groups). Among the (few) younger Italian ethnologists working on Ethiopia, Marco Bassi (2005) stands out.

Important R., especially in southern Ethiopia, was carried out by the pioneering German expeditions of Adolf Ellegard ↗Jensen, Eike ↗Haberland and Helmut ↗Straube in the 1930s and 1950s. Publications in the 1930s and 1950s (Jensen 1936; 1959; Haberland [VSAe II]; Straube [VSAe I]). The German tradition of R. on culture history, ethnography and material culture and themes like the "meritorious complex" (Braukämper 2001) have been transformed since the 1970s by more focused studies such as those by Ulrich Braukämper, Werner Lange, Hermann Amborn, and, in another vein, by Ivo Strecker, Jean Lydall, Günther Schlee and Thomas Zitelmann. Some younger scholars with significant contributions are Alexander Kellner, Christiane Falge, Alke Dohrmann, Andrea Nicolas, Nicole Poissonnier and Dirk Bustorf. The themes were, notably, southern Ethiopian ethnography (e.g., of the Oromo, Gurage, Səlṭe, Nuer, Konso and Burği), political anthropology, social organization, conflict study, religion, symbolism and ritual.

Jensen (middle) with colleagues Bayerle (right) and Wohlenberg (left) of the Frobenius Expedition viewing their ethnographic collection; from Rikli 1935: 33

French contributions since the late 1960s–70 were in the fields of ethnography, political anthropology and symbolism. Pioneer works were done in the Gamo area by Marc Abélès, Jacques Bureau, Dan Sperber, a.o. and in the south-west (Serge Tornay). Many of these French ethnologists (except Tornay and the late Bureau) did not continue in Ethiopian ethnological and ethnographic R. but moved to other topics and countries. A major contribution to the understanding of agro-pastoral societies in the Ethiopian south-west was Tornay's monograph on the ↗Ñaŋatom (2001). Other remarkable younger scholars in France are, e.g., Eloi Ficquet and Didier Morin.

US anthropologists were always an important presence and have carried out many research projects since the early 1960s, among them, William A. ↗Shack, Allan Hoben and Donald Levine (properly called a sociologist); institutionally, they had a strong impact. Many projects also led to a substantial material input and training in the field (with many Ethiopian scholars being helped to acquire Ph.D. degrees in the U.S.). Their interests were broad-ranging, from cultural organization, worldview, gender, material culture, ethnography, pastoralism as well as religion and ritual to ethnic relations and ethnic minorities (Jack Stauder, Dan F. Bauer, John Hamer, Frederick Gamst, Herbert Lewis, John Hinnant, William Torry, Donald Donham). A highly original study was that of Judith Olmstead on the Dita (1997). Recent innovative work was done on political anthropology (Donham 1999), material culture (by Sobania and Silverman 1998), religious and gender identity (Camilla Gibb and Cressida Marcus), Gabbra pastoralists (John Colman Wood), and on resettlement (Laura Hammond). American contributions are still of predominant importance.

British researchers had a more social-anthropological interest and worked on social organization, ethnic relations, agro-pastoral groups, art and crafts, political anthropology, and religion and ritual (e.g., Paul Trevor William Baxter, David Turton, Wendy James, Christopher R. Hallpike), and among the younger generation important new work was done by, a.o., Alula Pankhurst, Dena Freeman, Elizabeth Watson, and Cedric Barnes.

In the 1980s and 1990s a new phase of ethnological and ethnographic R. by Japanese scholars emerged, stimulated by Katsuyoshi Fukui (d. 2008) of Kyoto University. His own work and that of his students and colleagues, mainly on south and south-west Ethiopia, were a departure from predominantly socio-cultural anthropological research and concentrated on "ethno-science" and indigenous knowledge traditions, yielding major new findings and original perspectives. One piece that stands out is the masterful study of Bodi (Meʾen) ethno-classification (Fukui 1996). A second major figure was Eisei Kurimoto (Osaka), with, e.g., his studies on the ↗Añwaa. Interesting and valuable work was also done by Masayoshi Shigeta, Hiroshi Matsuda, Akira Deguchi, Yukio Miyawaki, Takeshi Fujimoto, and Renya Sato.

Many anthropologists from other countries – e.g., Sweden (Jan Hultin, Eva Poluha), Italy (Marco Bassi), Israel (Uri Almagor), The Netherlands (Jon Abbink), and Norway (Harald Aspen, Svein Ege and Kjetil Tronvoll) have done work on a large variety of peoples and subjects, usually less bound to a national tradition of Ethiopian studies and more geared towards concerns in mainstream anthropology.

Needless to say, not all ethnological and ethnographic interest came from foreigners: a local tradition of interest and exploration in Ethiopia–Eritrea emerged early on. Examples are the monk ↗Baḥrəy's ethno-historical survey of the Oromo ↗*gadaa* system (16th cent.), or *abba* ↗Gorgoryos reporting about Ethiopia to Hiob Ludolf. Since then many Ethiopians and Eritreans started to be active in exploration and research, well before the advent of professional ethnology (for details, s. Pankhurst 2002). One interesting example of a native ethno-historian/ethnographer *avant la lettre* is that of ↗Maḫtämä Śəllase Wäldä Mäsqäl, who, in a series of perceptive works, gave an excellent overview of Ethiopian highland society. But the first trained anthropologists in Ethiopia–Eritrea appeared in the 1970s, although there were only four Ph.D. holders in Ethiopia in the early 1980s (and probably none in Eritrea): Makʷännən Bišaw (d. 2007), Asmarom Legesse (came to Asmära from the U.S. in 1992), Tsehai Berhane-Selassie (went to the U.S. in 1993) and Fecadu Gedamu (became a diplomat in 1992).

Ethnological and ethnographic R. in Ethiopia gathered steam in the early 1990s when a social anthropology programme was established at Addis Ababa University, supported by Norway and some other foreign donors (cf. Pankhurst 2006). The successful program yielded dozens of M.A. holders, who did up-to-date research on a large variety of topics, often of striking originality and good quality (some names are Getachew Kassa, Gebre Yntiso, Data Dea, Dereje Feyissa, Ayalew Gebre, Teferi Abate, Wolde-Sellassie Abbute, Getnet Tadele, Melese Getu, Assefa Tolera, Taddese Wolde-Gossa, Getie Gelaye, Taddesse Berisso). With this programme, ethnological and ethnographic R. in Ethiopia became a well-established and dynamic field, and, depending on continued institutional support from the educational authorities, will be fully equipped to make a crucial contribution to the discipline. Numerous M.A. theses and international research papers were published and many graduates pursued a career outside of Ethiopia.

In Eritrea, building on an extended Italian colonial heritage of social and ethnological research, an Anthropology Department was opened at ↗Asmara University after independence in 1993, with some very active and capable local researchers, trained in Ethiopia and abroad. In Asmära there is also (in 2008) the unsurpassed Pavoni Social Centre (long led by Padre Ezio Tonini), where many works and archival material were stored, forming a treasure house of ethnological and ethnographic materials on Eritrea. Due to the weighty Italian impact on social research in Eritrea and even on the designation and, some would say "creation", of ethnic groups or "nationalities" in the country (cf. Gewald 1998), a more colonial-instrumental tradition had taken shape (first Italian, then British), different from that in Ethiopia (cf. also James 1990).

Perhaps due to the non-colonial trajectory of Ethiopia as well as the fact that research interests in the country focused on the old literate traditions of kingship, Orthodox Christianity and Islam, the peoples and cultures of Ethiopia (and to a lesser extent Eritrea) have not figured strongly in the development of the anthropological discipline as a whole, certainly not in the first two generations. Ethiopian-Eritrean case studies were not extensively used in thematic and theoretical discussions on core topics of anthropology as a comparative science of humans and their socio-cultural behaviour. Nonetheless, ethnological-anthropological research on Ethiopia and Eritrea has produced an exceptionally rich and path-breaking series of monographs and studies that merit comparison and inclusion in the mainstream. Its empirical wealth and thoroughness, often strengthened by excursions into history, law and linguistics, is remarkable and reflects the unique features of Ethiopia–Eritrea as an historical and cultural complex in Africa.

The character of ethnological and ethnographic R. was inevitably influenced by the wider political context of the country, i.e., the imperial (to 1974), Socialist-Marxist (↗Provisional Military Administrative Council, to 1991) and ethno-federal (to date) regimes. While most ethnologists were not interested in political developments per se but in ethnography, social organization and culture(s), they were not immune to the impact of political conditions and changes on the societies and social phenomena they studied. In Eritrea until 1991, little ethnological and ethnographic R. was possible due to war and instability. The ↗Eritrean Peoples' Liberation Front had its own research department and gathered a lot of material, but this was primarily of the folkloric kind. In the post-1991 period in Eritrea, a short window of opportunity opened up for a few years but closed again soon, making independent academic research by foreigners very difficult. A few local researchers (all foreign-trained) nevertheless kept up their work and produced highly interesting studies (Abbebe Kifleyesus, the late Alexander Naty [also on the Ethiopian Aari], and Abdulqader Saleh).

Discussing ethnological and ethnographic R. done by younger generations, since ca. 1990, falls mostly outside the scope of this article, but there is much fascinating new work being carried out: on ethnicity and ethnic relations, conflict studies, ethno-history, cultural ecology, worldview and religion (not only on the traditional religions but also on Islam and Christianity), the symbolism of space, ritual, and identity formation.

A recent notable development (since the mid-1990s) is the upsurge of "folk ethnography" and folklore studies carried out by intellectuals or educated members of ethnic minorities who (though usually not trained in anthropology) write ethnographies and ethno-histories of their people or offer materials on oral tradition (there are publications on the Konso, the Kafiččo, Oromo, Wälaytta, Sidaama, etc.). These works, while providing interesting insider perspectives, often lose themselves in minute and lengthy descriptions of as many "facts" and aspects of "the culture" as possible, but do not engage in wider discussions. They often lack sufficient analytical focus and readability, aiming at an almost encyclopaedic survey that has limited relevance for academic anthropology and its theoretical or comparative concerns. For instance, some collections of oral traditions are not very helpful because of a lack of information on place and time of recording, or a transcription in any other language, or a complete lack of analysis. Another new development is the upsurge in "transnatitional" studies: research on Ethiopian migrants or ↗diaspora communities living outside Ethiopia.

Institutional academic standards in Ethiopia-Eritrea are under pressure and perhaps declining, despite the great skills and commitment of local researchers – a lack of funding, a lack of time, overburdened staff, a lack of good academic debate, a neglect of in-depth serious investment in university infrastructure and a lack of interest in the policy sphere for nuanced research results, all play a role.

As noted, Ethiopia escaped an externally imposed, ethnicized R. tradition that we know from former colonial countries in Africa, where, for instance, French, Belgian or British administration and its demands for political control led to an undue classification of distinct "tribes" and tribal identities and the "creation" of ethnicity, with adverse political consequences. It is ironic that such a model became more current after 1991, when the official recognition and division of peoples into ethnic groups (*bəḥeräsäbočč*) became mandatory and produced results similar to those of the former colonial countries in Africa. Accordingly, ethnological and ethnographic R., if academic freedom is not respected, may be in danger of becoming more implicated in politicized discussions and in "competitive" discourse on ethnic identities and ethnic relations, inhibiting academic research and evidence-based, development-oriented studies. Ethnological and ethnographic R. in Ethiopia and Eritrea has made enormous strides in the past 18 years regarding quality and quantity and it has (re-)connected with the international mainstream of the discipline, i.e. a non-area studies approach of anthropology. It has shown advances in both disciplinary institutionalization and exchange with foreign scholars working on the unique social-cultural traditions of the two countries, but due to a variety of reasons there is some doubt as to the possibility of independent fieldwork keeping its standards in the near future.

Jon G. Abbink

II. Historical research

a. Historical research in early times to the 19th cent.

The origins of historical R. on Ethiopia can be traced to ancient Greek and Roman ↗historiography – first and foremost to Herodotus, who clearly identifies the country with the kingdom of ↗Meroë, i.e. ↗Nubia. Yet, beyond the threshold of the Middle Ages, Ethiopia was generally removed from the view of the outside world: more often confused with ↗India (s. "India as a name of Ethiopia") or Nubia itself, with references not always attributable to one or another country precisely, it entered a long period of isolation, scarcely illuminated by Islamic historiography and Christian Oriental narratives (e.g., the ↗*History of the Patriarchs of Alexandria*), as well as by a few itineraries, such as that by the Jewish Eldad ha-Dani, reflecting a direct or indirect acquaintance with the fabulous realm of ↗Prester John and the legends that had developed around it.

A higher degree of knowledge of the country was only reached in the 15th cent., when navigators and missionaries, traders and ambassadors made their way to actual Ethiopia, from which envoys of the local rulers had come to Europe as early as the beginning of the 14th cent. (↗Wədəm Räᶜad). This is immediately mirrored in late medieval and, on firmer grounds, humanist historiography. Of special importance here were the Ethiopian embassies led by Antonio Bartoli and, esp., Pietro Rombulo, whose own report survives partially embedded by Pietro Ranzano (d. 1492) in his *Annales omnium temporum* ('Annals of all times'), where it is harmonized, though, with that of classical and other writers (Trasselli 1941).

The historical study of Ethiopia, as we know it now, started however in Rome, in the circle of intellectuals gathered around ↗Santo Stefano dei Mori and its monastic community (cp. ↗Täsfa Ṣəyon). Their main focus was on the "Chaldean" or Ethiopic language, as a key to a most ancient literature that included the much sought after translation of the Holy Scriptures, the antiquity of which played a significant role within the discussions on the Biblical text triggered by the Reformation. Such primarily linguistic and philological issues soon entailed a keen interest in the history of Ethiopia and its long-standing Christian traditions, as revealed in the accounts of the Portuguese who had been to Ethiopia, visiting the country and exploring it (↗Alvares). Thus, at the end of his Gəᶜəz grammar (1552), Mariano ↗Vittori (s. EAE vol. 5) appended a list of the kings of Ethiopia since Biblical times (CRStor 12); and the humanist Paolo ↗Giovio (involved with the Latin translation of Alvares's book) devoted to Ethiopia a copious part of his *Historiae* (1550–52). An important figure in the second half of the 16th-cent. was Joseph Juste Scaliger, who in his *Opus novum de emendatione temporum* (1583) considered Ethiopia's classical past to be part of ancient history (Scaligerus 1629:671–704; cp. Neugebauer 1979:203).

The late 16th- and the early 17th-cent. ↗Jesuit mission, allowing closer scholarly observations in the field, definitely marked the enhancing of historical R. on Ethiopia, with special attention over the Aksumite past and its Christian antiquities up to early modern times, which were painstakingly described in a peculiar Catholic, albeit sympathetic, perspective (s. Portuguese ↗historiography). Works such as Nicolao ↗Godinho's *De Abassinorum rebus*, Pedro ↗Páez's *História da Etiópia*, Manoel de ↗Almeida's *História da Etiópia a Alta* (for long only known in the abridged version by Baltasar ↗Tellez) and Afonso ↗Mendes's *Expeditio Aethiopica*, were indeed aimed at justifying the missionary project of their order, but were also based on intensive historical R., as well as on a critical assessment of Ethiopian and European sources. Shorter historical sketches also appeared in the narratives by Manoel ↗Barradas, who left a faithful description of ↗Təgray, where he had been living for nine years, and Jerónimo ↗Lobo, especially well placed to chronicle the story of the expulsion of the Jesuits in 1633 (his *Voyage to Abyssinia* was translated into English by Samuel

↗Johnson). Almost contemporary with their writings is the *Historia eclesiastica politica, natural, y moral*, by the Spanish Luis de ↗Urreta – a largely far-fetched account of Ethiopia's religion and history.

With the departure of the Jesuits from Ethiopia, historical R. on the latter moved back to Europe, where the results of their intelligent and assiduous exploration of the country – far ahead of the times – provided the grounds to any further discussion about its history. The scholarly bias for the no longer fabulous realm of Prester John was resumed by German and Dutch scholars who were impressed, again, by the antiquity of Ethiopia's religious customs and literature. In 1671, Dietrich Lüders published his *De historia imperii Abyssini*. The achievements of two other German scholars, Johann Michael ↗Wansleben and, particularly, Hiob ↗Ludolf, are also worth mentioning: for their most ambitious historical works they still had resorted to the only source then available in Europe – the monastery of Santo Stefano dei Mori. This was soon to cease to be the centre of Ethiopian studies, which shifted, accordingly, to northern Europe – to be cultivated among Germans and Anglo-Saxons.

In his masterly *Histoire de l'Église d'Alexandrie*, Wansleben touches quite often upon Ethiopian matters, trying to clarify the position of the Ethiopian Church within and vs. the Alexandrian jurisdiction (Vansleb 1677). Thanks to the help of the famous ↗Gorgoryos of Mäkanä Śəllase, Ludolf authored two milestones of ↗Ethiopian studies: the *Historia Aethiopica* (LudHist) and the relevant *Commentarius* (1691). In both of them he used an impressive amount of Ethiopic documents, chiefly ↗manuscripts, through which he was able to offer both a detailed chronology of the Ethiopian kings, from the Aksumite times to his own, and a critical presentation of the major landmarks in the history of the country, by which he definitely contributed to the demise of Prester John's mystique (e.g., Ludolf 1691: 232).

At the end of the 18th cent., James ↗Bruce took to England an important collection of ↗manuscripts (now in the ↗Bodleian Library). In 1789 he published his *Travels* (BruNile), which contain sections on Ethiopian history and the Jesuit mission. Remarkably enough, his presentation of the facts was also based on accounts provided by oral informants met during his stay at ↗Gondär.

The 19th cent. witnessed a new blossoming of historical R. on Ethiopia, owing to at least two important factors: the intensified ↗explorations into the Horn of Africa, whence manuscripts and documents were brought to Europe, and the development of philological skills (↗Philology) that allowed these materials to be treated in proper historical terms.

Among the travellers who contributed to historical R., as well as to the hunt for monumental and literary sources, a pioneer was Henry ↗Salt. His account, *A Voyage to Abyssinia* (1814 = SalTrav), provides an insight into Ethiopia's royal history by using European (including Greek and Latin), Ethiopic and Arabic sources (SalTrav 457–85). More in keeping with the familiar issues of early 19th-cent. European historiography and its self-confident tone, Arnauld d'↗Abbadie's *Douze années de séjour dans la Haute Éthiopie* (1868 = AbbSéjour) is not only a record of his travels across the country in the 1840s, but also a pessimistic reflection on the "decay" of the Christian kingdom and society as seen through such major changes as the rise of the ↗Yäǧǧu dynasty, for which he offers one of the first historical accounts (AbbSéjour vol. 1, 125ff.). *The Highlands of Aethiopia* (1844 = HarAeth) of William Cornwallis ↗Harris, head of a British diplomatic mission to King ↗Śahlä Śəllase, offered a perceptive sketch of the long historical period from the reign of ↗ᶜAmdä Ṣəyon to the wars against the Muslims of ↗Aḥmad b. Ibrāhīm al-Ġāzī (HarAeth, vol. 2, 231ff.; vol. 3, 1ff.). Also remarkable was the work of the German traveller Eduard ↗Rüppell, who took an important collection of manuscripts to Germany and did historical and archaeological research (cf. Rüppell 1838–40).

Scholars then began to concentrate also on other groups than the Christian Amhara and Təgrəñña-speakers who had been, until then, the traditional focus of historical R. Charles Tilstone ↗Beke wrote an interesting opuscule on the origin of the ↗Oromo (Beke 1848). In the early 20th cent., ↗Aṣmä Giyorgis Gäbrä Mäsiḥ completed his *Yägalla tarik*, a lengthy investigation into the history of the Oromo people (BTafA); slightly later, the Austrian Friedrich Julius ↗Bieber wrote a pioneering monograph on the kingdom of ↗Käfa (1920–23). This contributed to the broadening of the perspectives on Ethiopia and its ethnic, cultural and religious traditions, among which Islam has since started to feature prominently. Thus, other topics were to be added later, e.g., the history of ↗Harär (↗Cahagne; ↗Paulitschke) and of the ↗Betä Ǝsraᵓel (Joseph ↗Halévi).

In European academic institutions, Ethiopian studies in general and historical R. in particular took on a definitive shape thanks to August ↗Dillmann, a Biblical scholar who typified the idea of philology as both textual criticism and historical reconstruction of the past from (written) sources. Next to his outstanding contributions to grammar and lexicography, between 1878 and 1884 he wrote a series of (still useful) essays on Aksumite history, as seen through Greek and Ethiopic literary and epigraphic evidence (local ↗inscriptions were published and commented upon by David H. ↗Müller in 1894), and on the Emperors ↗ᶜAmdä Ṣəyon I and ↗Zärᵓa Yaᶜəqob, of whose then still unpublished ↗chronicles he made extensive use. In 1896, the book by Theodor ↗Bent on the archaeology and history of Aksum appeared (with an epigraphic chapter contributed by Müller).

In the second half of the 19th cent., the availability of historical sources in Ethiopic, Arabic and European languages became a primary need for western scholars concerned with the Horn of Africa, who started editing them according to the philological standards of their times. This work was carried on, amongst others, by René ↗Basset, Francesco ↗Béguinot, Camillo ↗Beccari, Carl ↗Bezold, Carlo ↗Conti Rossini, Ignazio ↗Guidi, Francisco Maria ↗Esteves Pereira, Enno ↗Littmann and Jules ↗Perruchon. Detailed catalogues of Ethiopic manuscripts – a few of them quite relevant to historical R. – kept in the major European ↗libraries had been published in the meantime, by Dillmann himself, Antoine d'↗Abbadie, Hermann ↗Zotenberg and Stephen ↗Wright. On the Islamic side, in 1898, the German Assyriologist Felix Ernst Peiser translated into German the Arabic account of ↗Ḥasan b. Aḥmad al-Ḥaymī, and the Austrian explorer and ethnographer Philipp Paulitschke translated into French, with Antoine d'Abbadie, the ↗*Futūḥ al-Ḥabaša*.

b. Historical research in the 20th cent.

Modern historical R. in Ethiopia took off with works such as *Yäᵓityopya ḥəzb tarik* by *aläqa* ↗Tayyä Gäbrä Maryam, which had been commissioned by *aṣe* ↗Mənilək II. Further pioneer writings were those by ↗Täᵓammərat Amanuᵓel, ↗Gäbrä Ḥəywät Baykädañ, ↗Aṣmä Giyorgis and ↗Täklä Ṣadəq Mäkʷəriya. Among those produced by European scholars, a remarkable work was that by the Frenchman Georges Douin. His chronicle of *ḫidīw* ↗Ismāᶜīl Bāšā sheds light on the political history in the Horn of Africa during the 19th cent. (DouinIsm).

History reached an academic status in Ethiopia with the creation of the Department of History at Ḫaylä Śəllase University (↗Addis Ababa University) and the opening of the ↗Institute of Ethiopian Studies (cp. Sylvia ↗Pankhurst). Since the first ↗International Conferences of Ethiopian Studies in 1959, research has flourished, abroad and in Ethiopia.

Among the foreign centres which have pioneerd the fostering of historical R. were those in the United States of America (Michigan State University and the University of Illinois), Italy (Istituto Universitario Orientale, later Università di Napoli "L'Orientale", Università degli Studi di Firenze) and Great Britain (↗School of Oriental and African Studies). In Russia Sevir ↗Chernetsov (s. EAE vol. 5) produced a series of narratives of Ethiopian royal history; in Sweden Sven Rubenson has led an ambitious project of publication of 19th- and 20th-cent. political correspondence and treaties (RubActa). Ethiopian historians who studied abroad, such as Merid Wolde Aregay, Bairu Tafla and Taddesse Tamrat, have helped to enhance the standards of historical R. at home.

As a result, a wide range of new topics have been added to historical R. Oromo studies have been further developed at the hand of Mohammed Hassen and Merid Wolde Aregay and the historiography of the ↗ᶜAfar, ↗Harari, ↗Gurage, ↗Sidaama and ↗Omotic peoples has also been started. Among new themes explored in recent decades are urban history, ↗land tenure and agrarian issues, Islam, foreign missionary activities in Ethiopia, slavery and art (Bahru Zewde 2000; Crummey 2001). The colonial history of Eritrea and the social and political developments in this country after independence have also attracted scholarly attention (Crummey 1990: 112f.). Art history has recently also gathered interest as demonstrated by the periodical celebration, since 1986, of an International Conference on the History of Ethiopian Art.

Historical R. has been disseminated through a growing number of publications. Chief among them are academic journals such as the ↗*Journal of Ethiopian Studies*, ↗*Northeast African Studies*, ↗*Abbay*, ↗*Aethiopica*, ↗*Annales d'Ethiopie*, ↗*Rassegna di Studi Etiopici* and ↗*Quaderni di Studi Etiopici*. Monographic series have also contributed to the spread of scholarship, such as ↗*Aethiopistische Forschungen* and the ↗ *Corpus Scriptorum Christianorum Orientalium*.

Red.

c. Arabic studies on Ethiopian history

In the late 19th cent., classical written Arabic was revived as a tool for communication, general knowledge, and politics. The introduction of the printing press and the opening of publishing houses, combined with new ideas of modern nationalism and the emergence of a modern-educated general public, ushered in the appearance – first in ↗Egypt and Lebanon – of newspapers, journals, and a variety of books, including those concerned with secular matters. In the early 20th cent., there appeared the first modern books on Ethiopia, a country that had attracted Islamic interests since ancient times. A survey of the vast literature that has been produced in Arabic since the start of the 20th cent. reveals elements of continuity and change.

In pre-modern Islamic literature reflecting historical R. on Ethiopia two contradictory ideas may often be found: the legitimacy of the Ethiopian monarchy, in spite of its Christianity; and aspiration to a Muslim *naǧāšī* and the installation of an Islamic state. Medieval and early modern Arabic ↗historiography remained the essential reference for many modern authors, providing them not only with a necessary set of sources, but also with a general intellectual framework where Ethiopia and its relations to ↗Islam and the Arab world were inserted. The introduction of modern nationalist terminology, the creation of modern Arab states, and other developments in 20th-cent. Arab history added new perspectives and attitudes, but also reflected this old Islamic dilemma.

The first stage in modern Arabic historiography can be described as liberal and moderate. The first three decades of the 20th cent. were marked by the rise of secular Egyptian as well as Arab nationalist movements, which encouraged Islamic–Christian cooperation. The literature produced on Ethiopia during this period mostly reflects an acceptance of Ethiopia by Oriental peoples. It even reveals some admiration for its exceptional victory over colonialism. Three pioneering works contributing to that trend were as follows: in 1902–03, *šayḫ* Aḥmad Ḥifnī al-Qināᵓī of al-Azhar Mosque produced *al-Ǧawāhir al-ḥisān fī taᵓrīḫ al-Ḥubšān* ('The Beautiful Jewels in the History of the Ethiopians'), perhaps the first modern and moderate Islamic book on Ethiopia. The book recalls the medieval praises of *ḥabašī* Muslims, and combines them with a description of ↗Mənilək II as a great emperor, and a successor of the righteous ↗*naǧāšī*. In Cairo 1906, Tadrūs Ramzī published *Ḥāḍir al-Ḥabaša wamustaqbaluhā* ('Ethiopia's Present and its Future'). It was the first full size book on Ethiopia by an Egyptian Copt, and was full of praise for Mənilək. Tadrūs heralded an important dimension in modern Arabic historical R. that has persisted in Egypt to this day: modern Copts working to enhance the positive image of Ethiopia in Egypt (later Coptic authors who wrote in a similar vein are: Mirit Buṭrus Ġālī, Murād Kāmil, Zāhir Riyāḍ, and Buṭrus Buṭrus Ġālī). Within that first stage of liberalism and acceptance, perhaps the most important book was Ṣādiq al-Muᵓayyad al-ᶜAẓm's *Riḥlat al-Ḥabaša* ('The Voyage to Ethiopia'), which can be classified as representing moderate Islamic attitudes. It was first published in Turkish in Istanbul (1905), and then in Arabic in Cairo (1908). The book is a diary of a Syrian-born general sent by the Ottoman *sulṭān* to Mənilək in 1904. It portrayed Ethiopia as the land of a great

Christian, Oriental, neighbourly king, a man who defeated the colonialists and was also just and tolerant towards his Muslim subjects. The *Riḥlat al-Ḥabaša* became the most influential book on Ethiopia up to the 1930s.

The second stage began with the "Grand Crisis" of the 1930s. It saw the rise of anti-liberal militant Arabism and Islam in the Middle East, and the simultaneous fall of Ethiopia to Mussolini's fascism. Though the proponents of liberalism in the Arab world did not fade away – authors in Egypt and the Fertile Crescent continued writing in defence of Ethiopia and its history, e.g., Aḥmad Luṭfī Ǧumᶜa, and ᶜAbdallāh ᶜInān, the stronger voice of the 1930s, began depicting Ethiopia as an enemy of Islam. The Syrian Šakīb Arslān, arguably the most persistent supporter of Islamic-Arab emancipation between the two world wars, produced dozens of articles describing Ethiopia's sins against its Muslims, and recalling the old idea of Ethiopia's illegitimacy. Yūsuf Aḥmad's book, *Islām wa-l-Ḥabaša* ('Islam and Ethiopia', Cairo 1935), was written in the same vein, and replaced al-ᶜAẓm's *The Voyage to Ethiopia* as perhaps the most quoted source in Arabic writings on Ethiopia to this day. After the Italians invaded Ethiopia, the Syrian Taysīr Zabiyān al-Kaylani toured the country and wrote *al-Ḥabaša al-Muslima* ('Muslim Ethiopia', Damascus 1937), criticizing Ethiopia's historical record and celebrating the victory of Islam under Mussolini.

A third stage in the development of Arabic historiography can be discerned in the 1960s and 1970s. The period of "Nasserism" in the Middle East was marked by the rise of secular, revolutionary Arabism at the expense of both old constitutional monarchism and political Islam. The revolutionary Arab interest in Ethiopia focused mainly on the Eritrean struggle for independence, itself revolving, at that time, around the concept of Eritrea's Arabism. With regard to Ethiopia, Arabic historiography from that period mostly depicted it as reactionary, imperialistic, "Zionistic", and backward; often describing it in terms of secular Arab socialist rather than religious terminology. Among the dozens of books published in this spirit were: Rāšid al-Barrāwī, *al-Ḥabaša bayna l-iqṭāᶜ wa-l-ᶜaṣr al-ḥadīṯ* ('Ethiopia Between Feudalism and Modern Times', Cairo 1961); Mumtāz al-ᶜArīf, *al-Aḥbāš bayna Maᵓrib wa-Aksūm* ('The Ethiopians Between Marib and Aksum', Baghdad 1975); ᶜUṯmān Ṣāliḥ Sabbe, *Taᵓrīḫ al-Īrītriyā* ('History of Eritrea', Beirut 1974); Muḥammad Fāᵓiq, *ᶜAbdannāṣir wa-ṯ-ṯawra al-Ifrīqīya* ('ᶜAbdannāṣir and the African Revolution', Beirut 1980).

A fourth stage of Arabic historiography began in the early 1980s, following the demise of secular Arab nationalism and the reemergence of Islam as a political doctrine. Within this stage, Ethiopia – combining now, paradoxically, the images of Christianity and communism – is often depicted as the ultimate enemy of Islam. Such a perspective appears in: Muḥammad Raǧab ᶜAbdalḥalīm, *al-ᶜAlāqāt as-siyāsīya bayna muslimī z-Zaylaᶜ wa-naṣārā l-Ḥabaša fī l-ᶜuṣūr al-wusṭā* ('The Political Relations Between the Muslims of Zaylaᶜ and the Christians of Ethiopia in Medieval Times', Cairo 1985); ᶜAbdalfattāḥ ᶜAlīyān, *al-Hiǧra ilā l-Ḥabaša wa-munāqašāt qaḍīyat Islām an-Naǧāšī* ('The *Hiǧra* to Ethiopia and the Arguments about the Issue of the *Naǧāšī's* Islam', Cairo 1987); and ᶜAlī š-Šayḫ Aḥmad Abū Bakr, *Maᶜālim al-Hiǧratayn ilā arḍ al-Ḥabaša* ('Aspects of the Two *Hiǧras* to Ethiopia', Riyad 1993).

Throughout all of the phases described above, the voice of moderation and acceptance of Ethiopia, which had emerged in the beginning of the 20th cent., has persisted (e.g., ᶜAbdarraḥmān al-Ḥuṣṣ, *Iṯyūbyā fī ᶜahd Hayla Silāsī l-awwal* ('Ethiopia in the Period of Ḫaylä Śəllase I', Beirut 1960); Fatḥī Ġayṯ, *al-Islām wa-l-Ḥabaša ᶜabr at-taᵓrīḫ* ('Islam and Ethiopia throughout History', Cairo 1967).

Middle Eastern Arabic historiography on Ethiopia has indeed remained polemical. It seldom followed Western standards of R., and Arab writers and historians have rarely participated in the work of the international community of ↗ Ethiopian studies.

In the last decades of the 20th cent., written Arabic has gradually begun to be used among Ethiopia's Muslims, especially those living abroad. A pioneering book was clandestinely published in 1960 by Abū Aḥmad al-Iṯyūbī (pseudonym), *al-Islām al-Ǧarīḥ fī l-Ḥabaša* ('The Injured Islam in Ethiopia'). Borrowing from Arabic Middle Eastern sources it retold Ethiopia's old sins against its Muslims, and also described new ones committed by ↗ Ḫaylä Śəllase I. The advancement of Arabic into Ethiopia has gained revolutionary momentum in the 1990s, and a lengthy historiographical work written in Arabic by an Ethiopian Muslim was recently published (Sayyid b. Muḥammad Ṣādiq, *Manhal al-aṭšān fī taᵓrīḫ al-Ḥubšān*, 'The Spring of the Thirsty on the History of the Abyssinians', Sanᶜāᵓ 1422 H. [2001 A.D.]). However, it is too early to assess the impact Arabic will have on local Islamic historiography. In Eritrea, the official recognition of Arabic as a national language fostered the birth of an Arabic historiography whose most outstanding example is Muḥamad Uṯmān's work (MuhTarih).

III. Linguistic research

From the beginning of ↗Ethiopian studies, languages have been an important object of R. The first European grammars and lexicons of ↗Gəᶜəz and ↗Amharic by Mariano ↗Vittorio, Jacob ↗Wemmers (s. EAE vol. 5), and Hiob ↗Ludolf appeared as early as the 16th–17th cent. (Vittorio 1552; Ludolf 1661, 1698a, 1698b; cp. Raineri 1981). The scholarly interest in the languages of Ethiopia was fuelled in the 19th cent. by the flourishing of Oriental studies – Semitic, Biblical and Christian Oriental – by the works of many renowned Semitists, Orientalists and Biblicists, who in the course of time turned their attention *inter alia* – but in some cases, primarily – to the languages of Ethiopia and Eritrea: among them, *in primis* ↗Dillmann, together with ↗Ewald, ↗Trumpp, ↗Praetorius, ↗Halévy, ↗Guidi, ↗Nöldeke. R. on the ↗Ethio-Semitic languages as part of ↗Semitic studies has not ceased ever since, being prosecuted in the early 20th cent. by the generation of ↗Littmann and ↗Brockelmann, in turn succeeded by that of Marcel ↗Cohen and ↗Polotsky and their respective schools, including, e.g., ↗Leslau, ↗Strelcyn, ↗Rodinson, ↗Tubiana, David Cohen on the one side, and Edward Ullendorff, Gideon Goldenberg, Shlomo ↗Raz, Olga Kapeliuk on the other, as well as by a number of other scholars from ↗Germany, ↗Italy and other countries (just to mention a few names, ↗Mittwoch, ↗Klingenheben, Werner Diem, Ewald Wagner, Paolo Marrassini).

At the end of the 18th–19th cent. more material on the Ethiopian and Eritrean languages – now including also non-Semitic languages – became accessible to European scholars, thanks to travellers who as a rule collected and published texts, grammar notes, and word lists of the local languages (s., e.g., ↗Beke for, among others, ↗Agäw, ↗Gumuz, ↗Harari, ↗Käfa, ↗Yäm; ↗Bruce for ↗Gafat and other languages; ↗Burton for Harari; ↗Cecchi for Käfa, Yäm, ↗ᶜAfar; ↗Chiarini for Čaha; ↗Lefebvre for ↗Təgrəñña, Amharic, ᶜAfar; Munzinger for ↗Təgre and ↗Nara; Seetzen for Amharic; ↗Salt for Amharic, Təgrəñña, Nara, Kunama, Gumuz, Agäw; ↗Robecchi-Brichetti for Harari and ↗Oromiffaa; ↗Paulitschke for Harari, Schuver for Šinašša, etc.). Also missionary activity has been important in this regard, because it has involved producing ↗Bible translations and religious literature in the local languages and therefore favoured missionaries' interest in language studies (s. ↗Flad for Amharic and Agäw, Rodén for Təgre [s. ↗Evangeliska Fosterlands Stiftelsen], ↗Gobat for Amharic, ↗Mayer for Amharic, Oromiffaa, ↗Soddo, ↗Waldmeier for Agäw). Frequently, travellers and missionaries not only published the collected material, but also elaborated it into lexicons and grammars (s. Antoine d'↗Abbadie for Amharic, ↗Bieber for Käfa, ↗Isenberg for Amharic and ᶜAfar, Krapf for Oromiffaa, ↗Massaja for Amharic and Oromiffaa, Karl ↗Tutschek for Oromiffaa etc.).

The ↗manuscripts and publications that became available to European scholars through the activities of travellers, missionaries, and also military (for the latter cp., e.g., Marrassini 2004) made possible further descriptive and comparative studies: consider, e.g., in the first place the productive activity of Praetorius, who published the first comprehensive grammars of Təgrəñña, Amharic, and Oromiffaa.

The local development of linguistic R. was motivated by the fact that the first step in acquiring traditional education was to learn Gəᶜəz. This resulted in appearing of ↗*säwasəw*, short grammatical descriptions and glossaries of Gəᶜəz. This tradition continued well into the 19th–20th cent., when a number of *säwasəw* were compiled and published by such eminent Ethiopian scholars as *aläqa* ↗Tayyä Gäbrä Maryam, *abba* ↗Täklä Maryam Sämharay and *abba* ↗Yaᶜəqob Gäbrä Iyäsus.

With the strengthening of ties between Ethiopia and Europe, the role of Ethiopians and Eritreans in linguistic R. changed. Young Ethiopians sent abroad for education often became informants of European scholars (a tradition starting already with Ludolf whose informant was *abba* ↗Gorgoryos), as *däbtära* ↗Kəflä Giyorgis for Guidi or ↗Näffaᶜ Wäd ᶜƎtman for ↗Littmann. In addition, several modern grammars and lexicons compiled by native speakers appeared in the beginning of the 20th cent., e.g., *Grammatica della lingua amarica* by ↗Afäwärq Gäbrä Iyäsus (Afevorq 1905).

The pioneer of linguistic field R. on non-Semitic languages of the Ethio–Eritrean area at the end of the 19th–beginning of the 20th cent. was ↗Reinisch. His descriptive works on Agäw languages (e.g., ↗Bilin), ↗Sāho, ᶜAfar, Kunama, Beǧa, Käfa, etc., a result of his two travels to Africa, are at the same time important contributions to comparative Hamito-Semitic studies. The tradition of combining field R. with qualitative linguistic analysis was continued by such outstanding scholars as ↗Mondon-Vidailhet and Cohen (Amharic and Gurage), Littmann (Tәgre), ↗Conti Rossini (Semitic and mostly non-Semitic languages of Ethiopia); later by ↗Cerulli (Harari, non-Semitic languages), ↗Moreno (primarily non-Semitic languages), Leslau (Ethio-Semitic), ↗Plazikowsky-Brauner (Cushitic), and many others.

On the basis of collected material, classification studies made considerable progress, in which the Ethiopisants played a role of no small importance. The first overview and typological evaluation of Ethio-Semitic languages appeared in *Études d'éthiopien méridional* by Cohen (1931). A decade later his comprehensive study (1947) provided the first attempt at reconstructing regular phonetic correspondences between languages of the ↗Afro-Asiatic macro-family. An important contribution into establishing of ↗Nilotic languages as a linguistic unit, separate from ↗Hamitic (thus contesting their classification according to Meinhof 1912), was made by Conti Rossini (1926). Greenberg's classification studies gave a new impact to African linguistics in general (including languages of Ethiopia) and, *inter alia*, established ↗Nilo-Saharan studies, proposing genetic unity of Nilo-Saharan languages (Greenberg 1963).

Certain progress in linguistic R. of most widely used Ethiopian languages has been achieved in recent times. For Amharic, Tәgrәñña, Oromiffaa, Somali, ᶜAfar, comprehensive grammatical descriptions (e.g., Baye Yimam 1993/94; Bliese 1981; Griefenow-Mewis 2001; Leslau 1995; Saeed 1999) and lexicographical works have appeared (e.g., Agostini – Puglielli – Ciise Moxamed Siyaad 1985; DTWDic; Gragg 1982; KaneDic; Parker – Hayward 1985; TilDic; Saalax Xaashi Carab 2004; also for Tәgrәñña, KaneTDic).

Synchronic R. on Ethiopian and Eritrean languages was often motivated by comparative studies. This explains why for many Ethiopian languages the most reliable lexicons are etymological dictionaries (e.g., Leslau 1979; LesCDic; Hudson 1989; Sasse 1981; Appleyard 2006), and descriptive works are diachronically oriented (e.g., Hetzron 1977). Nevertheless, comparative and classification studies are still by no means completed. Suffice it to say that the status of ↗Omotic languages as an independent branch of ↗Afro-Asiatic is still debated (for a brief overview of the discussion, s. Wolff 1981; Bender 2000:1f.). The major overviews (Hetzron 1972 for Ethio-Semitic, 1980 for Cushitic, Tosco 2000 for Cushitic, Bender 1996 for Nilo-Saharan, 2000 and 2003 for Omotic) are, as their authors emphasize, to be regarded as preliminary reports, often outlining problems that still await solutions.

At the same time, the linguistic diversity of Ethiopia makes it an ideal field for studies in typology, areal studies (cf. ↗Ethiopian Language Area), and sociolinguistics (cf., e.g., Meyer – Richter 2003). Recently, attention of both Ethiopian and western scholars has been drawn to the phenomenon of language death in Ethiopia, and to the necessity of recording the endangered languages (s. Brenzinger 1998). In this connection, the activity of the ↗Summer Institute of Linguistics, under whose auspices numerous (socio)linguistic R. projects in Ethiopia and Eritrea are carried out, cannot be underestimated.

An important factor that influenced language studies in Ethiopia was change in the ↗language policy of the Ethiopian state, which after 1974 proclaimed its aim to give every nationality the right to use its language. This necessitated creation of alphabets for unwritten languages and introducing a large number of languages into elementary education. This task was entrusted to the ↗Ethiopian Language Academy, which in 1997 was integrated into ↗Addis Ababa University as the Ethiopian Languages Research Centre. No less significant contribution to promoting linguistic R. in Ethiopia was rendered by the Institute of Language Studies within Addis Ababa University. Today, the number of qualified linguistic studies by Ethiopian authors is steadily growing.

Although several collections of articles on Ethiopian languages (BendLang; BendNonSLang), as well as monograph series on many major and minor Ethiopian languages, such as *Kuschitische Sprachstudien* (by Buske and then by Köppe) and *Nilo-Saharan* (by Köppe), appeared in the end of the 20th cent., the only reference work containing updated information on all recorded Ethiopian and Eritrean languages is *Ethnologue* (e.g., Gordon 2005). After the very good systematic bibliography by Leslau (1965, only for Ethio-Semitic), subsequent contributions have to be traced here and there in the annual and periodical bibliographies, mainly in the indispensable systematic linguistic bibliography by UNESCO, covering all the languages of the world (cp. Permanent International Committee of Linguists 1949, 1951, for the years 1938-47). This bibliography can now be implemented with the yearly bibliographical reports by Rainer Voigt published in the journal ↗*Aethiopica* since 1998 (Voigt 1998ff.). For further reference works on individual languages and language groups s. the relevant entries.

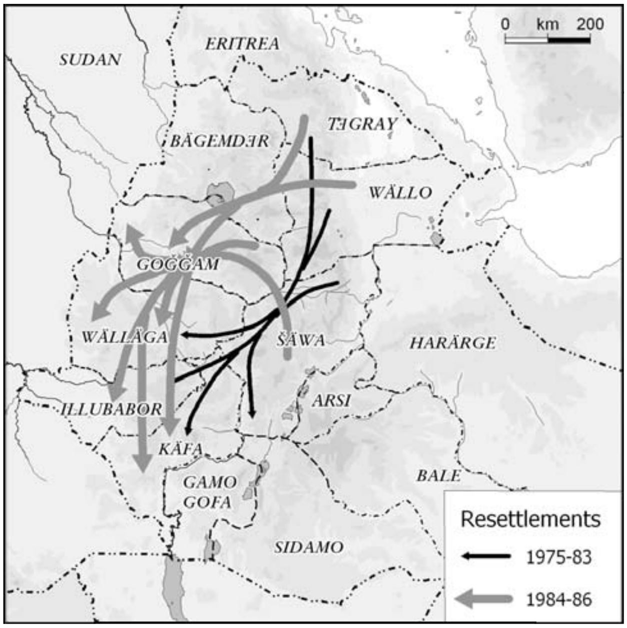
Red.

Resettlement

R. schemes can be divided into ad-hoc R., occuring on the basis of individual initiatives without central co-ordination (↗Migrations) as well as organized R. implemented through centrally coordinated government policies.

The earliest, pre-1974, Ethiopian R. schemes were both ad-hoc and organized (Dessalegn Rahmato 1989: 670; Pankhurst 1989: 319). Organized forms were based on "rationalizing" land use on government-owned land in order to raise state revenue as well as to provide additional resources to the hard pressed northern peasantry (↗Land tenure). After the collapse of the imperial government in 1974, R. schemes were expanded (↗Revolution). It was implemented as a means of assisting poor, famine-stricken and landless peasants (↗Famines), relieving the employment crisis in the urban areas, accelerating the sedentarization of transient populations, promoting both resource conservation and improved agricultural practices in densely populated areas, bringing "under-utilized" lands under cultivation, establishing a paramilitary defence force on the Ethio–Somali border, and rehabilitating returning Ethiopian refugees and displaced persons (Dessalegn Rahmato 1989: 684). The explicit reason for R. was to better ensure the material well-being of the peasants by taking them from famine-affected and over-populated areas and relocating them in the presumed "virgin" or "under-utilized" fertile lands of the south, south-west, and western peripheral parts of the country.



In the years between 1975 and 1983, ca. 80,000 peasants from ↗Wällo, ↗Təgray, and ↗Šäwa were resettled in the western and south-western regions of ↗Käfa, ↗Illubabor, ↗Wälläga, and Šäwa (Hurni 1990: 97f.). The operation in this phase was relatively better planned than later campaigns and implemented in small steps.

Considering R. as a lasting solution for several problems, the military government of Ethiopia launched a massive emergency R. program after the 1984–85 drought and famine. The government's initial plan was to resettle 300,000 families, consisting of about 1.5 million people, in two phases (Pankhurst 1990: 126; Dessalegn Rahmato 1989: 696). During the first phase, it was planned to resettle 50,000 households in the sparsely populated areas of Wälläga, Illubabor and Käfa through an 'integrated' (Amh. ሰግሰጋ, *səgsəga*) R. approach. In the second phase, 250,000 households were to be moved to the western lowland areas in ↗Mätäkkäl, ↗Asosa, and ↗Gambella through a 'conventional' (Amh. መደበኛ, *mädäbäñña*) R. approach. The former approach conveys the idea of insertion or filling empty spaces within already existing traditional subsistence agricultural settlements, whereas the latter approach designates large areas of "unoccupied" land to be allocated to the resettlers, which was found to be more challenging.

Within the short time span of a year – from December 1984 to December 1985 –, around 600,000 people (some 203,000 families) were resettled from Wällo, Təgray and Šäwa to areas in ↗Goǧǧam, Wälläga, Käfa, and Illubabor. Another 10,000 were moved by January 1986 (Kloos – Aynalem Adugna 1988: 148). The latter source indicates that fewer than 10,000 persons were resettled between 1986 and 1988, in spite of the spectre of another famine in 1987 and early 1988.

Due to lack of proper planning, the resettlers suffered multiple problems both of material and of psychological kind. Environmental issues also influenced emergency R., as peasants were relocated not only for rehabilitation purposes but also to promote the conservation of resources in high-density population areas and the regeneration of over-utilised lands (Dessalegn Rahmato 1989: 695). The scheme was considered as an opportunity for socialist transformation, accelerating the pace of mechanized agricultural collectivisation in the new locations. The planning of the scheme was inadequate due to hasty decision-making. It was a disorganized enterprise plagued by confusion and mismanagement. The participation of the resettlers in decision-making was almost non-existent. Affected people were not given accurate information about the program. R. areas frequently posed health problems to populations unaccustomed to the new environments. The inadequately planned schemes were therefore carried out at severe human cost. The resettlers underwent distressing, painful and traumatic experiences which brought about the break-up of long established social structures, the dismantling of production systems, and the destruction of traditional survival strategies. It can be argued that the schemes violated the basic human rights of those displaced.

Professional assessment of the environmental, economic, and socio-cultural features of R. did not occur. At the local level, R. planning was left in the hands of the political cadres who were assigned responsibility for each new R. village. While the emergency R. schemes were implemented, the indigenous host populations were not properly consulted. The hasty site selection, lack of qualified and skilled experts in the planning, lack of infrastructure and settler-support systems, as well as management and financial problems, and the resultant inability of settlers to become self-sufficient, resulted in a failure to achieve the objectives of the program. Most of the R. schemes failed to become self-sufficient and self-reliant. Persistent low production, the physical and mental difficulties of the resettlers to adapt to the new environment, as well as high rates of return migration right from the start, were the result of hasty planning and implementation. A summary of the death and desertion of the resettlers in the receiving areas (without including deaths in transit) in the years 1985 to 1987 was reported by the "*National Study Committee of Receiving Provinces* (NSCRP)" established in 1988 under the auspices of the Council of Ministers of the Military Government. According to the Committee's study estimate, out of the total 594,190 resettlers involved in both the conventional and integrated R. schemes, 116,768 of them deserted and/or died – desertions were estimated to be 83,800, and deaths 32,800 (NSCRP 1988: 18). Considerable numbers of people trecked to their areas of origin or crossed international borders to become refugees. 103,000 resettlers returned to northern Ethiopia from different R. sites, and another 34,000 resettlers returned to the Southern Šäwa regions of Kambaata and Hadiyya (Elias Negassa 1992: 4).

The deaths and desertions of resettlers were described (Elias Negassa 1992) as one in which "… 52,000 households deserted the large-scale farms; of these 7,000 people died at the rest trecked to their areas of origin or crossed international borders to become refugees. From the integrated settlements, 4000 heads of households escaped and 4,000 died". He further notes that approximately 103,000 resettlers returned to northern Ethiopia from different R. sites, and that another 34,000 resettlers have returned to the southern Šäwan regions of Kambaata and Hadiyya (Elias Negassa 1992: 4). After the political change of 1991, violent ethnic conflicts flared up between resettlers and hosts in several R. areas, thus adding political insecurity to the already critical problems of socio-cultural and economic survival.

Therefore, the state-sponsored R. scheme of the 1980s brought about complex changes in the socio-cultural, economic, and environmental conditions in the R. areas. The resettlers from the highlands, the host community, and the environment were all adversely affected by these schemes.

Despite the multi-dimensional negative effects of past schemes noted above, the post-1991 government, while attempting to address the issues of food shortage and overpopulation in various parts of the country, also considered R. as one of the quickest and most important ways to achieve food security in the short and medium term, this time based on voluntary participation and partially funded by international donors. The short-term R. plan is to resettle 440,000 smallholder farming households (ca. 2.2 million people) in four regional states (Amhara, Oromiyaa, Təgray, and Southern Nations, Nationalities, and People's Region [SNNPR]) within three years (2003–05). The operation of the program has been underway since 2003 and is having a major impact on local economies and population dynamics in the 'host' regions.

Wolde-Selassie Abbute

Resistance

In the context of Ethiopian history, the term R. is used for the Ethiopian and Eritrean national opposition to the ↗Italian war of 1935–36 and the subsequent occupation period which ended in 1941 (↗War of Liberation).

Opposition started at the war fronts, but took definite shape during the ↗Africa Orientale Italiana period (May 1936–April 1941). The patriotic R. transformed itself from [1] semi–conventional warfare (May 1936–February 1937) to [2] guerrilla warfare (February 1937–April 1941).

The major fighting backbone during stage [1] was the war-weary upper nobility and the remnants of the Ethiopian ↗army, whereas in stage [2] a mass-based popular struggle was led by chiefs of the lower nobility or of low social or ↗*šəfta* status who were more committed and determined than the weak and compromise-prone leadership of stage [1].

Aṣe ↗Ḫaylä Śəllase I could be considered as the initiator of the R. Soon after the defeat of the Ethiopian army at the war fronts in early April 1936, he ordered his warriors to oppose enemy rule in the form of guerrilla warfare. Before leaving the country for exile in early Mai, he set up a Provisional government (at ↗Gore), first headed by *bitwäddäd* ↗Wäldä Ṣadəq Goššu and later by *ras* ↗Ǝmməru Ḫaylä Śəllase. R. formations evolved and spread throughout the country, from the Täkkäze in the north to the Awaš-Omo in the south.

Apart from the high order and their desire to be independent, the Ethiopians had several reasons for R. The major ones were the incompatibility of the Ethiopian tradition of ↗land tenure with Italy's policy of colonial settlement (↗Colonialism), Italy's undermining of Ethiopian culture and civilization, its racism and its inefficient administration.

Däǧǧazmač Mängäša Ǧämbäre with fighters in Dangəla, Goǧǧam; from Seltene Seyoum 1999: 352

From the onset, the Ethiopians regarded the Italians as invaders who had come to seize their land. For their part, the enemy tried to impose military discipline over a people who had been known for their independent character. The Italian repressive measures and Ethiopian nationalist feelings resulted in virulent struggle.

Some of the major events of the R. include the Bonayya incident (near Naqamtee, Wälläga; 26 June 1936) where the ↗*Ṭəqur anbäsa* patriots destroyed Italian planes and killed eleven officers. The Šäwan patriots led an assault to liberate ↗Addis Abäba on 28 July 1936, which remained unsuccessful because of lack of coordination. The Ethiopian attempt to assassinate the Italian viceroy, Rodolfo ↗Graziani (19 February 1937) was another major episode in which several Italian officers including the viceroy himself were wounded. This incident was followed by three bloody days in which the Italians killed several thousand Ethiopians, including many of the intelligentsia in Addis Abäba (↗Graziani massacre). The reign of terror spread to the countryside, with many Ethiopians fleeing the capital and swelling ranks of the R.

The Italians tried to legitimize the occupation through various means: adopting a policy of "divide and rule", restoring some of the collaborating nobility in their former positions to counterbalance the patriotic opposition, conducting secret negotiations with the imperial family in exile, and flirting particularly with Britain and other member states of the Geneva-based ↗League of Nations. Moreover, they used maximum military force to suppress the R. However, none of these measures quelled the R.

The R. expanded its own capacity not only in order to withstand Italy's pressure but, more importantly, the R. aimed to wear down the invaders' strength by skilfully using the rugged mountainous terrain, destroying roads and bridges, cutting lines of communication, attacking convoys, surprising garrisons and troops and, above all, applying various offensive–defensive tactics and buying time through diplomatic ploys.

Despite some attempts at coordination, the R. was unable to come up with centralized leadership. Rather, it operated at local and regional levels. The military strength of each important chief was composed of two major groups: the **ደረቅ፡ ጦር** (*däräq ṭor*), a body of experienced fighters maintained by each patriot chief, and the **መዳዴ፡ ጦር** (*mädade ṭor*), ordinary peasants liable to military service. The former were highly mobile, whereas the latter fought in their own and neighboring localities.

The R. was supported by the local population on whom the patriots depended for their supplies. Thus, the people opposed the Italians en masse, giving the R. its widespread and popular character.

The patriot chiefs boosted the R. by giving their fighters honorary titles and encouraging them to submerge their petty rivalries. The chiefs restored and upheld local administration which helped to repulse any enemy incursion into their territories. Furthermore, they coordinated the work of the so-called **የውስጥ፡ አርበኞች** (*yäwəsṭ arbäññočč*, 'inner patriots') with that of the **የውጪ፡ አርበኞች** (*yäwəčči arbäññočč*, 'outer patriots') through undercover agents who helped the R. fighters gather necessary information about enemy army movements. The agents used codes or pen names when traveling or writing. ↗Šäwaräggäd Gädle was a noted female agent. Furthermore, the R. was generally supported by an ideology associated with the restoration of the Emperor (as a symbol of unity) and the regaining of independence through him.

The patriots were poorly equipped. The arms could be either bought from merchants or captured from the enemy. Local collaborating militias, who sympathized with the movement, smuggled munitions to the patriots in the countryside. Besides, arms were smuggled into Ethiopia from the Sudan, Kenya, the Red Sea and Djibouti. More importantly, the patriots were committed to fight until liberation was achieved.

The R. struggle of the R. at home was linked with the political struggle of the exiles abroad. Ḫaylä Śəllase (in exile) was the principal connecting bridge who strengthened the link by dispatching his agents (Taddäsä Gäbrä Mädḫən, ↗Loränso Täʾəzaz, etc.) and foreigners (Paul Langrois, Paul Robert Monnier, etc.). This kept both sides informed about the development and direction of local as well as international events.

The growing strength of the R. had considerable impact on the Italian administration. Three viceroys, Pietro ↗Badoglio (May 1936), Rodolfo Graziani (June 1936 to December 1937) and Amedeo di ↗Savoia Duke of Aosta (January 1938 to April 1941), were appointed within five years. Italy was also compelled to change the commanders-in-chief of the Italian Armed Forces in ↗Africa Orientale Italiana. Italian troops were forced to remain in military garrisons, their movement becoming difficult without convoys. Gradually, the Italian administration barely extended its authority outside towns and their immediate surroundings. The countryside was left under patriotic administration. In other words, two types of administration prevailed in Ethiopia, one Italian and another Ethiopian. Though it maintained a huge army, Italy was unable to resolve the political situation in Ethiopia let alone to implement its policy of colonization, and its function was limited to guarding a garrison state.

Finally, it was the existence of a powerful R. that persuaded the British Supreme Command in London in June 1940 to decide to attack Fascist forces in Italian East Africa immediately. Their quick success was by and large due to the fact that a huge Italian force was bogged down in garrisons round the country by the R. Ḫaylä Śəllase who coordinated the R. and who commanded a small army marched into the country, while the British pushed out the Italians by their two pronged offensives. On 6 April 1941, British forces triumphantly moved into Addis Abäba and Ḫaylä Śəllase entered the capital on May 1941, to the day of the march of the Fascist forces into the same city five years earlier. He used the forces of the R. to establish quickly imperial authority and to rebuild the state.

Seltene Seyoum

Rəst

The noun R. (ርስት) is derived from the Gəʿəz verb ወረሰ (*wäräsä*, ‘he inherited’, DillmLex 897). In its most general sense it refers to a deeply felt value throughout the Amharic- and Təgrəñña-speaking lands: the right to one’s patrimony, the right to inherit the standing and property of one’s parents, both father and mother. More specifically, it refers to the inherited right to agricultural land or to land so derived (Hoben 1973; ↗Land tenure; ↗*Rim*).

Those who held land by such rights were known as ባለርስት (*balärəst*) or ርስተኛ (*rəstäñña*). One of the earliest appearances of this term is in ↗Baḥrəy’s *History of the Galla*, where it is the label for one of the ten social classes into which Baḥrəy divides Ethiopian society (Guidi in CRHist 229f.). Historically it was often found alongside the term ጉልት (*gult* or ↗*gʷəlt*) as in the phrase ርስትና፡ ጉልት (*rəstənna gult*, ‘R. and *gult*’), the phrase being a byword for land matters in general, as opposed to spiritual (for example, in the confrontation between *aṣe* ↗Täklä Haymanot I and a group of monks, who pressed the ruler to issue a declaration recognizing their sectarian doctrinal claims. The ruler refused on the grounds that matters of faith were not like matters of property, *rəstənna gult* (BassÉt 58, 169); or the confrontation between *aṣe* ↗Tewodros II and the ↗Gondär clergy, which was explicitly about the church’s property, *rəstənna gult* (CRNuov 412). *Gult* is typically rendered as ‘fief’ (GuiVoc 708; BaetDic 1055).

In the juxtaposition of R. and *gult*, scholarship has tended to see the fundamental principles of historic Ethiopian land tenure, in which farmers, whose access to the land was determined by their inherited right, were found alongside a ruling class (↗Aristocracy) whose basis was primarily the extraction of ↗tribute, not rent, from farmers. In this understanding, Ethiopia’s ruling class as such had no direct access to agricultural land, which, on the contrary, was controlled by *balärəst,* those who farmed it on the basis of hereditary right and who were explicitly contrasted with those who held land as tenants (ጪሰኛ, *čisäñña*). The basic condition for maintaining one’s R. rights was the payment of tribute and, in this sense, *balärəst* were also ገባር (*gäbbar*, ‘tributaries’). Failure to pay tribute, or sedition, were, theoretically, the sole grounds for the abrogation of R.

While these principles fail to do justice to the full complexities of land-holding in historic Ethiopia, they have profoundly shaped discussions of historic land tenure (for dissent, s. CrumLand 9f.; Habtamu Mengistie 2003). The most important modern discussions of R., which incorporate to one degree or another the juxtaposition of R. and *gult*, are to be found in the works of Hoben (1973), Berhanou Abbebe (1971: 27–34, 103–08) and Mantel-Niećko (1980). Hoben, on the basis of anthropological fieldwork in ↗Goǧǧam, emphasises that, usage apart, strictly speaking R. referred to rights to agricultural land rather than to the land itself. In any given R. jurisdiction there were always multiple claims to be reconciled and this was done by periodic redistribution of agricultural plots. According to Hoben, the most important ways of acquiring R. land were by direct inheritance, by gift in anticipation of inheritance, or by presenting claims to the representatives of the descent groups (Hoben 1973: 144).

In ↗Amhara areas R. passed from parents to their children, male and female, on a more or less equal basis. In many ↗Təgrəñña-speaking areas, where the term was *rəsti*, there was a pronounced bias towards male heirs over their sisters. Hoben recounts the various ways in which more ambitious claimants could expand their holdings, primarily through the use of law courts (ibid. 156–59).

Mantel-Niećko’s account (1980) rests on a close reading of classical collections of documents presented by two public servants of the Ḫaylä Śəllase era: Maḫtämä Śəllase (MahZekr) and Gäbrä Wäld Ǝngəda Wärq (1951/52). While defining R. following the dictionaries cited above, Mantel-Niećko uses the term in a more expansive sense than does Hoben. For her “among the estates which are covered by the term *rist* one can distinguish great lay and ecclesiastical properties and smaller ones” (Mantel-Niećko 1980: 109). She refers to a 1908 edict of *aṣe* ↗Mənilək II, which established that R. “denotes land which has been handed down from one’s predecessors, bought or been granted by the emperor which cannot be taken away apart from cases of murder or offences against the states” (ibid. 110f.). Her discussion emphasizes variability in the meaning of the term from province to province.

The holding of land by R. ended with the 1975 "Proclamation to Provide for the Public Ownership of Rural Lands" (*Nägarit Gazeṭa*, Proclamation no. 31 of 1975; ↗Revolution; ↗Provisional Military Administrative Council).

Rətuᶜa Amlak

R.A. (**ርቱዐ፡ አምላክ**; d. 7 June 1632, Wäyna Däga) was the founder of a new line of holders of the ↗*wag šum* title. Sources, however, do not clearly indicate how he came to assume the title of *wag šum*. Originally he was from Zatta, ↗Wäfla. His seat was at Wänbärät, south-east of Koräm, from where he brought a number of districts under his control. He encouraged the settlement of craftsmen in his region.

R.A. was a strong defender of Ethiopian Orthodox Christianity and an opponent of the Catholic faith introduced by the ↗Jesuits. He was an ally of ↗Mälkəᵓa Krəstos, in his dynastic struggle against *aṣe* ↗Susənyos. It was during the struggle against Catholicism that R.A. founded a new line of *wag šum* known by informants as "the Zatta line" in opposition to the old line from ↗Säqoṭa. Descendants of the two lines led a stiff power struggle to control the office of the *wag šum*. Gradually they also intermarried among themselves. R.A., together with one of his sons and his ally ↗Bihono, died in the battle of ↗Wäyna Däga fighting against Susənyos on 7 June 1632 (BecRASO VII, 162). The death of R.A. as a martyr of Orthodoxy strengthened the power of his descendants in the region who held the office of *wag šum* for a number of years.

Rətuᶜa Haymanot

R.H. (**ርቱዐ፡ ሃይማኖት**, lit. 'the Orthodox') is the (pen-)name of several traditional scholars of the ↗Ethiopian Orthodox (Täwaḥədo) Church (EOTC) as well as the title traditionally given to a compendium of homilies on Orthodox ↗theology, that was authored by one of these scholars – in keeping with a frequent practice to style texts after their authors.

The expression "R.H." was originally used to describe the firm position of authorities adhering to the Orthodox Church and/or the Orthodox Faith, used as an epithet of such spiritual leaders as, e.g., the 318 Fathers of the Council of ↗Nicaea, ↗John Chrysostom, *aṣe* ↗Dawit II, *aṣe* ↗Zärᵓa Yaᶜəqob, *abba* ↗Giyorgis of Sägla. The frequency of the use of the epithet as a pen name makes it difficult to identify the R.H. who authored the homilies.

The first R.H. wrote prior to 1337 as the homilies he authored are transmitted in manuscript EMML 1763, copied in the year 521 of the Great Cycle (1329 A.M. = 1336/37 A.D.; s. EMML V, 223). As quite a few of the texts in EMML 1763 belong to Aksumite literature, it seems fair to assume that this R.H., who chose not to give his real name for reasons of modesty, flourished during ↗Aksumite period. This may also be the reason for the author of these homilies and the author of the Vita of *abba* ↗P̣änṭälewon (an "ordained bishop of Aksum", s. Conti Rossini 1904: 43) to share the same pen-name. Homilies in EMML 1763 ascribed to R.H. are the following:

On John the Baptist, fols. 3r–9r; *On the two Sabbaths*, fols. 37v–48v; *On the Nativity*, fols. 80v–96v; *On Stephen the Protomartyr*, fols. 106r–110r; *On Epiphany*, fols. 114v–121v; *On the Holy Fast* (*Lent*), (1) fols. 139v–143v, (2) fols. 143v–148v, (3) fols. 162r–164r, (4) fols. 182r–184v, (5) fols. 190r–195v, and (6) fols. 195v–199; *On the Ascension*, fols. 240v–245v; *On Pentecost*, (1) fols. 247v–253v, (2) fols. 253v–258r; *On the Disciples and the Community of Saints*, fols. 264v–268r; *On the Blessed Virgin Mary*, fols. 268r–270v.

This R.H., however, cannot have compiled the traditional compendium R.H., whose author must have lived ca. 1375 (cp. ms. EMML 2375, s. EMML VI, 451). He chose to hide his name as what he wrote was the final "truth about how the Word of God was incarnated of the

Holy Spirit and Mary" (ms. EMML 2375, fol. 54r; EMML VI, 454); s. also ms. BN d'Abbadie 80, CRAbb III, 15, no. 154, where the homilies are wrongly ascribed to John Chrysostom, and BritLib Orient. 786 (WrBriMus 231f., no. 343).

The compendium R.H. includes the following homilies, all but one different from those authored by the first R.H. (here according to EMML 2375): *On the Incarnation of the Son* (untitled), fols. 3r–8r; *On the Birth of God from Mary*, fols. 8r–18v; *On how Our Lord Christ was Baptized*, fols. 18v–31r; *For the Eve of the Forty-Day Fast* (*Lent*), fols. 31v–36v; *On Fasting and Almsgiving*, fols. 36v–39r; *On Fasting and peace*, fols. 39r–41r; *On Fasting and Meekness*, fols. 41r–42v; *On How the Word of God was Incarnated of the Holy Spirit and Mary*, fols. 54r–65r; *On how Our Lord Observed* [*ᶜodä*] *Hosanna in the City of Jerusalem*, fols. 65r–67v; *On how (Our Lord) Washed the Feet of his Disciples*, fols. 67v–78v; *On the Death of Our Lord Jesus Christ at the 9th Hour on a Wooden Cross, on Crucifixion, the Thief on Right, death and on Satan*, fols. 78v–89r; *On the Ascension of Our Lord* (= EMML 1763, fols. 240v–245v), fols. 89r–93r; *On the Paraclete* (untitled), fols. 93v–101v; *On the Honoured Springs of Israel which are Peter and Paul*, fols. 101v–104r; *On the Transfiguration of Our Lord*, fols. 104r–108r; *On the Assumption of the Blessed Virgin*, fols. 109r–122r.; *On the Four Living Beasts*, fols. 122r–127v.

The homily *On how the Word of God was Incarnated…* contains a controversial statement about life after death: "Behold, it is known that not a single Christian will ever perish, if he dies with his ↗baptism intact. If he dies while in sin, before ↗penance, he will be given penance in hell in the measure of his deeds. He will then be saved for the sake of the name of Christ." The sentences reflect a belief similar to that of ↗*täzkar* (Getatchew Haile in VarAeth); however, the official position of the EOTC states that there is no penance and salvation after death.

The homily *On the Assumption of the Blessed Virgin* does not have a title that attributes it to R.H. A comparison of its contents with that of the ↗*Nägärä Maryam* (e.g., EMML 2044, fols. 25r–33r, EMML VI, 27–41) hints that it may have come from the clergy of *aṣe* ↗Zärᵓa Yaᶜəqob.

The compendium R.H. may have been authored by the famous *abba* Giyorgis of Sägla. Whilst there is no evidence that Giyorgis ever used a pen name, the epithet "R.H." was frequently attached to his name (cp. YaqMist I, 209 [text]). Besides, there are two homilies in his *Mäṣḥafä* ↗*məśṭir* attributed to a R.H.: *On Strengthening the Faithful in their Belief in Jesus Christ* (ibid. 217), and *On the Washing of Feet* (ibid. 235). Given the fact he was resented by some of the leading clergy (e.g., Getatchew Haile 1982: 65–91; Colin 1987: 25 [text]), it is possible that Giyorgis occasionally wrote under the name R.H. It seems highly unlikely that there could have been another similarly prolific but totally unknown writer living at the same time.

Another R.H. is the author of the homily (↗*Dərsan*, that later became a ↗*gädl*) on the life of *abunä* ↗Iyäsus Moᵓa (ms. EMML 1960, fols. 29r–55v; EMML V, 477). Since in his compilation this R.H. used many of the notes recorded in the Gospel of Iyäsus Moᵓa in the 15th cent., including the time of *aṣe* Zärᵓa Yaᶜəqob, he cannot be the same R.H. of the homilies in EMML 1763 or the Vita of *abba* Ṗänṭälewon, or of the R.H. compendium.

Getatchew Haile

Revelation of St. John

R., or the Apocalypse of St. John, is the last book in the ↗New Testament (s. ↗Bible: biblical canon). Its Gəᶜəz title, **አቡቀለምሲስ** (*Abuqälämsis*), a loan from the Greek (via Arabic) ἀποκάλυψις, is interpreted – e.g., in ↗*Tərgʷame* – as "seer of mysteries during his [John's] life-time" (Cowley 1983: 81). After ch. 1:1 and the prescript, the description **ራእዩ፡ ለዮሐንስ** (*raᵓəyu läyoḥannəs* 'Vision of John') became established in the manuscripts. In the manuscripts the author is repeatedly taken to be the (4th-cent.) "metropolitan ↗John Chrysostomos of Constantinople" (Hofmann 1967: 1 [text]).

R. was translated into Gəᶜəz along with the rest of the N.T. during the Aksumite period from a Greek Vorlage and was later revised against an Arabic one (↗Bible: Gəᶜəz Bible translation; cp. also ↗Old Testament).

The text is well documented. The earliest witnesses date to the 14th cent. and later

(Hofmann 1967: ii–ix; Marrassini 1984: 91f.; Zuurmond 1989: 2f.; Getatchew Haile's handlist). Printed editions have been available since 1548 (↗Täsfa Ṣəyon), and a critical edition was provided by Hofmann (1967).

The question of the inclusion of R. in the Biblical canon has been for long a very debated one, to the point that several Christian Oriental Churches did not accept it. Even though the Ethiopian Orthodox (Täwaḥədo) Church has included it, some clear reflexions of the debate can be perceived in some of its writings, e.g., in the ↗*Senodos*, where one of the various Biblical canon, and the oldest one indeed, does not include it (cp. BauSen 178 [text] = 72 [tr.]).

The apocalypticism of the book, with its themes of Satan, the false Messiah, the Last Judgement and the heavenly Kingdom of God, have influenced its theology, as the *Tərgʷame* and ↗*Andəmta* traditions prove (Cowley 1983).

↗Eschatology

Siegbert Uhlig

Revolution of 1974

The R. (Amh. **አብዮት**, *abyot*) of 1974 led to the downfall of the Ethiopian monarchy and brought the *Därg* (↗Provisional Military Administrative Council) to power, headed by Mängəśtu Ḫaylä Maryam, Aṭnafu Abbate and others. It led to a protracted civil war and a period of terror in an attempt to establish a new social and political order.

The immediate factors that sparked the R. were the severe ↗famine of 1972/3, the sudden rise of petrol prices and student protests which caused political discontent, alongside warring factions inside the military, leading to a shift in the loyalties of the army.

The extreme droughts which affected ↗Wällo and ↗Təgray during the years 1971–73, in combination with disastrous mismanagement and corruption on the part of the government and administration, led to the severe famine which cost the lives of ca, 200,000 people (Bartnicki – Mantel-Niećko 1978: 589). Local administrators in Wällo abused the situation by selling small amounts of produce for land. In the capital the hunger was not felt so acutely. In 1973, at the height of the famine, Ethiopia still exported 203,900 tons of food (Brüne 1986: 75). For reasons not fully known, the regime decided to cover up the famine, apparently even ↗Ḫaylä Śəllase I was not aware of it. It was the BBC documentary *The Unknown Famine* by Jonathan Dimbleby, broadcast worldwide in 1973, which brought it to light, horrifying the Ethiopian upper class and intellectuals. In the meantime professors and students of Ḫaylä Śəllase I University (now ↗Addis Ababa University) publicized the tragedy as much as they could.

In this mood of general despondency, the government announced a rise of 50 % in the price of petrol on 9 January 1974 due to the global oil crisis. This increase hit taxi drivers, merchants and other low income groups in the cities particularly hard. A further precursor of the actual outbreak of R. was the 12 January mutiny of the troops of the 4th division in the Nägälle-Boräna (↗Nagallee) garrison. Protesting against low pay, bad food and water they arrested their officers. They also sent radio messages to all units of the armed forces informing them that they were not against the imperial order but simply protesting against the bad living conditions. General Dərase Dubale, sent to resolve the issue, was also taken into custody. The situation seemed under control till 11 February when the Ethiopian Teachers Association appealed to the Emperor for a rise in salaries. This same day the Ethiopian Air Force rebelled, arresting their commander. On 14 February University students went on strike and demonstrated. On 18 February the Ethiopian Teachers Association went on a nation-wide strike, stating that the government had failed to meet its demands and protesting against the new educational policy, the *Education Sector Review.* Students, teachers, taxi drivers as well as the many unemployed took to the streets, attacking buses, other government vehicles and limousines. Law and order broke down in parts of the capital – the police arrested over one thousand people, almost half of them taxi drivers; unconfirmed reports put the death toll at five persons. The following days were marked by similar events. The demonstrators got very quickly organized and started to produce and distribute flyers and leaflets calling upon the masses to rise up. The ruling classes were confused by the events; the government seemed paralyzed. Finally on 23 February Ḫaylä Śəllase went on television to announce that the petrol price increase as well as the *Educational Sector Review* had been withdrawn. Soldiers and teachers were promised a salary increase.

While the situation calmed down in the capital, however, it was widely felt in Eritrea that the planned reforms were ineffective. In addition, Eritrea was suffering the effects of a rebellion which had started in the 1960s, leading to a highly politicized atmosphere (↗Eritrean Liberation Front; ↗Eritrean Peoples Liberation Front). The army based in Eritrea revolted on 26 February, they arrested the commander of the 2nd division as well as other senior officers and the provincial governor; they placed ↗Asmära under their control, closed off air traffic, cut off all communications with the outside world and read out their 23-point demand on Asmära radio. Prime Minister ↗Aklilu Habtäwäld resigned together with his cabinet. In a second television statement the Emperor announced the appointment of *ləǧ* ↗Ǝndalkaččäw Mäkʷännən as new Prime Minister, his former son-in-law General Abiy Abbäbä as Minister of Defence and General Wäldä Śəllase Bäräka as Chief of Staff of the armed forces.

The first days of March were marked by further strikes, the Confederation of Ethiopian Labour Unions called for a nation-wide strike with 85,000–100,000 participants, further demonstrations were held, by an estimated 5,000 university students and teachers. Prime Minister Ǝndalkaččäw called out units of the 4th division as well as the Special Police Force to put down the protest; in the end several demonstrators were killed, quite a few wounded, and many arrested. The soldiers who had just suppressed the revolts, came out on 4 March, but this time on the side of the demonstrators. Army helicopters flew over the capital and distributed flyers, calling for reforms. Other sections of the population demonstrated as well, such as 500 priests, calling for fair payment and retirement pensions, and about 5,000 women demanded for equal rights. Ǝndalkaččäw's answer to these demonstrations was the formation of the Commission of Enquiry on 28 March which was to put an end to corruption. He later produced the "white paper" outlining new policies and a reform agenda. During March the revolts spread throughout the country, farmers rose up, unwilling to pay taxes and demanding land rights; civil servants, judges and other officials lost their posts. In several garrisons sergeants and soldiers were forming councils and clandestine committees. Prime Minister Ǝndalkaččäw ordered the immediate arrest of former ministers, governors and generals on 8 April.

Strike of the taxi drivers in Addis Abäba on 2 February 1974; photo courtesy of the Red Terror "Martyrs" Museum Addis Abäba

The largest demonstration was held in ↗Addis Abäba on 20 April by an estimated 100,000 participants, mainly Muslims demanding equality with Christians; one demand was that they should be referred to as "Ethiopian Muslims" and not as "Muslims living in Ethiopia" (↗Islam). On 26 April, on their own initiative, the army arrested 200 high-level civilian and military officials. The army began to pressure strikers to go back to work at companies such as the power company, water supply companies and telecommunications. 24 members of the newly formed labour union were arrested on 24 May. With the formation of the "Coordinating Committee of the Armed Forces, Police and Territorial Army" (*Yäṭor ḫayločč yäpolis ənna yäbəḫerawi ṭor astäbabari därg*, abbreviated "*Därg*") on 28 June by radical groups of younger army members the coup gradually took shape. The *Därg* elected Major Mängəśtu Ḫaylä Maryam as chairman and Major Aṭnafu Abatä as vice chairman, and proclaimed the committee's motto: **ኢትዮጵያ ፡ ትቅደም** (*Ityopya təqdäm*, 'Ethiopia First'). The *Därg* imposed a dusk-till-dawn curfew on Addis

Abäba and arrested further members of the old regime. It presented demands to the Emperor on 3 July, forcing him to co-operate closely with the committee, to which the Emperor agreed. On 22 July Ǝndalkaččäw abdicated under pressure from the *Därg* and was replaced by Mikaʾel Ǝmməru. By this time the entire cabinet was under *Därg* control and a new draft constitution proclaimed a constitutional monarchy. Step by step the control of the *ancien régime* was weakened; the ↗Crown Council, the *zufan* ↗*čəlot* and the military council were dissolved on 15 August. The Anbäsa Bus Company, the St. George Brewery and the Ḫaylä Śəllase Prize, all belonging to the Emperor or the royal family, were nationalized by the 6th of September. There was however discord about how to proceed with the various proposals being discussed.

The final push was made on 12 September, when the *Därg* proclaimed the suspension of the existing constitution, deposed Emperor Ḫaylä Śəllase I and dissolved ↗parliament. In order to acquire respectability and legitimacy, they made the highly respected ↗Aman Mikaʾel ʿAndom chairman of the *Därg*, which they renamed the ↗Provisional Military Administrative Council. Mängəśtu Ḫaylä Maryam became vice-chairman and Aṭnafu second vice-chairman. After only a few weeks of major controversies in the leadership, Aman Mikaʾel ʿAndom was killed on 24 November. In the night of the same day they killed close to 60 officers of the ancién regime.

A period of violent upheaval, culminating in the Red Terror of 1977 whose purpose was to weaken political opponents such as *Mäʾison* and the ↗Ethiopian Peoples Revolutionary Party. By the 1980s the leaders of the R. and their followers had assumed institutionalized governmental posts, a situation which contrasted sharply with that of 1974, when even the members of the *Därg* were widely unknown and acted in secrecy. In 1987 a new constitution was promulgated, the administrative divisions of Ethiopia changed, and Ethiopia was declared the People's Democratic Republic of Ethiopia with Mängəśtu as its president.

Shiferaw Bekele – Sophia Dege

Rey, Charles Fernand

Sir Charles R. (b. 1877, d. 30 March 1968, Cape Town, South Africa) was a British soldier and civil servant, also a traveller and entrepreneur in Ethiopia.

R's career began in 1900 with his appointment to the Board of Trade. Until 1919 he had held various positions in the Ministry of Munitions, Ministry of National Service and Ministry of Labour. From 1919–29 R. lived in Ethiopia for different periods of time as an employee of the Abyssinian Corporation and took an active role in safeguarding British interests. For example, in 1920 he negotiated a scheme in which *ras* ↗Ḫaylu Täklä Haymanot of ↗Goǧǧam was able to divert the trade of his province to the Sudan by a road built by the Sudanese government (McCann 1981:676). R. was on close terms with *ras* Täfäri Mäkʷännən (later *aṣe* ↗Ḫaylä Śəllase I) who bestowed on him the Order of the Star of Ethiopia.

From 1930 until 1937, R. served as a Resident Commissioner of the British Bechuanaland Protectorate and Commandant of the Protectorate Police in Bechuanaland. He was knighted in 1932. He spent the last years of his life in Cape Town, but was buried in the cemetery of the British Legation in Addis Abäba, next to two of his sons who had died in Ethiopia in 1920.

R. presented a number of reports on Ethiopia to the African Society and the Royal African Society. In addition, he described his experiences in a number of articles and books. Among his publications, there is also a novel describing life in Ethiopia (*The Lady or the Leopard*). The ↗Bodleian Library keeps R.'s unpublished memoirs (mss. Eng. c. 7191–3) which refer to the years 1947–61 when he lived in South Africa.

During his time, R. was perceived as an outstanding specialist on Ethiopian history, culture and Amharic, which he could speak. He was described as "an intimate friend of the Emperor, [and] received every possible facility for writing about the history, ethnology, and civilization of Abyssinia" (J.B. 1936). On the other hand, R. represented the typical paternalistic attitude of the colonial British, fascinated with the Ethiopian Empire as the only surviving independent African country, while he also described what he perceived as the "barbarism" of the people and their customs. Apart from this attitude, R.'s works are an important source dealing with almost every aspect of life in Ethiopia in the 1920s.

Hanna Rubinkowska

Ricci, Lanfranco

R. (b. 25 March 1916, Sarzana [La Spezia], d. 15 December 2007, Rome) was the most outstanding Italian scholar of ↗Ethiopian studies in the second half of the 20th cent. A pupil of Carlo ↗Conti Rossini, he was the last scholar in the tradition of studies founded by Ignazio ↗Guidi and pursued by Francesco ↗Gallina, Conti Rossini, Enrico ↗Cerulli and Martino ↗Mario Moreno.

R. graduated from the University of Rome in Humanities in 1938, with a thesis in Ethiopian studies supervised by Conti Rossini. Three weeks later, he left for ↗Africa Orientale Italiana (AOI). He served from December as an auxiliary officer in the army (Regio Corpo Truppe Coloniali dell'AOI), later becoming head of the "residenza" of Aqaqi (Šäwa) in the civilian government. In April 1941, R. was captured by British troops and kept as a prisoner-of-war in Kenya till December 1946.

His involvement in the war had a negative impact on R.'s post-war university career. Working as an executive at the Banca Nazionale del Lavoro, R. started in 1947 as an assistant to the professorship in Storia e lingue d'Abissinia (held first by Conti Rossini, then in 1951/52 by Moreno) at the Faculty of Humanities of the University of Rome. He was lecturer from 1952 to 1962, also appointed professor from 1953 to 1962. In 1962 he finally became a full professor of Amharic at the ↗Istituto Universitario Orientale (IUO) of Naples. R. kept the chair (later Amharic language and literature) till 1986, and as emeritus till 1991. He also taught Somali (1958–92), Təgrəñña (1958–81) and Ethiopian history (1960–63). He continued teaching his courses in Storia, lingue e letterature dell'Etiopia and Lingue non semitiche dell'Africa orientale at the University of Rome until 1977. From ↗Strelcyn's death in 1981 till 1983, R. held the annual seminars in Ethiopian studies instituted by Cerulli at the Accademia Nazionale dei Lincei in 1973.

During his years at the IUO, R. strenuously defended the existence and autonomy of Ethiopian and African studies throughout the reorganization of Italian universities from a seminars-based structure to that of Departments. Thanks to his efforts, the professorships and teaching assignments of the Seminario di Africanistica (later Dipartimento di Studi e Ricerche su Africa e Paesi Arabi) came to include Gəᶜəz, Təgrəñña, Swahili, Somali, Egyptology, Coptic, Hausa, African history, Ethiopian archaeology (the only such professorship in the world at that point), Ethiopian history, Berber and Arabic: a range of disciplines which was, and still is, unique in Italy and with few possible comparisons in and outside Europe.

R.'s academic influence developed through the editorial activity of the ↗Rassegna di Studi Etiopici (RSE). He joined the editorial board early in 1952 and succeeded Moreno as editor-in-chief in 1964. In 1959 he achieved the sponsorship of the Istituto per l'Oriente (IPO), Rome, and in 1983 succeeded in having the journal jointly edited by the IPO and the then IUO. He resigned in 2003, having devoted over 50 years of tireless scientific activity to the journal.

In 1979, R. assumed responsibility for the series Scriptores Aethiopici of the ↗Corpus Scriptorum Christianorum Orientalium, succeeding Cerulli. A member of the Accademia Nazionale dei Lincei from 1988, as well as of the Fondazione Leone Caetani for Islamic studies, he took active part in the activities of the Istituto Italo–Africano (successor of the ↗Istituto Coloniale Italiano).

R. was probably the last "all-embracing" scholar in Ethiopian Studies. With the practice of Amharic as a spoken language as his starting point, and consistently true to the "historico-philological" approach which he considered essential to the RSE (cp. Ricci 1986: 154), R. broadened the scope of his interests and ↗research to such an extent that there is virtually no branch of Ethiopian studies which he did not touch in his numerous monographs, articles, and reviews (cp. Lusini in EtRicci; Bausi 2008): from archaeology (in 1973 he promoted the Italian Archaeological Mission of the IUO in Ethiopia) to epigraphy (palaeo-Ethiopic inscriptions being one of his lasting concerns), from modern and ancient literatures to languages and linguistics (he mastered Amharic as well as other Semitic and Cushitic languages of Ethiopia, Eritrea and Somalia), from ancient and medieval history, to modern and contemporary issues, from anthropology and sociology to the history of art and religion, he maintained a profound interest in every aspect of Ethiopian society.

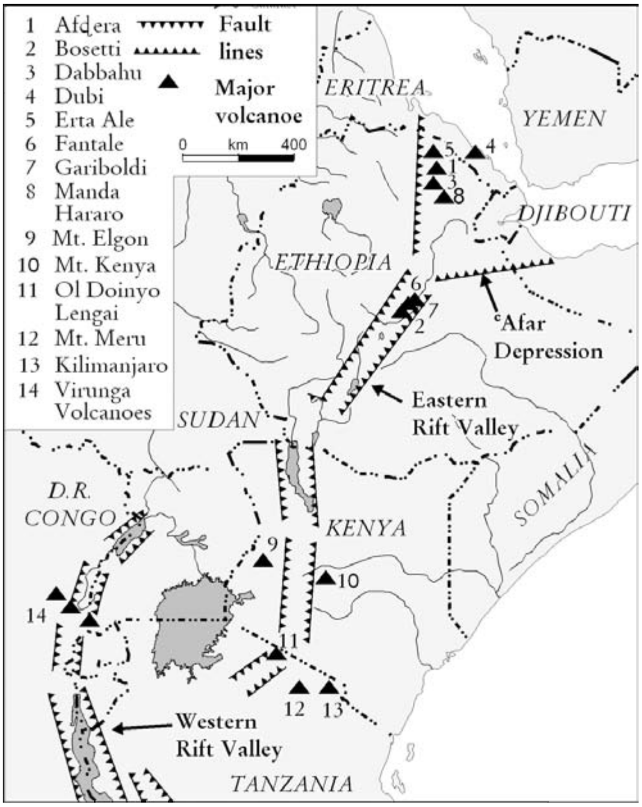
Rift Valley

The R. ("Great Rift Valley of East Africa" or "East African Rift System" [EARS]) separates the Ethiopian Plateau into a western and eastern half. The name was introduced by John Walter Gregory (1896) for a succession of individual fault-controlled tectonic basins or grabens that are separated by relative shoals, representing transform, transfer and accomodation zones (Chorowicz 2005). The graben basins are bordered by uplifted shoulders which form almost continuous parallel mountain lines or plateaus. The boundary faults are predominantly normal faults running approximately parallel to the rift axis. On the large-scale, the EARS consists of NNE-trending domal uplifts, such as the Ethiopian dome, building a several thousand kilometres long intra-continental ridge (Chorowicz 2005) and is composed of a western, an eastern and a south-eastern branch. The Ethiopian R. represents the northern part of the eastern branch and is build up of three major rift zones with distinct volcanic and tectonic character: the ᶜAfar Rift in eastern Ethiopia, Djibouti and Eritrea, the Main Ethiopian Rift system (MER) in central Ethiopia and the broadly rifted zone in south-western Ethiopia (Giday Wolde Gabriel 2002). The uplift of the Ethiopian Plateau, the formation of the R. and the extensive volcanism (↗Seismology) are thought to be related to one or more mantle plumes (Mohr 1983; Furman 2007). In the Ethiopian Plateau, the first manifestation of rifting was the development of open fractures and the eruption of up to 2 km thick flood basalts in Oligocene times, at around 31–30 Ma (Hofmann et al. 1997; Wolfenden et al. 2004).

The ᶜAfar Rift

The ↗ᶜAfar Rift forms the triple junction between the African, Arabian and Somalian plates (Chorowicz 2005). This broad triangular depression is thought to have resulted from the tectonic interaction of the ↗Red Sea Rift, the Gulf of Aden oceanic rift and the continental MER. The depression reaches up to 156 m B.S.L. in contrast to the adjacent Western Plateau, which is elevated in places over 4,000 m A.S.L. Only the southern half of the ᶜAfar Rift fully belongs to the EARS, being an asymmetric rift made up of a series of east-southeast-dipping tilted blocks forming plateaus that are bounded by normal fault scarps (Chorowicz 2005). The ᶜAfar Rift started to develop in the Miocene, accompanied by the eruption of flood basalts and the intrusion of peralkaline granites (Varet – Gasse 1978). During the Pliocene-Pleistocene period, volcanic activity peaked with extensive flood basalt eruptions and intercalated rhyolithe flows, domes and ignimbrites, and fault bounded basins were filled with fluvial, lacustrine and volcanoclastic sediments (Gasse et al. 1980). In the Quaternary, volcanism was concentrated along the rift axis, being underlain by ocean-type crust (Varet – Gasse 1978; Mengesh Tefera et al. 1996). It is, however, still debated which parts of the ↗ᶜAfar depression are underlain by oceanic or by thinned continental crust (e.g., Mohr 1989; Hayward – Ebinger 1996).



The Main Ethiopian Rift

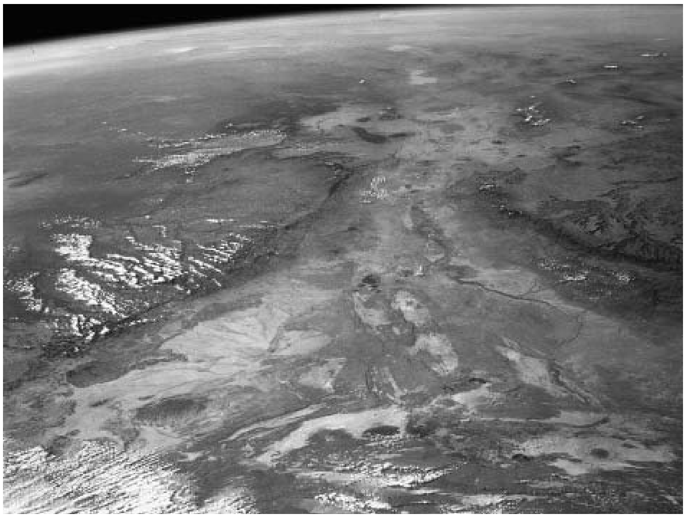
The MER represents the central part of the Ethiopian R. It is a more than 600 km long NNE-SSW-trending valley that narrows southward from about 80–120 km in the north to approximately 30–60 km in the south (Giday Wolde-Gabriel 2002). The rift margins are mostly well defined and follow normal faults that accommodate offsets of 500 to 3,000 m between plateaus and R. floors. The rift is segmented into asymmetric half-grabens (Chorowicz 2005). The floor and margins of the MER consist of early Eocene to Quaternary volcanic rocks. Rifting started in the middle Miocene accompanied by volcanism along the boundary faults and deposition of syn-rift sediments (Giday Wolde-Gabriel 2002; Wolfenden et al. 2004). The rift-related volcanism was mostly bimodal, with rhyolitic and trachytic ignimbrites, pumice and ashes as well as minor lava flows dominating in the R. floor and subordinate basalt lava flows and cinder cones aligned along the rift margins. Volcanic activity shifted during time from the southern part of the MER to the north. Rift-related basin formation started in the middle Miocene, but most of the fluvial, lacustrine and volcanoclastic sediments are Quaternary in age (Le Turdu et al. 1999).

South-western Ethiopia

The broadly rifted zone of south-western Ethiopia or ↗Omo-↗Turkana faulted zone is a significantly lower area than the nearby uplifted dome regions at which the MER and the Kenya Rift System overlap (Ebinger et al. 2000). Although it consists of numerous N- to NE-striking half-grabens that are filled with late Cenozoic sediments, the zone has neither a morphologically distinct R. nor rift shoulders.

Rift lakes

Except of Lake ↗Ṭana, most major lakes are located in or near to the R., in tectonically and partly in volcano-tectonically controlled endorheic basins. The salinity of the lake waters varies considerably. Water volume and salinity of the lakes as well as the lake sediments form sensitive recorders of climatic changes in the surrounding highlands. Reconstructions of lake levels and salinity fluctuations of Lake Abbe, the terminal lake of the ↗Awaš River in the ᶜAfar depression, revealed four major humid episodes over at least the last 70,000 years (Gasse et al. 1980). The lake dried out during the Last Glacial Maximum and was filled up again during the latest Pleistocene and the Early Holocene. A similar climatic evolution is documented in the ↗Zʷay-↗Šala lake basin of the



The Rift Valley seen from outer space, with the Assal Lake and the Awaš River (on the upper right Eritrea, on the lower left Djibouti); photo by NASA

MER by palaeoshorelines and fossil lake deposits (Le Turdu et al. 1999; Benvenuti et al. 2002).

Mineral deposits and natural hazards

The lacustrine and volcanoclastic sediments of the R. contain industrial ↗minerals such as bentonite, soda ash, rock salts, native sulphur and diatomite (Getaneh Assefa 1985). Active volcanism in the R. causes hot springs and high geothermal gradients, the latter being exploited in the Aluto-↗Langano and Tendaho geothermal fields (Tsegaye Abebe 2000). Potential natural hazards in the R. include volcanic eruptions, earthquakes, landslides and floodings.

Robert Bussert

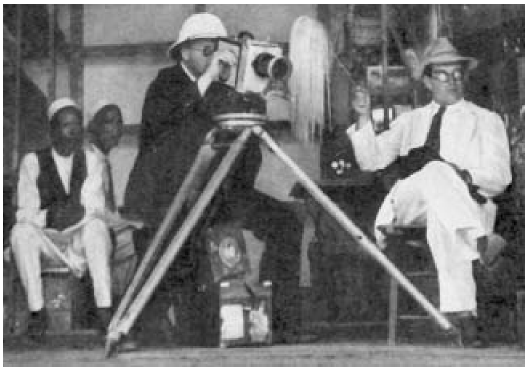
Rikli, Martin

R. (b. 19 January 1889, Zurich, d. 7 April 1969, Zurich), the son of the Swiss botanist Martin Rikli, was a film-maker who produced a cinema film on Ethiopia and the royal court prior to the Italian occupation.

During his studies at the Technical University Dresden R. specialized in photochemistry and obtained his doctorate on the ageing and inflammability of cinematic films. Having finished his studies, he received employment in the Scientific Department of Zeiss-Icon in Dresden. In 1927 he got the chance to accompany an expedition to the former German colonies in East Africa, and was granted leave of absence by Zeiss-Icon. *Heia Safari*, the cinema movie he made about the expedition, was a box-office success in 1928. This film brought him to the attentions of Universum Film AG's Documentary Film Department, where he was engaged as an author and film director. In 1929, R. undertook a second film expedition to Northern Africa (Tunisia, Tripolitania and Cyrenaica), this time for a US company, and made a film called *Am Rande der Sahara*. Further expeditions led him to East Asia in 1932 and to Ethiopia in 1934/35, which resulted among others in the film *Abessinien heute – Brennpunkt der Welt* (The expedition is also well documented in a photobook published in 1935.) R. travelled around the world for Ufa, working as an official propaganda filmmaker for the Nazis, returning to ↗Switzerland in 1944.

In his book *Seltsames Abessinien – als Filmreporter am Hof des Negus* R. reports in detail on the time he spent in Ethiopia; he illustrated the book with photographs he took and which today can be considered as an important document on Ethiopian history around 1935. During his stay in Ethiopia, R. was able to accompany the Ethiopian Emperor during many of his travels, among others to ↗Dərre Dawa and the ↗Ogaden region, where he observed the Emperor's preparations for war. As designated photographer at the Court, he gained many insights into the conditions of imperial life at that time and met many of the Europeans residing in Ethiopia's capital, including the German Ambassador. R. published photographs of Ethiopia in various German newspapers (e.g., in "Die Woche").

After his return to Zurich, R. became the owner of an institute for Colour Photography and continued to produce documentary films.



Martin Rikli during his 1934-filming expedition in Ethiopia; from Rikli 1935: 62

Girma Fisseha

Rim

R. (ሪም) is a form of ↗land tenure found throughout the historic Christian highlands. The meaning and practice of R. varied widely from place to place.

In the 18th and 19th cent. in the endowed churches in the ↗Gondär region, R. supported liturgical services. R. lands were held by individuals whose tenure lasted as long as they met their liturgical obligations. Gondär R. lands were heritable and could be bought and sold (Crummey 2001: 68; Id. in PICES 5b). In mid-20th cent. Ethiopia R. was ↗*madäriya*, land granted temporarily by the crown or a prominent land holder to a subordinate, to provide them with a living (Shiferaw Bekele 2001). In the monasteries of ↗Säraye, monks described R. (strictly speaking *gʷəlti rim*; s. also ↗*gʷəlt*) as the right, which they enjoyed, to receive donations, while peasants in ↗Wälqayt saw R. as equivalent to what they called *əṭan zore*, "inalienable land, situated close to the church, assigned by the church to the cultivators who support it" (Taddia 2001: 18f.). In the 1990s in ↗Ḥamasen in Eritrea R. had come to form a conceptual framework clarifying "the rights and duties of each villager related to land use and kinship system" (Tekeste Negash – Tronvoll 2001: 111ff.).

One can best reconcile these widely contrasting usages if we suppose that, originally, R. was a kind of *madäriya*. However, rather than its temporary nature, what came frequently to be associated with it was the privileged status it gave its holders vis à vis their tributary farmers. While its conditional nature was foremost in many instances, in Gondär the permanency of the church and the unusually individual way in which its land was held turned R. into a transgenerational form of tenure. The dictionary definitions stress either a church dimension ('ecclesiastical fief', GuiVoc 121; BaetDic 180; KaneDic 372; cp. ↗Sämon), or a secular one (THMDic 115), but not both. The primary documents testify to both usages.

The earliest mention of R. appeared with the founding of the church of Däbrä Bərhan Śəllase in Gondär in 1694. The manuscript which records this event may well have been written in the 20th cent. (*Tarikä nägäśt*, Däbrä Bərhan Śəllase, ILL/IES 88.V.23). The earliest document in which R. appears is a will of *ras* ↗Wäldä Giyorgis, which dates to the first decade of the 18th cent. and in which Wäldä Giyorgis awards both his R. and *gʷəlt* to his son, ↗Gälawdewos (CrumLand 115–21). In this context the distinction between R. and *gʷəlt* may be between Wäldä Giyorgis's church and secular holdings. The context of the next reference is secular. The Chronicle of *aṣe* ↗Bäkaffa notes that, in 1723, in order to get them out of

Gondär the ruler sent the palace guards to their R. lands (GuiIyas 283f., 303f.). The earliest explicit reference we have to church R. dates to Bäkaffa as well, who gave "R. to 52 *däbtäročč*" on behalf of the Church of Qälämuğ Kidanä Məḥrät (Ill/IES, 88.X.19–21, ↗Mändabba Mädḫane ^{c}Aläm, *Wängel Zäwärq*). Following the founding of the church of ↗Däbrä Ṣ́äḥay Q^{w}əsq^{w}am by Bäkaffa's consort and successor, *ətege* Məntəwwab (↗Bərhan Mogäsa), in the early 1740s, the references to R. land swell. They are to be found in the marginalia and end notes of manuscripts which originated in the churches of Gondär (Crummey in *PICES* 5b). In these documents R. is bought, sold and transferred through wills and marriage endowments. Its ownership is contested by litigation.

A practice that may well have originated with the founding of the churches of Gondär was imitated in the later founding of churches in Təgray, Goğğam and Səmen in the later 18th and earlier 19th cent. and continued through to the churches of Addis Abäba (CrumLand 111, 154, 213, 219). R. has typically, as in the dictionary definitions, been seen as a form of *g^{w}əlt*, and, in the standard interpretation of the distinction between ↗*rəst* and *g^{w}əlt*, judged to be limited to the right to collect tribute, not displacing, but juxtaposed to, the inherited *rəst* rights of subject cultivators. However, on the basis of evidence from eastern Goğğam and Gondär, it is argued that, in the cases of the churches in these areas, the establishment of R. displaced pre-existing *rəst* holders and gave to the privileged R. holder rights to the land itself and not just to a portion of its product (Habtamu Mengistie 2004). This appears also to have been the case in several churches of Təgray, notably ↗Aksum Ṣəyon, and Mädḫane ^{c}Aläm in ↗^{c}Adwa (Villari 1938: 1435; CrumLand 214). The rural land reform of 1975 eliminated R.

Donald Crummey

Rimbaud, Arthur

R. (in Ethiopia: *muse* Rämbo, also Rabo; b. 20 October 1854, Charleville, d. 10 November 1891, Marseille) was an outstanding French writer and later a trader in Aden, ↗Zayla^{c}, ↗Tağūra, ↗Harär and ↗Šäwa.

At a very young age, R. was an exceptional poet and an "enfant terrible" of the literary scene in Paris. Some of his poems are characterized by a strong expression of fundamental dissent (including allusions to European imperialism), which may partially explain his later life as an errant merchant in Africa and Arabia. At the age of 21, R. began a series of wanderings through Europe and the Orient. In 1880, he settled in Aden and became a foreman in the ↗Bardey company (until 1884). The following years he established trade connections between the Red Sea coast, Egyptian Harär (where he arrived in December 1880) and the Ethiopian kingdom of Šäwa, where he entered into relations with *nəguś* ↗Mənilək II.

R. regularly travelled among the ^{c}Afar, Somali and Oromo for several months, with whom he established close relations, and learnt Arabic, Oromo and Amharic. Between 1883 and 1884 he spent nearly a year in Tağūra trying unsuccessfully to form a caravan to go to Šäwa. In March 1887, after Harär had been annexed and occupied by the Šäwan armies, R. was at ↗Ǝnṭoṭṭo witnessing the triumphal return of Mənilək. R.'s correspondence with the latter and his confident ↗Ilg shows that R. was then mainly active in the import of arms, and exported coffee and hides (among others – but not slaves, as some posthumous rumours claimed); however, he was not able to make a substantial profit due to the difficult conditions. R. then also established commercial contacts with *ras* ↗Mäk^{w}ännən Wäldä Mika^{ɔ}el in Harär. In 1884 R. took a Šäwan (or Argobba, s. WagHar 29, 36f., 40f., 43, 49ff.) wife, with whom he lived in Aden, and in 1888–91 he had an Oromo or Təgrayan concubine in Harär (WagHar 35, 179); in his will, however, he left assets only to his family and his servant Ǧāmi^{c} Wada^{c}ī, a young man who later worked for ↗Rolph Bienenfeld in Harär (WagHar 37, 40, 43, 47, 50f.).

In Harär R. developed writing projects for the Société de Géographie, but he quickly gave up. As an explorer he only penned a short description of ↗Ogaden (1883) – the earliest report on that region – and a number of shorter reports and letters on his journeys, and made sketches (e.g., of a route linking Harär with Ǝnṭoṭṭo built by Mənilək, WagHar 510). R.'s letters, even if often penurious, contain a lot of information on trade conditions, itineraries, notables (e.g., ↗Abū Bakr Ibrāhīm of Zaylaᶜ), travellers and activities of ethnic subgroups. R. was also a pioneer photographer (showing, e.g., himself in the garden of the Egyptian governor ↗Muḥammad Raᵓūf *bašša*), but due to defective equipment his photos are mostly of low quality (Lefrère 2002). After having fallen ill in Harär, he travelled back to Europe, and died of cancer in France.

R.'s stay in Harär has aroused the imagination of innumerable writers. He appears in novels, studies and travel reports (for an extensive bibliography of publications on R., s. WagHar 35–55; Lefrère 2001); his African writings, including his letters, have repeatedly been published and translated (s. Rimbaud 1972; an annotated bibliography of his publications of 1884, 1887, and 1888, cf. WagHar 70, 131f., 505; a bibliography of posthumous publications and re-editions, s. WagHar 29–34). The Indian-style wooden house in Harär, which on the basis of local traditions has been identified as his (perhaps erroneously, WagHar 40, 396), today houses the French Centre.

Wolbert Smidt

Rivista delle Colonie Italiane

Founded in 1927 by the Ministry of Colonies, the R.C.I. was a bimonthly review (monthly from 1933), the first of a series of periodicals devoted to illustrating, analyzing and publicizing Italian colonialism in Africa and especially in the Horn. The alleged aim of R.C.I. was to make the Italian public acquainted with the realities of "our lands" overseas. The chief editor was Camillo Manfroni, professor of Colonial History at the University of Rome. Such experienced and prominent scholars of Somalia and Ethiopia as Enrico ↗Cerulli, Tullio Colucci (a former member of the Anglo–Italian [Jubaland] Boundary Commission in 1925–27), and Rodolfo Micacchi (director of the Inspectorate for Schools and Archaeology of the Ministry of the Colonies) were among the collaborators.

In December 1934, *L'Oltremare* (*Rivista coloniale* in 1906–27), the journal of the ↗Istituto coloniale italiano, was incorporated into the R.C.I., which was renamed *Rivista delle Colonie* (R.C.), and began to deal with the colonial question in general. The new journal (editors and publishers of which were the Ministry of the Colonies and, after 1937, the Ministry of Italian Africa) upgraded its scientific commitment. Martino Mario ↗Moreno wrote book reviews; Angelo Piccioli (a colonial officer who had been superintendent for education in the schools of Tripolitania, Libya) often contributed to the arts section.

Giuseppe Liprandi succeeded Manfroni (d. June 1935) as chief editor for almost a decade. Then, after a short interlude of one month with another director, the post was taken by General Ambrogio Bollati, a participant in the first Africa campaign and later in the re-conquering of Libya. Academic features were overshadowed by the need to promote and exalt the campaign in Ethiopia. The journal became more and more official and militant, hosting representatives of the Fascist regime such as Luigi Federzoni, then president of the Istituto fascista dell'Africa italiana, and General Ettore Bastico. However, it still enjoyed the collaboration of such respected scholars as Gennaro Mondaini, Carlo ↗Giglio and Moreno himself.

After the outbreak of World War II, the events in Europe obscured the colonial scenario. Bollati was joined in the editorship by Angelo Piccioli. The Italian defeat in Africa severely affected the periodical, and in 1943 R.C. disappeared for good.

Roads

The topography of the Ethiopian highlands, towered over by high mountain barriers and carved by canyons, has contributed to the political division of Ethiopia throughout history (Donham 1986; cf. also Reclus 1885: 251). Sovereigns used to order R. construction through corvées. However, such R. were unpassable during the rainy season. Reportedly, towards 1630 *aṣe* ↗Susənyos ordered the construction of the first stone bridge in Ethiopia. It was built over the ↗Abbay in Alata by an Indian engineer who came from Diu with the ↗Jesuits (BecRASO VII, 231). Further bridges were constructed by the order of his successors, ↗Fasilädäs, ↗Yoḥannəs II and ↗Iyasu I (cf. Anfray in PICES 8).

Modern R. building might have begun with *aṣe* ↗Tewodros II, in accordance with his endeavour to unite the splintered Ethiopian kingdoms. The British contributed to R. bulding as well by constructing a road between ↗Zula and ↗Mäqdäla during the ↗Napier expedition (PankEcon 287). Later, *aṣe* ↗Mənilək II launched a network of "royal" R. linking the ↗*kätäma* after he conquered the South (Marcus 1975: 200). He ordered the construction of a gravel R. between ↗Addis Abäba and ↗Addis ᶜAläm through ↗Holäta, between ↗Dərre Dawa and ↗Harär and the improvement of the streets in the capital for motor-vehicles. Before 1935, earth R. radiated from Addis Abäba; it took one day to drive from ↗Ambo to Addis Abäba (Balsan 1947).

In ↗Eritrea R. building and ↗urbanization came with the Italians, interested in developing the colony as a productive centre (Sbacchi 1980:252f.). This began with the policies fostered by governor Ferdinando ↗Martini. The most important expansion of the transportation network, however, took place in the 1930s. Under ↗Mussolini 2,466 km of R. were constructed, totalling 3,596 km in 1933. The greater proportion of investment focused in the ↗Barka region and was aimed at exploiting its tropical resources (Yemane Mesghenna 1988: 186f.). An outcome of this development was the establishment of markets and small settlements along railway lines and R. and eventually the formation of major towns (Redie Bereketeab 2000: 123ff.; ↗Urbanization).

From 1936 to 1941, during the ↗Africa Orientale Italiana, Ethiopia went through its first transportation revolution. The Italians assigned the main part of the colonial budget to design a network of asphalted R. radiating from Addis Abäba. From Addis Abäba the "Strada della Vittoria" led northwards to Asmära and it divided at ↗Däse to serve ↗Gondär and then ↗Asmära. Westwards Läqämte and ↗Ǧimma were reached while eastwards a R. followed the railway as far as Dərre Dawa and Harär. Lastly the Imperial highway leaving from Harär crossed the Ogaden and reached Mogadishu and Kismaayo in Somalia. By 1941, there were about 7,000 km of R., of which about half were asphalted. After the war, ↗Ḫaylä Śəllase I used R. improvements to enforce definitively his power over the provincial authorities.

In 1951, the Imperial Highway Authority (IHA) was established. However, due to a lack of resources, R. maintenance and construction stagnated. At the end of the 1960s only the R. radiating from the capital within a 100 km radius were asphalted as were the Rift (Nazret [Adaamaa]–Awasa), Dərre Dawa, Azäzo–Gondär and Kombolča–Däse highways and the Eritrean R. network. During the 1960s the IHA had laid out the Addis Abäba–Gondär R. through the ↗Abbay canyon, linked Däse and ↗ᶜAsäb, opened the R. carrying ↗coffee harvests from Ǧimma and the ↗Rift Valley and then linked the Rift Valley with ↗Bale (Gobba) and with Kenya through ↗Moyale, Dilla and Nägäle–Boräna. Towards the end of Ḫaylä Śəllase's rule an asphalted highway connected Addis Abäba with ↗ᶜAsäb through the ↗Awaš valley in order to avoid having to drive lorries through Däse and the highlands.

During the *Därg* (↗Provisional Military Administrative Council) the IHA was restructured as the Ethiopian Road Authority and the Rural Roads Task Force. Under Mängəśtu Ḫaylä Maryam a programme to extend and improve the R. network was set up: the Chinese rebuilt the Däse–Wäldiya–Gondär R., a second bridge crossed the Abbay, asphalt R. reached Läqämte (↗Naqamtee), Ǧimma and Däse and gravel R. reached ↗Gambella and ↗Asosa, where they served the Sudanese refugee camps. In order to increase the trade through ↗Djibouti, the port was linked with the ᶜAsäb R. A network of secondary tracks was opened in order to bring assistance to the victims of the 1984–85 ↗famine and to make resettlement easier in the South. However, the general lack of good R. made food distribution difficult and led to the death of thousands of Ethiopians.

Military conflicts in 1989–90 in Təgray and Wällo and in 1991 along the Abbay gorges and in the Harär region damaged the R. network. Recently, with the help of the European Union, development agencies (↗Development issues) and the World Bank, the Federal Democratic Republic of Ethiopia has noticeably improved the main highways, extended its network and linked the regions directly by-passing the capital. In 1992 there were 18,081 km of highways (15 % in good condition) and in 2005 37,018 km (6 % in bad condition). Asphalted and R. in good condition averaged 17 % of the total length in 1997 and 49 % in 2005. The R. length per 100 inhabitants has also sligthly increased: from 0.46 km in 1997 to 0.51 km in 2005 (Ethiopian Road Network 2005; Ethiopian Road Authority 2006). The R. density has increased from 21 km per 1000 km^2 in 1995 to 30 km in 2002, which is, however, still less than the average of 50 km per 1000 km^2 for Africa.

2008, Addis Abäba was connected by asphalt highways with Harär, Arba Mənč̣, Dilla, Läqämte, Ǧimma, Gondär, May Č̣äw and ↗ᶜAddigrat. Cross-country truck R. join Läqämte and Gondär through the Abbay gorge and Ǧimma by-passing the Didessa canyon. Ǧimma and Soddo are linked through the Omo gorges. Wällo (Lalibäla), Təgray (Säqota, Abiy ᶜAddi, Mäqäle), northern Šäwa, Arsi and the coffee producing regions to the South-West are no longer distinct enclaves. The Ethiopian authorities have planned to reopen and improve the R. to the frontier via Harär–Hargeysa–Berbera, Moyale–Kenya and Gondär–Gallabat; this last is used by lorries carrying imported petrol from Sudan. Chinese, Japanese and Cypriot contractors have shared the work with Ethiopian firms.

As of 2002, R. in Ethiopia carry about 95 % of the country's passenger and freight traffic. R. improvements have also considerably shortened distances but the country faces new challenges. Even if the capital is by-passed by a ring R. highways which lead to Addis Abäba are blocked by traffic jams. Moreover, the fact that most of the transport is done by lorries whilst transport by ↗railways is still modest damages the R. and the ↗environment and makes Ethiopia increasingly dependent on imported oil.

Alain Gascon

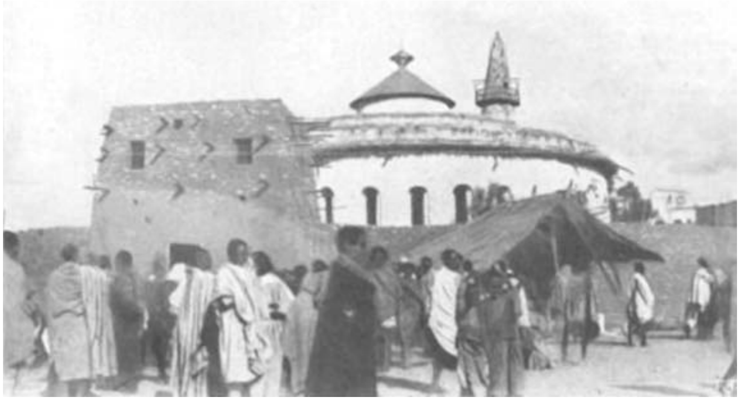
Robecchi Bricchetti, Luigi

R.B. (b. 21 May 1855, Pavia, d. 31 May 1926, Pavia) was an Italian explorer. He studied in Pavia, graduated in engineering from the Polytechnic Institute of Zurich and completed his education at Karlsruhe University.

R.B. travelled to Egypt in 1885 and, with a small caravan, to the Libyan Desert in 1886. He donated his archaeological and anthropological findings to the National Museum of Anthropology and Ethnology in Florence. Between 1888 and 1891, he travelled in the Horn of Africa on behalf of the Società Africana d'Italia and the ↗Società Geografica Italiana. In spring 1888 he headed to ↗Harär. On his way through ↗Ǧildessa he studied the Oromo population and their language (↗Oromiffa). The then governor *ras* ↗Mäkʷännən Wäldä Mikaᵓel charged him with constructing a church on the ruins of a mosque. During his stay, R.B. visited neighbouring areas including ↗Č̣ällänqo, ↗Erär and the ↗Argobba-populated areas. He returned to Italy in 1889 and published a detailed description of his voyage (1896).

In 1890 R.B. set out on his next expedition, this time to southern Somalia, via ↗Hobyo, across Cape ↗Gardafui to the Gulf of Aden. He returned to Hobyo in 1891, where he was hosted by *sulṭān* Yūsuf ᶜAlī. He stayed there for a month until leaving for ↗Wabi Šäbälle and ↗Berbera. R.B. was the first European to carry out the trip from Hobyo to Berbera crossing the ↗Ogaden desert. His precise linguistic, geographical and anthropological observations still have a high scholarly value for researchers in the area.

R.B. left important zoological, botanical and ethnographic collections. The photographic and ethnographic patrimony which he bequeathed to his home town of Pavia formed the core of the



The church of Mädḫane ᶜAläm, Harär, after the design of Robecchi Bricchetti; the building was later rebuilt in octagonal plan; from de Castro 1914, TAV XVII, fig. 27

city's ethnographic museum (Vicini 1987). The Civic Library "Carlo Bonetta" in Pavia keeps R.B.'s precious collection of Arabic ↗manuscripts, acquired in Harär in 1888 (Traini 1974).

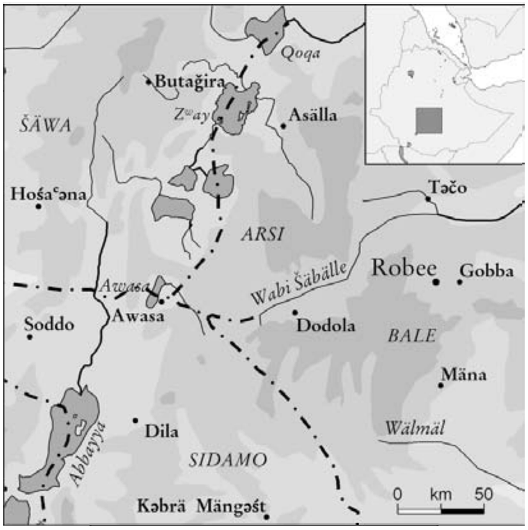
Manlio Bonati

Robee

R. (ሮቤ, Roobee; 7° 8' 0" N, 40° 0' 0" E, 2,492 m A.S.L.) is a town in ↗Bale. The forested highlands around R. were home to the Bale peasant rebellion (1963–67) brought about by the arrival of new settlers evicted from Šäwa and from the Rift Valley by the advance of commercial farms. R. is the gateway to the Bale National Park (↗Parks, National) and hosts tourists coming to visit it.

On January 2008, the Ethiopian Ministry of Education with the help of the German Gesellschaft für Technische Zusammenarbeit (GTZ) built the regional University of the Bale zone with a capacity of 5,000 students.

Before the 1991 administrative reforms R. was the capital of the Mädäyo/Fasil *awraǧǧa* in the Bale region. It is now the capital of the Sinana-Dinšo *wäräda*, Bale zone. In 1984, R. had 9,303 inhabit-



ants. In 1994 its population was 21,516 (CSA 1998), and about ten years later 40,316 (CSA 2006; cf. also CSA 2004). It is the second largest town in Bale after the zone capital ↗Gobba.

Alain Gascon

Robel

R. (**ሮቤል**, b. likely 1475–85, d. early March 1529, Šəmbəra Kʷəre, Fäṭägar) was a leading Təgrayan lord of his time. He makes his first recorded appearance in Francisco ↗Alvares's account who in August 1520 met him as ↗*balgäda* of ↗Ǝndärta and describes him as a "great lord", a valiant warrior, and an open-minded individual (BeckHuntAlvar 179f.). Ethiopian tradition later associated R. not with Ǝndärta but remembered him as governor of the neighbouring Bora and ↗Säläwa provinces (GuiIyas 8 [text]). In any case R.'s power base clearly lay in south-eastern Təgray from where he exercised a good measure of control over the important ↗salt trade originating from the neighbouring ᶜAfar lowlands (BeckHuntAlvar 180).

Towards the end of 1524 *aṣe* ↗Ləbnä Dəngəl in the context of a larger surprise reshuffle in leading state offices (↗Ǝslam Sägäd [I], ↗Ros Näbiyat, ↗Wäsän Sägäd), appointed R. as ↗*Təgre mäkʷännən* (BeckHuntAlvar 434). While his appointment as such likely came unexpected for R., he certainly had not neglected to prepare the ground for it by courting the Emperor with a fine tribute presentation (BeckHuntAlvar 428f.). R. did not, however, remain in his new office for long. While the *Mäṣḥafä ↗Aksum* charter no. 30 shows that he still held it in December 1525, the same collection's doc. no. 35, issued between September 1527 and August 1528, already records Täklä Iyäsus as his successor (CRAxum 32, 34 [text]). Against this background it makes sense to regard the preceding undated charter no. 34, which documents an imperial land grant to a R. in Təgray (CRAxum 34 [text]), as referring to the R. here under discussion and the grant as a compensation for his loss of office.

However, even after having been supplanted as *Təgre mäkʷännən* R. continued to play a leading role in his native province. For early 1529 the ↗*Futūḥ al-Ḥabaša* thus shows him, and not Täklä Iyäsus, as the de facto leader of the Təgrayan nobles in the run-up to the battle of ↗Šəmbəra Kʷəre, the first major confrontation between the Muslim and Christian armies in the *ǧihād* launched by ↗Aḥmad b. Ibrāhīm al-Ġāzī (Grañ). In the ensuing battle though R. perished alongside many other Christian lords, thus eventually paying dearly for his customary pugnacity. Yet even in death his stature is acknowledged by the *Futūḥ al-Ḥabaša* when it lists him first in its enumeration of Christian notables killed at Šəmbəra Kʷəre and considers it worthwhile to preserve the name of his slayer (BassHist 45ff., 62 [text]).

More than two decades after R.'s death his daughter Śəllus Ḫayla (↗Admas Mogäsa) married *aṣe* ↗Minas. This marriage not only posthumously made R. a grandfather of *aṣe* ↗Śärṣ̌ä Dəngəl (the other one being Ləbnä Dəngəl), but allied his entire lineage with the Solomonids in their 16th and early 17th-cent. struggle with the forces contending for greater Təgrayan autonomy (*baḥər nägaš* ↗Yəsḥaq).

Other known members of R.'s family are his brother ᶜUqba Mikaᵓel (he, too, killed at Šəmbəra Kʷəre; BassHist 62 [text]) and three sons, ᶜAmdä Mikaᵓel (ibid. 152f. [text]), Täklä Mikaᵓel (CRAxum 33 [text] [no. 33]) and Täklä Yoḥannəs (Conti Rossini 1922–23:55).

Michael Kleiner

Robillard, Léon de

R. (b. 29 July 1874, Saint-Aignan, Mayenne, d. 5 September 1945, Carrière-sur-Seine, Yvelines, France) was a French official active in Ethiopia and the publisher of *Le ↗Courrier d'Ethiopie*.

R. was first active as a clerk working for a notary, then as a surveyor, and came to Ethiopia in 1912 to work in the land registry. When the printer Alexis ↗Desvages left Ethiopia in 1924, he transferred the copyright in the Francophone journal founded by him, *Le Courrier d'Ethiopie*, to the French Legation, who immediately asked R. to take it over. He was able to increase the circulation of the journal to 500 copies in 1926, and ten years later to 2,500, at a time when only 300 French nationals were residing in Ethiopia.

R. became a personality central to the European community and was acting as a local correspondent for the international ↗press and as a guide. In 1929 he opened his own ↗printing press, the Imprimerie du Courrier d'Ethiopie, which was established next to his house, near the Bank of Abyssinia. Besides the journal, this printing house issued brochures and other printed documents. He created the *Annuaire d'Ethiopie*, of which Adrien ↗Zervos edited the section on the Greeks. When R. became sick, Zervos finalized this project, publishing it under his name as *L'Empire d'Ethiopie, Le miroir de l'Ethiopie moderne* (ZerÉth). The printing house continued working until the Italian occupation (↗Italian war 1935–36); the last issue of his journal appeared 1 May 1936. R. was expelled on 13 May due to his opposition to Italian rule. His daughter, Germaine de Robillard, who had played an increasingly central role in the printing house, stayed behind to liquidate the company, but finally had to give up and to leave Ethiopia.

Rochet d'Héricourt, Charles-Xavier

R.d'H. (b. 10 May 1801, Héricourt, d. 9 March 1854, Jeddah) was a French trader, explorer and diplomat. The son of an industrialist, he won first prize in chemistry at the Academy of Florence. Between 1828–29, he lived in Tunisia and from 1829 to 1839 in Egypt. In 1839, he set up an expedition with the aim of crossing Africa from east to west, but did not get further than Šäwa. He accomplished three journeys, in 1839–40, 1843–44 and 1848–49 and published accounts of two of them.

R. was one of the first explorers to attempt the ^{c}Afar road between ↗Tağūra and Šäwa. In Šäwa he was warmly received at the court of the *nəguś* ↗Śahlä Śəllase, where he also used his skills in such activities as the production of sugar. An important achievement of his was the treaty of trade and friendship between Ethiopia and ↗France – which, however, never ratified it. The treaty was signed on 7 June 1843 by Śahlä Śəllase at Angoläla and became the basis for later treaties between the two countries.

R. was a skilled observer of cultural features. His remarks on the Arabic language and the trade connecting Tağūra with Šäwa are noteworthy. He also painted several gouaches, which are presently kept at the ↗Bibliothèque Nationale de France. Through conferences in scientific and political circles, he also popularized the image of Šäwa in France.

In 1847, R. joined the consular service in Suez and in 1850 moved to ↗Massawa to replace Eugène Rolland as consul. In 1852, he became consul of Jeddah, where he died two years later.

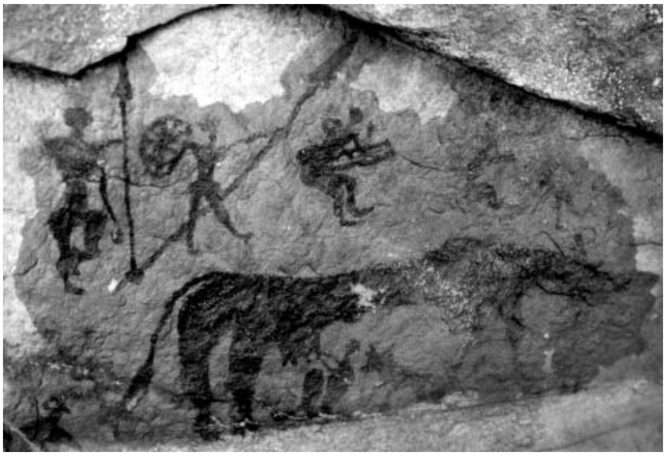
Rock art

The Horn of Africa is rich in R.a. (engravings, paintings, bas-reliefs) dating to various periods. Their chronology is often problematic. While test excavations at ↗Läga Oda produced evidence for Late Pleistocene settlement, the remains of possible cattle paintings inside the painted shelter have been dated back to 3510 ± 105 before the present. This dating may provide a reference point for a chronological approach to representations of domestic animals in R.a. in the Horn of Africa.

The main phases of R.a. in the Horn of Africa can be traced along a stylistic and iconographic path. The R.a. is prevalently the expression of breeder-peoples whose iconography is dominated by bovines. The most ancient period of their art can be traced back to Saharan R.a., in particular to Uwenait art.

Engravings of wild fauna and hunting scenes are only found in north-western Djibouti; probably they are the oldest samples belonging to the breeders' period and may thus belong to the 4th–3rd millennium B.C. (Joussaume 1995).

Wild fauna are also represented in Eritrea (Ṣəllum Bäᶜatti, Tämalihe) and in Ethiopia (Läga Oda), here connected to domestic animals. In this early phase, animal shapes are painted with an accurate hand, providing anatomic details, even if with a degree of abstraction. Horns are thin and extended; their mantel is often brindled with decorative motives. Numerous herds are depicted, while human figures play a secondary role. This phase later shows variants or other local and temporal "phases", starting from common elements. This phase could have started from the second half of the 3rd millennium B.C., by breeders from Sudan and Nubia (Joussaume 1995).



Rock painting from Zəban ᶜOna Libanos from the first millennium B.C. showing warriors with spears and shields, and milking in the foreground; photo courtesy of the author

During the most ancient phases of breeders' R.a. in the Horn, a distinctive Ethiopian–Arabian, or Dahthani style can be distinguished (Červiček 1979). The characteristic way of portraying a bovine figure is in profile with its legs rendered with one single bold line for the forelegs and one for the hind legs. Hoofs are stylized. Head and horns are twisted, as seen from a point lying behind the head; at times, the body is decorated with vertical stripes. Later on, this style developed schematic forms with the animal stretched in an unnatural way, "multiform" helical horns, reduced head and neck. This schematic pattern, however, is widely spread, and a connection with the Arabian Peninsula is only one of many possibilities. Later, images become different in style, depending on the geographical or cultural area. In Arabia, elegant human shapes appear, portrayed in naturalistic narrative scenes, with details such as shields, and spears with large metal points. At the end of this phase – during the second half of the 1st millennium B.C. – the zebu (*Bos indicus*) was introduced from Arabia, followed by the dromedary.

In later phases, the figures grow more stylized, sometimes, only the horns of the bovine figure remaining. In other cases, the animals' images were used to portray events such as battles involving horses and dromedaries reduced to the shape of a comb.

As for the recurring themes in R.a. cycles, many are found in different "phases", drawn in different styles, e.g., the cow feeding or protecting the calf, or a group of lined up men. Other motifs are characteristic of a particular period. E.g., the theme of the "aesthete" warrior, presented with his weapons or as a shepherd-warrior, appears in a mature phase of the Ethio-Eritrean R.a. In most cases, these characters are elegantly shaped and have discernible arms, often apparently protecting their bovines. In the same period, the theme of the feline is found, appearing to attack animals and with an armed man opposed to it. Another recurring theme is an abstract composition of aligned dots or small cups. Its symbolism is not always clear; it is often linked to hump-backed oxen. The fact that it is sometimes linked to a ploughing scene provides chronological and cultural hints. The herd is also often represented; the way animals are positioned and matched may also have symbolic implications. The fight scene apparently appears in a recent period of R.a. in the Horn. Clashes always involve schematic shapes of knights, often facing a fighter on foot.

The most important main R.a. sites are:

I. Eritrea:

↗Qarora, with the bovine R.a. that can be related to the ancient phase: shapes are polychrome or monochrome, in some cases animals are red with an outline and horns are white. Human shapes are combined with animals; in one painting they are aligned and armed with spears;

Bäᶜatti Ṣəllum, near Gänzabo in Akkälä Guzay, with one of the most important painting cycles of the ancient period of R.a. in Eritrea: scrupulously painted bovines, with a taste for schematized naturalism. The horns are long and twisted, the head and the legs are pronounced. In a group of cows, udders from which some calves are sucking are identifiable (Franchini 1952);

Ṣəllum Bäᶜatti cave at the foot of Mount Ǝnda Nəhbi, on the right bank of the Märäb; with paintings of an ancient period. Domestic bovines appear, alongside buffaloes, antelopes, hyenas, felines, perhaps zebras. Outlined men in the shape of an assegai take part in strange rituals; some of them ride mysterious animals decorated with vertical stripes going out of their bodies like rays (Franchini 1951);

Zəban ᶜOna Libanos, 2 km from ᶜAddi Moqäda, a small hollow with paintings that may date back to the beginning of the 1st millennium B.C. Elegantly shaped warriors with shields and long spears with large points made of metal are portrayed hunting, playing and resting. A naturalistic scene shows a moment of milking. Such images are related to Zəban Käbäsa and Zəban Abur, where a ploughing scene is painted, as at ↗Amba Foqäda in Ethiopia;

Ǝmba Q̣əlay with engravings of warriors with short spears, maybe of the ↗Aksumite kind;

↗Qoḥayto plateau, where for the first time the early Palaeolithic in Eritrea has been indicated (Calegari 1999);

Säro, where in 1841 d'↗Abbadie discovered R.a. for the first time;

Qʷärtamit, Maği Malhess, Lämdrara, and Dämbi Wadi Muduy in ↗Ḥamasen, west of Asmära, where schematic rock engravings were recorded by Leo ↗Frobenius in 1914–15;

Daᶜro Qawlos near Asmära, where a bas-relief is found in a cave traditionally linked to the legend of a hermit saint. It is a composition of purely anthropomorphic shapes, 40–50 cm tall (Tringali 1988). It can be linked to the bas relief found in 1993 under the rock shelter of Bäᶜatti Maryam, at Bärda village, 23 km west of Asmära. In both cases, shapes are aligned *en face*; their faces are not clearly shown. Local Christians venerate the images which they believe represent the saints and the Virgin Mary.

II. Ethiopia:

Surre, or Ganda Biftu, in ↗Harärge, with R.a. of bovines and humans belonging to three phases: the first shows accurate shapes of oxen with large or "tong" horns and well-defined human figures; the second is more schematic, particularly in human representation, reduced to an H-shape; in the third, animals are less accurately drawn and the hump-backed ox appears;

Läga Oda, also in Harärge, can be compared to Surre. Among the animals, antelopes, elephants, felines, giraffes and camels appear. Similar phases and styles can be found in human and animal shapes at Way Bärr, in the cave of Wərso, at Erär Kimet, at Säka Šarifa and at Läga Gäfra in the same region;

Amba Foqäda, with R.a. dating back to a more recent period, same as Zəban ᶜOna Libanos in Eritrea;

↗Č̣abbe in Sidamo, with the bas-reliefs showing 50 bovines, 40–50 cm high (first recorded in Anfray 1967). All are in profile, with small heads and long horns. Very similar are the bovines in bas-relief in Galma (Odela) and in Soka Dibič̣č̣e. The iconography of such shapes can be compared with the final phase of the most ancient period.

III. Djibouti:

Wad Balho, near the north-western border with Ethiopia, with ancient-phase engravings showing wild fauna (giraffes, ostriches, antelopes) no longer present in this region, and domestic bovines;

Dorra, a region of many sites with rock engravings showing wild fauna and scenes of hunters with bows. The bovine figures are of a later period and more schematic.

IV. Somalia:

Karin Heegan, the best studied site, with many shapes of bovines painted in a small cave in "Ethio–Arabian style". A man and a dog stand near an ox with decorated horns. A few other sites in northern Somalia have R.a. traceable to different periods.

Giulio Calegari

Rock-hewn churches and churches-in-caves

Ethiopia is richly endowed with ecclesiastical ↗architecture cut into, or out of, the living rock (cp. ↗Church buildings). There is also a small number of built churches constructed in caves. They will be discussed here respectively as "rock-hewn" (R.c.), "monolithic" (M.c.) and "churches-in-caves" (C.c.; Sauter 1963: 236).

There are hundreds of examples of R.c. in the highlands (s. fig. 3) and although some claim their inspiration and origin to be entirely indigenous, there are many examples of foreign precedents. The phenomenon is common to the northern

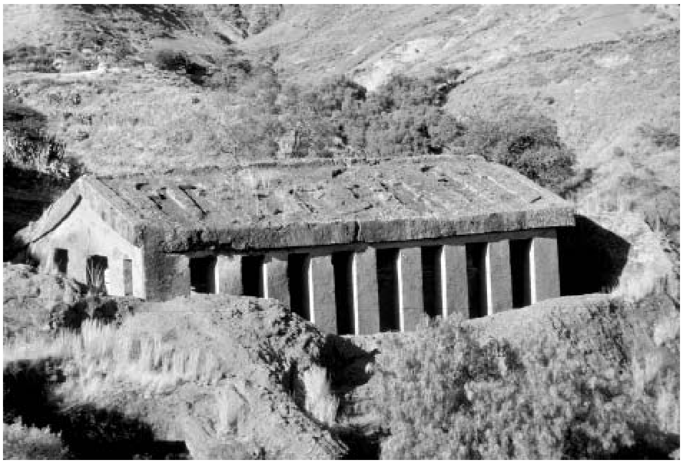

Fig. 1: The 13th-cent. monolithic church of Gännätä Maryam, Lasta, facing north-east; photo 1993, courtesy of Michael Gervers

and eastern shores of the Christian Mediterranean World, and has influenced Ethiopian church building, or seen counterparts develop as far apart as France and Central Germany in the north-west and Georgia to the north-east. A major impetus for the excavation of such sites came with the 8th–9th-cent. Iconoclastic Controversy when Byzantine monks and artists sought refuge in Cappadocia (esp. Göreme) and Phrygia in Asia Minor, and in Basilicata (esp. Matera) in southern Italy. Even prior to that time, Byzantine artists, influenced by the description in the 2nd-cent. *Protevangelium Iacobi* (cp. ↗*Lədätä lämaryam*), established the iconography of Christ's birth in a cave. This setting, which itself derived from ancient cosmology (cf. Porphyry's *On the Cave of the Nymphs)*, saw the cave as a microcosm of the universe, to the darkness of which Christ, as a sun-God, brought enlightenment. In the Church of the Nativity in Bethlehem, one descends into the grotto where Christ is said to have been born. His burial in a rock-hewn tomb completed the cycle, commemorated since the time of Constantine by the grotto under the aedicule in the Church of the Anastasis (or Holy Sepulchre) in Jerusalem. The eremetical tradition, which has seen any number of saintly and other hermits from the time of St. ↗Anthony onwards living in grottos, caves and tombs, perpetuates this association. Other physical examples lay closer to Ethiopia, namely the rock-hewn temples and tombs of Pharonic Egypt. In the Early Christian period, many of these tombs were turned into churches (e.g., Ǧabal al-Ṭayr, or Apa Hor).

It has been argued that what some think to be among the earliest examples of rock-hewn ecclesiastical architecture in Ethiopia, the so-called *églises de vallée*, or churches located in the plain (↗Dəgum, Bäraqit and ↗Ḥawzen in ↗Gärᶜalta; Gazen and Gundəfru Śəllase in Aṣbi Dära), were associated with tombs or occasioned by tombs (Lepage 1997). Pre-16th-cent. churches of all sorts regularly served as burial places, expectedly for the patrons of the place. A noteworthy example is the M.c. of ↗Wəqro Mäsqäl near Säqoṭa, where one branch of the burial crypt, entered from the *qəddəst*, extends directly under the sanctuary while the other runs north (Gervers 2002). At other sites, there is a tendency for the crypt to lie in the north-east corner of the church, an area held in particular reverence in respect of the biblical description of the Old Temple. Of particular note are the monolithic tombs in the north aisle of ↗Wəqro Maryam and in the sanctuary of Däbrä Näzrawi, and the recumbent relief figure referred to as the "Dead Christ" in Betä Golgota at ↗Lalibäla. At Wəqro Qirqos (↗Dängolo), a tomb lies in the east wall of the south *pastophorion*.

The R.c. has several advantages over its built counterpart. In the first place, because it is part of the living rock, it is far more durable. With few notable exceptions, constructed churches have long since collapsed and are known to us only as excavation sites, if at all. Consequently, the survival rate of the R.c. may be inproportionate to the number of ↗church buildings which inhabited the landscape at the time they were created. R.c. have survived, while most of the built churches have disappeared. Secondly, they could be excavated to imitate constructed buildings with little more than hammers and chisels, without the intervention of trained architects, unless they were particularly skillfully made as in the case of ↗Ṣəraᶜ Abrəha wä-Aṣbəḥa. This technology largely determined where such excavations occurred; relatively soft limestone and sandstone environments were preferred. The tradition continues, with the newly R.c. of Ṗeṭros wä-Ṗawlos (Ṣäᶜada Ǝmba, Təgray), Č̣äč̣äho Gäbrəʾel (Wällo-Gondär border), ↗Ǝtissa (Däbrä Ṣəlaləš, Sälale), and several others. Sandstone excavations have

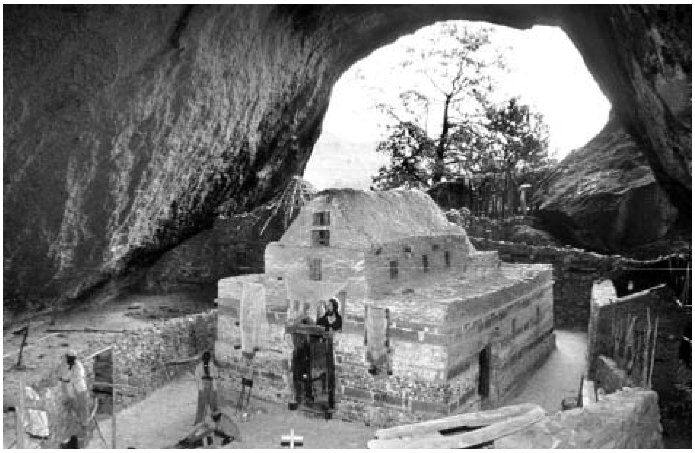

Fig. 2: The late 13th cent. church of Ǝmäkina Mädḫane ᶜAläm, built in a cave above Gännätä Maryam, Lasta, facing north-east; photo 2004, courtesy of Michael Gervers

proved to be the more vulnerable with some, such as Gazen, disintegrating by the moment. There, as at ↗Qorqor Maryam, ↗Däbrä Ṣəyon and elsewhere, the deterioration of the fabric also threatens the priceless murals painted on walls and pillars.

In their most unsophisticated form, these places of worship were adapted from natural caves, which in some cases continue to be designated as *waššа* (**ዋሻ**, Amh. 'cave'). One such site, ↗Waša Mikaᵓel in Wällo, has rows of remarkable hunting scenes running the length of the north and south walls, suggesting pre-Christian origins (cf. Mercier 2002). The opposite end of this spectrum was the wide-spread, R.c. or *wəq̱ro* (**ውቅሮ**, Tgn. 'cut stone'), sometimes of considerable proportions (Wəq̱ro Maryam, Wəqro Mäsqäl, Wəq̱ro Qirqos). Most R.c. are of this type. These R.c. may be considered in every way contemporary in form and details with standing buildings of the time, if only because they had to correspond to the changing needs of the liturgy. They never served a different purpose from that of built churches. It is through them, and the few constructed churches which have survived, that one may examine both the architectural record of the time and the periodic changes to the liturgy which are reflected in them. Their ground plans generally follow the form of the basilica, but if some have wide naves and transepts covered by barrel vaults (Ṣəraᶜ Abrəha wä-Aṣbəḥa, ↗Mikaᵓel Amba) or, as in the case of Gʷahəgot, by the imitation of a saddle back ceiling, others are of the hypostyle type, with columns supporting flat ceilings of even height and akin to more ancient Egyptian prototypes.
